"No consideration for the feelings or

opinions of others seemed to have

weight with him, and his imperious will

brooked no check, not even from official

authority. Once, having accompanied

one of his many favorites to the railway

station, an unusual piece of gallantry

for him, who was ordinarily content

with receiving without returning atten-

tions, and finding the train late and

waiting-room close, the party moved

chairs to the broad shady platform.

"Scarcely were they seated when the depot master, with all the pompous and aggressive authority of a small German official, bustled up, declaring they must not sit there; it was not permitted. Liszt rose with his most crushing dignity, demanding: 'Do you know, sir, whom you are addressing? I am the Doctor Liszt.'

"The little official, not to be daunted, replied: 'I can't help it if you're Doctor Lord Almighty; I have my orders, and if you don't vacate this platform I shall help you to do so.'

"Not disposed for a scuffle, the party withdrew. But that afternoon, by special order of the Grand Duke, that platform was wreathed in flowers and hung with banners. A grand piano was moved on, and seats for several hundred, and the élite of Weimar assembled to listen to a grand concert in which the great, the world-famous Liszt fairly outdid himself, proud to demonstrate before all eyes that he would sit on that platform if he chose. Worthy triumph for immortal genius!

"Yet on occasion he could be noble, kindly and benevolent. Much that he has done for art is grand and lasting, and all who have heard him play must count those moments as among the most memorable of their lives. And when we remember that from boyhood on he was the spoiled pet of royalty, the idol of a world, that the Pope of Rome was for years his friend and host, and that now, in his old age, he lives like a prince, without earning or owning a dollar, the guest of monarchs wherever he goes—which one of us could say with confidence: 'I could have borne greatness better?'"

## Getting Acquainted With the Keyboard

By LYNN C. CHAMBERS

THE FOLLOWING exercise is a good one for giving the young piano student an acquaintance with the keyboard; and it will also exercise the underarm muscles.

Begin with the thumb on the right hand on Middle C, and skip to E, using second finger; bring the thumb up to E and hold it down while the second finger skips again to G. Bring the thumb up to G and let second finger go on to B, and so on up the keyboard to second C above middle C, using only the thumb and second finger on every other white key. The thumb will lead in coming back down the keyboard, holding every other white key until the second finger catches it. Do this, using the thumb and each of the

fingers in turn till all are exercised.

Ascending R.H.

Descending R.H.

Follow the same procedure with the left hand, only begin with middle C and proceed downward to second C below, and return. The keys should be struck with a firm, decisive touch, avoiding all tendency toward staccato.

# Radio Flashes

By PAUL GIRARD

How FAR DOES the influence of radio extend? How many listeners are represented by each letter sent to a radio station? So far, no one can answer either of these questions accurately. The circle widens, however, and interest grows even beyond the confines of our own country. The National Broadcasting Company tells us that a year ago, when its short-wave stations to foreign countries were inaugurated, the first month of broadcasts brought in only one hundred fifty-seven pieces of mail. Four months later the number had increased to over ten times as many. At the end of the ninth month over three thousand letters were being received monthly, and at the end of the year there were some three thousand, five hundred letters coming in each month, from over eighty-two countries, protectorates and colonies.

Letters from Brazil claim that over forty percent of the people of a town of five thousand are tuning in regularly on NBC's short-wave stations every night. A listener in Guatamala relays that he knows of over fifty families who tune in regularly.

The fixed language system, an outgrowth of extended research into the program needs of short-wave listeners in Latin America and Europe, is given greatest credit for the gain in audience response reports an NBC official. The schedule is so arranged that uninterrupted sixty-minute programs in Spanish, Portuguese, French, German, Italian and English are broadcast seven days a week, at exactly the same hours each day, between 9:00 A.M. and 1:00 A. M. EDST.

Off for the summer, the popular program Tune Up Time, featuring Andre Kostelanetz's forty-five piece orchestra and Kay Thompson and her Rhythm Singers returned recently to the airways via Columbia Broadcasting System on Mondays 8:00 to 8:30 P.M., EDST.

A new show on the airways, which seems to be attracting some attention, is Columbia's Gay Nineties, heard Sundays at 6:00 to 6:30 P.M., EDST. All the old tunes that grandad and grandma, pop and mammy sang are featured. The producer of the show peered back more than four decades for his material. It is an hilarious program of song and story. And to make it more realistic for the audience at the broadcasts, the cast is garbed in costume of the era. Audiences are invited to join in the singing of some of the old numbers, but no one knows the size of the audience actually singing a song for it is safe to conjecture that there is one or more in front of every loud speaker that is tuned in. All the world loves to remember old times and to relax for a little while in their memories. Columbia's Gay Nineties has its possibilities.

Summertime being over, the transient shows of the airways will be giving way to some interesting new as well as old regular features. Now is the time to begin looking over the weekly schedules and marking down your favorite broadcasts. It is a good idea to keep a notebook handy around your radio with a page for each day in the week. Jot down the program that look good, then when you are home and want to listen to the radio you will know just what to turn to and at what time. Later on you can revise your list so that it contains only your favorites. Some listeners like to keep a radio log so that they can look back and not only recall the night that they heard a great singer but also the songs he or she sang.

# "The Style's The Thing"

By  
JOHN BROWNLEE

Leading Baritone of The Metropolitan Opera

A Conference Secured Expressly for THE ETUDE

By STEPHEN WEST

TO THE ZEALOUS YOUNG SINGER who would make his career something more than a mere means of livelihood, a mastery of musical style ranks equally important with vocal technic. This, to my mind, is a point all too often neglected. There seems to be current a nebulous impression that one has only to learn to sing, after which happy event he is quite ready to mount upon any stage, acquiring the details of acting as time goes on, and leaving the chief responsibility with the dramatic coaches. Nothing could be more erroneous. Neither singing nor acting can raise one's work to the level of artistry until a sure mastery of musical style has been acquired.

What, exactly, is musical style? It is an enormously big thing, and difficult to define. Let us begin by illustration. The reader has doubtless attended performances, either concert or operatic, in which the singer emitted all the correct notes, went through all the proper motions, and still left the listener with a profound feeling of something wanting. Such a performance creates no positive impression of character or of conviction. On the other hand, a truly great artist at work—an artist like Chaliapin or Schumann-Heink, let us say—leaves upon one the impression of having witnessed a living, flesh and blood character at grips with his problems. The notes and the gestures, agreeable as they may be, are not the important features of the impression received by the hearer. They are simply contributory factors in a portrayal of real life. All of which means that the unconvincing portrayal lacks vital style, while Chaliapin's performance had it. Which, in turn, means that this matter of style has to do with digging one's way under the externals of arias and motions, and bringing to the surface the psychological truth of every character, and every song, one performs.

## Authenticity in Style

MANY DIFFERENT ELEMENTS go to the building of style. First is the distinction between concert and operatic styles. The great concert stylist creates his own pictures with no external help by way of costumes, effects, or orchestral color; he externalizes his ideas so as to convince his hearers of the truth of all they do not see.

The great operatic stylist uses the more elaborate materials at his disposal to recreate, not an idea, but a moving picture of life and character. His most readily accessible aids are, of course, the external elements, accuracy of costumes and wigs and make-up, authenticity of deportment, conviction of stage business. He not only must permit his *Rigoletto* and his *Don Giovanni* to behave differently from each other; he also must calculate his effects with very definite reasons why they behave so, and the reasons must penetrate beneath mere gestures and find root in the time, the age, the circumstances, and the characters of the men. Things like these, of course, can be verified in books and pictures. There is something more important, though, than these external aids. That is the inner truth of a portrayal. To project this inner truth, one must first possess it. And, to possess it, one must do a great deal of studying *beyond* the matter of singing and making gestures. It is an emphasis on precisely this point of training that the young artist most needs.

I speak very feelingly of this aspect of artistic preparation, because my own career began in an atmosphere that lacked it. I grew up in Melbourne, Australia, which is about as far removed as a place can be from the things we sum up as "tradition," and where stylistic values reach us only by hearsay. Then, in my student

days there were no short wave radio programs. Thus I know at first hand the problems confronting a beginner who must carve out his traditions for himself. And I know, too, that the thing can be done.

Australians cling with affectionate tenacity to the tradition of home. Having fewer outside distractions, we

JOHN BROWNLEE

make our own amusements. The old Scotch tradition of making music at home was kept vigorously alive in my family. We had Sunday night home concerts, and I can recall no time in my life when I was not actively familiar with music. We also have the British fondness for choral music, and many contests are organized on the pattern of the old Welsh Eisteddfods, for the encouragement of the young people. At nineteen I was fortunate enough to win first place in one of these contests. It brought me a gold medal, several prizes, and much encouragement. This led to engagements to take part in the "Elijah" of Mendelssohn and in several performances of the "Passions" of Bach, all of which were thoroughly enjoyed, though I was in no sense a professional.

While rehearsing for one of these events, there was a sudden commotion in the hall. A very imperious lady appeared, with emphatic inquiries as to who the young

baritone might be. But this was not so interesting to me as her later insistence that I must go straight off to Europe to study for something more than occasional appearances in non-professional choral concerts. This was all very agreeable to hear, but I did not take the lady's words too seriously because I did not yet know who she might be. Imagine my feverish excitement when I learned that it was Melba; and I owe much to her continued kindly interest.

## "The Style's the Man"

UPON MELBA'S ADVICE I gave up my work as chartered accountant and went to Europe to study. There I discovered the amazing difference between "studying voice" and mastering musical style.

I have spoken of my own experiences only to draw a possible parallel between them and the problem facing many young Americans: How to get hold of this mastery of style which is difficult to acquire at home. There must be many gifted young beginners in the more outlying communities, who wish ardently to learn and yet do not know quite what to do next. My advice to them is to go abroad, to take the smallest opening available, no matter how poorly paid or unglamorous it may be, and to absorb the very spirit of style, at its source. Do small work; learn while you do it; and let the big offers wait until you have something more than mere voice to bring to them.

This will sound extremely reactionary, I am afraid, to those Americans who take pride in their very excellent conservatories and the all American opportunities they offer. Can we not learn to sing at home?

they will ask. If the ultimate goal were merely singing, I should answer, "Yes." One can learn to sing anywhere. But once you are launched upon a career, it will be found that the fight for advancement requires stronger weapons than mere singing. The difference between the vocal craftsman and the finished artist is calculated in terms of that elusive style which, logically enough, is best absorbed at its source. I say this in no disparagement of America's many excellent opportunities; but I have learned through experience that secondhand impressions lose their vitality. To study about the traditions of the great Opéra in Paris and the smaller houses in Italy is better than nothing; but best of all is to take even the smallest position in one of these very houses, and there to learn operatic traditions at first hand, from the ground up.

## Our Maiden Voyage on Operatic Seas

MY OPERATIC DEBUT was made at Covent Garden, in 1926, in the very performance of *La Bohème* which marked Melba's farewell to the stage. A year later, I made my Parisian début, at the Opéra, in "Thaïs." I was then invited to become a *pensionnaire* of the Paris Opéra, an appointment seldom made to foreigners. And there it was that I was able to plunge into the study of style.

The Paris Opéra maintains perhaps the most useful system in the world for helping beginning artists. Besides functioning as a public opera house, it acts as a complete training school. There are classes and practice periods and endless concentrated drills; and the veteran members of the company act as teachers, taking the youngsters in hand, and showing them how to walk, to rise, to cross the stage. A special

section of the gallery is set aside for the students, who pay reduced prices for their tickets and sit there, score in hand, watching the morning's theoretic studies come to life. Then, too, there are the archives of the Opéra to consult, with their old programs, books of operatic and dramatic history, old pictures and prints. It means much to a youngster, who knows nothing of anything, to be able to consult these treasures and so to find out exactly how Maurel and Plançon and De Reszke dressed their parts; to copy details of dress and make-up for use in his own work. Altogether a different matter from going to some costumer and asking him to design you a suit!

Another advantage of foreign apprenticeship is the sense of the languages. One can learn Latin and Greek from a book, but living tongues are not properly learned until they are spoken. The conscientious singer should speak the languages in which he sings. My actual vocal

studies in Paris were under Dinh Gilly, famous at the Metropolitan thirty years ago, and especially distinguished for his performance, with Caruso and Destinn, in Puccini's "Girl of the Golden West." I learned much from him, but just as much away from the studio, drinking the atmosphere of Saint-Sulpice into my studies for "Manon"; getting the feel of the very Latin Quarter where the people of "La Bohème" held sway; chattering French with a dozen other students, from all parts of the world, all ardently engaged in the same business of first hand absorption; or reporting some especially exciting new discovery to some pompously dignified old member of the Opéra, who had known Gounod and Massenet and Puccini, and could crown one's efforts with a bit of first hand advice, personally transmitted. There I learned the excellent trick of playing my own guitar accompaniment to the *Serenade* of *Don Giovanni*. Things like that make up study in its best sense.

Let me emphasize, however, that study of this kind is suitable only for those young artists already on their way to a career. Student beginners, who have no idea of what they are working towards, for the excellent reason that they have yet to prove themselves, are not ready for it. They would do much better to stop at home. I had my best training in style after I had made my Parisian début. Young professionals, however, would find it a distinct advantage in their future careers to let the Metropolitan and the big offers wait for three or four years, until they have had a period of working experience in some traditional company (no matter how small), where they can absorb style, language, and atmosphere, at first hand. There is a great temptation, I know, to blossom out at once with fine sounding and well paying engagements; but it pays best in the end to go ahead slowly, consecrating one's best efforts over a given period of years, to a mastery of that all important style which alone can make for finished artistry.

### The Golden Era of Song

AS A MATTER OF FACT, none of us to-day can have the same ideal working conditions that Melba's generation enjoyed. Possibly this is why that particular generation of singers stand supreme. Besides absorbing the elements of style and tradition, these artists actually knew the composers who wrote the works. I have heard Melba tell often of working out some detail of characterization with Massenet or Gounod. And what did such discussions consist of? Never of how to produce tones or make gestures. All the study centered in the background of psychological accuracy, in the basic character of the personage. How did he think and feel? What did he do in any given situation, as the result of his nature and his emotions? That is how good characterizations are built.

Melba was an enormously stimulating person with whom to work. She had two separate personalities; a public one and a private one. In public, or at work, she was completely intolerant of mediocrity. The least show of deficiency in singing or in general musicianship would bring forth a sharply outspoken rebuke. She had tremendous respect for the music as it was written. When less faithful artists ventured to take liberties with some phrase, Melba could be heard to inquire whether this score was actually the work of Gounod, or whether he had had collaborators? When one worked in a cast with her, there was that in her personality that made one strike sparks, almost in spite of one's self. She could hold up the level of an entire performance, sheerly through the force of her natural personality. Melba was an accomplished musician, a fine pianist and organist, and a thorough student. She founded the Melba Conservatorium in Melbourne, and devoted much time to the work

there whenever she was at home. And my own experience bears witness to her kindness to beginners.

In private life she was warm, kindly and tolerant. She would have been a distinguished person if she had never sung a note. She had a great mind and an inborn gift for dominating people—in such an agreeable way that they did not realize they were being led in control. I well remember how Melba held court in Paris. Her drawing room would be crowded with artists, writers, musicians, statesmen, politicians; and Melba would circulate from group to group, talking to each guest in

his own language and about the topics which interested him most. It was a remarkable experience to hear Melba explain the truth of the political situation to some cabinet minister, just arrived from the Senate.

Melba made a point of singing for the men in prison; and she regularly refused to sing *Home, Sweet Home* on such visits, lest she hurt the men too deeply. My favorite recollection of Melba concerns the day on which she stood god-mother to my own small daughter.

Many people say that Melba was a fine vocalist but an indifferent actress; that she

was cold. In the later years of her career when I knew her, this was certainly not true. Although no longer young then, she dominated the scene, not only portraying but becoming every character she played. If the charge was true in her earlier years, I wonder if the fault did not lie in the general demands of the times? In the Golden Age of song, the singing itself stood supreme. It is only in recent years, it would seem, that audiences have become conscious of the eye values in music. Doubtless the movies have contributed to this. No matter how gloriously a lady might sing to-day we would no longer be willing to accept the overbuxom *Mimis* and *Violettas* of past decades, whose death by consumption, as per the libretto's requirements, must have called for an artist's imagination on the part of the audience.

On one point Melba remained inflexible. Kind as was her interest in me, and greatly as she helped me in mastering style, she would never give me the least bit of vocal teaching. In this, she held to the view of her own great teacher, Marchesi: "Only a man can develop a man's voice, and only a woman can develop a woman's." Looking back it seems that Melba did very little talking about vocal theory. If one were a professional singer at all, that phase of his equipment was to be taken quite for granted—exactly as an athletic instructor takes for granted that his pupils know how to walk. Her concern was with the meaning behind the music, and with the stylistic accuracy of its interpretation and projection. This is the point upon which our younger artists of to-day would do well to concentrate.

\* \* \* \* \*

### Climbing

By ROWENA GAILEY

THE LATE FANNIE BLOOMFIELD-ZEISLER, world famous pianist and teacher, likened a student's progress in piano playing to climbing a ladder. First one foot is thrust ahead, and next the foot behind is pulled up and put ahead of the first one.

The application of the simile is obvious. The "foot behind" is the student's weakest point. With this thought in mind Mrs. Zeisler was constantly on the lookout for her pupil's "foot behind." When located, work was concentrated on this point until in time the student invariably found that the "foot behind" had gone up ahead and the time had come to search for the next weakest point. A uniform progress was gained in this way.

Perhaps the student's scales and runs were not as smooth as they should be. In that case one certain finger might be weaker than the others. That finger was located and trained until it became even stronger than the others.

Perhaps the arpeggios were the least bit jerky. Was the student's hand tightly bound? Was he putting his thumb under quickly enough? Was the thumb curved properly? The detail causing the trouble was sought out and given intensive work and study. The point which to-day might be the pupil's weakest would later on very likely be one of his strongest. By that time another "weakest point" probably would have crept to the foreground and be next in line for attention.

Mrs. Zeisler often remarked, "I do not teach just piano playing," and she pointed out that the same principles she taught in connection with music study could be applied to many other things. We can climb the ladder in a broader way by singling out the greatest fault of our character and giving it our concentrated attention.

\* \* \* \* \*

"The works of Bach for the clavichord (clavichord and harpsichord) are the Old Testament; Beethoven's sonatas the New; we must believe in the one and the other."

—von Bulow.

## Music of Worth to the Movies

By VERNA ARVEY

IT SOMETIMES HAPPENS that the beauty of a single theme is the outstanding element in a musical creation; but it may also happen that the theme itself is unimportant, while the composer's method of development assumes the greater importance. This is no less true of film music, depending on the ability of the composers or composer assigned to each picture. For example, Twentieth Century Fox has produced "Three Musketeers" with Don Ameche and the Ritz Brothers: a film that is almost completely underscored. For this, the original songs (that is, the thematic material) were supplied by Sam Pokrass. These are topical songs, in light mood, with the exception of one love song that is heard throughout the picture. But the development of the themes and the intricate job of weaving them into the film were entrusted to two men, Charles Maxwell and Dr. Ernst Toch, noted Viennese modernist. Naturally, the work called for all the technical resources at their command, and the completed score contains much of their own original material.

He, as composer, was actually a collaborator. When he came to Hollywood he discovered that the composer usually is unacquainted with the director! The film is made, shown to the composer, and the music required to be ready in a very few days—a breath taking and often thankless process. "Up to now music has been a sort of queer stepchild in films," Toch once declared. "It has been given little attention, while every other detail is planned painstakingly. It could have a much bigger function." Toch is of the opinion that films would benefit by the employment of more serious composers, but only in the event that these men were engaged to underscore two pictures a year, then allowed freedom for their own creative work, so that they would not become stale in an atmosphere which converts inspiration to a commercial proposition.

Incidentally, Don Ameche (who sings a great deal in "Three Musketeers") sang in St. Borchman's Choir in his boyhood. Since then his baritone voice has been heard a great deal over the radio as well

A MUSICAL CINEMA STAR

Many of Hollywood's shining lights have been very capable musicians, including Ernest Torrence, Lewis Stone, Wallace Beery, Ramon Novarro and many others. Elissa Landi, who has been variously reported as a grandchild of the Empress Elizabeth of Austria and again as a member of an English theatrical family, is likewise a musician and is here seated at one of the new console pianos.

Dr. Toch's experience in films has been unique, for he has underscored British films, as well as some Hollywood products. "Catherine the Great," "Private Life of Don Juan," "Little Friend," "Peter Ibbetson" and "Outcast" are some of those on which he has worked. In England, he worked from the script with the director.

as in interesting stellar rôles in the films.

Yet another film promises to make use of Stephen Foster's songs, as well as of Negro spirituals and other Southern folk-songs. This is "Way Down South," starring Bobby Breen and dealing with that so romantic and picturesque plantation life on the Mississippi.

A NOTED ENGLISH PEDAGOG, who was a devotee of Czerny, enjoyed pointing to the fact that, as the teacher of Liszt, Döhler, Thalberg, Jaëll, Leschetizky and Anna Caroline de Belleville, Czerny was the educational ancestor of more pianists than any master in history. When one thinks of all the pupils of Czerny's pupils, and all of their pupils, it is evident that a great dynasty of pianism may be traced to this Czech pedagog. It should be remembered that his more than a thousand works are, in many instances, in themselves composed of sets of studies. In this manner, this remarkable genius penetrated to almost every nook and cranny of piano technic.

Time and again, pedagogs have striven to find substitutes for Czerny. Many of these have been very ingenious and well worthy of consideration; yet, somehow, the pianist who has been through the refining course of a series of Czerny studies acquires a finish, an ease, and a force, which are indispensable to fine playing. This does not mean that every pupil must be put through the entire Czerny mill. In fact, many of the studies I have written have been issued to economize time and avoid unnecessary redundancy. Yet I believe that every student should have a comprehensive course of Czerny. The late Emil Liebling, a "grand pupil" of Czerny, as he was a pupil of Liszt, made a collection in three volumes known as the "Czerny-Liebling," which contains many of the indispensable studies. The student who is making a serious study of piano may well investigate upon the completion of this list the following extremely valuable studies.

- "School for the Left Hand, Op. 399."
- "The Art of Finger Dexterity, Op. 740."
- "School of Ornaments, Op. 355."
- "Sonate d'Etude, Op. 258."
- "Grand Exercise de Trille, Op. 151."
- "Toccat, Op. 92."
- "School of the Virtuoso, Op. 365."
- "Forty Daily Studies, Op. 337."
- "12 Preludes and Fugues, Op. 400," above all his others, a master work of science and of technic.

These should be the daily vitamins for every virtuoso who wishes to preserve his clearness, precision and purity of execution. The late Ferruccio Busoni used to say that he could hear in the technic of an unknown pianist whether his education was "with Czerny" or "without Czerny." The same criticism might be directed to the student who has had a course of Bach or has not had the blessing of the "Cantor of Leipzig."

Czerny was no mere mechanical ring master. Remember that he was a pupil of no less than Ludwig von Beethoven; and the records indicate that he devoted far more time, with his famous pupils, to interpretative and artistic problems than to the mechanical studies for which he is famous. Musicians realize that many of his works have genuine musical feeling and excellent taste. It must also be remembered that Czerny was an extremely well read man and had many distinguished friends. His "*Umriss der ganzen Musikgeschichte*" ("Survey of the Entire Music History") was considered one of the finest musical histories of its time.

### Ousting Kinks from History

MOST OF THE BIOGRAPHIES OF LISZT devote only a few lines to the relations between the great teacher and his pupil of genius. Many of them also seem to understand nothing of the generous personality, of the talent of the perfect musician, which was a part of Czerny's character. They speak of Czerny as though he were a dry and unmusical pedant, who would have made a martyr of the young Liszt by obliging him to work for hours at foolish exercises and to play the "empty" and "useless" compositions of Clementi; for so they called those works. But these learned people are more royalist than the king himself. For Liszt always held his first teacher in the highest and most grateful esteem. He respected Czerny's compositions and took pleasure in praising his patience, his extraordinary pedagogical intelligence, his knowledge, loyalty, courtesy, and modesty.

Some time ago, when I was in Vienna, to assist in judging an international competition in piano playing, I became acquainted with some "Memoirs of Czerny" which have not been published. They were written in 1842, when Czerny was fifty-one years old. In these memoirs it was revealed that all Czerny's contemporaries regarded him as a fine man, somewhat reserved and quiet, and as an artist, distinguished. Evidently he was a born teacher. When only fifteen he was sought as a teacher and was already known as an excellent one. Gradually his fame increased and his works were found everywhere that the piano was played or taught, until Czerny became the most renowned teacher in Europe.

# Czerny, Master of Masters

CARL CZERNY

By the Celebrated  
French Piano Virtuoso  
and Author  
M. ISIDOR PHILIPP

*M. Philipp's high position in the musical world is indicated by Ignace Jan Paderewski's introduction to a book upon the works of Chopin, which M. Philipp has been preparing.*

*Mr. Paderewski writes: "My dear colleague, I. Philipp, is an artist by the grace of the muses, teacher of world-wide renown, occupying one of the highest places in musical life, not only in France, but in the entire world. His profound knowledge of the piano, his brilliant career as a pedagog, his rare culture, and his methodical mind, have given him the qualities demanded by his great work."*

His "Preludes and Fugues, Op. 400" are sufficient evidence of his musical knowledge.

It is hard to imagine how conscientiously and how carefully Czerny devoted himself to the extraordinary child who had been intrusted to him. He felt responsible for the boy's whole musical education, and it is easy to see from passages in the memoirs what fatherly care he bestowed, without remuneration, on the little "Franzi," as he called the boy. He believed that a young artist, no matter how remarkable, could not be rightly developed without the guidance of a master, an understanding, devoted and disinterested friend. How many years of unproductive effort were thus spared the young Liszt! It is not at all improbable that Czerny's generosity in giving Liszt instruction without any fees inspired the Hungarian master to teach for many years and without fees the long list of noted pupils who later became great virtuosi. Czerny was, naturally, very proud of his distinguished protégé.

Madame Ramann, in a biography of Liszt, which is full of errors, and intentional errors, accuses Czerny of not having understood his talented pupil; and she says that he obliged Liszt to work for hours on exercises and Clementi. This story of Ramann's has been repeated by almost all the biographers of Liszt; and not one of them took the trouble to verify it by going to the source, that is, by reading the "Recollections of Czerny," a part of which were published in 1842. The complete manuscript of the recollections, from which one could learn so many interesting facts about Beethoven, Hummel, Liszt, Thalberg, and others, is in Vienna and has never been published as a whole.

### The Master Does Justice

IN READING THESE MEMOIRS it is easy to see the conscientiousness with which Czerny devoted himself to his talented little pupil. A genius can only be developed by a wise guide, a friend who seeks to help him avoid the mistakes of early study which waste precious time; and in this respect Czerny was marvelous as an educator of Liszt. Liszt, indeed, had for his master a great affection and an unbounded gratitude. As for Czerny, the great pedagog foresaw the extraordinary rôle which his pupil was going to play, not alone as a performer, but also as a composer. Fortunately his description of his first relations with Liszt have been preserved. He wrote, "One morning in 1819, I received a visit from a man accompanied by a little boy of about eight years. He asked me to hear and to judge the playing of the child. It was a poor little creature, delicate and pale, who behaved at the piano as if he were possessed. I was quite overwhelmed. His playing was irregular, not correct, superficial, and he used any fingering at all. Nevertheless, I was surprised by the innate talent of the child. I made him read at sight some little pieces; and, although he made some errors, he put into them a meaning so musical that I was interested in the highest degree.

'Nature has truly created here a pianist,' I said to myself. His father wished me to give him a theme for improvising; and, without knowing one rule of harmony, he invented charming things which astonished me greatly.

"The father told me that his name was Liszt and informed me further that he was in the employ of Prince Esterhazy, and that, as he knew something about music, he had made little Franz study. He asked me to undertake the musical education of his son the following year, when he was coming to live in Vienna. I accepted with pleasure, for the child had made such an impression upon me, and I made out immediately a scheme of exercises and scales for him to work on. Several months later Liszt came to Vienna with his son, took the apartment next to mine, and, as I was very busy during the day, I worked with the child in the evening.

"I never had a more intelligent pupil, more industrious, more understanding, more deferential. Experience had taught me that such a talented child would not willingly devote himself to the necessary technic, so it seemed unavoidable to me to pay attention, above all, to the skill of his fingers, so that later his musical development would not have to suffer for lack of technic. In a short time he was able to play all the scales in all keys, with rare evenness and perfection of touch. I had him study sonatinas of Clementi; and, in working carefully on those principles in which he was lacking, I tried to impart to him rhythm, beauty of tone, musical declamation, and correct fingering.

"The little boy was so lively, so gay, so mischievous, that it was some time before he could accustom himself to such severe discipline; but, at the end of several months of this work, I had him play some Hummel, some Ries, Moscheles, and even Beethoven and Bach. His

technic was so far advanced that he had only to think of the musical aspect of these works and he understood immediately the character and spirit of them.

"I obliged him to read a great deal of music, and therefore he became an extraordinary sight-reader and was able very soon to play at sight, even in public, complicated compositions. At the same time I tried also to cultivate his great talent for improvising.

### A World Does Homage

"THE INCOMPARABLE CHARM of this child and his constant good humor, combined with his astonishing talents, made my parents as devoted to him as I myself was, and he was like a child of our own. Of course I gave him lessons gratis; and I made him a present of all of the music which he would need. A year later I had him appear in his first concert, and there were few artists who could flatter themselves with having achieved so triumphant a success as this child. The following year his father arranged a concert with an orchestra in which the little Franz performed concertos in A minor and B minor by Hummel, which had just appeared, and several compositions by Ries and by himself. The public made no mistake in going into ecstasies and saying that a new Mozart had arrived.

"Unfortunately, Liszt the elder was counting on pecuniary advantages from his son's talent and began to make him travel. From Hungary, he took him to London and Paris where he made a sensation. Everybody was talking of the little Liszt. In Paris he earned much money, but he lost the freshness and spontaneity which were so characteristic of his talent. When I saw him again in 1837, I was distressed that I found in him no longer, in spite of his diabolical *bravura*, the clearness, purity, and balance, that I loved so much. All I could do was advise him to forget the exaggerations of style and of technic and to return to the more classic style. In fact, from the time when he returned to Vienna, his enormous talents became more and more polished from contact with the musically artistic public of this City of Art."

Liszt preserved for Czerny the same affection, the same gratitude to the last days of the life of this famous teacher.

In spite of his prodigious facility, Czerny was able to write such a large number of works, and to teach so extensively, only because of his very retired way of living. This was not caused by a natural weariness and irritability, which sometimes leads certain artists towards a solitary life, as was the case for the great French musician, Valentine Alka. No, he was, as I have stated, a kind and sociable man; but the conditions, which he had imposed upon himself for his work, obliged him to keep isolated, to delve within himself.

Czerny was of small stature, frail, and very unassuming in appearance. He will not remain unnoticed in musical history. His life is summed up in his works; some of which will forever remain indispensable to those who wish to study the piano thoroughly.

## Independent Finger Motion

By ESTHER WALLACE DIXON

THE easy relaxed finger motion is very difficult to teach to small children. Their fingers are so tiny that they are inclined to swing the whole arm when playing a single note. The independent finger motion may be practiced on a table away from the piano, or the teacher might open the front of the piano and show the pupil how the hammers in the piano work and explain the similarity in the action of the piano and fingers. No child can ever be a good pianist without learning and applying this independent finger motion.

# RECENT RECORD RELEASES

By PETER HUGH REED

CURIOUSLY, TWO RECORD COMPANIES decided recently to honor Schubert at about the same time with wider representation of his symphonic genius. Almost coincidentally with Columbia's treasurable performance of his "Fifth Symphony" (reviewed last month) came a Victor performance of his "Fourth" or "Tragic" Symphony" (Set M-562). Barbirolli, conducting the New York Philharmonic-Symphony Orchestra, gives a performance distinguished for its stylistic security and tonal opulence. Both the "Fourth" and "Fifth Symphonies" represent a lighter and gentler Schubert than the "Seventh" and "Unfinished." Like the "Fifth," the "Fourth" was written in his nineteenth year, for an amateur orchestral group with whom he played. The sobriquet "Tragic" seems to have been Schubert's own, given to the work after its completion. The dark hued opening motive, which is surely among the composer's most impressive inventions of its kind, and the fact that the first movement proper and the *finale* are planned mostly in the minor key (both end in the major) would seem to be the composer's reasons for the name. The symphony is distinguished by a genuinely beautiful slow movement and a particularly buoyant minuet.

Ernest Bloch's "Concerto Grosso, for piano and string orchestra," has long needed an up to date recording. Hence Victor's new release of it, played by the Curtis Chamber Music Ensemble, should be most welcome (Victor set M-563). Although the work can hardly be said to represent Bloch's extraordinarily expressive genius at its greatest, it is none the less an interesting and glowing one, with a brilliant fugal ending.

For his third recording, Howard Barlow selected another Haydn symphony—the one in B-flat major, the fourth of the famous twelve composed in 1791 for the Salomon concerts in London. The "Symphony in B-flat" is one of the composer's most imposing. It offers an interesting demonstration of his thematic economy—for the main motive of the slow introduction to the first movement becomes the gay opening theme of the movement proper. It has been said that Haydn might have termed his deeply felt and tenderly expressive slow movement a

"Requiem" for Mozart, for it was composed shortly after the death of this master, which shocked Haydn greatly. Barlow and the Columbia Broadcasting Symphony Orchestra play this work with considerable force and fervor, reminding us that in spirit it is not far removed from Beethoven (Columbia set M-370).

Some musical compositions lend themselves to ballet treatment. To Debussy's *L'après-midi d'une faune* and Griffes' *The White Peacock*. Sir Thomas Beecham, conducting the London Philharmonic Orchestra, gives a rarely nuanced reading of the languorous and nostalgic music of the faun (Columbia disc 69600D). Howard Barlow with the Columbia Broadcasting Symphony Orchestra repeats his expressive performance of *The White Peacock*, familiar to and much admired by his radio audiences (Columbia disc 17140D).

Those who know and admire Liszt's *Totentanz* and *Hungarian Fantasy*, for piano and orchestra, will welcome the recording of his *Fantasia on Beethoven's "Ruins of Athens"* (Columbia set X-136). Egon Petri, Leslie Heward and the London Philharmonic Orchestra play this glowingly scored work with superb energy and technical finish. Using some of the incidental music that Beethoven wrote for Kotzebue's play "The Ruins of Athens," Liszt has devised an opulent score.

One of the most popular records in the Victor list of the past ten years was the one that included the performances of Johann Strauss' waltzes—"Blue Danube" and "Tales of the Vienna Woods," by Stokowski and Philadelphia Orchestra. In the past year Mr. Stokowski has re-recorded these waltzes in his abridged and effective arrangements (Victor disc 15425).

Chamber music enthusiasts will find Musicraft's Mozart Trio Album (No. 29) a welcome addition to their libraries. It contains the "Trio in E major," K. 542, a masterpiece in its form, and the "Trio in C major," K. 548, a work somewhat reminiscent of Haydn. Played with admirable precision and expressive restraint by Kurt Appelbaum, pianist, Roman Totenburg, violinist and Fritz Magg, violoncellist, these two works are equally friendly, but if one must make a choice we recommend the "E major" (discs 1103-04)—it is a

"must have" for all our ardent Mozartians.

In their set 33, Musicraft brings us another trio, the work of a highly talented American composer, Aurelio Giorni, who was killed last fall in the hurricane off the New England coast. This "Trio in C major" (1934) is a richly voiced and excellently devised work, showing the composer's predilection for polyphony. The music, although original in texture and spirit, shows the influence of Bach and Beethoven. There is some unusual and ingenious writing in this trio, and the expression of a deep sincerity. It is excellently performed by Hollaender (violin), Hunkins (violoncello), and Kusmiak (piano).

In his chamber music Dvořák created some cherishable works. Among these must be numbered his "Quartet No. 3, in E-flat, Op. 51." It bears every mark of that happy time in the composer's life known as his "Slavonic" period, the period that saw the creation of the "Slavonic Dances" and the lovely "Sextet in A major," among other works. In an excellent Columbia recording (set M-369), this quartet is played with affectionate regard by the Lener String Quartet, one of the best contributions this ensemble has made to the phonograph.

The first of Brahms' sonatas in duet form is the "Sonata in E minor, Op. 38, for violoncello and piano," a work of elegiac as well as pastoral expression. A new recording of it, made by Gregor Piatigorsky and Arthur Rubinstein (Victor set M-564), is better balanced, as far as the piano is concerned, than the set Feuermann and van der Pas made for Columbia.

One of Beethoven's lighter, more jovial moods is evinced in his "Sonata, No. 8, in G major, Op. 30, No. 3," for violin and piano. The two outer movements are full of exhilarating elation and the middle *Tempo di Menuetto* is more gracefully sedate. Nathan Milstein and Arthur Balsam play this work for Columbia (set X-137), the violinist turning in one of the best performances he has on records.

A popular piano sonata by Mozart, the one in F major, K. 332 has been recorded by the nimble fingered José Iturbi with admirable clarity and poise (Victor set M-565). The recording here is unusually lifelike and tonally rich. Another fine piano recording is Walter Gieseking's performance of Bach's "Partita No. 6, in E minor" (Columbia set X-135). The sensitivity and deftness of Gieseking's touch is happily mated to Bach's music.

Lotte Lehmann and Lauritz Melchior unite to sing some fine lieder duets by Schumann, in the manner of opera rather than lieder (Victor album M-560). This is a vocal art that to-day is sadly neglected.

## A Schumann Drill

By ANNETTE M. LINGELBACH

TO LIMBER, relax, and ease a stiff hand, either left or right, practice this first measure from Robert Schumann's *The Wayside Inn, Op 82, No. 61*

Left Hand

HOW MANY CHILDREN, whether highly gifted or having merely a love for music, have been repelled by the piano at an early age, and have never entirely overcome this feeling that the piano is a monster, surly and invincible, created only to torment them. These children were not shown how to understand the piano, in the first years of their study.

As the child advances, there should be no hostile deities to command, "Stop, child! Study your scales; 1-2-3-1 repeat this passage twenty to fifty times!"

Poor little squirrel, caged by conventions and traditions. Repetitions are necessary, yes! But there are ways of repeating—many ways of encouraging the child to conquer the difficulties instead of being forever repelled by them.

Every healthy child is gay and lively. He is an impulsive little creature, with eyes open to all the wonders of the world, demanding, above everything else, to act, to exercise his powers with unrestrained spontaneity. Why not apply to piano study these impulsive faculties?

Illustration No. 1

Illustration No. 2

Let us then amuse the child by making a continual appeal to his imagination, to his inventive faculties?

### *The Rôle of the Instructor*

THE TEACHER MUST UNDERSTAND the personality of the child. He must find the line of action which suits each separate pupil, and must vary his course according to the subject to be taught. The teacher must be always ready to modify his general principles according to the needs of a lively intelligence, as well as to those of less developed abilities. He must be able to explain everything. Otherwise he cannot hold the confidence of his pupil.

Technical study may be begun in the first lessons, while the supple little hand can lend itself to any movement; but this work must be never without interest for the child. From the first days of work, the music must be *always music*. It must be a joy for everyone, but especially for the little learner trying to lisp its first syllables.

It is evident that the child's first feeling for music ought to be awakened before he begins the actual study of an instrument. This is an essential condition, if musical feeling and technic are to develop rapidly and at the same time.

### *Power in Repose*

THE MOST DIFFICULT FACULTY to develop in the pupil is the power to stop at the right moment, to make a sufficiently long pause, and to observe silence exactly. Why? Because he has difficulty in mastering his nerves, which are urging him to play without stopping. Then the harder it is for him to stop, the more he is inclined to an uncontrolled *accelerando*. The more he hurries involuntarily, the less he is able to stop. He must understand and feel

# Luring the Child to Love the Piano

By

Professeure Supérieure at the Conservatory of Geneva

Selected and Translated from the French

By FLORENCE LEONARD

in himself the value of silence, both for the sake of its actual length and for the sake of the feeling of the passage.

One must know, therefore, both how to introduce silence and how to end it. The feeling of this silence will vary according to the expression and the pace of the piece. It is a question of musical sensibility, of finesse of

Illustration No. 3

Illustration No. 4

touch.

There are so many ways of attacking a note and of leaving it. The more we cultivate this technic of touch, the more we shall be able to approach the thought of the composer and to transmit to others that which we ourselves have experienced.

### *The Very First Lessons*

NOW, TO LAY IN A STOCK of good humor. For we are going to try to influence our future pianist. Place him at a normal distance from the piano, upon an immovable chair, and not on a stool which moves about involuntarily in a fashion harmful to playing as well as to health. It should be not too high, and not too low; so that the forearm shall be on a level with the keyboard, with the hand placed naturally, without effort, on the keys. The arm will be entirely free, with the shoulders falling naturally, the back and the head straight, but with ease and without tension in any muscle.

The little hand is then placed upon five neighboring keys, in the most natural possible position, that of the hand in repose. It is rounded slightly, the wrist being

somewhat low, the thumb below the other fingers so that it may easily pass under the tunnel formed by the hand, when that is required. The child should be shown that this position, in which the fingers all have a good length, is solid as a chair on its four legs, for instance, and can with no effort support a rather heavy weight. In this way the child learns that, with this little firm hand of which each curved finger is a support, he can accomplish many lovely things.

Next we ask the little student to play any notes that he desires, with one finger, without moving one joint of the finger or of the wrist. It is, of course, the arm which makes the movement; but, with the condition that every tone is round and clear, and not "dry." For the time being, we ignore the thumb, that heavy cumbersome person that wishes to make more noise by itself than all the other fingers put together. For a while, it will have to be contented with staying near the keys, at a respectful distance from the second finger.

Illustration No. 5

Illustration No. 6

Soon the little hand, lively as a squirrel (for it is now perfectly free), will hunt out its notes, all along the keyboard. This becomes an amusing performance and creates many a pretty carillon, with little familiar airs it is a pleasure to play.

The black notes—are they difficult? They are even more amusing than the white ones; for one must be a little careful and very firm, or else a finger will slip off onto the next note. (See illustration No. 1.)

Next, thirds by conjunct degrees, may be tried; then, with skipping about by chance, with varied fingerings that are always chosen beforehand. After this the thumb is taught to play nicely, *pianissimo*, so that he will not overcome his smaller comrades. (See illustration No. 2.)

Often it is found that it is easier for a beginner to skip to a third or a sixth, with firm hand, than to a single note. These exercises may thus begin with thirds and sixths, and lead later to octaves. By changing the position of the hand a trifle, so that the keys descend to differing depths, one will soon be able to require that one note sounds stronger than the other. This is preparatory to bringing into relief certain themes in later study, as in fugues. (See illustrations No. 3 and 4.)

Gradually one may try the hands together; but the teacher need have no fear of prolonging for a considerable time these beginning exercises with separate hands. They are so simple, so easy to understand, and to execute. The skips should be extended to wider distances, with hands crossing, and made more and more rapid. The movement should be always as direct and as close to the keys as possible. There should be always a little pause after each skip, so that the hand becomes tranquil and sure of succeeding in the next skip.

It is so delightful to succeed at the first trial! No corrections are necessary; and, if the child begins over again, that is only for the pleasure of doing better and "for fun." What an immeasurable advantage over incorrect attempts!

Soon these exercises can be combined into certain chosen rhythms; and a great variety of rhythms can be used. Separate hands; hands together; two different rhythms; or two different skips; and so on. Changes of rhythms, of skips, of hands, of speed, of strength; all of these may be demanded at the word of command.

Finally all these exercises must be carried out without looking at the hands. Many will be the false notes at first; but gradually wonders will be accomplished, and the hands will learn to "divine" the keyboard. The left hand must be made to work as well as the right, and perhaps a bit more.

These exercises must next be carried out with a supple wrist. That is a little more difficult; for the hands and the fingers must at the same time remain firm, and the tone must be clear and good, without any movement of the fingerjoint.

Also the child should invent original exercises.

Presently the piano and *soffège*, instrument and voice, are combined; and the child will find for himself steps and half

steps on the keyboard, always keeping the hand firm, without stiffening, and the arm very free.

Following this, scales are to be formed, by ear and by reasoning, according to the type of scale. They are to be played with one finger, *staccato*, without articulation; for at this time the object is to acquire solidity in the finger. Major and minor scales, alterations, black notes and white, and finally the complete cycle of scales, all are to be developed, and always with the ear as an attentive judge of tone.

Here is the début of self-control, the fundamental requirement for every performer, every teacher.

Scales are to be played next with fingers 2 and 3, 3 and 4, 4 and 5, and then with 2-3-4, 3-4-5, in *semistaccato*, a trifle articulated. Only later, when the hand has become more fully conscious, is the regulation

Illustration No. 7

fingering, with the passing under of the thumb (now become much easier) to be introduced.

In all these exercises the touch must be made close to the keys, slowly and deeply, with no hardness by a firm finger. Each finger will rise a little—just enough to depress the following key. The result will be the sound of a "singing *legato*" which leads to the musical phrase, which must be played without stroke and without interruption in its flow.

#### Position, Control à la Leschetizky

AFTER THE EXERCISES with which the child began, comes, in due course, the study of position and control, with the latter the chief in importance. Place the five fingers on five adjacent keys, deeply depressed; and the child may be shown that it can articulate, or move freely, any finger, without any contraction in the upper arm being visible.

The means of control is marvelously simple. The pupil has only to take hold of the arm with the hand which is not playing. If the hand which plays is firm, without jerking, in the position indicated above,

each finger will be freed in turn, while the neighbors serve to support it.

The *natural position* must be cultivated next—the hand in repose, somewhat rounded so that the bones of the metacarpus form an all important support. The wrist is lowered a little, the five fingers are arranged so as to be of the same length, thus leading later to equality of technic. The thumb must have room to move about under the tunnel of the hand without continual useless displacements of the hand. (See illustrations No. 5 and 6)

Such a simple and natural arrangement of the hand is the true basis of what has been called the "Leschetizky method", despite the fact that the master himself forbade it. This teacher of so great genius denied that he had created a "method"; for the word was to him too pretentious, and he himself was the opposite of pedantic.

The muscles of the upper arm are not the same as those of the forearm. Therefore it is plain that a contraction of these muscles would fall into the class of "useless movements," as far as finger technic is concerned. But this contraction will become *natural* when we have need of the whole arm, in the technic of octaves, of chords, of special attacks, or of great fullness of tone.

The support for octaves and chords is not the back of the hand, as in finger technic, but the wrist itself, which will be more or less rounded, according to the length of the fingers, and the size of the hand.

Illustration No. 8

In no case must the shoulder rise in a useless effort.

#### Positions and Freedom

AT FIRST LET the child test, for himself, with the other hand, the resistance of the hand which is playing, and which must remain solid. Then let him learn what takes place in the muscle of the upper arm when the work of the fingers commences. The *controlled* hand will not permit the slightest suspicious shake in the arm.

In the beginning we ask for little strength, (Continued on Page 620)

## Painless Review Work

By D. D. FREAS

REVIEW WORK often is slighted, or entirely neglected, by the pupil. Once a piece is learned fairly well, it is sometimes hard to get children to work it up to perfection. In this situation well managed review work will do wonders in putting on those last few finishing touches which mark a selection as being ready for public performance.

There are several methods of making review work interesting. If the material in the book is taken in consecutive order when page eleven is reached, it would be well to review all of page one; in like manner page two may be reviewed when the new assignment is on page twelve; and when page twenty-one is reached, pages eleven and one both may come in for special review.

Another way of stimulating interest in review work, is to let the pupil write the titles or numbers of three compositions which he will practice for the week. (Incidentally, the teacher must watch that these numbers change every week.)

A third plan which may work best with some pupils is to designate certain "weeks" for special work. For example, one week may be called "staccato week," in which attention is focused on pieces with *staccato* parts in them. Then may follow "legato week," "rest week," "triplet week," and any other kind of week the teacher may deem necessary. These suggestions will help the child to make a game out of work.

## A Liszt Trick

By

GERTRUDE GREENHALGH WALKER

IT HAS BEEN TOLD of the great Liszt that he had three fingerings for every composition; one that he gave to the public, one that he gave to his pupils that they might play better than the public; and last, one that he retained for himself that he would play better than his pupils.

A little secret, or trick, as Liszt preferred to call it, that has been handed down from his pupils to their pupils is the master's treatment of the *Acciaccatura* or crushed, short grace note.

Liszt insisted that it be played at exactly the same moment that the principal note is struck and then with lightning rapidity release the auxiliary note.

This method not only insures a most brilliant interpretation and rendition of the embellishment but also is invaluable in training pupils for a rapid, triggerlike finger action.

THEY GAVE "HÄNSEL AND GRETEL"

A fine example of initiative was shown by Mrs. Katherine Nargle van Ewigen of Toledo, Ohio, who made an arrangement of Humperdinck's "Hänsel and Gretel" and gave it with these active young pupils.

ISABEL and SILVIO SCIONTI

Silvio Scionti, the noted Italian piano virtuoso, so long identified with American musical life that he is looked upon as an American artist, was born in Acireale, Sicily, in 1882. He studied with Cesi at the Palermo Conservatory and with Rossomandi at the old and famous Conservatory in Naples. He graduated from there with highest honors at the age of nineteen; and, after making his debut in Naples, he came to the United States where he has been engaged in a most enviable pedagogic and concert career. Although he has held master classes in many of the most important cities in this country and Italy, his main school connections have been with the American Conservatory of Chicago and the Chicago Musical College. He has appeared as soloist with many symphony orchestras, including the Minneapolis Symphony Orchestra and several engagements with the Chicago Symphony Orchestra. In recent years Mr. Scionti has specialized in the art of two-piano playing, with his wife and former pupil, Isabel Laughlin Scionti, herself a remarkable pianist, and it is in this form of art that they have achieved their most extraordinary success, both in this country and in Europe.—Editor's Note.

# The Fascination of Two-Piano Playing

From a Conference with

SILVIO SCIONTI

Secured Expressly for THE ETUDE Music Magazine

By JAY MEDIA

NO ONE KNOWS EXACTLY when two-piano playing commenced or who were the first two-piano players. Though it seems that England must be given credit for the first composition written for two virginals, Couperin wrote one *Allemande* for two harpsichords. But Johann Sebastian Bach took a very keen and practical interest in music of this type, or else he would not have written three concertos for two clavier and orchestra, two for three clavier and one for four. This last work, however, is a transcription of a concerto for four violins and strings by the Venetian composer, the Abate Antonio Vivaldi, that curious and masterly "red priest" (*il prete rosso*) who was the life director of the *Ospedale della Pietà* in Venice. Vivaldi was only ten years older than Bach, but the German pianist looked up to the genius of his Italian predecessor, making many transcriptions from his music to acquaint himself with the beautiful Italian style.

"The initiative of Bach in writing so many noble works for two pianos stimulated an interest in his sons to write in this medium. Wilhelm Friedemann wrote a "Concerto in E-flat" as well as two sonatas for two pianos, in D and F. Two concertos, in E-flat and F major, came also from the pen of Carl Philipp Emanuel, while Johann Christian (the "London Bach") is known to have written one two-clavier sonata. One of the first two-piano performances to attract wide attention was the contest which the Emperor Joseph II arranged in Vienna, in 1781, between Mozart and Clementi. Seated side by side at two pianos, they improvised alternately upon a melody by Paisiello. While one was playing the leading part, the other would supply an improvised second part on the other piano.

"The present very marked revival of interest in two-piano playing is a development rather than a sensational outburst of enthusiasm resulting in a fad. Carreño and his one time husband, Eugen d'Albert, gave a few memorable two-piano recitals in Europe. What a singular

experience such a recital must have been to an audience, with a kind of musical contest between a *Walküre* and a *Wotan*, two giants of pianism at two keyboards. From accounts of their almost incessant domestic battles, this could not have been two-piano playing at its highest perfection, as, first of all, this art demands transcendent understanding, sympathy, and psychic coöperation between the participants.

"In 1893 two remarkable sisters from Baltimore, Rose Laura Sutro (1870- ) and Ottilie Sutro (1872- ) commenced giving two-piano recitals, first in Germany and England, and later in the United States. These attracted very wide attention.

## An Art Develops

"THE PRESENT WIDESPREAD REVIVAL of interest, however, must be credited to the magnificent initiative of the famous duo-pianists, Guy Maier and Lee Pattison. Mr. Guy Maier, born in Buffalo in 1892, studied at the New England Conservatory at Boston and with Artur Schnabel in Berlin. Lee Pattison, born at Grand Rapids, Wisconsin, in 1890, also studied at the New England Conservatory, with Carl Baerman, and later with Artur Schnabel in Berlin. In 1916 these two artists appeared together for the first time in a two-piano recital in Jordan Hall, Boston. Shortly thereafter they appeared in Aeolin Hall in New York, with such extraordinary success that, during the following fourteen years, they played with many of the leading orchestras in Europe and America and gave innumerable recitals. Foremost composers wrote concertos and two-piano compositions for them.

"Two virtuosos of the pianoforte have been heard together in an occasional two-piano recital, but rarely with marked success. Their limited number of rehearsals and their unavoidable concern over the loss of solo personality would naturally impair the possibility of that resourceful tonal adjustment and color and subtle rhythmic freedom (the life of music) which distinguishes two-piano art from two-piano playing. Harold Bauer and Ossip Gabrilowitsch should be mentioned as an exception, because, in spite of their great individual popularity and activity, they succeeded in giving noble annual contributions to two-piano art. Recently Josef and Rosina Lhévinne celebrated the fortieth anniversary of their duo-activity, which, in spite of Mr. Lhévinne's regular flights into the realm of outstanding solo virtuosity, has supported two-piano ideals with unflinching devotion.

"Among the outstanding duo-piano teams of our present time, who have dedicated their untiring efforts toward the great cause of two-piano art, are the noted English artists, Ethel Bartlett and Rae Robertson; the Russians, Vitya Vronsky and Victor Babin, and Luboshutz and Nemanoff; the French and Italian, Fray and Braggiotti; the Austrian brothers Heinz and Robert Scholtz; the Canadians, Malcom and Godden; and the Americans, Gruen and Hall. To whom may be added the duo-harpsichordists, Manuel and Williamson.

"The increased popularity of two-piano playing even diverged into the lighter style of music and found its way into the orchestras for popular musical theatrical revues. Theatergoers were no longer surprised to see two pianos in the orchestra pit or on the stage. Paul

(Continued on Page 602)

# STRANGE MUSIC

By JOHN HIX

*The Greeks had a word for it! The bagpipe is not Scottish in origin, but goes far back to ancient Greece and Rome.*

**E**XCITEMENT RAN THROUGH the French court of King Louis XI like an electric current. A wonderful show was about to be given by the Abbe de Baigne, favorite musician of the King, whose entertainments were the talk of Paris.

Monsieur de Baigne had erected a huge black velvet tent at one end of the great hall; from it ran strange wires connecting with an oddly shaped keyboard. From within the tent came strange, inhuman noises. Eagerly the assembly waited for Monsieur de Baigne to draw back the curtains and start the performance. All eyes turned to King Louis. He gave the signal to begin.

When the musician uncovered the mysterious interior of the black tent, cries of surprise and screams of laughter filled the hall. Solemnly he announced, "Your Excellency, allow me to present the Pig-o-phone!" A score or more of pigs—big ones, little ones, fat ones, lean ones—were arranged in a long line and tied securely side by side. Suddenly Monsieur de Baigne struck the keyboard. Two pigs squealed loudly, in close harmony. He struck more keys. Other pigs broke out in higher pitched squeals. Monsieur de Baigne played feverishly. The pigs responded with ever-increasing volume until the entire hall was an uproar of pig-squeals and shouts from the audience. King Louis laughed until his sides ached.

Out of the strange bedlam came the notes of an old French air, squealed harmoniously by the line of singing swine. Never had Paris seen or heard anything like it. Monsieur de Baigne was showered with praise. Questions were shot at him by the curious members of Louis's court. How did he do it? How was it possible to teach pigs to sing in harmony? Disdainfully Monsieur de Baigne answered, "An artist's secrets are his own. That is one secret I cannot reveal."

The musician's secret did leak out, however, and it was learned that Monsieur de Baigne had fixed sharp spikes at the ends of each wire from his keyboard which effectively produced the proper squeal at the proper time when he struck the corresponding keys.

## Racily Romantic Origins

MUSICAL INSTRUMENTS, like music itself, have a strange story to tell of themselves. Monsieur de Baigne's Pig-o-phone is an extraordinary example, but few of us know

of the amazing stories which lie behind the most ordinary musical instruments.

Music as we know it to-day has had a comparatively short history; and, without the help of the many stringed and wood instruments, our harmonic system of music might still be undeveloped. The ancient Greeks, masters of almost every branch of art, strangely did not consider music an art in itself at all, merely regarding it as a means of heightening the effect of poetry. But the Greeks had a word for it, if not much else. *Mousike* (music), strange as it seems, was the name they gave to the entire field of psychic culture sponsored by the Nine Muses. A Greek musical education covered reading, writing, and arithmetic, with a little astronomy thrown in.

On hearing the peculiar strains

*The "Armonica"—a strange instrument invented and played by Benjamin Franklin. Glass discs vibrated pleasantly when Franklin applied wet finger tips to them as they rotated.*

of bagpipe music, one immediately pictures a gaily kilted Scotsman, cheek distended, swinging along over the highlands or lowlands. Yet, strange as it may seem, the bagpipe is really a very ancient instrument and we know from studying sculptures that the ancient Greeks and Romans were familiar with it.

If Emperor Nero and his friends were familiar with bagpipes, they did not know anything about violins, so the legendary story of how Nero fiddled around Rome while that great city burned, may be crossed out, unless it originated in other than a musical sense. If Nero played any sort of an instrument, say historians, it was probably a lute. Nero set fire to the city to see how it would look in flames, and was so pleased with the spectacle that he refused to let anybody put the fire out. He blamed it on the Christians, like a good Roman, and set about persecuting them mercilessly, even to requiring them to join in the popular applause of his singing.

## Too Much Skirl

WHILE ON THE SUBJECT of bagpipes, it is interesting to note that this instrument once played an important rôle in the winning of the West during a crisis at Fort Vancouver, in the Oregon country, back in the early part of the last century. Dr. John McLaughlin, who was the Hudson Bay Company's administrator in the Oregon country from 1812 to 1829, had been having great trouble with the Dalles Indians, a tribe which had been on the rampage and threatened to wipe out all the white trading posts in the region.

On one occasion when Dr. McLaughlin was stationed at Fort Vancouver a war party of these Dalles Indians broke from the woods and attacked the stockade. The fort was greatly undermanned; it would be impossible to resist the Indian attack for long. Dr. McLaughlin's worried gaze fell on one of his soldiers, Col. Fraser, a six-foot Scottish Highlander who carried his beloved bag-

*The world's highest, heaviest and largest musical instrument—New York's 240 ton Riverside Church Carillon, 400 feet above the streets of the metropolis. It contains 72 bells, the biggest containing a two ton clapper.*

# MAKERS

pipes with him wherever he went. The good Doctor was struck with an idea. "Music hath charms to soothe the savage breast," he mused. The Indians had never seen a bagpipe.

"Fraser!" he called. "Let them have it with that bagpipe!"

The Scotsman drew a deep breath and went to work. Loudly he blew; his pipes wailed mournfully. Out over the stockade floated the strange music. In amazement the Indians stopped in their tracks and listened. Their amazement turned to terror. The White Men were brewing some powerful medicine music which would wipe them out!

The Dalles warriors threw down their weapons and fled into the woods, trailed by the incessant wail of Fraser's bagpipes. Later they returned, cautiously, only to run terror stricken back into the woods whenever Fraser picked up his pipes and started to play again. At last, realizing the music was too much for them, the Indians agreed to sign a peace treaty with the White Men. Never again, strange as it seems, did they attack Fort Vancouver.

What tune Fraser blew is not known, but most probably it was *The Blue Bells of Scotland* or *Scots Wha Hae*, which the Scotch recognize as their national anthem along with *God Save the King*.

## Drums, and More of Them

IN POINT OF ANTIQUITY, the oldest musical instruments in the world are drums. Among savage tribes of to-day, where no other musical instruments are to be found, the drum is usually in evidence. African tribes have developed the art of drumming to a high degree. They have evolved a sort of primitive code telegraph system through expert manipulation of the instruments. Some of the tribes use huge hollowed logs, placed near a river, upon which they beat with sticks. The strange tattoo can be heard for distances up to twenty miles; and in this manner messages are relayed for thousands of miles across impenetrable jungles of the Dark Continent. The different tribes, strange as it seems, are able to understand each other's drumming, through a sort of African Esperanto, a universal code system which natives spend years in learning.

One of the strangest drums on record was made from the human skin of Zizka, the great Bohemian general who fought for the cause of the Hussites, during Europe's Thirty Years' War. In his lifetime, Zizka—who got his name from the fact that he had but one eye—was a powerful and fearless military leader. Once he threw back an attack of one hundred thousand Crusaders with only a handful of forty thousand untrained Bohemian peasants.

Not content to cease leading his troops when death should overtake him, Zizka ordered that his skin should be stripped from his body and made into a drumhead. His request was granted, and after death halted his plans to effect a treaty to give the Hussites religious freedom, his own skin reverberated to the beat of drumsticks time and again at the head of the army he had once led in person.

Rivaling the drum in antiquity is a strange xylophone built a few years ago by Henry Reider, of the Vertebrate Paleontology Department of the University of Nebraska. Curiously enough, this instrument is made from million-year-old ribs of prehistoric rhinoceroses. The scientist selected enough ribs to give two full octaves, with sharps and flats, and mounted them on a suitable

stand. Like a voice from the long dead past, the ribs give out a strange musical quality when played upon.

## A Hirsute Symphony

USING HUMAN OR ANIMAL products in musical instruments is nothing new, but how many of our readers know that Mangyan natives of the Philippines can get music out of their hair? They string their ukuleles with human hair and achieve delightful results.

The ukulele, incidentally, is not a Hawaiian instru-

ment, nor is it based on any instrument played by the Islanders. It was, in fact, designed by a white man whose modifications of the Portuguese "taro-patch fiddle" resulted in its invention. Nor is ukulele a Hawaiian name; and it means "jumping flea"! Similarly, the flute was named for an animal, a sort of eel. The word *flute* is derived from *fluta*, the Latin name for the small lamprey. This was because the small eel of the Sicilian Sea has seven small holes in its body, corresponding with the holes on the front of the flute.

Another wind instrument with a story behind its name is the English horn. Really this instrument is not English at all, and is not a horn. It is a form of oboe and was called a horn because the early forms of this instrument were curved to form part of a circle. The derivation of English—*anglais*—is less certain. Originally a French instrument, it was frequently made in a bent form to which the French applied the descriptive word "angle." From this, it is believed, its name was corrupted to "anglais."

How many know that the oboe is probably the most important instrument in a symphony orchestra? Due to the fact that it is very difficult to change the pitch of the oboe, all the other instruments in the orchestra must take their pitch from it.

## Bells, Great and Small

AMONG THE MOST ROMANTIC of all musical instruments are bells. For this reason, perhaps the Empress Anna Ivanovna of Russia decided she would have made the greatest bell ever seen by man. At her order there was cast in 1733 the great Tzar Kolokol, weighing one hundred ninety-three tons. Unfortunately, the Empress Anna's project was doomed to failure, and the great bell was never rung. During the process of cooling, water entered the mold in which it was cast and caused the bell to crack. A section weighing eleven thousand pounds dropped out, ruining it completely. The heavy bell was abandoned and it slowly sank to the ground, where it lay for more than one hundred years. Finally Emperor Nicholas I, in 1836, succeeded in having it lifted from the ground and placed on a pedestal. Standing more than twenty feet high, the bell at one time housed a chapel, instead of a chapel housing the bell. Entrance was gained through the aperture left by the section which dropped out when it was first made.

Although the world's largest bell was never rung, another, the largest hung bell in the world, can be rung with a slight rap of the knuckles! This is the Great Bell of Mingun, near Mandalay, weighing eighty tons. It has no clapper and is rung with a heavy piece of wood, giving out a thrilling low note beautiful to hear.

An interesting feature is that to be in perfect tune a bell must have no less than five distinct tones. Thus a bell really does not sound a note when struck, but a true chord. To raise or lower the pitch of a bell, basically the same method is used. Trimming off a little metal from the rim of the bell raises the pitch; trimming metal from the inside at the bottom swell lowers it.

Although *tenor* is a term almost universally applied to high tones in musical instruments, it means just the opposite in the case of bells. The bell with the highest

(Continued on Page 620)

The "Pig-o-phone"—when the French Abbe de Baigne pulled wires the pigs broke forth in a "swine song" to the consternation and amusement of King Louis XI's court.

The drum of death! Zizka—the great Bohemian general—had his own skin made into a drumhead after death so that he might continue at the head of his troops.

THERE ARE SEVERAL KINDS of chords and harmonic situations which do not fit any of the rules of harmony so far laid down. For instance, we often hear music which runs along contentedly in one key, with both feet firmly planted there, yet which introduces chords that do not belong in that key at all. These misplaced chords have been sprinkled in among the chords which do belong in the regular scheme of things, not because the composer had any intention of pulling up stakes and modulating to another key, but merely because he wanted to enrich and color the harmony.

We could explain these chords as one-foot modulations. But they are hardly even that. It would be more appropriate to label them as chords out on loan—borrowed, for the moment, to make the music more interesting.

The most common example of borrowed chords is the use of minor chords in a major key, introducing, for instance, some of the vocabulary of C minor into a C major composition.

Some of the favorite borrowings from the minor are:

**Ex. 1**

C Major: 1 1 1 1 1 1 1  
C Minor: 2 4 6 2 7

Here is a brief quotation from a famous opera—one of the most charming phrases in the whole opera, in fact—which illustrates an out and out case of borrowing. It is from the opening of Act IV of "Romeo and Juliet" by Charles Gounod.

**Ex. 2**

There are only three chords in this phrase: the triads on Do and Fa and the seventh chord on Ti. Composer Gounod, upon repeating the phrase, felt the need of intensifying its beauty, so he employed for the repetition the *minor versions* of the triad on Fa and the seventh chord on Ti. They will be found in the third and fourth measures. But do not be mistaken into believing that the music has modulated from D major to D minor. That is not the case, for the tonic chord still remains major. Those minor chords have merely been borrowed as pinch-hitters.

Perhaps you remember this popular song, *A Kingdom of Our Own* by George M. Cohan, with its prominently displayed borrowed chord:

**Ex. 3**

This quotation, and the one used later in this article from *Once in a Blue Moon* by Jerome Kern, are reproduced with the permission of the Music Publishers Holding Corporation, controllers of their copyrights.

# The Threshold of Music

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

## Borrowed Chords and Altered Chords

This article is the fourteenth in a series on "The Doorstep of Harmony."  
The first appeared in The Etude for January, 1938.

### Part I

The borrowed chord, indicated by an x, is the minor version of the sixth-floor (La) triad.

The triad on La, as you already know, is the one used in deceptive cadences. The La Triad borrowed from the minor produces a deceptive cadence that is even more surprising. Like the ordinary deceptive cadence, it is also a handy lever to use in changing keys. As will be recalled, the deceptive cadence is often used as a stepping stone by which to modulate into the relative minor (see *With a Song in My Heart*, in Chapter Thirteen). Similarly, the minor version of the deceptive cadence makes an equally good stepping stone for modulating into that distant key, the relative major of the subdominant minor. It is a favorite modulation in musical comedy overtures and finales. The more serious composers have not neglected it either. The following measures come at the end of the *Eighth Variation* and the beginning of the *Ninth Variation* in Sir Edward Elgar's most famous symphonic work, the "Enigma Variations." Notice the sustained G, which forms a connecting link between the movements.

**Ex. 4**

### Altered Chords

SOME CHORDS we hear in music do not sound like anything we have run across so far. They are not familiar chords which appear to be misplaced, like borrowed chords, but are definitely and strangely different in their sound. These are known as altered chords; that is, chords which have had one or more of their notes raised or lowered in order to give them new character or a richer, more exotic color.

For instance, here are some alterations which can be made on a simple chord, the Re seventh chord in the key of C Major.

**Ex. 5**

C Major C Minor D-Flat Major? E Minor ?

The first is the chord itself. The second is the same chord with its fifth lowered. It can be considered the Re seventh belonging to the key of C minor. The third example might possibly be labeled the dominant seventh of D-flat major, but in that case it is certainly spelled wrong. The fourth (a diminished seventh) belongs to the scale of E minor. But the fifth example does not even sound like anything we have

heard before in any key. It sounds more like a caricature or a grotesque version of an old friend. That is what it is—an altered version of the seventh chord on Re. You could also call it an altered version of the dominant seventh in the key of G major.

Altered chords retain some of the characteristics they had in their original form. If you are smart, you can recognize the old chord through its new trappings.

Two of the most frequently met altered chords are variations of the dominant seventh. In one case the fifth is lowered from a perfect to a diminished interval; in the other case it is raised to an augmented interval. In the key of C, the dominant seventh is G-B-D-F and its fifth is D. One altered version lowers the D to D-flat; the other raises it to D-sharp. Here are the two altered chords, marked x and y:

**Ex. 6**

In each case the feeling of unrest in the chord is heightened by the alteration, and the magnetic pull of its notes toward the notes of the tonic is accentuated. Hence its effectiveness.

An example of an altered dominant seventh with its fifth lowered is found in *The Two Grenadiers* by Robert Schumann.

**Ex. 7**

The altered chords are marked x and y. Both are dominant sevenths, the first being in the key of F and the second in the key of E-flat. By the way, notice Schumann's shifting of keys: from the original key (B-flat major) to its dominant (F major); from F major to its tonic minor (F minor); and then, using the triad of F minor as *re* in the key of E-flat major—thus considering it common to both keys—an easy shift into E-flat (the dominant of the relative major of F minor).

An example of an altered dominant seventh with its fifth raised occurs in *Mighty Lak' a Rose* by Ethelbert Nevin.

**Ex. 8**

The raised fifth creates an augmented triad—an exotic addition to the richness already inherent in the seventh chord.

Another example will be found in *Once in a Blue Moon*, from "Stepping Stones" by Jerome Kern.

**Ex. 9**

After simple triads, the contrasting richness of the altered dominant seventh, the final chord of the phrase, is doubly effective.

### Chords that Fly Under False Colors

SOMETIMES A CHORD can be so altered out of its original shape, so pushed and squeezed that it is finally made to resemble some familiar chord in a far distant key. Such a chord is, of course, a downright usurper. When we hear it we are apt to mistake it for a borrowed chord from another key, but actually it is no such thing. It is a chord of an entirely different stripe, masquerading under false colors.

### The False Dominant Seventh

AMONG THE CHORDS that fly under false colors, the most prominent are those altered seventh chords which sound exactly like dominant sevenths. Because their tonal effect duplicates that famous "chord of nature," they produce the same rich, satisfying sensations on our ears, and for that reason they are held in high favor and often used.

If you take the second-floor seventh chord in the key of C major, consisting of the notes D-F-A-C, and raise its D to D-sharp, there will be created one of these "mock" dominant sevenths. The resulting chord sounds exactly like the dominant seventh belonging to the key of B-flat—which consists of the notes F-A-C-E-flat—but its meaning is entirely different. E-flat is lured by the Melody Law to D, while D-sharp is attracted in the opposite direction, to E-natural. So the fake dominant seventh sounds like a true dominant seventh, but acts entirely differently.

Let us put this false chord into musical notation and see how it looks and behaves.

# BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI  
FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

THE OPENING OF A NEW SCHOOL YEAR in the fall brings with it new, yet familiarly old, problems for the instructor. With renewed zest and with better ideas about his routine the teacher must retrace last year's course, pressing on to growing youngsters some uses of his wisdom and experience. In the case of the instrumental director the effect of change is more patent. His orchestra and band are depleted, for last June's graduation has taken away important parts of their instrumentation. He cannot, like the professional director, face a group whose every player he knows and whose every idiosyncrasy he can handle. He faces empty chairs which must be filled, and he wonders what latent capabilities will come to the fore, what degree of restoration or improvement can be had over last year's organization.

Many high school bands and orchestras starting the new school year with players of important instruments gone on to new fields: violoncellos, violas and string basses, in the orchestras; and oboes, bassoons, alto and bass clarinets, and French horns, in the band. These players have left the school rehearsal rooms, little realizing the problem facing the conductor in replacing them. Now the ranks from which these vacancies are to be filled are the groups of children in junior high, and the excellence of this new material, the possibilities for development, lie in the efficiency with which elementary and junior high instrumental programs have been conceived and organized. In school systems where this elementary and junior high program has been properly carried through, the problem of replacements is not overwhelming. But where this program does not function or has been neglected, the problem is too often acute.

It would be well, then, to give thought to the development of an elementary and junior high program which not only functions as a separate unit, but which exists as a fertile source of players for the high school units. The competitive spirit demands better and better results from high school musical organizations; and, if not competitive, then the progressive spirit calls for improvement. The director or teacher who has worked on the "founda-

## The Elementary and Junior High School Instrumental Program

By

WILLIAM D. REVELLI

pare in ability with those bands and orchestras of some communities, requires more than the time usually allotted the instrumental program in the four years of high school. If we were to make a survey of our outstanding high school bands and orchestras, we would find invariably that in every one a well rounded and efficient instrumental music program has been adopted for the elementary and junior high schools which feed the more advanced group. These communities have foreseen the advantages of this early training and provided for it, they have even realized the necessity for its development, not only from a musical standpoint but also from a general educational one.

We shall make the assumption that our readers agree on the importance of the early program and discuss those elements of this instructional program which go to make it the well rounded and efficient plan which we find so desirable. At this time of year, when we are all beginning to work up musical organizations which will be a credit to school and community, some thought on these ideas will perhaps be of value.

### *The Beginning Instrumental Classes*

NATURALLY, THERE is a precursor even to beginning instruction on instruments. Ele-

mentary instruction should be preceded, in the kindergarten and first grade, by singing and rhythm band participation; and in the primary

grade, by piano (class or private) or pre-band instruments, such as saxette, tonette, clarette, and so on. The beginning instrumental instruction itself should begin not earlier than the fourth grade, nor later than the fifth.

Many elementary instrumental music curricula fail, due to the fact that music is still too often considered by many educational administrators as "extra-curricular." They have not yet placed it in the regular educational plan, and the music instructor must, after recruiting the material for instrumental beginning classes, arrange periods for rehearsals which do not conflict with the regular academic curriculum. The necessity for doing this might at first seem to be a handicap to the efficiency of the instrumental program, but then it is in reality a blessing. The fact that these schedule conflicts and short class periods necessitate

the segregation of instruments from heterogeneous to homogeneous groups, makes for more efficient teaching and greater student progress.

Short periods are desirable, because at this time embouchures of wind players are being formed, and a long period would be harmful, in addition to straining the endurance of the student. The fact that schedule conflicts in elementary schools often prohibit the adoption of a program entailing

Above—A Junior High School "High Brass" Class; At left—A Class of Drummers in the Making; Below—A "Low Brass" Class.

large heterogeneous groups is a distinct advantage, since beginners' classes should be small and of homogeneous composition, in order to assure careful and thorough training.

Regardless of what plan is adopted, however, one period per week should be devoted to complete band and orchestra rehearsals. Saturday morning seems to be a preferable time, since there are then few conflicts. Children of elementary grades have a natural desire to play together in these large groups; and, while there is a necessity for a certain amount of these full ensemble rehearsals for purposes of retaining interest, enthusiasm, and morale, it is advisable to maintain a system of small homogeneous groups for all preliminary instruction. Thus there is provision for systematic and thorough instruction on fundamentals, and opportunity for individual attention so necessary and important in the early stages of student training. Full band and orchestra rehearsals are not to be omitted, though, for they provide experience in ensemble performance, and this is also a step in the proper development of our young musicians.

The primary objective of the elementary and junior high school instrumental program is to provide the student with the means for mastering fundamentals, without which he cannot effectively continue his progress toward the higher levels of musical achievement. This early training should do much in the way of developing music appreciation and experience—it is a "sowing of the seed" from which we can expect a real growth as the student matures. This is and should be the ideal purpose behind the program.

Too often, however, the objective is otherwise. In our modern age when things are done so quickly, it appears that rapid results are desired even with artistic performances, which should be the result of slow but sure development. Too many of

(Continued on page 607)

## Alt Wien

IT SEEMS very appropriate, now that Vienna is no longer a capital of Austria but a German city in the province of Ostmark, that a volume should appear giving a history of what most people will agree is the most musical city in the world.

Musical Vienna starts with the return of Christoph Willibald Gluck to the city in 1748. Haydn was then a boy of sixteen, but Mozart was still unborn. Now, the thing that strikes the American traveler most is that one can go back at this day and cast his eyes upon the very buildings in the Graben, that Gluck saw and which were a part of the lives of all of the masters who have made Vienna famous.

We are told that old Vienna is no more. That the new regime has put an end to the *Lebhaftigkeit* and the *Gemüthlichkeit* which contributed to the indescribable liveliness and friendliness of that inimitable city. But one cannot take away the Graben nor St. Stephan's Turm; and the world looks forward to a time, which, with better economic conditions, will revive that free and unconstrained spirit believed to be responsible for the musical greatness of Vienna.

Gluck, Salieri, Haydn, Mozart, Beethoven, Schubert, Brahms, Strauss, Wolf, and a score of other Viennese composers, all take such an important place in music that to remove them would cripple the art. Most of them lie in that little "Garden of Peace" on the outskirts and mark the city's richest treasures.

"Musical Vienna", makes a very fascinating series of pictures of the art life of the Austrian capital, reaching right up to the Nazi annexation. Vienna has been more than an incubator for musical genius. It

recruited mostly from the San Carlo at Naples, was setting the Viennese agog with Italian tunes. 'So long as I have money for the Italian opera,' wrote the Philosopher Hegel to his wife, 'I shall not leave Vienna.'

"Fat, lazy, genial, gifted, Rossini walked the streets of Vienna in triumph. At the Kärntnertor-theater were performed *Zelmira*, *Ricciardo*, *La Gassa ladra*—all products of his fluent pen. Even Metternich took to the seductive airs which Vienna was humming.

"For four months Rossini remained in Vienna. Shortly before his departure a benefit night was arranged for him at the Kärntnertor. Viennese admirers—several thousands of them—swarmed outside the theater. Rossini, who had invited the entire cast to supper, heard of the crowd gathered outside the theater and decided to arrange an impromptu concert on the balcony. Arias from *Elisabetta* and *Zelmira* were sung by the leading members of the cast. Rossini himself joined by singing the *Largo al factotum* from *The Barber of Seville*. The music went on until two in the morning.

"Then, loaded with praise and money, Rossini returned to his country—but not before he had composed for his hosts a parting song, *Addio ai Viennesi*."

Realizing that many of our readers may have difficulty in securing the books listed in this department, THE ETUDE MUSIC MAGAZINE will be glad to furnish its readers with these books at the price given, plus the slight charge for transportation and delivery.

Vienna: The House of Federal Legislation (Parliament) at the left; the Town Hall (Rathaus) at upper center; the Burgtheater (City Opera House) at upper right; and the fine towers of the historic and beautiful St. Stefan's Church.

has been a very hospitable haven for visiting artists, such as Rossini, for instance.

The following excerpt is an indication of this:

"In the years between 1821 and 1823 the battle of German romantic opera was once again waged with vehemence on the Viennese stage. For a time it seemed as if the good old days of operatic feuds had come back, the struggles of Gluck and Metastasio, Mozart and Salieri.

"The standard-bearers of the opposing sides were now Karl Maria von Weber and Gioachino Rossini.

"Rossini had been brought to Vienna by the Italian impresario, Barbaja, who now held sway at both the Kärntnertor and the Theater an der Wien. His Italian company,

Throughout the very entertaining book, the reader will find much that is inspiring and helpful. We enthusiastically recommend this work to Etude friends.

## Musical Therapeutics

Edward Podolsky, M. D., who has written many articles for THE ETUDE, has recently put forth a new book, "The Doctor Prescribes Music."

His first chapter has to do with the efforts of man to use music for curative

purposes, from the ancient Hebrews to this time. With the ancient Greeks, music was a part of the regular therapeutic practice. The harp was used as a pacifier for maniacs. Democrats thought that the flute was a remedy for plagues. Napoleon went so far as to say that the failure of his troops in Russia was due principally to the Russian winter and Russian military music—the weird, barbaric tunes of "those monstrous Cossack regiments." Philip V of Spain and George II in England employed music to alleviate depression. How music affects the body; Music and Mental Health; Music is a Good Tonic for the Heart; Getting more Power from Music; Music Drives Away Pain; Music with your Meals; Music and Warped Personalities; Singing for Health—these are a few of the subjects of the chapters in a very entertaining book which will give the reader much to think about. It is a book of the popular type, designed for the general reader rather than the physician.

## The Making of Musical Instruments

Very, very few music students know how their particular instrument was made. There are a great many books upon the making of the piano, or the violin, or the organ; but the first book of a popular reference type, upon making of the leading instruments of all descriptions, is that of T. Campbell Young. Richly supplied with excellent cuts, the book starts with the piano, moves to the violin, the brass instruments, the wood-wind, and concludes with the organ and electronic organs, such as The Hammond.

Written from the English viewpoint, it is equally useful to American readers. We are confident that this very simple and readable book will find its way to all American musical libraries of standing.

"The Making of Musical Instruments"

Pages: 190

Price: \$3.00

Publishers: The Oxford Press

## A Brilliant Vocal Accomplishment

A third edition of Douglas Stanley's voluminous and excellent discussion of "The Science of the Human Voice" has just appeared. It is easily the most authoritative work upon the subject and fortunately is written in language not too technical for the serious student and teacher to read. Vocal science is by no means a simple matter, and writers upon voice have probably produced more poppycock upon the subject than has leaked out of the pens of any other scribes upon the arts.

The appendices (really a ninety-four page additional book) to the new edition are right up to the minute, even including descriptions of the astonishing Bell Tele-

phone Company machine, the Voder, which from a typewriterlike keyboard actually makes a speech, halting and peculiar though it is, but none the less proving many of the principles for which Dr. Stanley has contended. Millions have marveled at the Voder machine at the New York World Fair and the San Francisco Fair. In the invention of much of the scientific advances of Electrical Research Products, Inc., the researches of Dr. Stanley have had an important part. In fact, the vocal teacher of to-day, who is not acquainted with these advances, can hardly consider himself well informed.

The Voder Machine

## The Young Cosima

The daughter of one of the most famous romances of musical history, child of a great piano virtuoso and composer, wife of a famous pianist and conductor, and later the wife of the immortal Wagner. Cosima Liszt at no place in her life could come within the conventions of the later era of good Queen Victoria; but nothing could possibly prevent her from having a very unusual and distinctive place in musical history.

We once knew a pious churchman who was a devotee of both Wagner and Liszt. When someone twitted him about the family affairs of both masters, he replied, "I am very fond of coconuts; but, if I bothered with the romances of those who pick them in the jungle, I should never have any to eat." However this may be, the great number of books upon both Liszt and Wagner, which have had a large sale in all lands, concern themselves very largely with the frankly clandestine lives of the composers and, in doing this, look upon them as men apart from the great world. There can be no doubt that this very inconformity of the lives of Liszt and Wagner makes them exciting material for romancers.

Henry Handel Richardson's "The Young Cosima" finds the extraordinary young woman in Berlin, in about the middle of the last century, in the home of the mother of Hans von Bülow, where she had been placed by Liszt's innamorata, Mme. la Comtesse d'Agoult. Liszt, at the time, was

# THE TEACHERS' ROUND TABLE

Conducted Monthly by GUY MAIER  
NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

## Inspiration from the Northwest

This month's page is dedicated to the enterprising teachers of our great Northwest. A recent visit to that magnificent part of the land—Oregon, Washington and British Columbia—revealed such surprisingly high standards and such active, fruitful coöperation on the part of the local music teachers, that I came away dizzy with new ideas to share with Round Table readers. I was delighted with the technical and musical accomplishments of many of the students and, consequently, with the superior intelligence of their teachers. The whole "tour of inspection" was, in fact, a thrilling experience.

So, just settle yourself in your easiest chair, put on your specs, and listen to some of the things I learned!

The gulf between public schools and private music teachers has widened so seriously that I receive many appealing letters wanting to know what, if anything, can be done about the deplorable situation. We all have learned to our sorrow that pupils are dropping out, right and left, because the schools usurp their entire time. This unfair encroachment on the music teachers' domain has become more flagrant each year. As to remedies, I have been up a "tree," and have been able to offer only an occasional feeble suggestion. And, just in time, along comes the community of Wenatchee, Washington—a city in the 10,000 to 15,000 class—with its own admirable solution of the problem. Eleanor Scott submitted the plan to me, of which the following is a brief digest.

Wenatchee boasts a flourishing music teachers' association of twenty-five members, of whom one third are public school music teachers. This group sponsors a strong Public Relations Committee consisting of two studio teachers and the supervisor of public school music. The members of the committee are carefully selected, for, in addition to their professional qualifications, they must be respected, energetic citizens, and not "musical nuts."

This committee, which contacts the entire community on musical matters, has secured one hundred per cent coöperation of the school administration. Among the accomplishments to date are:

1. Full school credit for individual music study with accredited private teachers.
  2. Students excused for music instruction at mutually convenient times during the school day, as, for instance, junior high pupils excused during gymnasium and school music periods, senior high students during vacant periods.
  3. Arrangements for semester examinations by a qualified visiting examiner.
  4. "Putting across" a remarkable series of all-music assemblies in the schools, sponsored by the Music Teachers' Association and the Ladies Musical Club.
- The high school not only arranges tent student assemblies, but also offers a small guaranteed fee for the professional artists who appear. Upon recommendation of the committee, the high school authorities also offer the auditorium gratis for occasional, serious evening concerts.

The public school officials make it a practice to confer with the Public Relations Committee when any changes in

school music policy are under consideration. Frequent conferences have been invaluable in smoothing out countless minor frictions which developed—as, for instance, the wiping out of ill feeling in the matter of class piano instruction in the schools. Although such teaching is limited to the school supervisors, the private teachers have found the classes excellent "feeders" for their own studios.

Then, too, the private teachers have found it necessary to keep abreast of the progress of musical America within the public schools. They have learned to coöperate with all types of supervisors and to give intelligent, sympathetic support to the music problems of the community at large. After all, studio teachers are taxpayers and should recognize their responsibilities by keeping in touch with civic groups, and by rousing the citizens to the realization that music education is not a "frill" but a major subject requiring efficiently trained teachers, who in turn require adequate salaries. They should preach to school boards, superintendents and principals, the gospel of "More and Better Music in the Public Schools"; for, we know, alas, how often music education is made a political football in the schools.

If you think an unusually favorable situation exists up there in the center of the great northwest apple industry, you are right. It does, but Wenatchee teachers pay the price for it, in constant coöperative study and effort, plus eternal vigilance.

Can anyone offer a sensible reason why the Wenatchee plan should not be tried throughout our great musical land? The same set-up could be realized in your town, if a few moving spirits rose resolutely among you, determined to put the matter through, regardless of how long or how much effort it would take.

Another problem which is being successfully attacked up in the Northwest is that of the talented student without funds. How we all whoop with joy when that rare, blessed paragon is found—a gifted, serious student who can pay for his lessons! Most of us have yet to experience one such thrill in a lifetime. If music teachers were suddenly to be reimbursed for the long hours and quarts of life's blood they have lovingly given to students, they could probably retire on the income. On the other hand, such an unheard of windfall might result in a fatal heart attack—so watch out for it! Yet, although the temptation is strong, we cannot go through life teaching more and more "scholarship" pupils. We, too, must eat to live! In the Northwest, they have good amateur choruses and madrigal clubs which give the proceeds of their annual public concerts to deserving students. This helps the gifted pupil, pays the teacher and gives justification to public performances by amateur groups. If more choruses and clubs would devote part of their energies to financing students, they would bring infinite happiness to themselves and to the young musicians whose artistic development they make possible.

Vancouver (B. C.) has one of the most intelligent groups of teachers and pianists I have ever encountered. An enthusiastic bow to our Canadian confrères!

I can put down only a few of the things I learned in Portland (Oregon). Did you ever hear of a city where the teachers themselves get together in technic classes? Well, they do in Portland—and that is truly something to write home about!

E. C. J. (Portland), who gives very successful piano ensemble concerts, uses four to sixteen players in arrangements of Debussy's "Petite Suite," Liszt's "Les Preludes," Mozart's "Symphony in G minor" (*Allegro*), Prokofieff's *March from the Love of Three Oranges*, and Chopin's *Polonaise in C-sharp Minor*. E. C. J. makes many of the adaptations, from the two-piano, four hand versions; when a two-piano, eight hand arrangement is used, it must be "filled in." I am glad to know that other pianists feel the thinness of these eight hand numbers, which are immensely improved by tasteful thickening. Two good recent eight hand publications are the *Dance of the Buffoons* (Withrow) from Rimsky-Korsakoff's "Snow Maiden" and Dieter's version of the Schubert *Moment Musical in F minor*.

L. P. (Portland, Oregon) offers a good suggestion for that series of student recitals which many teachers give in the merry months of May and June. One thousand small, attractive eight page circulars are sent out containing dates, names of participants and programs of all the recitals, one page to each recital. On the last leaf are announcements of general interest, like names of prize winners, out of town programs by students, times of

classes, press notices, and so on. Such a circular serves as program for all the concerts, and is invaluable publicity material.

This is a good spot for me to let out a few fierce growls about pupils' recitals. There is no earthly reason for asking even fatuous parents to suffer through such slovenly affairs as I have recently endured. It does not take a dramatic genius to know that these events should begin promptly (if only out of respect to those who have come on time), that each pupil should play only one short, colorful, contrasted piece (with all "repeats" omitted), that announcements must be audible to all the audience, that any hitch in the continuity of the program is ruinous, that students must be so well trained that they can go through their pieces almost automatically, that gracious platform etiquette is part of this training, and that short programs are a godsend to audiences.

It does not seem necessary, does it, to mention that the pianos ought to be good instruments in decent tune? Yet I have heard any number of recitals with miserable pianos, flagrantly out of tune. How can one help condemning a teacher, when the tone and pitch of an instrument brings agony to the soul? If teachers developed a keener dramatic sense, they would be much more successful in both teaching and recitals.

I hasten to add that none of the events which caused the above outburst occurred in the Northwest. All honor to the teachers of that region for their up-and-comingness!

## Minor Scales

"Is there a minor scale beginning one and one-half steps below any given key-note and using the exact signature of the given key without raising or lowering any tone?"

"Ex.—Using C major scale, build this minor by beginning on A below C and keeping the same signature of the C scale."

"If there is such a minor, what is the name, and does one play it in both sharps and flats?"—H. A. T., California.

Yes, it is called the "natural" minor scale; it is used in all keys; and it is a good way to show pupils the close relation of major and minor. For scale practice, however, I think it advisable to stick to the harmonic minor, formed by lowering the third and sixth steps of the ascending and descending major. Several different minor scale forms are unnecessary, and only succeed in befuddling the student.

## Business Ability

At the monthly meeting of our local music teachers recently, we had a discussion on the subject of musical talent and business ability. Some of us maintained that musicians were almost always poor business men; while others claimed that the many successful teachers and artists proved the contrary. Our "hot" argument got us nowhere, so we resolved to put it up to you. Can you help us settle it?—B. F. B., California.

It gives me more hope than ever for the musical profession to learn that the musicians of many towns are at last getting together to "hash" over their problems. Wherever this has been done, it has resulted in increased understanding among music teachers, in higher standards, and in laying the ghosts of jealousy, pupil snatching and price cutting. So I say: "Music Teachers everywhere, talk it out!"

To the world, we may seem a bit starry

eyed, or even downright "balmy"; but, no matter what the public thinks, the really successful musician has both feet firmly planted on the ground. He permits only his head to touch the sky, in the practice of his art.

Of course musicians are not naturally good business men at the start of their careers, or they would not be musicians. But, just remember, the successful ones are those who, in addition to their artistic talent, possess high general intelligence. This intelligence teaches them early in life that it is necessary to develop a shrewd practical approach to the problem of earning a livelihood. Even though this business sense is hard to achieve, they force themselves to it. Almost every successful teacher of my acquaintance is a living example of slow, sure (though reluctant) development of the hardheadedness necessary to earn and save his dollars.

So I think your club would be safe to decide that the best musicians are almost invariably pretty good business men.

## Rest During Practice

You advise stopping practice every ten or fifteen minutes for rest. How can I make myself remember when to stop?—B. C., North Dakota.

If you concentrate so intently on your work that you cannot keep tabs on the time, you will just have to use an alarm clock! It will probably scare you half to death when it rings in the middle of a poetic phrase, but it is the only sure way I know. After the alarm is shut off, and reset, pace around the room once or twice; look out of the window; make out a check or a bill (or better still, a receipt) before resuming practice. You will often be surprised to find recalcitrant fingers completely capitulating upon your return to the piano.

# Are You Aiming for the Opera?

By

ROSE HEYLBUT

How they "break into"  
the Metropolitan

BRUNA CASTAGNA *as Carmen*

THE GLAMOUR SURROUNDING OPERA in general, and the great Metropolitan Opera in particular, is unique. One reason for this is the artistic completeness of performances which combine symphonic richness of orchestration and the greatest singing of the day, with a stage play and scenic splendor, and all at their best. Another reason is that the comparative scarcity of operatic opportunities makes the goal seem extra desirable. It is a fairly safe assumption that, at one time or another, every student in every vocal studio cherishes dreams, either secret or avowed, of finding a niche of his own somewhere on the Metropolitan's hundred foot stage when the great gold curtains swing apart. Not every one arrives there, of course. Because of the splendid traditions of the Metropolitan, with its standards of merit set by Lilli Lehmann, Caruso, Nordica, Bispham, and Farrar, the organization has established certain levels of performance which must be maintained; and consequently it has but few openings to offer to less than experienced newcomers. But it does no harm to hope, to strive, and to wonder.

How does one "get into" the Metropolitan? What happens between acceptance and performance? What is the routine of mounting grand opera? Each of these is a question of vital importance to the aspirant.

## No Room for Novices

NO ONE APPEARS in even the smallest rôle on the Metropolitan stage without presenting carefully investigated credentials as to training, ability, and experience; and without submitting to a series of auditions conducted by the General Manager and his staff. Requests for auditions are received throughout the year, and those candidates whose credentials seem most promising, are invited to make the test. This operatic audition can prove a grueling affair, for all the hope it may carry. The vast auditorium is entirely dark and apparently empty. Rows of vacant chairs and the shadows of overhanging boxes range before the candidate, nearly a city block in depth. Somewhere in that dark space sits the General Manager of the Metropolitan Opera, with his co-judges, waiting, unseen, to listen and discover valuable new vocal material.

The candidates do not know exactly who is hearing them or in what part of the house their judges are to be found. The huge stage is only half lit by a single electric lamp beside the piano. Several auditions are made on the same day, and the candidates wait in the wings, to be summoned forth to show what they can do. No candidate is engaged on the strength of a single audition. Those that make the best impression are invited to return for a second and a third audition. Sometimes a fourth may be required before the final decision is made. But then there may come a contract; and the one who stepped upon the stage as a candidate leaves it as a member of the Metropolitan Opera with all its opportunities to de-

velop a talent that will please perhaps the most exacting audience in all the world.

Once admitted to company membership, our young artist is listed according to his voice and the number of rôles he knows. The Metropolitan maintains no regular understudies, and consequently, several singers must be able to perform the same part, for normal cast variations and in case of emergency. The casting of rôles is undertaken in the spring of the year when the next season's repertory is announced; and the singers are expected to learn new parts and to brush up on familiar ones during the summer.

The actual work of rehearsal begins the following autumn, some two to three weeks before the opening of the new operatic season. It continues straight through the entire year, up to the final preparations for the final performance. No performance is given without rehearsal.

As a general thing, leading rôles are definitely assigned to the experienced artists who have performed them many times before. Secondary parts are assigned to several members of the company, the ultimate choice waiting over until the performance is cast.

## As The Wheels Go Round

THE METROPOLITAN'S REHEARSALS require elaborate organization. The six regular weekly performances offer six different operas, with six different casts. All must be carefully rehearsed. No matter how familiar the individual singer may be with his individual rôle, the various styles must be blended together, and each performance is refreshed and drilled. This means that many different rehearsals are going on at the same time—on the stage, in dressing rooms, even in the patrons' rest rooms and lounges. Visitors to the Metropolitan often wonder why there are grand pianos in the rooms where coats are checked. They have nothing to do with the subscribers. The company's Musical Secretary works out this complicated rehearsal schedule, summoning the various casts to the proper rooms at the proper hours, and the work is ready to go forward.

The first rehearsal begins with the musical score. One of the assistant conductors goes through an entire part with its singer individually, indicating cuts or the open-

ing up of former cuts, and convincing himself that the singer's private preparation has left him absolutely sure of all words and music and cues. Next, the conductor who directs the performance meets the singers, again individually, and shapes the musical material into the pattern he desires. Grades of emphasis, shadings, climaxes, all are worked out; and the same passage may be repeated six or eight times, exactly as at a singing lesson. Only after his individual part is in fluent working order does our aspirant to honors begin to work with his colleagues.

Duets, trios, quartets, and so on, are now rehearsed; cues and entrances are timed; the half dozen individual performances are made to unite into a new and balanced whole. Often these ensemble scenes are taken in regular order; often the more difficult scenes are worked over first. It is possible that the sextet in Act Three may be perfected before a duet in Act One is begun. Rehearsals are never timed in advance. They may last two hours; they may require six. Often rehearsals are in progress on the roof stage while a public performance is being given in the auditorium.

When the musical rehearsals begin to "sound," the dramatic work is begun, under the direction of the stage director. The same general routine is followed. The stage director meets the members of the cast individually and explains to them, not merely motions and "stage business," but the quality of the performance he wishes to give. Operatic acting is different from, and more difficult than, dramatic acting, for the reason that the singer's first consideration must be the welfare of his vocal mechanism. This means that he must deliberately sacrifice a measure of perfect freedom to the demands of his voice. He may assume no position which might prove constricting to breath control and the emission of good tone; and at the same time he must carry himself in such a way that the audience is completely unaware of any check on perfect freedom of motion or gesture. To the newcomer, at least, this requires considerable drill. Again, individual drill is followed by ensemble work, in which the solo singers adjust their own performances to blend with those of their co-workers.

While the cast is being drilled by the conductor and stage-director, the orchestra and chorus, in different

FASCINATING PIECES FOR THE MUSICAL HOME

AMOURETTE

Mazurka Impromptu

Piquant, almost Gallic in type is this little recital mazurka by an American composer. Play it with decided rhythm but with light, springing fingers. This composition has all the characteristics of an excellent teaching piece. Grade 3½.

FREDERIC GROTON, Op. 86

Con allegrezza M.M. ♩ = 152

The musical score for 'Amourette' is presented in a standard piano format with two staves per system. The first system (measures 1-8) begins with a treble clef and a key signature of one sharp (F#). The tempo and meter are indicated as 'Con allegrezza M.M. ♩ = 152'. The dynamics range from mezzo-forte (mf) to piano (p). The second system (measures 9-16) continues the piece, ending with a 'D.C.\*' (Da Capo) instruction. The third system (measures 17-24) is marked 'TRIO' and begins with a piano (p) dynamic. It includes a 'Ped. simile' (pedal simile) instruction and ends with a 'D.C.' (Da Capo) instruction. The score is rich in musical detail, including various note values, rests, and articulation marks.

From here go back to the beginning and play to *Fine*; then play *Trio*.

# SILVER SLIPPERS

MAZURKA

FREDERICK A. WILLIAMS

Grade 3 $\frac{1}{2}$ . Tempo di Mazurka M.M.  $\text{♩} = 116$

The musical score for 'Silver Slippers' is written for piano in 3/4 time. It consists of six systems of music. The first system begins with a treble clef, a key signature of one flat (B-flat), and a 3/4 time signature. The tempo is 'Tempo di Mazurka' with a metronome marking of 116. The first system includes fingerings (3, 4, 1, 3, 2, 3, 4, 2, 2, 2, 4, 3) and dynamics (mf, f poco rit.). The second system includes fingerings (3, 4, 1, 1, 2, 3, 1, 5, 3, 5, 1) and dynamics (mf a tempo, Fine). The third system includes fingerings (4, 5, 5, 5, 5, 5, 3) and dynamics (f, Ped. simile). The fourth system includes fingerings (5, 5, 3, 5, 5, 5, 4, 1, 4, 1) and dynamics (f, Ped. simile, dim., p). The fifth system includes fingerings (5, 3, 2, 5, 5, 4, 1, 5, 4, 1, 2, 3, 1) and dynamics (f, 8 Ped. simile, 8). The sixth system includes fingerings (5, 4, 3, 5, 3, 5, 4, 3, 2, 3, 1) and dynamics (f, p, D.C.).

# UP AND DOWN

Grade 3. M.M.  $\text{♩} = 112$

18th Century

The musical score for 'Up and Down' is written for piano in 6/8 time. It consists of one system of music. The first system includes fingerings (2, 3, 2, 1, 4, 5, 3, 4, 2, 2, 3, 2, 3, 1, 4) and dynamics (f, p). The key signature is one flat (B-flat).

The piano introduction consists of two staves. The right hand features a series of eighth-note patterns with triplets and slurs, while the left hand provides a harmonic accompaniment with chords and single notes. The key signature has one sharp (F#), and the time signature is 2/4.

Copyright MCMXXV by Oliver Ditson Company

# AT THE DERBY

WILLIS NORTHROP

No. 3. Allegro

The main body of the piece is written for piano and consists of several systems of two staves each. The music is in 2/4 time and features a variety of dynamic markings including *p*, *mf*, *mp*, *f*, and *sf*. It includes tempo changes such as *pochetto rit.*, *a tempo*, and *gliss.*. The piece is characterized by intricate fingerings, slurs, and a final flourish marked *sf* and *Λ*. The key signature remains one sharp (F#).

## SLEEPING WATERS

A piece in thoroughly modern style. The inverted secondary seventh chords in the left hand must be played very evenly so that the muted effect is maintained regularly. Although the pedal marking *una corda* requires the so-called soft pedal, as indicated, this does not mean that the damper pedal (loud pedal) should not be employed at the same time. In doing this, change the pedal to accommodate change in harmony. Grade 4.

# INDIAN FLUTE CALL

## FROM "MINISA"

At dusk he stood on the lakeside, yearning for his beloved;  
the call of his flute echoed plaintively cross hills and woodland.

This number from the impressive *Minisa* suite by one of the most distinguished American composers, Thurlow Lieurance, is arranged here as a piano composition worthy of a place upon the programs of our foremost virtuosi. Miss Lehman's transcription is thoroughly practical and is spread upon three staves in order to facilitate reading. Practice this for a few weeks, so that its delicate refinements may be developed properly.

Grade 7.

THURLOW LIEURANCE

This page of musical notation is for a piano piece, likely a solo or a part of a larger work. It consists of eight systems of staves, each containing two staves (treble and bass clef). The notation is highly complex, featuring many chords, arpeggios, and rapid passages. Fingerings are indicated by numbers 1-5. Dynamic markings include *p* (piano), *pp* (pianissimo), *mf* (mezzo-forte), *ff* (fortissimo), *dim.* (diminuendo), and *riten.* (ritardando). The piece is marked with a double bar line in the first system, indicating a section change. The notation includes many accidentals (sharps, flats, naturals) and slurs. The overall style is characteristic of early 20th-century piano music, possibly by a composer like Scriabin or Debussy.

Key markings and features include:

- Dynamic markings:** *p*, *pp*, *mf*, *ff*, *dim.*, *riten.*
- Rehearsal marks:** (42), (43), (44), (21), (23), (34)
- Fingerings:** 1, 2, 3, 4, 5
- Accents:** >
- Slurs:** Over groups of notes
- Arpeggios:** Indicated by diagonal lines and slurs
- Chords:** Many complex chords, some with multiple sharps or flats
- Section change:** Indicated by a double bar line in the first system

# MINUET, in G

## SECONDO

LUDWIG van BEETHOVEN

Arr. by Arthur H. Ryde

Allegretto moderato con grazia

The musical score is written for piano and features seven systems of music. The first six systems are in 3/4 time, while the seventh system is in 2/4 time. The key signature is G major (one sharp). The tempo and mood are indicated as "Allegretto moderato con grazia".

**System 1:** Piano section. Treble and bass staves. Dynamics: *p dolce*, *ten.*, *dim.*

**System 2:** Piano section. Treble and bass staves. Dynamics: *ten.*, *ten.*, *dim.*

**System 3:** Piano section. Treble and bass staves. Dynamics: *mp dolce*, *ten.*, *sostenuto*, *mf dolce*, *dim.*

**System 4:** TRIO section. Treble and bass staves. Dynamics: *pp*

**System 5:** Piano section. Treble and bass staves. Dynamics: *mp*, *mf*

**System 6:** Piano section. Treble and bass staves. Dynamics: *p dolce*, *ten.*, *ten.*

**System 7:** Piano section. Treble and bass staves. Dynamics: *mf dolce*, *sostenuto*, *f dolce*

## The Etude Music Lover's Bookshelf

(Continued from Page 572)

conductor of the court theater in Weimar, where he met a new flame, the Princess Carolyne von Sayn-Wittgenstein. Wagner, at the time, was in Zurich with his wife Minna, in the grounds of a large villa owned by Otto and Mathilde Wesendonck. From these beginnings, the author has built a tale with credible dialogue and situations not strictly historical, of course, but quite in line with what might have happened.

Cosima (*Cosette*) moves through the chapters like a phantom of fate, destined to wreck the life and ambitions of Hans von Bülow, whom she married, and to ride ruthlessly over the feelings of Minna, all for the purpose of ultimately bringing to Richard Wagner the help, understanding and inspiration for which he had longed for so many years. It is an interminable ethical problem, "Do the ends justify the means?" It is not settled in this book; and it is not likely to be settled in any book. Nevertheless, the material makes a mighty interesting story, and one which the author has worked out with fine consideration for history. His bibliographical list cites twenty-nine important reference sources. Many readers of *THE ETUDE* will find it most enjoyable.

## The Phenomena of Inspiration

There are few subjects apart from those sure fire journalistic magnets—sex, selfishness and survival—that draw the human imagination to texts more than that of inspiration, the mysterious force coming from somewhere and tenanted the human mind for a period during which it creates great and wonderful things for mankind. The writer of this review has never had any suspicion that the source of inspiration was not divine; and, moreover, after consultation with scores of men and women noted for their fine creative genius, he has found almost none who did not look to inspiration as coming from this same source.

We have seen many books upon inspiration, but very few that have had the significance to us that is contained in a little volume, "Creative Power," by Frederic Howard Griswold. Usually such books are pedantic, pseudoscientific, supertechnical, or just plain dull. We have felt that the time spent in reading them has been wasted.

Here, however, is a thoroughly readable book filled with interesting references which bring us a clearer light upon one of the most engaging problems of life.

Among the thousands of music students we have known, there has been a laudable struggle for higher technical efficiency. Laudable, because, before we can walk, we must first learn how to walk. Watch the little toddler in his first amusing efforts to stay perpendicular. It is his first great lesson in acquiring a technic. At last, he does walk. What then? Everything depends upon how and where he walks, that is, what he does with his walking technic. If he is inspired to do things that get him into trouble, he will walk toward them. If he aspires for higher things, his walking technic may lead him to them. That is, if he wants to do anything in life, particularly in the arts, he must have a technic; but the technic is only worth what his inspiration leads it to do.

Far too many teachers of interpretation and composition give their pupils technic galore and then leave them stranded with little idea of the meaning of inspiration. Schubert died resolving to study counterpoint. He knew that he was deficient in advanced technic; but there have been scores of composers with greater technic than Schubert who have been long forgotten because they did not have inspiration.

Therefore we feel that this book, although it is not entirely a musical book, is a very valuable one for supplementary reading and "cogitation." The teacher who can get pupils to think over the things he can learn in this book will produce finer results. Such chapters as "Can we saddle Pegasus?"; "Secrets of Great Creative Writers"; "Beethoven points the way"; "Brahms' Views on Inspiration"; "Inspiration and Dreams"; "How Tchaikowsky Invoked his Muse"; "Mozart Passes the Torch"; "Behold the Dreamer Cometh!"; "Revelation or Inspiration"; Utilizing Suggestion"; "Kipling's Daemon"; "Glimpses behind the Scenes"; "Genesis and Inspiration"; "Can We, Too, Invoke the Muse?"; and "The Power to Create Rests Within Us," all should be gold in the hands of the worth while student who remembers that the best, and often the most practiced, things in life are spiritual. For composers of all kinds and all ages, the book is a windfall.

## The Threshold of Music

(Continued from Page 570)

If the little markings below each chord are followed, it will be seen what it is all about. The first measure is in the key of C major. We start with an ordinary *re* seventh chord (27), alter it by raising D to D-sharp (27a), thus creating a false dominant seventh, and progress nicely into the tonic. The second measure is in the key of A minor (the relative minor). This key has several chords in common with C major, among them the same seventh chord on D which appeared in the first measure. This chord becomes the Fa seventh chord of A minor (47). We alter

it (47a). This, too, progresses nicely into the minor tonic triad. The third measure is like the second, except for the fact that we are now in A major, using 47 and 47a as borrowed chords, on loan from A minor. Thus far we have illustrated the *false* dominant seventh. The fourth measure presents the true dominant seventh, which, as will be seen, belongs to the key of B-flat major. It is included here so that you can observe for yourself that its sound is the same but its meaning quite different.

(Continued in *THE ETUDE* for October)

"There are now more than one hundred and seventy settlements in the principal cities of America which have non-profit-making music schools, music departments, or organized social music. Eventually every settlement must have a music department. We in the settlement field look upon music as a part of life experience; we are not primarily searching for exceptional talent."—Mrs. Frances McElwee McFarland.

## PIANO TEACHERS!

HERE'S AN OPPORTUNITY to become a local service representative for one of the world's great pianos—MATHUSHEK.

Distinguished in the field of fine piano building since 1863, MATHUSHEK PIANOS are acknowledged as being among the outstanding creations in the progressive development of the piano.

We suggest communicating with us for further details regarding this opportunity. Or if you happen to be coming to New York for the World's Fair and we have come to a tentative agreement, we will ask you to be our guest for a day at the well-known Narragansett Hotel in New York. After a visit to the factory, negotiations may be completed.

Write immediately for details regarding available territory which does not conflict with our present dealer relationships. Special preference for accredited teachers.

Music Lovers: Write for Mathushek's Musical Map of Manhattan and the Fair!

## Is Singing a Gift or An Acquirement?

By

WILLIAM G. ARMSTRONG

### Part II

NOW WHILE STILL WAITING for breath development, we have to do something about range extension, and we reason so: If we take this voice up the scale, we are going to cause a succession of efforts as the voice ascends to higher and higher notes. With dependence upon a breath supply not yet assured, that succession of efforts will bring back the old contraction of the throat and tightening of the jaw; whereas if we start the voice on an upper note, say C in the third space of the treble staff and bring it downward, we shall have in place of the succession of upward contractive efforts, the single effort of starting the voice, and an easy dropping of the voice from the C downward. Quite similar to starting upstream, and floating down with the current, instead of starting downstream, and paddling upstream against the current. Yes! And so, we decide upon an exercise of this type:

Lankow

Why the prefix "d"? To steer clear of the throat contracting influence of the "glottis stroke." Why preferably the vowel "o"? Because where there is contraction of the throat, there is always an elevation of the tone; and the effort made to form "o," lowers the tongue. But will not the setting of the lips tend to tighten the jaw? Yes! How shall we avoid this? By just a suggestion of a smile. Is this exercise applicable to the male voice? No! We use one of this type for the male voice:

Now toward this range awakening, there is one essential of which we must be assured, and that is that the nasal resonator is playing its part. So again we reason: If we instruct the student to add nasal resonance to his tone, he will be sure to contract his throat in his effort to do so; whereas, if we place the consonant "n" before the dark sounds "o" and "aw," and instruct him to direct his voice downward to his chest, we shall, through the nasal influence of "n," and the downward thought, be adding nasal resonance, and preserving dilation of the throat; and this without his knowing that he is making use

of his nose. Hence the exercise.

Later other vowels are added, forming no, naw, noo, nay, ne, with the vowels "a" and "e" darkened, and the jaw active.

Another essential is a well arched palate; and for this we choose one of a number of exercises used by Anna Lankow for awakening extreme high notes in the voices of her female pupils, for which she was famous.

To be sung slowly. There should be an upward gaping sensation accompanying the singing of the upper notes, with the jaw dropping well, and the tongue lying quietly with its tip touching the lower front teeth throughout the exercise.

Here is a palate arching exercise for the male voice.

The upward gaping sensation, advised in the case of the female voice, is to be adhered to, and most marked in changing from the sound "aw" to "ü." In making this change, we shall not try to give "ü" its true character, but only approach it, or borrow from it; and, when making the change, we shall hold the tone well focused on the upper front teeth; otherwise the tone will be, very likely, excessively "covered." Different voices change at different notes; but all, male and female, change within the second interval C to F-sharp, so that by transposing the exercise upward in semitones, we find the point where all voices change; and that change is always to the short sound of the vowel of the moment, or the short sound of another.

This carries us into the "old song," registers; but as it is our intention to take up that subject later on, we shall only touch upon it here.

It is possible to sing all vowels in their true characters on medium low, and medium high notes; but when a certain low and high note is reached, comfort demands an alteration of vowel character. The most pronounced alteration is made in the low range of the female voice, and in the high range of the male voice. When the female

voice reaches a certain note in its low range, tone is "opened" in order to reach lower notes; while when the male voice reaches a certain high note, tone is "covered" in order to reach higher notes. The female voice is covered also in the high range, but not to the same degree as the male voice. But, we are getting far afield, and must call a halt somewhere—so just an exercise, for the time being.

For the female voice,

take this final phrase of the song, "The Star," by Rogers, and,

1. Sing the phrase slowly, and on the breath, and with no attempt at great power.
2. Pronounce the word *with*, or *withc*.

JENNY LIND

3. Open the mouth well for the sound "i" in eyes, and hold "i" well focused on the upper front teeth while slurring it down to the note A, and on to the word "on."
4. Give to the final sound of the word "eyes" the sound "Z."
5. Dwell for a moment on "n," in the word "on" before passing to "th" in the word "thee," and dwell for a moment on "th" before passing to "ee" in the word "thee."
6. Sing the phrase as one word, or, as an uninterrupted flow of tone changing in color, as: "witheallits-eyeszonthee." (Note: This is an exercise for mechanical control, and not for diction).

Preserve an upward gaping sensation and a smiling position of the lips throughout the exercise, and keep the jaw active. The whole idea is to prepare for the coming drop from the note G to the note A, so that, when it comes, the tone will remain focused on the upper front teeth, instead of, as it were, dropping suddenly to the lower throat and chest.

For the vowel alteration necessary to the high range of the male voice, we use Exercise 7.

So far, so good. What is needed for this "voice in the making," is flexibility, and accordingly we add exercise of this nature.

This we follow with a vocal study invented by Manuel Garcia who made Lind a singing marvel for all time.

These exercises are sung both *legato* and *staccato*; and quickly. A smiling position of the lips is to be preserved throughout the exercises, that the lips may not set stiffly for the vowel "o."

For male voice flexibility, we recommend

Our next need is an exercise "mezzavoice (medium voice)" emblematic in the high range.

This exercise is to be sung on breath; the lips expressing a smile; an upward gaping sensation marked approach to the *pianissimo* note. This instruction to experience an upward gaping sensation, is just another way of asking the student to arch his palate.

The next requirement is accurate fluent enunciation of vowels, and articulation of consonants, and for this, the following:

Do re mi fa so la si do re,  
Re mi fa so la si do re mi,  
Mi fa so la si do re mi fa,  
Fa so la si do re mi fa so,  
So la si do re mi fa so la,  
La si do re mi fa so la si,  
Si do re mi fa so la si do,  
Do la so fa re mi do si la.

Sung as rapidly as possible with the exaggeratedly active, and the r's rolled.

Each group is sung on a note of descending diatonic scale, starting Middle C for the male voice and the third space treble staff C for the female voice. Upward transpositions stop at E.

We have now made such progress in the way of breath development, flexibility of the throat and jaw muscles, and extension, that we may leave further development of breath capacity, retention and outgoing control, and vocal dexterity to the enthusiasm of the student, and to what progress we have made to songs.

# Artistic Tones

By

HERBERT WENDELL AUSTIN

"ARTISTIC TONES" we do not mean a show off demonstration of technical skill, but good, pure enunciation, an achievement for which every singer should strive. This enunciation is practiced so much that the professional beautiful, full, round tones become the singer's "second nature," so that when traces of affectation vanish, enunciation is bad singing, no perfect tune and time may be. A voice is really a good musical instrument until it has attained some skill. The singer not only should pronounce every word plain, but distinct from the rest thereof; but he also should be beautiful by clothing it in lovely tones. No affectation here—when the singer has enough time in practice to make it natural. It requires no more effort to drop off words correctly than it does to utter them awkwardly, and unattractively. And the voice may be improved to that fine point where it produces good enunciation. First, the singer should pronounce every word correctly; yet the aesthetic ear is object to a mild modification in the enunciation of certain syllables (in which such modification beautifies and softens all the tones that are being produced). However, one ought to have a good excuse for departing, even for one syllable only, from the normal forms of pronunciation. A good excuse is as essential to the singer as to the public speaker or the writer.

## The Fundamentals of Song

Singing, vowels and consonants demand consideration; though most of us tend to drop off our consonants nimbly and free use of the lips and tongue. Vowels are slighted, flimsy, empty, and when they should be rich, round, and characteristic, and pleasingly. This is attained only through practice.

With the syllable "Ah." Speak it with an open throat, and with the mouth open, smiling position. Place the tongue flat forward, as if the tone were to come from a few inches in front of the lips, and the sound on some medium pitch. Concentrate on the production of a rich, full tone. Relax the muscles of the throat as much as possible. Try to eradicate the feeling of tenseness in any muscle. Strain for power. Intone the sound as fully as possible. Usually, the lower tones drop involuntarily to a good position when the jaw and throat muscles are relaxed.

Sing the same syllable on different pitches. Sing the tones of the diatonic scale, using *Ah* as the syllable, and to make the progression from one tone to the other very smoothly *legato*. Concentrate on purity and quality of tone in each pitch.

Practice the same thing with other syllables—*la*, *ha*, and so on. Sing in scalelike fashion for awhile; then practice the syllable skips. Strive for quality—a well-toned, free flowing and resonant tone in each pitch. Do not force the voice in an effort to produce greater volume; it will only produce vocal habits if not to critical injury.

Soft tones produce covered tones; and harsh tones are taken with rounded lips,

in a sort of whistling position. Sing diatonic scales and melodies using *oo* as the vowel. Use also *moo*, *boo*, *too*, *loo*, *doo*, and so on, for the same practice. Get the covered tone feeling. The *oo* sound will be found in many words, such as *moon*, *croon*, *June*, *blue*, and *you*. Sing such words on different pitches, striving for quality of tone, purity of vowel.

*O* should bring a round and full tone—vibrant and pleasing. Half vocalized, it does not sound well. Coming directly from the voice box, and taking on its characteristic tonality in the cavities of the mouth, *O*, as a vowel, is beautiful and solemn. To produce this tone, the lips should take a rounded form as described for *oo* sounds, except that the aperture is larger. Sing this sound to exercises suggested for other vowel sounds. Also sing words such as *flow*, *go*, *sow*, and *snow*, to scales and melodies, working as always for tonal quality instead of for tonal power.

*Ee* sounds bring the voice forward. Make them rich and ringing by impelling the voice against the hard palate just above the front teeth. The male voice sometimes encounters trouble in handling these sounds well. They expose bad voice qualities quite readily. Practice daily the syllable *tee*, *mee*, and words containing those sounds.

*A* and *I* sounds, if practiced as suggested for the other vowels, seldom give trouble. Try to render them in pure, characteristic quality.

We still have another beautiful sound found in *ou* as in *out* and *round*. Such sounds are sung flatly by untrained singers; but, when rendered pure by the good vocalist, they may become sounds of lovely quality. Essential syllables of many words have this *ou* diphthong, which should be purely vocalized for effective singing. Practice *ou* sounds as you do the other vowels.

## Putting Them to Use

AFTER LEARNING TO PRODUCE the suggested sounds, as recommended, mix them. Sing entire scales and melodies, using mixtures of *ah*, *o*, *a*, *oo*, *e*, *ou*. Work for free, flowing, characteristic tones; for quality, and not for power.

Be patient and faithful in this vowel practice. Do not be too anxious to rush into actual exhibition song. By no means leave this vowel practice, until the vocalizing of the characteristic vowel sounds has become a second nature—so much so that words containing them will be properly enunciated and vocalized.

Having practiced the vowels, go over the song you are to sing. Study its words—each one. How can you make each of them beautiful, through what you have learned about vowel sound production? Sing slowly, smoothly, giving attention to proper pronunciation and full enunciation.

In no case should the practicing student overdo the thing. When the voice mechanism begins to feel wearied, take a rest. Prolonged practice may do more injury than good. Fifteen to thirty minute practice periods are usually long enough for any voice.

Remember all along that a loud voice is not necessarily a good voice; that quality is more important than power. Remember further that, no matter how poor may be the voice, it can be improved by diligent practice of the vowels, as here suggested. No effort, with a good purpose, is in vain.

\*\*\*\*\*

"It makes me wild when I have to contend with that insane idea that the best singing is done and the 'best' repertoire is written in foreign languages. America could lead the world in composition and in concert and opera singing if we would only, among ourselves, quit talking about foreign languages and quit using them in our opera houses and concert halls."—William Brady.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## Making Acquaintance of a "Unit Organ"

By EVERETT E. TRUETTE

*The late Everett E. Truette left an incomparable legacy to better organ playing in America. Born March 14, 1861, at Rockland, Massachusetts, he graduated from the New England Conservatory, and later studied with August Haupt in Berlin, Alexandre Guilmant in Paris, and William T. Best of London and Liverpool. He held an eminent position among American church organists, and as a concert artist gave over four hundred recitals from coast to coast. For ten years he was Editor of the Organ Department of THE ETUDE, and this article is one of the last from his prolific and learned pen.—Editor's Note.*

YOUNG, AND ASPIRING, ORGANISTS frequently ask the question, "What is a Unit Organ, or a unified Organ"? And, to clarify these problems in the minds of readers of THE ETUDE, we have had pleasure in preparing this rather detailed description of such an instrument and now the uninitiated may become acquainted with it.

A pipe organ is an expensive instrument. It costs a large sum of money, and occupies a large amount of space in a church, theater or hall. Naturally, efforts have been made for years to reduce the cost and to reduce the amount of space required. One of the first results of these efforts was the borrowing of the 16 ft. Bourdon of the swell organ for a soft pedal stop named, "Lieblich Bourdon," or "Lieblich Gedeckt," without adding any extra pipes. With the advent of electric action, this borrowing of a stop from a manual for the pedal proved to be a simple mechanical process, entailing only a small amount of extra wiring or possibly a different kind of a magnet.

For the sake of clearness it may be stated, that a "borrowed stop" is a second drawstop, by means of which the individual stop, whose name it bears, can be played from some other keyboard than the one with which its first drawstop is primarily connected, without the assistance of a coupler. For example, if one draws the Sw. Bourdon 16 ft. and the Sw. to Ped. coupler, the Bourdon can be played from the pedal keyboard. If, however, any other stop of the swell organ (Oboe, for example) is drawn at the same time, it will sound on the pedal, as long as the Sw. to Ped. coupler is on.

On the other hand, if the Sw. Bourdon is borrowed on the pedal, and one draws the extra drawstop labeled, "Ped. Lieblich Bourdon," that one stop, and no other stop of the swell organ, will sound on the pedal. If the Sw. Oboe is drawn at the same time it will sound on the swell keyboard but not on the pedal. The 16 ft. Dulciana of the choir organ has likewise been borrowed on the pedal and named "Ped. Dulciana," without the addition of the word "Lieblich."

There is another system of borrowing, or partial borrowing called "augmenting," which first came into use with the pedal organ. This consists of extending the compass of a 16 ft. pedal stop by the addition of twelve small pipes at the upper end of the stop. By omitting the lower twelve pipes and using these added pipes at the upper end of the stop, the stop becomes an eight-foot stop. With these forty-two pipes, we have a 16-ft. and an 8-ft. stop, whereas it would require sixty pipes if the stop were not augmented. The added twelve pipes cost less than one-quarter of the amount for the full thirty pipes, and occupy less than one-quarter of the space that the full set of pipes would require.

The organ builders, finding it a simple matter to borrow a stop of one department of the organ for another department, proceeded to borrow stops of one manual for some other manual, and in time all, or nearly all, of the stops of the swell organ

were borrowed for the great organ substituting these borrowed stops of the swell organ for the usual stops of the organ. Obviously this borrowing resulted in a great saving of space and money. "Borrowing" and "augmenting," described above, are the germs from which "Unit Organs" have been evolved.

By referring to Figure 1, it will be easily understood how the pipes of the Gedeckt are playable from the manual by means of the drawstop (b) electric wires (c). The same stop can be borrowed on the great manual by means of the drawstop (d) and wires (e) or the choir manual by means of the drawstop (f) and wires (g); also on the pedal board by means of the drawstop (h) and wires (i).

Extending this principle of borrowing and adding a generous amount of imagination, the organ builders borrowed the Oboe of the Swell Organ (Fig. II) from the Great manual and called it "Gt. Oboe"; also on the pedal keyboard called it "Ped. Tromba." Obviously the tone of the Oboe is unlike that of the Clarinet; but, both being reed tones, the former can be substituted (with the aid of the imagination to which reference has been already made) for the latter. Still more imagination the Oboe can be substituted for the Ped. Tromba. With still greater extension of this principle of borrowing, many of the stops were borrowed on different keyboards, using the same or different names for the borrowed stops.

Referring to Fig. III one will observe how the Gedeckt (or St. Diapason) can be augmented from sixty-one pipes to ninety-seven pipes, in order to provide the one set of pipes four distinct stops: Bourdon 16 ft., by adding twelve pipes below the compass of the Gedeckt; Flute 4 ft. and Flautina 2 ft., by adding two four pipes above the compass of the Gedeckt. (It should be noted, in passing, that the Gedeckt is rarely augmented above its usual compass to provide the Flautina; this stop being more often obtained from the augmentation of some other stop. In this particular instance it is added for illustration of the principle of extended augmentation.) By this system of augmentation, the ninety-seven pipes provide the four stops, Bourdon Gedeckt, Flute 4 ft. and Flautina. With augmentation, the four stops would require four hundred twenty-four pipes. The saving of expense and space will be evident to everyone. As this article is purely descriptive, it is unnecessary to enlarge on the musical disadvantages of such augmentation and borrowing.

In a Unit Organ nearly every stop of pipes is augmented to seventy-three or eighty-five (sometimes ninety-seven) pipes so that separate stops (of the same tone color) of 16 ft., 8 ft. or 4 ft. (sometimes 2 ft.) can be obtained from each set of pipes by borrowing. Each group of six pipes is borrowed on each of the manuals and many groups of thirty-two pipes are borrowed on the pedal. In some organs only part of the stops are "unified" (augmented and borrowed), the rest being what are called "straight stops."

Fig. IV illustrates the specification of a much unified organ which was sponsored

# INVEST YOUR MUSIC MONEY WISELY

WHY IS the Bible the cheapest book in the world? Why can you purchase the complete works of Shakespeare at less than the cost of the latest novels? The answer is simple—mass production; no royalties; constant demand.

By the same token you can buy Beethoven's Moonlight Sonata—15 pages of the world's best music—for only 15¢ in the CENTURY EDITION. Beautifully printed, carefully edited, the best of paper and workmanship throughout.

Think of it! Over 2,000 selections to choose from and none of them cost more than 15¢. A century Sheet Music is truly dollar value for 15¢.

TEACHERS who are today employing their pupils' aids from the Century catalogue are making it possible for many parents to continue their children's musical education, and its low cost is likewise aiding them in their new student enrollment.

That's why we say, "Please Ask for Century Edition." You will get a new conception of your money's worth.

| TOTAL SETS PIPES 8 608  |       | TOTAL DRAW STOPS 36                                      |   |   |

Figure IV

is shown the eight distinct sets of pipes, from which the whole organ (thirty-six drawstops) is made up. The second column indicates the number of distinct pipes in each set. The third column gives the individual stops borrowed on the pedal keyboard. The fourth and fifth columns show the individual stops borrowed on the great and swell manuals. With several of the borrowed stops the name of the stop is changed, to conform to the usual name of such a stop in that department of the

pedal note, two notes in the left hand and three notes in the right hand, using all the stops except the Voix Céleste, would sound 53 pipes. On a straight organ the same chord would sound 130 pipes.

During the past year or two very large unit organs have been constructed, principally for theaters. One with thirty-nine sets of pipes has 326 drawstops. This organ is mentioned specifically, simply to indicate to the reader the "inflating possibilities" of the "unit" principle in organ construction.

## Interesting Facts About Organs and Organists

By MILDRED MARTIN

**H**ISTORICALLY, THE ORGAN is one of the most ancient of all musical instruments. In the book of Genesis we read, "And his brother's name was Jubal; He was the father of all such as handle the harp and organ." Jubal, as we know, lived in 4004 B. C., and at that time the harp and the organ were considered the higher forms of musical instruments.

It is thought that the early organ was the Pan's pipe or syrinx of the Greeks and was "made of reeds of unequal length and thickness, which were joined together." At first two reeds or pipes were used; later there were seven; and still later the number was further increased.

In ancient days, the organ was spoken of as "an instrument of pleasure and praise."

History tells us of a barber by the name of Ctesibius, who lived about 284-246 B. C. and invented an organ. He had noticed that the counter-weight of a movable mirror produced a musical sound by the force with which it drove the air out of the tube in which it moved. By experimenting, he succeeded in producing powerful sounds from water pumped into a vase which had a trumpet attached to the top. Not entirely pleased with the result, he continued the experiment and finally arranged a row of pipes in the order of a musical scale, that could be made to sound at the will of the player. The motive power was supplied by water. This instrument was called the "Hydraulus" and is considered to have been the predecessor of the organ of to-day.

In the museum at Naples, there are two hydraulic organs, which were excavated from the ruins of Pompeii, destroyed by an eruption of Mt. Vesuvius, on August 24, 79 A. D.

It is interesting to trace the development and use of the organ. About the year 450 A. D. organs were in common use in the churches of Spain. Pope Vitalian introduced the organ in Rome, in 666 A. D., "to improve the singing." Just about one hundred years later, they came into use in England and France; and in 811 or 812 the first organ was introduced in Germany, at Aachen (Aix-la-Chapelle).

Pope John VIII, in the year 880, sent to Germany for an organ and a teacher to "instruct the Roman artists."

In the tenth century St. Dunstan built an organ for Abington Abbey, England. It is quite generally thought that the Romans had the first balanced keyboard; however, the first one was used in Madgeburg in the eleventh century. It had sixteen keys, each having a width of three inches.

The early organs were built in the churches and not in factories as is the organ of to-day.

How very strange the instrument mentioned as "the Winchester organ" would look to us with its four hundred bronze pipes, two manuals of twenty keys each, and with the note name lettered on each key. When the keys were struck the wind was given to ten huge diapasons tuned in octaves, or perhaps in octaves and fifths.

Byzantium (Constantinople) was the first city to become an important center of organ building; and it was there that the first pneumatic organ, with the wind supplied by bellows, was used.

As late as 950 A. D., history tells us that "seventy men, acting as blowers," were used in Winchester Cathedral.

Prior to the sixteenth century, organ making was entirely in the hands of the Monks; but after that time the trade was learned by those outside the church.

*... yet only one of hundreds!*

C. Glenn Amps of Johnstown, Pa., pictured above, writes: "Although I have played many organs, I can truthfully say that for beautiful, cathedral-like tone, instantaneous response, perfect workmanship and great economy, I prefer the WICKS to all other makes of organs. I have never had a silent note or cypher since installation two years ago."

# The Fascination of Two-Piano Playing

(Continued from Page 567)

Whiteman, and other conductors of popular ensembles, began to employ two pianos; and for years the now well known composer, Ferde Grofé (who arranged Gershwin's *Rhapsody in Blue*), was one of a two-piano team which contributed much to Mr. Whiteman's success.

## An Art With An Individuality

"TWO-PIANO PLAYING of the higher type cannot be compared with solo playing. They represent two entirely different arts, with greatly different objectives. The resources of two-piano playing are naturally greater, in many particulars, than solo playing; because there are twenty fingers and two pairs of brains involved! When the two performers have arrived where the problems of a perfect artistic ensemble have been mastered to the point of becoming second nature, the possibilities for a forceful musical expression are great indeed. Here they are giving 'imagination' its full chance and justice! With the greater resources of pedal effects, tone coloring and adjustment, which two pianos offer, and with a greater technical coloring and emotional range at their command, the performers are indeed inspired to orchestral heights. Two players with distinctive and individual musical and artistic personalities will fit into this marvelously artistic scheme more forcefully and effectively than two pianists who are as much alike as identical twins.

"When the number of pianos is increased, the opportunity for artistic effects is diminished accordingly. The giant ensembles, say from ten to a hundred pianos, while entertaining from the standpoint of a 'stunt' and of creating an interest in the instrument itself, do not provide an easy opportunity for rehearsals and cannot realize all that two pianos can achieve in the way of a finished product.

"Two-piano playing, that suggests just the mechanical, naturally must be avoided, no less than the curse of Hades! Precision there must be, of course, but anything which suggests wheels, levers, cams, bolts or gears, would support the old saying, 'What is worse than one piano? Two pianos!' And I would add another bit of advice, 'Burn up the instruments and assassinate the players.'

"How should one start two-piano playing?

"First, with a certain degree of individual advancement in solo playing. A beginner in two-piano playing must have a good knowledge of the instrument's resources for tone production and a fairly good command of technic. The easy transcriptions by Bach, and other classics by Guy Maier, and those by Mary Howe, are excellent material in this type of work. Of unusual interest is the second piano part to the Bach "Two-Part Inventions" ingeniously written by Louis Victor Saar. Students practicing the "Two-Part Inventions" will find it refreshing to try them with the additional piano. Ensemble playing, that is, playing together with precision, must be mastered and forgotten, just as one masters the technic of the piano itself. Not until this occurs can there be any emotional beauty.

"How much time should be spent on rehearsals?

"As much as is at all possible. It takes hours, days and months of indefatigable labor at the dual keyboards to conquer the difficulties that stand in the way of beautiful coloring, rhythms, and dynamics. The players must learn to listen to each other so acutely that, with years, something resem-

bling a kind of mystic musical telepathy is developed. At all times, the ear must be intensely alert.

## An Abundant Repertory

"THE REPERTORY FOR TWO-PIANO PLAYING is far larger than most people realize.

"Mozart has given us two sonatas (D major and F major); a "Concerto in E-flat, for Two Pianos and Orchestra"; and a *Fugue in C minor*. Edvard Grieg added a second piano part to Mozart's piano sonatas Nos. 3, 4, 5, and 18, thus making them available for duo-pianists.

Clementi: Two Sonatas.

Schumann: *Andante and Variations, Opus 46* (first played in public by Mendelssohn and Clara Schumann).

Chopin: *Rondo in C, Op. 73* (effectively abridged by Lee Pattison).

Liszt: "Concerto Pathétique" (without orchestra).

Brahms: *Masterful Variations on a theme by Haydn*, considered by many "the most inspired and inspiring achievement in two-piano literature."

Grieg: *Romance and Variations, Opus 51*.

Edward Schütt: *Variations, Opus 9*.

Sinding: *Variations E-flat minor*.

Camille Saint-Saëns was especially fond of two-piano playing and valued it very highly. Among his best compositions are the famous "Carnival of the Animals"; *Variations on a theme by Beethoven*; *Caprice Arabe, Opus 86*; *Danse Macabre*; and *Scherzo*.

Emmanuel Chabrier: *España* (transcribed for two pianos from his popular rhapsody for orchestra), and three *Valses Romantiques*.

Martucci wrote also an interesting *Theme with Variations* for two pianos, performed in this country several times in 1932.

Rachmaninoff has contributed two beautiful suites for two pianos; and we must not forget the popular suites of Arensky, who had a marked aptitude for two-piano writing.

Arnold Bax, among English composers, has contributed a number of tone poems, including *Moy Mell* or *The Happy Plain*, *The Poisoned Fountain*, and *Hardanger*; Norman O'Neill, a *Variations and Fugue on an Irish Theme, Op. 17*; and Sydney Rosenbloom, a *Variations and Fugue for Two Pianos*.

These are but a few of the outstanding numbers written for two pianos. We have a great number of transcriptions, among which must be mentioned Louis Victor Saar's arrangements of the mighty *Passacaglia* and *Chaconne* by Bach; Vivaldi's "Concerto Grosso in D minor"; and Giovanni Battista Martini's *Prelude, Adagio, and Fugue in B Minor*, all unpublished. Maurice Ravel transcribed Debussy's *Fêtes, Sirènes, and Nuages*.

The increasing popularity of two-piano playing has encouraged composers of every nationality to write for this combination, and practically every pair of the present well known duo-pianists has been honored with two-piano works written especially for them. American composers, also, have written excellent works for two pianos, the most recent being the brilliant piano concerto by Harl MacDonald. Leo Sowerby has written a beautiful *Ballade* for two pianos and orchestra, which has been frequently performed by Maier and Pattison. Lora Aborn's *Fugue in Yellow*, dedicated to us, has been received with fine favor. She is now writing a *Rhapsody* for two pianos and orchestra for our duo.

"We have had great success with Castelnovo-Tedesco's *The Little Siren and the Bluefish*, still unpublished; his "Alt Wein Suite"; and also with Casella's "Puppet Pieces" and *Fox Trot*, which are inimitably humorous. Stravinsky's "Concerto for Two Pianos," without orchestra, is a notably brilliant work. Poulenc's "Concerto for Two Pianos with Orchestra" has been

# ORGAN AND CHOIR QUESTIONS Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I am enclosing a diagram of our church auditorium and choir loft. Is there a standard way of arranging sopranos, altos, tenors and basses? In our case should the altos and basses be placed nearest the organ?—E. N.

A. The conventional way to seat a chorus is sopranos and tenors on the conductor's left, when facing the chorus, with altos and basses on the right. This, of course, can be changed if advisable, for giving more prominence to some weaker part, and so forth. In your case, apparently none of the singers face you unless it should be the end singer or singers on the back row, so that you would probably be justified in having the choir arranged so that the congregation may have the benefit of the best results. It might be advisable for you to do at least part of your rehearsal, facing the choir (using piano for accompaniment, if necessary and advisable), so that you may judge the balance of parts, and so forth. The relative position of the organ (console) and your choir, does not appear to be a very satisfactory arrangement for the organist to hear the choir to advantage.

Q. At present I have a one manual reed organ. Of late I have been working on a plan to add, perhaps, two additional manuals and at least two more sets of reeds and pedals. Will it be possible to obtain reeds which will give good 8' and 16' tones for the pedals? Where can I get reeds for both the manuals and pedals? If I enlarge the instrument to the size mentioned will I have to enlarge the air chamber, and can the instrument be supplied by a suction fan, or should I turn the reeds over and supply pressure the same as for a pipe organ? How can I make an effective tremolo? I have a practical knowledge of electricity and have an electric contact system planned, instead of the old mechanical system. Will this be better? While I am making these changes would it be better to add more sets of reeds than I have mentioned? Do you think the idea fantastic—will it really work? Is there any book which might help me? Is it possible to get reeds that will produce different tone colors?—C. H.

A. We suggest your communicating with the makers of the organ, the W. W. Kimball Co., Chicago, Illinois, and asking their advice about new reeds. They might also advise you as to the size of the air chamber. On general principles, we think it should be enlarged. We cannot tell you whether the reeds would act satisfactorily under pressure instead of suction. Pressure was used by one maker of reed organs, but the firm we believe was taken over by another organ company, and we think the making of the instrument has been discontinued. If your present instrument has a tremolo you might use it in the new instrument, or, if it is not large enough you might pattern a new one from it. You, being a practical electrician may be better able to judge as to the advisability of installing the proposed electric action. You do not state the size of your present instrument nor the names of the stops you propose adding, therefore we cannot advise you as to whether more additions would be advisable. We do not feel that the results you would attain would justify the amount of work necessary for the changes you have in mind. We understand from Emerson Richards, of Atlantic City, that there is a very complete book on how to build a reed organ, by H. F. Mallin. You might secure information as to electric action from "The Contemporary American Organ" by Barnes. Both these works can be secured through the publishers of THE ETUDE. It would be possible to secure different quality reeds, but there is very little variety to reed tone colors.

Q. I am playing a three manual theater organ, and I cannot discover how to set the pistons. On the organ shelf just below the right hand side of the lowest keyboard there is a lever, or stop, which I suspect has something to do with the piston combinations. One end is marked "on" and the other "off." The words in the middle of this lever resemble "Mast Exp." At the right side of the uppermost keyboard there is a similar working lever marked "Unison on or off." Please explain the working of this lever.—G. F. L.

A. We cannot advise you definitely how to set your combinations. The two systems principally in use are: 1. Where the pistons are held in while the stops are changed—namely—hold in the piston on which stops are to be set—move the stops "on" or "off" as desired and release the piston. 2. Where the adjustment is made by an adjuster, when the procedure is (a) set the stops desired, (b) put on adjuster, keeping it on, (c) push in the piston which is to receive the combination, (d) release piston, (e) release adjuster. Instruments are also built with both systems of adjustment. The lever marked "Mast Exp." we presume is a device for locking all swell pedals to one pedal so that it will be necessary to operate one pedal only. This, of course, prohibits individual expression and can be

used only when such expression is not wanted. The lever "Unison on or off" controls unison speech of stops on the manual which it is effective; that is, if "off" it cuts the unison tone and speaks only through couplers in operation. For instance, draw a stop on the proper manual and place the piston lever at "off." The stop will not speak; by the use of manual 4' or 16' couplers, or unison couplers to another manual pedal, the stop will speak at the pitches suggested by the couplers in use.

Q. I am enclosing specification of a 1 manual theater organ. Will you send me a few combinations building up from very low to very loud? I would like combination arrangements that are suited especially to theater playing. Will you give me a list of stops and explain the required playing technique for a "Bagpipe Arrangement"? Where can I secure a copy of the book "Theatre Organ Tricks and Secrets" by C. Roy Carter?—X.

A. The specifications of your instrument indicate it to be a typical theater organ, a not of the "build up" type (no Diapason). It is difficult, without hearing the instrument, suggest a registration from very soft to very loud. You might start with Concert Flute 4' add the stops in the order you find most agreeable after experimenting. You have many effects, and we suggest experimenting with these stops also. Stops of the Tibia family are usually popular in theater combinations, but your specification does not include this family, at least not by name. You might try Doppel Flute as a substitute. For "Bagpipe Arrangement" we quote from "Organist's Photo Play Instructions" by May M. Mills, "Organ registration suitable to produce bagpipe effect is:

Clarinet and Violin 4'  
Kinura and Violin 4'  
Clarinet and Kinura  
Oboe, Alone  
Musette, Alone  
Musette and Violin 4'

Use both hands on same keyboard an octave or more apart. Play bass drum in pedals. There are usually three pipes, one plays the air very high, the other plays one sing-song note called the drone bass, and to obtain the drone bass imitation pump the swell shades 2 pedals.

We cannot tell you where you might secure a copy of the Carter book.

Q. I am attempting to play the organ in our church. There being no instructor available, I have depended on the information I get from THE ETUDE. I have studied "The Organ" by Stainer. No music that I have studied has had a registration that I can use on our organ, so I have to use guesswork in selecting stops. I am enclosing a list of the stops. Can you suggest any instruction books or music that will aid me in knowing what stops to use? I am interested principally in hymns, preludes of simple style, and simple music that I can use for practice.—H. B.

A. Your instrument is undoubtedly simple and unified—that is, the stops of Great and Swell of similar names are duplicates and the 16' and 4' stops are extensions of 8' stops. We will try to give you some idea as to stops that might be suggested as substitutes. You do not have any of the so-called "string" stops such as Salicorno, Gamba and so forth. Flute 8' might be used to take the place of Stopped Diapason. Stopped Flute or Gedackt 8'. Open Diapason (if not too loud) might be used for Viol Diapason or Gelgen Principal, though we imagine it would be too heavy unless enclosed and the expression box closed. Oboe can be used for solo effects that call for Oboe. English Horn, Clarinet or Cornopean, though of course it will be a substitute and not an imitation. Box Humana can be used where that stop is required, or it may be used as an occasional substitute for Vox Celeste. Acoline is usually soft organ tone, but if it is "stringy" it can be used as a substitute for Salicorno; and, with tremolo, as a Vox Celeste. The "Vox Tremulant" is to be used as a tremulant when the Vox Humana is in use. Sub Octave couples one octave below the notes being played, and we presume Trem Octave to be a super-octave coupler, coupling one octave above the notes being played. For congregational singing of hymns we suggest the use of Open Diapason, Flute 8', Flute 4', Octave 4', Oboe and Pedal Bourdon. Since these manual stops appear on the Swell organ (the Octave 4' is not included in the Great organ specification), add Swell 4' Pedal. If additional brightness is desired include Treble Octave. We suggest the following books for your use: "Primer of Organ Registration," by Nevins; "Church Music for the Smallest Organ," by Nevins; and "Primer of the Staff Organ Book." We suggest also that you read the information on stops included in "The Organ" by Stainer.

# 4 EARLY GRADE PIANO COLLECTIONS YOU SIMPLY MUST BUY!

PUBLISHERS:

**HAROLD FLAMMER, INC.**

10 East 43rd St., N. Y.

ILLUSTRATIONS FROM FAVORITE PIANO ALBUM

## ① Mastery of Technical Problems—McIntosh .60

A collection of 9 best selling pieces with distinct teaching points

### CONTENTS

Wood Nymphs' Frolic  
Sing Lee, China Boy  
Fairy Barque

The Arab  
Chinese Lanterns  
The Wavelet

Penny Whistle  
Springtime  
Pickaninny March

## ② Ten Descriptive Sketches—McIntosh . . .60

A collection of 10 pieces selected to develop style in playing and to provide drill in a variety of technical problems

### CONTENTS

Waltz of the Toys  
Hop O' My Thumb  
Bagpipes in Dundee

Indian War Call  
March of the Candy Soldiers  
Banjo-Pickaninnies

## THE ACCORDION DEPARTMENT

### Secrets of a Big Technic

By CHARLES MAGNANTE

An Interview with PIETRO DEIRO As told to ElVera Collins

Manhattan Merry-Go-Round, Music International, Hobby Lobby, Waltz Time, Schaeffer Revue, Lucky Strike, and Major Bowe's Capitol Family. He claims that the busiest time in his life was in 1930, when he averaged thirty-one commercial programs a week.

#### A Busy Artist Finds Time

ONE MIGHT THINK that such a strenuous routine would have absorbed all of Magnante's time, but such was not the case; for during the past ten years he has composed many fine accordion compositions and has also made some excellent accordion arrangements and adaptations. In addition to all of this he has found time to make recordings for the Brunswick Company; and he is also an R. C. A. Victor artist.

Those who hear Magnante play are immediately impressed by his remarkable technic. It seems to be flawless; for, although he plays with lightning velocity, every individual note sounds distinctly and no emphasis or accent is slighted. Knowing that many of our readers are desirous of building just such a technic, we have asked Magnante to tell what method he used to accomplish it. His first remark on the subject may be a surprise, for he emphatically stated that he does not believe there is such a thing as natural talent for

CHARLES MAGNANTE

rapid technic. He believes it can be accomplished only by hard work. We assumed that he implied hours and hours of routine practice, but he contradicted this. To use his words, "It is not the number of hours one practices but how he concentrates. It is not the size of the hand but the size of the mind which counts. Four hours of proper

practice each day will accomplish wonders. Half of this time should be devoted to technical studies, such as scales, arpeggios, thirds, sixths, chords, and broken chords. Accordion arrangements of Czerny and Hanon studies should be practiced faithfully."

This advice, direct from Magnante, will no doubt serve as an inspiration to many accordionists who have been trying to work out a practice program.

#### Speed in Slow Practice

WE DECIDED to confront Magnante with another problem which frequently comes to this column. We have answered it many times but we wanted our readers to hear Magnante's advice. It is the old question, "Why do most accordionists fail when they try to execute a difficult passage rapidly?" Magnante's reply was, "The trouble is caused by the fact that the passage has not been perfected slowly. Students are not patient enough to take time for slow practice. They want to play rapidly before they can play correctly. The first time I play a passage I plan my fingering systematically. Inaccuracies show that the fingering was not planned right in the beginning. If I make errors I stop and analyze them to find the reason. Perhaps the substitution of a certain finger will correct the trouble. I always try to select the strongest fingers for difficult groups of notes and frequently substitute the third and fourth for the fourth and fifth.

"Errors also cause me to look into my hand position to see if it is correct for that certain passage. I find that I get the best results by a pivot action of the wrist, using my thumb as the pivot so that the hand can freely swing to the right or to the left. Sometimes I find that I have difficulty in playing a certain group of notes because I have not applied the right pressure or weight where needed. All of these things

(Continued on Page 617)

# THE VIOLINIST'S ETUDE

Edited by  
ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## Carving a Golden Voice

By

KATHRYN SANDERS RIEDER

**T**HOUGH MANY YEARS have flown into eternity since the Cremona makers, Amati, Stradivarius, Stainer, Ruggeri, and Guarnerius, produced the matchless instruments which every violinist dreams of playing, the search for the secrets they knew goes on unabated. Though much is swathed in tantalizing, mystery, which inspires continued research, other fascinating requirements of fine violin making are very definitely known.

At first glance the violin does not seem complicated. Many boys have set out to make them in manual training. When they have finished they are puzzled by the flat, unpleasant tone which comes from the instruments. They may have a good example of manual training, but it takes a lifetime of study and practice to make a fine violin. Stradivarius, one of the very few men to whom it was given to make perfect violins, was apprenticed to Amati when he was about seventeen. Though he was thoroughly versed in the intricacies of his craft and art, he did not open his own shop until he was nearly forty. Even then he spent years in experimenting, and did not reach his stage of mastery until he was about fifty, in 1700. Why? What makes these violins almost priceless and classed among the world's greatest treasures of art?

The violin maker's mastery begins with the very wood itself, for he will use at least six or eight different kinds of wood, probably maple, pine, deal, plane tree, ebony, rosewood, bird's-eye maple, and boxwood, in many varieties and many degrees of softness, grain and age. It is said that "Old Stainer" walked through the Tyrolean mountain woods with a hammer in his hand. So sensitive was he to the vibrations set up when he struck a tree trunk, he knew instantly when the wood was fit for his violins, and he would order the tree chopped for him.

There must be a fine model from which to work. This the maker takes apart, handles, studies, and tries to reproduce. To begin, he may take the model back, outline it on wood, and cut it with a sharp knife.

### The Ultimate in Skill

THE VIOLIN CONTAINS seventy parts. Each of these must be perfect in itself and in its relation to all other parts. When we add the fact that the violin must be made by hand, literally carved piece by piece, with no two violins exactly alike, but each an individual work of scientific and artistic achievement, and a law unto itself, we marvel that any perfect instruments have been made.

The back of the violin is made of a hard wood, usually maple. The top or belly, is made of a soft wood, usually deal wood which will vibrate freely and carry the vibrations to the sides and back. Uneven grain, or roughness, or knot holes, would make the wood useless, as any of these conditions would interfere with the vibrations. Green wood is useless, and yet the

seasoned wood must not be entirely sapless or it will not be elastic enough; for the violin must support a tension of sixty-eight pounds on the strings, and a pressure vertically on the bridge of twenty-six pounds.

Next the maker must be certain that the top and back will vibrate together. If the vibrations of one conflict with those of the other, no beautiful tone ever can result. The Cremona makers had a superlative talent for selecting these harmonizing woods. The curious part of it is that wood which at first seems right often will change, and the violin will be a failure. No exact rule can be given for the thickness of the top and back, though the latter is always a little thicker than the former. A good violin becomes better with the years, a poor one never does. It is difficult to predict, at the time of the finished violin, what kind of a tone it will have eventually. Some violins, which start out with rather harsh, unpleasant voices, may, after some settling and drying of the wood, become fine instruments.

The sides, which are made of maple, must be of the right height and thickness. If the measurements are wrong—and there can be no exact rule given for them—the sides will not transmit vibrations to the neck; a wrong height will make the space inside the body, which determines the necessary column of air, of the wrong size. The sides of the violin are made in six pieces. They are dipped in water and bent with hot irons. It is a delicate task to bend them, and many are spoiled before a satisfactory set is completed.

These sides are glued to the back, and six corner blocks, small pieces of pine or willow carved to fit, are glued in the corners formed by the center curves, and the top and bottom curves. They transmit some sound and are important in strengthening the structure. Between the blocks are thin strips of wood called linings, which serve the same purpose. The top is further strengthened by a threadlike line of wood near the edge, which appears to be purely ornamental. This "purfling" prevents the splitting of the wood.

A violinist should be very particular about the bridge used on his instrument. He should buy the best he can afford, change it at the slightest sign of warping, and straighten it almost every time he picks up his violin. There is an important reason for this. The bridge has been called the tongue of the violin. It is still an exact copy of the one made by Stradivarius. Though many attempts have been made to change its design, it remains much like its original form. Bird's-eye maple of horizontal grain is used, and it must be of medium hardness.

The top of the bridge, where four shallow notches are cut for the strings to cross, must be one half as thick as the base. The two feet of the bridge which rest on the violin must be shaped to fit the curve of the top. A dull heavy sound

Stradivarius at Work

results from failure to fit the feet of the bridge to this curve. The slant of the top of the bridge, from the G string to the E string is an exact science. A too gradual slope results in a sharp, disagreeable violin tone. Of course the bridge must be sloped enough so the player can draw the bow across one string without touching the others, but if the slope is too sharp, the tone goes to the other extreme and is sluggish and dull. Even the placement of the bridge, between the two *f* holes is important.

### The Inner Secrets

INSIDE THE VIOLIN, under the right foot of the bridge is the sound post, the soul of the violin. The duty of this small, round, upright stick, not more than a fourth of an inch in diameter, is to carry the vibrations into the amplifier or box of the violin. Tiny as it is, it is the soul, and if it is too long, too short, too thick or too thin, it is a bad soul to have. It is made of even grained pine. It is not glued in place but fits snugly between the top and back, and is held in place by the pressure of the strings on the bridge. Its adjustment requires great patience, as the work must be done through the *f* holes. Though special instruments are available, it is still the work of an expert to place it correctly. In general, it is placed about one fourth inch back of the right foot of the bridge, though experts tell us that this depends on the arch of the belly; if it is high, the sound post must be nearer the bridge.

The bass or sound bar is fastened to the belly or top, inside the violin. It is often called the nervous system of the instrument. Made of soft, even grained pine, it runs for ten and a half inches, obliquely, under the left foot of the bridge. It has an interesting function; for, beside strengthening the top, it compensates for the difference in pitch caused by location of the *f* holes in the top. The angle at which it lies varies by no more than a tenth of an inch in its full length and must be placed to suit the individual instrument. Unless the placing is above reproach, it produces what violin makers call a "wolf", a disagreeable growl, which ruins the instrument.

Even the cutting of the two *f* holes is a task requiring scientific precision. While makers did vary some in this matter, with-

out doing any harm, they were all careful to divide the long and short fibers of wood in such a way that the short fibers would be sufficient to pick out and vibrate the high tones, and the long fibers the low tones. This may seem rather complicated but it merely demonstrates in another way how great must be the art of the fine violin maker. The *f* holes make the body vibrate sufficiently by exposing the air inside the instrument, and they add to the graceful appearance of the violin.

The neck, without the curved scroll plate, is carved from maple. It must be strong enough to resist the strain of the string tension yet be capable of vibration. Below the scroll is the part of the neck which forms the peg box. Here four pegs, made of boxwood, ebony or rosewood, hold the strings ready for tuning. The fingerboard of ebony lies beneath the upper portion of the strings, glued to the upper surface of the neck, but suspended above the violin at its lower end. It must have the smoothest of surfaces to permit the player to shift easily among the positions.

The tail piece holds the lower end of the strings, and it in turn is held in place by a piece of thick gut extending around the end pin.

Fine varnish is important. Here again the Cremona secret of varnish is unknown. They varnished the inside as well as the outside. Interior finish is vitally important when judging the worth of a violin. A slow drying varnish, applied in several coats, is used; and several months are usually required for this treatment. Sometimes the most of a year may be given to the proper varnishing job. The strings themselves, produce very little of the volume of sound. Volume results from the vibrations being carried from the strings through the bridge and sound post to the wood parts, causing them to vibrate in sympathy with all of which produces the sonority of violin tone.

The strings are made of sheep or goat gut, and the lowest string, the G, is wound with wire. Also, in recent years, the steel string, wound with aluminum wire, has come into almost general use. The raw materials for the strings are soaked in many solutions, scraped, cleaned, divided into shreds and finally spun into strings. It

process requiring weeks or even months. Making is an art in itself, and was it to its highest development by a man, Tourte. Fine old bows are in a with rare old violins, and it is not for them to cost two thousand dollars. The bow is often made of Pernambuco lancewood, or snakewood. The stick is well balanced and responsive to the movement of the player. From one hundred and seventy-five, to two hundred horse hairs of very carefully se-

lected quality are used in hairing each bow. Stradivarius excelled his teacher, Amati, and all others who followed him. Violin makers still wonder and dream about it. In time these old violins may be gone. Will the art of the Cremona masters be forever lost? Present day craftsmen know that age of wood and varnish, and continued use of the instrument mean much. "Perhaps," they dream, transfigured at the thought, "perhaps, our modern violins will—in a century or two—take on the golden voice."

## The Young Violin Student and the Teacher

By J. W. HULFF

IMPRESSIONS are usually lasting. To the teacher who has beginners in the study of violin, and especially young beginners, this fact should not be lost sight of. The parent brings the child for the lessons.

Over, at the very first visit, what the child is most interested in—airplanes, ships, books, dolls, certain pets, and so on—knowledge so gained may be used in many ways during the months that follow. Making the child feel more at home in the studio, and in creating a real desire to learn, the teacher, talk to him and to his parents. Our most successful traveling teachers are those who know a prospect's interests and show an interest in this hobby. Talking business. Every child has a strong liking for something, and it is good psychology for the teacher to find out what this is and to use this knowledge in making the lessons pleasant at the same time profitable for the child. If the child is a boy not yet in his "teens"

and is, for instance, interested in airplanes, the teacher, after a few lessons have been taken, can draw an outline of a plane on a page farther along in the lesson book and tell the child that he will be presented with a small plane as soon as he reaches the page and can play it creditably. The girl, who may be interested in Mickey Mouse, may be told that she will receive one of the many inexpensive Mickey Mouse novelties on the market when she reaches a page in the book that the teacher selects and designates with a suitable drawing or Mickey Mouse clipping from a magazine or newspaper. A phonographic record of the child's work may be promised as soon as a certain composition in the lesson book can be correctly played.

Make the child happy with and anxious for little surprises, and, above all, let him know that you are not only his teacher but also his friend. Remember, too, that the psychological effect of a music magazine in the home of a family that has a violin student in it cannot be overestimated.

## Paganini

By ALTON A. ADAMS

NEAR APPROACH of the centenary of the passing of this extraordinary performer under the following extracts from a description of him in *Le Globe* of his interest to our readers:

Paganini and his violin enter. A unclapping welcomes his appearance on stage. He advances several paces, embarrassment, and bows; and the music recommences. He proceeds with still more awkward and is again rebuffed. He bows repeatedly, and ends to throw into his countenance a look of acknowledgment, which is soon, replaced by an icy coldness of vision.

He stops, and in a position in which, if possible, still more constrained, ceases his walk and his salutations. He seizes his violin, places it between his head and his breast, and casts on it a proud and once piercing and sweet. He stands for several seconds, leaving the public to observe and examine his strange ability; to gaze with curiosity at his body, his long arms and fingers, his hair colored hair flowing over his ears, the illness and suffering imprinted on his whole person, his sunken cheeks, his long hawk nose, his pale and cheeks, his large, fine and open mouth, which Dr. Gall would love to imitate, and under that forehead, eyes, as if in shade, but every instant glowing forth lightning.

Suddenly, his looks descend from his to the orchestra; he gives the signal abruptly raising his right hand in a gesture, lets his bow fall upon the violin.

\* \* \* \* \*

"I have been teaching young violinists for forty years now. I find that the present generation of students has a bad inclination to slur over its work. It wishes to accomplish what requires a body and a soul and a lifetime all in a few years and with partial application."—César Thomson.

## UNDERWOOD Leads AGAIN

THE CHAMPION

Offers all of the UNDERWOOD Typewriter features such as Champion Keyboard, Sealed Action Frame and Dual Touch Tuning plus an Inbuilt Tabulator as standard equipment. Everything you have a right to expect from THE TYPEWRITER LEADER OF THE WORLD.

ENTIRE UNIT FOLDS INTO THIS COMPARTMENT

New UNDERWOOD Typing Stand Carrying Case. Requires no desk space. Carries its own type whenever you want. wherever you are. It can be extended to three different typing heights. Available with Champion or Universal Portable at additional cost of only \$7.50. . . cannot be purchased separately.

## A New Base FOR PORTABLE PERFORMANCE

## Piano Solo Composition

# PRIZE CONTEST

### Four Generous Prizes

#### CLASS ONE

*Concert Piano Solo* (See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

#### CLASS TWO

*Entertaining Piano Solo* (See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

#### Class One

### CONCERT PIANO SOLO

First Prize—\$250  
Second Prize—\$150

Manuscripts entered in this class should be solos of average length written for the more advanced pianist. This does not mean a number demanding virtuoso ability for its rendition, since there are many appealing piano solos played in concert by master pianists, yet which are played frequently by many who may be generally described as advanced piano students or accomplished pianists. Any form such as the prelude, waltz, caprice, nocturne, etc., may be used, but the judges will be influenced more by compositions possessing the qualities of spontaneity and melodic freshness than by those written in the strict pedantic style.

#### Class Two

### ENTERTAINING PIANO SOLO

First Prize—\$250  
Second Prize—\$150

The publishers of THE ETUDE are firmly convinced that there is a definite place in the teaching repertoire for the recreational piece which reflects something of the present-day tendency in its rhythmic and harmonic design. Such pieces also are enjoyed by the average pianist and his or her intimate audience in the home or in small social groups where entertainment is the paramount consideration. Radio pianists catering to a wide and varied audience also appreciate compositions of this character. This class affords a splendid opportunity for the composer whose writing talent inclines toward pieces such as *Soliloquy*, *Holiday*, *Serenade for a Wealthy Widow*, *Noia* and *Flapperette*.

This Prize Contest is open to all who wish to enter it, excepting members of the staff of THE ETUDE MUSIC MAGAZINE and employees of the Theodore Presser Co.

#### THIS CONTEST WILL CLOSE NOVEMBER 1, 1939

THE ETUDE MUSIC MAGAZINE feels that a Composition Contest of this character will stimulate composing efforts directed toward supplying present-day pianists (of whom there are many giving formal and informal recitals) with some new material for their audiences to enjoy, and that composers also will be moved to bring forth for those who play chiefly for their own amusement some new piano solos for them and their friends to enjoy.

Only Piano Solos will be considered in this Contest.  
Do not send compositions of any other character.

#### CONDITIONS

are simple.  
All entries must be addressed to:—

THE ETUDE PIANO COMPOSITION PRIZE CONTEST  
1712 Chestnut Street, Philadelphia, Pennsylvania

All manuscripts submitted must have written at the top of the first page—For THE ETUDE PIANO COMPOSITION PRIZE CONTEST.

The real name of the composer-contestant must not be placed on the manuscript. Write a fictitious name on the manuscript and write that same fictitious name on an envelope. Seal within that envelope a slip of paper with the real name and full address written upon it, and bearing in the lower left hand corner also the fictitious name. This sealed envelope should be attached to and sent with the manuscript. By this system judging may be kept free from any considerations other than the merits of each composition. One of the

greatest reasons for conducting a contest after this fashion is to assure the unknown composer the opportunity to have an equal chance with composers of established reputations. In this contest all are welcome to participate and every manuscript submitted will be reviewed by a number of competent judges. Their decisions will be impartial and final.

No composition already published shall be eligible for entry in this contest.

No variation nor any adaptation of a previously published melody shall be eligible for entry in this contest.

The pedantic type of composition such as those running to involved contrapuntal treatment of themes should be avoided.

The Piano Compositions winning prizes are to become the property of THE ETUDE MUSIC MAGAZINE with full publishing rights vested in its publishers, the Theodore Presser Co.

Contestants may enter compositions in both classes.

Although there are two prizes in each classification, the publishers of THE ETUDE expect to find a number of the manuscripts not winning prizes to be deserving of publication, and accordingly expect to offer some contestants who are not prize winners an opportunity to realize something on their composing efforts by offering to purchase the manuscript for regular publication purposes.

## VIOLIN QUESTIONS *Answered*

By ROBERT BRAINE

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

#### How Long to Study

W. F. H.—So much depends on the talent of the pupil that it is impossible to set the exact number of years it will take him to become a professional, also whether you mean a solo violinist, a symphony orchestra violinist, or an ordinary orchestra violinist. I should say that the limit would be from six to ten years, according to the talent of the pupil, or how far he expected to go in the profession.

#### To Study the Vibrato

I. W. 1. It is practically impossible to teach the technique of violin playing by mail. A few hints can be given, however, which may help you, although nothing can take the place of a good teacher, standing at your side and patiently demonstrating the correct method of playing. The vibrato is a to and fro movement of the hand while the tip of the finger is held firmly on the finger board, the motion coming from the wrist. Do not move the whole forearm. The neck is held lightly between the thumb and base of the forefinger. The chapters on the vibrato in the book, "Violin Teaching and Violin Study," by Eugene Gruenberg, are admirable in explaining the best methods of acquiring this beautiful art. The book gives the views on the subject by the greatest violinists, and many valuable hints to the student. This book can be purchased through the publishers of THE ETUDE. 2. For your solo you might try the *Sixth Air Varié*, Op. 86, by Ch. Dancla. It is brilliant and melodious, and a never failing favorite with an audience. 3. I do not know of any violin bridges which are supposed to give the effect of the vibrato.

#### Copyright on Paganini Works

B. J. K.—The copyrights on the *moto perpetuo* compositions by Paganini, Novacek and Ries, have long since expired, as they were composed many years ago. For this reason I think you could safely use excerpts from these compositions without special permission. The only exception might be where special arrangements have been made of these compositions, including special fingering, bowing, phrasing, and so on. In such a case, you could write to the publisher, asking permission, which would no doubt be gladly given.

#### To Practice Quietly

J. F.—1. There are two ways of reducing the tone of the violin when practicing, so that it will not annoy involuntary listeners. The first is the use of the mute, a little contrivance with prongs which can be slipped over the top of the bridge. This reduces the tone, and gives it a certain muffled and subdued character. It is used more to produce tone of this character, than to reduce the loudness of the tone, although it does that too. The best means of reducing the volume of tone, at the same time producing the characteristic tone of the violin, is to use a "practice" or "mute" violin. These violins are made without a back, but with neck and fingerboard, and light supports below. The violin is strung up in the usual manner, and a chin rest can be arranged on it. It is played in the usual manner. The tone is a faint humming, which can be hardly heard in an adjoining room. It has the characteristic violin tone, without the muted character, and one can play all night, without annoying his next door neighbor. I used to know a chap who took his skeleton violin with him on railroad trips. He would engage a berth in a sleeping car, and blithely play all night without the porter throwing him out even once. Large music houses carry these mute or skeleton violins, and they are not expensive. 2. Some violinists claim to get considerable benefit from practicing with the bow held an inch or so above the strings, but with the hair not touching the strings. This gives a certain steadiness to the stroke (and to the tone), when the hair is brought down to touch the strings.

#### What Can He Accomplish?

C. H.—As a rule, the great violinists have studied the violin from the age of four or five, or even earlier. It depends largely on the talent of the student, how much he can accomplish, starting at the ages from fifteen to twenty. In your case, starting the violin at seventeen, after several years of harmony, and piano, you ought to do fairly well, although it is doubtful if you could become a great virtuoso, or anything of that sort. I knew of a case of a young man, highly talented in music, who commenced the study of the violin at twenty. He made rapid progress, under a very fine teacher, and at the age of twenty-eight, was able to play concertos of considerable difficulty, as well as compositions requiring quite an amount of technical skill. I cannot advise you definitely, without hearing you play. From what you write, I would advise you to keep on with your violin and piano studies for another year, until you conclude your high school studies. As you then plan to go to a conservatory of music, you can put the decision as to your studies up to the teachers there.

#### Violins by Guadagnini

J. G. Lewis—1. There were several violins named Guadagnini, who made violins in different Italian cities. Lorenzo, in Cremona from 1690 to 1760 (one of the best Cremona makers), and Giovanni Battista, in Milan from 1735 to 1770. These two makers were brothers, but the violins of Giovanni were superior to those of Lorenzo. 2. I have never seen a label in an Italian violin such as you describe. I would have to show the violin to an expert to learn whether it is genuine or not. There are several good experts in St. Louis, Missouri, near your home. 3. I find fine specimens of J. B. Guadagnini quoted in dealer catalogs at from \$9,000 to \$12,000; but course inferior grades of this maker are much cheaper. An expert must actually see the violin and examine it in every part, before he can tell if it is genuine.

#### Position of Fingers on Bow

LeR. F.—The position of your fingers on the stick of the bow, as illustrated on the card you send, is very good, always provided that you do not stretch your fingers too far apart when bowing.

#### Tools for Making Violins

F. P. 1. In justice to its advertisers, THE ETUDE does not furnish subscribers with names and addresses of music dealers and dealers in musical supplies. Any large music dealer can furnish you with supplies, tools, and on for making violins, or if they do not call them can furnish you with the address of a firm which does. 2. The violins made in Leipzig, Germany, by Jul. Heinr. Zimmermann, are evidently commercial instruments, but I do not know where you could obtain any information on them, or whether they are as good in this country. 3. If you will write to the publishers of THE ETUDE they will send you "Guide on Teaching the Violin" and catalog of violin music. You can also buy through them the book, "The Violin and How to Master It," by a Professional Player, which contains much useful information.

#### Thickness of Violin Ribs.

G. L.—Walter H. Mayson, eminent English violin maker, in his book, "Violin Making," advises making the ribs of the violin of sixteenth of an inch thick. Mr. Mayson died, and I do not know where you could find this book, unless you could find a music dealer who has copies of it.

#### Another Unknown Maker

V. P. F.—Sorry I cannot tell you the value of your violin without seeing it. The maker is not well known, and the violin is what is called "new" by violin dealers. As you live near New York City, possibly some of the dealers there could give you information. Without seeing it, I cannot say definitely about what effect revarnishing the violin would have. Show it to an expert repairer, when you visit New York, and he will advise you.

#### A Talented Boy

A. G.—The first thing for you to do is out is whether your little son is as great a prodigy as people say he is. As you know people are inclined to rave about the play of young children, even if they can play only a few simple pieces. The best thing to do is to take the boy to the Juilliard Music Institute, where they have eminent teachers of all musical instruments. Explain that you want the boy to have an audition (hearing) on the violin with an experienced teacher, they are willing to do this, well and good, not ask them to recommend some eminent teacher in New York who will give the boy an audition. You want to have him judge by a violin teacher who knows what he is doing. The Juilliard Institute is in New York City; and you can find the address in the city or telephone directory. At this school they will tell you truthfully just what talent the boy possesses, and what is the best course to follow in developing it.

#### A Supposed Bergonzi

L. R.—The Carlo Bergonzi violins were made in Cremona, Italy, and are of great rarity and value. I have known an exceptionally fine Bergonzi violin to sell for as high as twelve thousand dollars. However, there is a large number of imitations which sell for possible twenty-five or thirty dollars. Thus you will see that there is small chance of the supposed Bergonzi found by your pupil being genuine. He could show the violin to a well known violin dealer, and get his opinion.

#### Does Any Reader Know Him?

E. P. W.—I can find no information regarding a Bohemian violin maker named Alois Kroger, although there may be one. There are hundreds of violin makers scattered over Europe, who are practically unknown.

# EASY to play

With an easy playing Conn band instrument, you can be ready for band or orchestra in 4 to 6 weeks. A sure road to popularity if you start on a Conn. Choice of the world's greatest artists. Magnificent tone. Many exclusive features—yet they cost no more. Ask to see the marvelous new models now being displayed by Conn dealers.

# BANDS AND ORCHESTRAS

## The Elementary and Junior High School Instrumental Program

(Continued from Page 571)

our elementary instrumental groups are exploited for the benefit of their school patrons and communities, long before their musical training and experience are commensurate with the demands of adequate performance. School administrators, patrons and conductors, who are responsible for these premature appearances, are not helping the instrumental music program. Rather they are stimulating an artificial appreciation and interest which burns itself out too soon to be of lasting benefit to the student's musical future.

This statement is not to be taken to imply that our elementary groups should not engage at all in public performances, which are of vital and of great significance to all concerned. But the plan which permits "over night" training to be substituted for the child's fundamental musical education is not sound. It is in vogue at many of our schools but is not in keeping with the requirements for a healthy, strong musical foundation. In any case, the plan of organization should be flexible enough to allow for whatever situations exist in each school system.

In the average school system, elementary instrumental classes should meet at least twice a week, and these meetings should not last for more than forty-five minutes nor for less than thirty. If classes cannot be held during the school hours, then one period per week might be scheduled during school time, and the other period before or after school. Saturday morning, as has been suggested, is reserved for full rehearsal, with all pupils from the different school buildings brought together.

Beginning classes should be divided into at least four groups:

1. Violin (violinello, viola, and string bass are not used until junior high).
2. Woodwind
3. Brass
4. Percussion

If at all possible, these instruments should be owned by the school and rented to the students at a nominal fee. Reasons for this are that, in the first place all children, including those who are talented but cannot afford to purchase an instrument, will have equal opportunity to acquire a musical education. The democracy of thought and deed in our country extends to this as well as to any other phase of national life. Secondly, children lacking in musical talent, or in a real desire for playing an instrument, can be discovered at an early stage without their having made an unnecessary monetary investment.

Incidentally, this plan is advantageous in that gradually the music department will own these instruments, and in due time the revenue received from their rental can be applied to the purchase costs of added band and orchestra equipment.

Elementary classes should not be too large, a maximum of twelve to fifteen being most practical. As the classes progress, it is advisable that even further division be

considered, since the group will come to vary in the ability of its constituents. The too common practice of including the string and wind players in the same class is to be discouraged. The teaching procedures of these two families of instruments are so fundamentally different that segregation in these elementary stages is wise. The groups can be combined at a later time, when the preliminary problems have been solved and the fundamental teaching procedures assimilated.

### Objectives

PERHAPS A LISTING of objectives is an over indulged form of discussion or suggestion, but it is helpful in making definite some of the motives which guide our actions. The primary objectives in our elementary teaching, should be:

1. To develop a correct attitude toward and desire for sufficient practice and interest in instrumental music;
2. To transfer the appreciation and knowledge acquired through vocal classes of the primary grades to instrumental music, and to apply them properly;
3. To develop a fundamental knowledge of good care of an instrument;
4. To master the essentials of:
  - (a) Tuning the instrument,
  - (b) Posture and position for playing,
  - (c) Tone production,
  - (d) The symbols of music;
5. A very gradual development of technique which will eventually lead to the playing of simple pieces.

The initial studies should be short and of sufficient musical interest and worth to merit their being included as desirable teaching material. During the first few lessons great care should be exercised in regard to the mastery of correct habits of playing position, breathing (for wind players), hand position of woodwind and string players, tuning, drawing of the bow for string players, placing of fingers and bow control. It is at this stage of development that the teacher must be thorough and patient. The singing of all studies and melodies will serve as a valuable aid in the improvement of intonation.

It is wise to use a neutral syllable, such as Lōō or Lō, and to do considerable individual as well as ensemble singing. Advanced players might be used as models, and the class asked to evaluate their performances, making comparisons and pointing out the individual faults and weaknesses, or their good points.

The material selected for elementary class instrumental instruction will depend largely upon the existing situation. For instance, in school systems where the music program rehearsals are limited to one period per week, one would hardly select the same course of study that would be used by groups which meet daily. Some

# The Elementary and Junior High School Instrumental Program

(Continued from Page 607)

methods are devised with the specific purpose of developing groups and preparing them for public performance in a short time, and other methods are designed for those cases where adequate time has been provided for a thorough musical preparation. Each method is adapted to the requirements of the situation, and for that reason a wise selection of method is very necessary.

In accordance with these ideas, we would advocate the beginning of instrumental instruction in the elementary grades, and the continuance of that study in class work up to the junior high school. During the first two years, classes will be offered in violin, clarinet, flute, cornet, and percussion. At the beginning of the third year, a number of brass instrument students are transferred to each of French horn, trombone, baritone and tuba. Some of the students of clarinet are transferred to oboe, bassoon, saxophone; and some of the violin students are moved to viola and violoncello. These transfers are made with an eye to the student's general physical and musical adaptability and to his general attitude toward the change and interest in playing the different instrument. Under no circumstances should a student be transferred from one instrument to another merely for the purpose of maintaining a balanced instrumentation. Instead a student should be fitted, in all ways for the instrument to which he is transferred. This matter of changing over is very important and demands considerable foresight and thought on the part of the instructor.

Very seldom does a mediocre performer on one instrument object to his being transferred to another instrument for which his capabilities are better suited. In aiding these students, and to give each student a good start on his new instrument, the advanced high school players of violoncello, string bass, oboe, bassoon, and so on, can be used to good advantage. These older students are especially valuable in that they have a psychologically good effect on the morale of the younger ones, in addition to whatever musical instruction they can pass on. The younger student is even more interested in his new instrument when he has the attention and interest of an older and a more capable student.

The aforementioned instruments are a necessary and often vital part of the instrumentation of every band or orchestra, and classes consisting of groups of these instruments should be organized as early as possible, as it is virtually impossible to develop excellent players on those instruments during the rapid moving four years of high school.

Naturally, students of musical instruments should have been the adept, talented students of the grammar school classes. The musical knowledge gained in the elementary classes then can be readily transferred to the handling of the new instrument, the result of which will be a much more rapid progress than if they were just beginning the study of instrumental music.

When the elementary stage has been safely negotiated and the student has acquired those proficiencies indicated in our list of objectives, the carefulness and efficiency of the program must be continued in the plans for junior high.

If the junior high schedule does not permit full rehearsals, we would recommend a continuance of the classes, with the full rehearsals held on Saturday morning. The preferable thing at this point would be to combine classes if possible, so that the groups rehearse as complete and separate units—and an orchestra. This program allows for development of appreciation of the

more important musical compositions and makes possible a retention of interest in instrumental music through the medium of full ensemble experience. Participation in full band and orchestra helps to broaden the student and exerts a profound influence on him at this age of early adolescence.

Small instrumental ensembles should be developed and given the opportunity to play before various community and school audiences. Students should be especially encouraged to engage in solo work, and to improve themselves where conditions permit with private lessons.

## The Junior High Instrumental Program

REGARDLESS OF WHAT REHEARSAL plan is adopted, we must not lose sight of the fact that the elementary and junior high instrumental program is the foundation of our entire high school instrumental set-up. It is indispensable, and a carefully worked out program will be a joy and a help to the director who season after season must watch his older and better players go away on new paths, and must help the growing youngsters into the places which have been left vacant.

Orchestras and bands, whether they are the grade school groups, the junior high, the senior high, or the college level organizations, should not be so different from each other in schooling. Their difference lies in quality of performance. The elements of musicianship and techniques of performance are fundamentally unchanging, but the degree of perfection attained in these elements constitutes the variance between one age group and another.

I am reminded of a saucy but certainly apt remark made once by a little boy when his older brother said that "he wasn't very big." "Well," said he, "I'm just as big for me as you are big for you!" And it is that very feeling that should typify the morale of each of our school music groups. They have their separate bignesses, but there are an interdependence and a cohesion among these groups that demand of the progressive director a program and a plan of organization which are wide enough in scope to handle the elementary and middle groups as well as those of the high school.

Good things in life are most often a result of foresight, and of the preparation and planning which back it up. If we earnestly desire the advancement of our high school instrumental organizations, and if we want to lighten the burden of yearly replacements, no amount of attention given to the program for the elementary and junior high schools will be wasted.

## Music for Afternoon Tea

The Philadelphia Catholic Girls High School Orchestra Playing at Scottish Rite Temple in Philadelphia. Inset: Benjamin A. d'Amelio.

## A Notable Philadelphia Girls High School Orchestra

THIS ORCHESTRA is unique in so far as it is composed entirely of one hundred and twenty-five high school girls from the John W. Hallahan Catholic Girls High School and the West Philadelphia Catholic Girls High School, many of whom receive their first musical training from these high schools. Each year both schools have increased their membership and introduced new equipment, till each of them now has an organization with the full instrumentation of a symphonic orchestra.

At the Hallahan Catholic Girls High School and at the West Philadelphia Catholic Girls High School, the Department of Music, under the direction of the Sisters of St. Joseph, supervises the practice of the students and is responsible for the general management of the orchestra. Weekly lessons are given by specialists in the various fields of music. Many of the instructors employed in the schools for this purpose are

musicians of wide experience. Not a few are at present members of such outstanding organizations as the Philadelphia Orchestra. The general direction of symphonic organizations is under Benjamin A. D'Amelio.

In April, 1932, the combined orchestra of the two high schools gave their first annual concert. In May of 1938, this year's festival was held for the second time. Philadelphia's famous Academy of Music and this same summer the orchestra gave a concert in Robin Hood Dell, under the baton of José Iturbi. The annual festival for 1939 was again held at the Academy of Music, in early May; and the latter part of the same month, the orchestra, upon the invitation of the University of Darby High School, cooperated in the "Upper Darby Day" at the World's Fair in New York City, and presented a program in the Court of Peace.

## Practical Crime Prevention

(Continued from Page 558)

men of intelligence and are firm believers in rehabilitation. Constructive work is encouraged in every way."

The main point of this editorial is this: Experience has shown that music is invaluable in crime prevention. When your time comes to vote, in your home or in your community, for an investment in music study, an investment in an instrument, an investment in music books, or an investment in the local orchestra or band, give the project all your enthusiasm, and convince other parents and taxpayers that there are few wiser and more prudent ways in which to spend money.

Small wonder that the band interests have been employing a slogan, "Teach your boy to blow a horn, and he will not blow a safe."

## A Popular Composer of Another Era

"Monteverdi ruled in all domains: church, theatre, chamber. His masses in contrapuntal style were no less admired of connoisseurs than his motets for soli, choruses, and orchestra, his madrigals no less than his airs for voice alone. On every harpsichord lay a copy of the Lamento d'Arianna, which in earlier days in Mantua had drawn tears from thousands of spectators. Whether for ballets or for tournaments, for operas, cantatas, or solemn masses, Monteverdi's compositions were always in demand."—Henry Prunieres in the Musical Quarterly.

# VOICE QUESTIONS *Answered*

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## ing During Singing Practice

Please discuss the causes of excessive yawning during singing practice and suggest any in which it may be overcome.—H. L. Perhaps you have been taught to sing with a very wide open throat and a wide mouth, in order to prevent contraction of jaw and throat. Some singing teachers advocate that their pupils should have a yawning position during singing. They have overdone this and formed a habit of stretching the throat open instead of letting it to open naturally. If this is so, you are only to stop this exaggerated throating and return to a natural throat and position, for the excessive yawning is a distortion. However, if this does not help, you better consult your physician.

## and Open Tones

We are having a discussion about the merits of closed and open tones in the voice and closed in the upper. Lampedusa advocated open tone in the voice and closed in the upper. Lampedusa closed open tone throughout the voice. It seems that open and closed tone is an adjunct of several methods rather than a distinct method of itself. Is this correct?

The best teachers in New York, Chicago and Europe teach closed or open tones? Cite some authoritative references on this.—L. A. M.

There are many expressions used by teachers and singing teachers, in an attempt to explain different qualities of tone and methods of production. Very often these expressions are not scientific, but are convenient to convey an idea, especially when they are accompanied by an oral explanation. For example, what is the difference between Head Voice and Falsetto in the voice? When is a tone Forward and when Back? What is the difference between an Open and an Open tone, or as the French call it, Voix Ouverte and Voix Fermée. Upon understanding of these words, depends the idea of the best method to use to develop your own voice. Speaking generally it is a question of the balance of resonances. There are three—1. The resonance of the head and bones of the chest. 2. The resonance of the cavity of the mouth and the surrounding it. 3. The resonance of the head and cavities of the nose and the forehead. Lampedusa used to say that these resonances were inseparable like the three persons of the Trinity. His dictum was—"No tone low that it does not need the upper tones, and no tone is so high that it does not need the resonance of the chest." This means, I think, that every good tone needs the resonances of both the Open and the Covered tone in varying proportion. Different parts of the scale and that they never be used separately, except for a special effect. The Open tone is hard and is carried too high while the Covered tone is dull and veiled if sung too low. It is the business of the singing teacher, whether in New York, Chicago, Europe, China and City to explain these things and to help the pupil practice them in the manner best suited to his individuality. Please read Lampedusa, Garcia and any authority that you may like over again, bearing what I have written here and try to understand them better.

## ness and Breathiness

My range is from Middle C to F on the line on the treble staff. I can sing clearly but on the F-sharp I crack into a hoarse croak. I strain and hoarse if I try to sing above the F. I practice above the F? I practice, Brumby, Escalati and Granier, and simple songs. I cannot seem to sing many measures at a time. I expect too much at a time. The more I think about singing and relaxing the throat the worse. Please give me some simple breathing exercises.—C. F.

From your description of your clear tones and your husky, squeaking, difficult upper ones, I should say you had the Thyro-arytenoid and the crico-arytenoid muscles. Or it may be that you have a nodule upon one of the vocal cords. One of these things would prevent the approximation of the cords necessary to produce high tones. Keep in mind that a tone produced with any strain will not be a beautiful tone. If the strain will not come clearly, let it alone for the present. Perhaps, when you have a mastery of your low tones, this high will develop. If not, every voice has its limits. And in your practice remember that the development of the lower of a voice releases the upper ones. Have your throat examined by the best throat doctor available, and abide by his advice. Lampedusa's book, "The Art of Breathing," is in detail the process of inspiration and expiration; and it also gives many exercises to develop the lungs and strengthen the breathing muscles. But, unless your vocal and the muscles that move them are in healthy condition, air will always be short and you will be short of breath when singing.

## That Fatal Break

Q.—I am a tenor. My highest well produced tone is E-flat above High C. The break in my voice occurs at F above Middle C. I have lowered my head voice or falsetto down to D, the first space on the treble staff. From

I can get a clear, resonant tone, while from there down I use a lower register. When I started this practice my voice was thin, throaty and raspy; but it became clearer after months of practice, and it lost the rasp and became larger, without any strain. All my vowel sounds are now almost equally resonant, and I am one hundred per cent better. Is it right to lower the top register (head voice) this low, or will practicing this method hurt me as some singing teachers have suggested.—W. B., Jr.

A.—The production of the so called head voice and the falsetto is not the same. In the first instance the vocal bands are not firmly approximated, and this is the reason why the high tones are so easy to sing, while the middle tones are weak and breathy. In the so called head voice, although a sense of vibration is felt on the roof of the mouth, in the nasal passages, and sometimes in the head; on the contrary, the vocal cords must be firmly approximated. It is seldom possible to start a scale on a very high tone in falsetto and sing down to D just above Middle C, without a clearly defined break into what is called the lower register. A voice trained in this fashion may do very well in a chorus or even in a male quartet. The solo singer must have a smooth scale, from bottom to top, and, inversely, from top to bottom. A perceptible break will make him have two distinct qualities of tone, which is very inartistic, to say the least. Learn ease and freedom of throat from your falsetto, but use it with the greatest discretion. I wish the expression "falsetto" and "head voice" could be abolished and superseded by terms more descriptive and scientific.

## Singing "Dans La Masque"

Q. I am 18 and I have studied singing for a little over two years. My voice is a baritone of fine natural quality. My teacher teaches tone placement in the masque and I have been fairly successful with this method. When my nose is "open" I sing fairly well, but many times my nose gets stopped up and I am unable to get the masque focus. After I have sung five or six songs I find difficulty in keeping the masque open. Would another method of singing be more desirable for me? I have a slight deviation of the nasal septum. Is it possible to be a successful singer with this defect?—K. T.

A. I have tried to explain in an answer to a question from L. A. M., which appears in this issue of "The Etude," the theory of employing all the resonators in the body, in varying proportion throughout the entire range of the voice. If your voice is lacking in head and so called nasal resonance, you should learn to sing "Dans La Masque," especially on the high tones. It seems to me that you will never be entirely successful until you learn to employ all the resonances at once; in other words, until you sing with all of yourself instead of part of yourself. From your description of the deviation of the nasal septum, it seems that you may have a slight nasal catarrh associated with it which may explain why your nose is frequently "stopped up." Perhaps, if you have this cured you may find no difficulty in keeping the nasal passage "open."

## A Lyric Tenor

Q. I am a lyric tenor and I can sustain a high B-flat, when in good voice. My voice is of good quality, but it is not resonant enough on the highest tones of the head register. A competent teacher criticized me for singing throaty. I want some hints upon how to focus my voice in the mask, on the lips, or as far forward as possible. Is there any set of vocal exercises which will accomplish this?—P. M.

A. To properly "Place the Voice" requires a long period of study under a competent teacher. No book, no series of exercises, no written method can take a teacher's place. I will recommend some books for you to read: Fillebrown, "Resonance"; Guttman, "Gymnastics of the Voice." You need many lessons from a good teacher, preferably one who can sing the high tones for you.

## The Singer Whose Musical Education Is Neglected

Q. I have been studying singing for three months, and it seems as if I can not understand time. I sing soprano, between middle C and high C. Would you advise me to change vocal teachers? I sing popular songs.—A. W.

A. There is only one way for you to improve: Learn to be a better musician. Study the piano and slight singing, join a choir, and, if you have time, study a little harmony. No matter how good your voice may be, you can scarcely hope for much success unless you can read music readily. Instead of changing vocal teachers, add teachers in other departments of music.

# AMERICAN CONSERVATORY OF MUSIC

CHICAGO

54th SEASON

Founded in 1886 by John J. Hattstaedt, today The American Conservatory of Music is outstanding among institutions for music education in this country. Its graduates are to be found occupying positions of honor and responsibility in every department of music.

Member of the National Association of Schools of Music

**The Faculty**—One hundred and thirty artist teachers of national and international reputation comprise the faculty.

**Accredited Courses** are offered in Piano, Vocal, Violin, Organ, Orchestra and Band Instruments, Public School Music, Children's Piano Work, Class Piano, Musical Theory, Dramatic Art and Dancing.

**Certificates and Degrees** are conferred by authority of the State of Illinois and recognized the country over. Degrees conferred are those of Bachelor of Music, Bachelor of Music Education, Bachelor of Speaking Arts, Master of Music and Master of Music Education.

**Dormitories**—Desirable living and boarding accommodations can be secured at the Conservatory Dormitories at surprisingly low rates. Particulars on request.

**Professional and Teaching Engagements**—Although the management does not guarantee positions, it has been most successful in assisting students to find remunerative situations in colleges, academies, music schools and in concert, orchestra, lyceum and choir work.

**Tuition** is reasonable in keeping with the times and may be paid in convenient installments. Complete particulars given in catalog which will be mailed on request.

**Students' Self Help**—The management makes every endeavor to assist needy students to find part-time employment. Many find work as teachers, accompanists, or part-time positions working for commercial houses, etc.

Students may enroll at any time.

For free catalog address John R. Hattstaedt, Pres.

## PEABODY CONSERVATORY BALTIMORE, MD.

OTTO ORTMANN, *Director*

One of the Oldest and Most Noted Music Schools in America.

"One great mistake lies in the failure of so large a majority of those who decide to devote themselves to music—to learning some string instrument, the violin, for example—to ascertain at the very outset whether nature has adequately supplied them with the necessary tools for what they have in mind. They apparently do not stop to consider that for a student to devote himself to the mastery of the violin with no more than a vague and uncertain idea of prerequisite conditions is tantamount to inviting failure."—Leopold Auer.

## FRETTED INSTRUMENTS DEPARTMENT

# The Guitar and Modern Music

By

GEORGE C. KRICK

NOT LONG AGO the writer received a letter from a former pupil, now residing in a large western city, describing an interview he had with a guitar teacher, on whom he called in order to resume his studies. After telling him of his two years work with the guitar, using the "methods" of Carcassi and Foden, and supplementing them with etudes by Giuliani, Sor and Tarrega, the teacher turned, picked up a wire strung plectrum guitar, strummed a few chords with a pick, and then made the statement: "This is the modern way of playing the guitar; yours is old fashioned and out of date and most present day guitarists use this plectrum method." Needless to say that teacher did not get a new pupil.

To this young student the plectrum guitar was not a novelty; he had heard this instrument in the hands of many clever players, but he had also heard Segovia, Oyanguren, Gomez, Foden and others play the guitar in the way it was intended to be played; and his discriminating musical sense convinced him that he was traveling on the right road.

Any one stating that the classic guitar is "old fashioned" or "out of date," thereby admits his lack of knowledge of the history and literature of the instrument. How ridiculous it would sound if we should apply those terms to the violin, because the finest instruments were made during the time of Stradivarius, and present day violinists still play the works of Bach, Mozart, Haydn, and of other composers living several hundred years ago.

Let us for a moment go back to the early keyboard instruments, the forerunners of the modern grand piano. Here we find the harpsichord, spinet, virginal and clavichord, which have virtually disappeared from the concert platform, although the harpsichord is staging somewhat of a comeback. The present day piano is the result of changes and improvements in the former keyboard instruments, until today it is considered the perfect instrument for the artist.

While the history of the guitar dates back hundreds of years, and while there have been periods during which its popularity was on the wane, it always has reappeared on the musical scene; and through its beautiful tone quality it continues to capture the hearts of listeners and to attract the attention of thousands of talented students.

The instrument itself has retained its shape and size, and the method of stringing it with three gut and three silk wound strings. Through the careful selection of wood, and different bracings of top and back, the tone quality and carrying power have been improved by some of the prominent guitar makers, but it is still the same guitar, beloved by Schubert, Beethoven and Paganini. It has been adopted by many great artists of the past and present as the means of musical expression and of providing pleasure to those millions of amateur players of the instrument during several centuries.

### Doubtful Claims

THE CLAIM that the plectrum guitar is an improvement or a modern version of the classic guitar is not based on facts; it

should be called the noisy brother to romantic, aristocratic and highly cultured member of the guitar family. It was invented to compete with the trumpet saxophone in the dance band, where it primarily used to strum chords as a rhythmic background for the melody instrument. It is true that the shape is the same, it has six strings tuned in a like manner. However, the strings are made of steel wire and played with a heavy plectrum in order to get quantity of tone. The difference in tone quality is so pronounced in favor of the classic guitar that there is hardly a division of opinion amongst those who have made a thorough study of both instruments.

Another claim frequently made is that the plectrum guitar is better fitted to popular music and for that reason the younger element prefers it. It is the writer's opinion that the main reason for the consistent popularity of the classic guitar is its versatility. When played by even a mediocre performer it will adapt itself to the playing of simple popular melodies and will provide a satisfactory accompaniment to songs; or will take its part in the performance of chamber music. The alluring tone of its gut and silk strings blends beautifully with that of the flute, violin, violoncello or mandolin. In the hands of an artist the guitar becomes an instrument of the highest order, and its artistic possibilities are unlimited. Listening to a sonata by Ferdinand Sor, or pieces by Coste, Giuliani, Legnani, and Mertz, one is astonished at the many beautiful effects possible on this instrument seemingly limited in scope. When one hears the works of Mozart, Bach, Haydn, Chopin and Segovia, one begins to wonder how things are possible on an instrument with six strings. But, looking over the literature for guitar by modern writers, we are reminded that the classic guitar is to become more alive than ever and able to hold its own against all comers. Since the advent of Segovia, many of the present day composers have given us a number of beautiful works especially written for guitar, which mention is made of a few of the prominent ones: Moreno F. Torroba—*Sonatina* and eight other pieces; Manuel M. Ponce—Three sonatas and about two smaller numbers; Joan Manen—Several pieces, including *Tausman Mazurka*; Isaac Albéniz—*Three Sonatas*, three short numbers; and many more.

Since all of this music is the product of living composers and written in the modern vein, we must admit that the classic guitar and the method of playing it is not "old fashioned" but very much up to date, and it probably always will remain so.

G. Jean Aubrey, the distinguished French critic, had this to say of the guitar, after a Segovia recital: "The principal merit of the guitar is to be at the same time sonorous and not noisy, and even in a large hall its sound carries everywhere. Because of the variety of tone possible on the guitar people can listen to it for a longer time than to almost any other instrument played alone. It is an instrument of the present which succeeds in preserving the sonority belonging to ancient works, without, however, erecting a barrier of several centuries between the listener and the music."

# QUESTIONS and ANSWERS

A Music Information Service Department  
Conducted Each Month

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## To Play a Turn

1. How are the turns played in these measures from Czerny's "Op. 139" (Ex. 39)? It is the sharps that bother me.

What is the meaning of this sign (') appears over the bass notes in Exer. 39?

Could you suggest a book to study after Op. 139 of Czerny's and the Bach-Carroll collection?—Miss P. V. M.

1. The turns are played as written below the sharp placed under these turns. If it had been placed above the turn, the note of the turn would be sharpened. In words, an accidental placed below a note means that the note below the principal note by it. If the accidental is placed below the note above the principal note, the note above the principal note is sharpened. Since you are playing in C, there are no other notes sharpened.

2. I have been unable to obtain but one of this work and in it there is no sign as you mention. If this symbol is of a comma it ordinarily means a sharp point; but I see no reason for that in a dry exercise.

After the Bach-Carroll you might try "Little Preludes for Beginners." If you too difficult get "Heller, Op. 47." The Czerny you might try "Kohler, Op. 20." "Le Couppes, Op. 20." I do not know how you play these but it might be still satisfactory to use Books 2 or 3 of the "New Graded Course." They are not so but they contain much technical work.

## To Play Grace Notes

1. How do you play the grace notes beginning of the Adagio in F major Haydn's "Sonata in C major"? Are played on the first beat exactly with great note of the broken chord. And is the first note of the treble played—the lowest bass note or the top note broken chord?

2. I have been of the impression that in classical grace notes are to be played the bass note, on the beat, whereas, in modern music they may be played ahead of the beat. Am I right?

3. Liszt's "Second Rhapsody," where a small grace note at the beginning of the first measure? I was taught to play it ahead of the beat, but another teacher has told me the opposite. —Mrs. M. M. M.

1. Play the grace note A with the low note F. The F in the treble is struck the top F of the bass chord. I say this, because of any rule, because it sounds better. The important thing in playing this is to see that your melody note F is good tone and is not smothered by the chord in the bass.

2. The general rule is to play grace notes on the beat in the early classics; however, there is no authority that obliges you to do occasionally you think they sound better. Other way do not hesitate to play that way. Artists do not follow this rule strictly.

3. The grace note C is played before the

## Mendelssohn's Concerto in G Minor

1. Would you give me the metronome marks for the "Concerto in G minor for piano" by Mendelssohn?

2. When was this concerto written?

3. Where could one get information concerning it? —B. V.

1. The approximate tempos are: First movement  $\text{♩} = 144$ ; Second movement  $\text{♩} = 80$ ; Third movement  $\text{♩} = 144$  to 160.

2. My copy states that it was composed by Mendelssohn, says it was composed and performed in Munich in 1827. However, Mr. Stephen S. Stratton, in his biography of Mendelssohn, says it was composed and performed in Munich in 1827. The next year it was played by the composer in Birmingham, England, at one of the festivals. A program of this concert "A New Grand Concerto, composed by Mendelssohn for this Festival." Probably Mendelssohn has been played more often than by Mendelssohn; but it is now self-performed by artists. It still is an excellent concerto, however, for students to

## Shall a Young Boy Take Vocal Lessons?

Q. I am a graduate of a well known Conservatory of Music with a degree in public school music and a teaching certificate in voice. I am a constant reader of your Question and Answer Department in THE ETUDE MUSIC MAGAZINE and have read several of your books and articles as references, while in College.

I have a few teaching problems and I would very much appreciate your help. A boy, ten years old, desires to study voice. His voice is very sweet but not very strong. Since the lessons will be private, just what type of vocalizing, if any, should I give him, and what type of songs should I use. Is there a collection of well known songs suited for a boy of that age? He has completed a book entitled "Songs for Children." —Mrs. V. W. A.

A. First of all I must tell you that I am extremely skeptical about a boy of ten taking private lessons in singing. His voice is entirely unformed at that stage; and, unless you are extremely careful, you may spoil his later voice for all time. The boy's voice does not ordinarily change until about the age of fourteen, and often this is delayed until fifteen or sixteen. After that it takes two more years for the voice to settle or "ripen," and during this whole period the boy should sing lightly and only in a compass which is easy. If he sings loudly and if you try to extend the compass during the period of mutation, you are likely to strain the voice so that when it does mature it will be thin and poor. This has happened to thousands of choir boys whose voices have been forced to sing high long after the voice began to lower, and who, after the voice was completely changed, have scarcely been able to sing at all. In the public schools teachers usually know how to treat the changing voice, and here we have two rules: 1. Keep the unchanged voice singing high and always urge the child to sing lightly; 2. When the voice begins to show signs of changing, put the boy on a progressively lower part until the voice is finally settled.

Now for your boy. 1. Get a copy of a little book by Howard, called "The Child Voice in Singing," and follow its directions. 2. Get a copy of "New Universal School Music Series: Teachers Book of Accompaniments." This latter is a book of lovely songs. I suggest that you sing various ones to him, playing the accompaniment as beautifully and artistically as possible and letting him choose which ones he wants to learn. Also, look up the boy's teacher of music in school and confer with her about him. And, finally, advise the boy to study the piano and thus to get a start at being a musician. The books mentioned may be secured through the publishers of THE ETUDE.

## How Are Chords Altered

Q. 1. How may seventh and ninth chords be altered?

2. Is there any rule that governs the resolution of altered tones?

3. What is meant by resolution to the tonic triad?

4. Please give the name of any harmony book that explains alteration of chords. —J. P.

A. 1. Seventh and ninth chords may be altered in an almost infinite variety of ways. The following are some of the commonest alterations:

Seventh chords:

Ex. 1

Ninth chords:

Ex. 2

2. The simplest rule is that altered tones must continue in the direction of their alteration; that is, if a tone has been sharpened, it continues upward, if a tone has been flattened, it continues downward. There are, of course, many exceptions to this rule.

3. Resolution to the tonic triad means that a chord goes to the triad (root, third, and fifth) built on the first degree of the scale. The tonic triad in the key of C would be C-E-G.

4. Almost any harmony book explains alteration of chords. For a concise discussion of altered seventh and ninth chords, see *Manual of Harmonic Technique* by Tweedy, pages 32-35 and 224-289.

## What Does "Islamey" Mean?

Q. Can you tell me something about Islamey by Balakireff—that is, where he got the name, theme, and, in general, what the piece is supposed to represent, if anything? —D. E. C.

A. Balakireff, like many other Russian composers, was influenced by the East. No doubt the title refers to Islam, as all three themes in this "Oriental Fantasy" are borrowed from Armenia and Caucasasia. I have been unable to find anywhere that the piece is descriptive in any sense.

# Chicago Conservatory

Established 1857

Your musical education at Chicago Conservatory will be directed along sound educational lines combined with the highest artistic standards. For 83 years such has been the reputation of this nationally recognized institution—a reputation that lends immediate prestige to its graduates.

Courses in all branches of Music leading to Bachelor and Master degrees.

## The "Chrysanthemum" To Be Shorn

One of Paderewski's favorite stories is said to be this anecdote, the locale of which is Boston.

Paderewski was approached by a bootblack who asked him whether he would have a shine. The great pianist replied, "No, but if you will wash your face I will give you a quarter."

Quickly the boy ran to a nearby horse trough from which he soon returned with a radiant face. He accepted the quarter thankfully; but, glancing again at the artist, he handed it back, saying, "Here, mister, take it yourself and get your hair cut."

# WHERE SHALL I GO TO STUDY?

## PRIVATE TEACHERS (Western)

### Mr. and Mrs. ABBY DE AVIRETT

Teachers of Piano

Telephone WHitney 7340

Residence Studios, 267 South Arden Boulevard  
(Corner Third Street) Los Angeles, Calif.

### EDNA GUNNAR PETERSON

Concert Pianist—Artist Teacher

229 So. Harvard Blvd. Los Angeles, Calif.  
FE. 2597

### LAZAR S. SAMOILOFF

Voice teacher of famous singers

From rudiments to professional engagements  
Beginners accepted. Special teachers' courses

610 So. Van Ness Ave., Los Angeles, Cal.

### ELIZABETH SIMPSON

Author of "Basic Pianoforte Technique"

Teacher of Teachers. Coach of Young Artists.  
Pupils Prepared for Concert Work. Class Courses  
in Technique, Pianistic Interpretation, Normal  
Methods for Piano Teachers.

609 Sutter St., San Francisco;  
2833 Webster St., Berkeley, Cal.

## PRIVATE TEACHERS (Mid-West)

### ELSA HARTHAN ARENDT

Vice-Pres. Sherwood Music School

Soprano Teacher of Voice

Soloist-Director 1st Congregational Church,  
Oak Park, Ill.

300 Fine Arts Bldg., Chicago, Ill. (Harr. 6267)  
337 So. Brainard, La Grange, Ill. (La Grange 2070)

### NINA BOLMAR

Teacher of voice

Endorsed by L. S. Samoiloff

612 Fine Arts Bldg. Chicago, Ill.  
Phone: Web. 4937

### ROY DAVID BROWN

Pianist and Teacher

assistant and successor to Emil Liebling

612 Fine Arts Building, Chicago, Illinois  
Telephone Webster 4937

### CECILE DE HORVATH

Concert Pianiste and Teacher

Pupil of the noted virtuoso and conductor,  
Ossip Gabrilowitsch

418 Fine Arts Bldg. Chicago, Ill.

### ELAINE DE SELLEM

Mezzo-Soprano

Youthful voices developed. Mature voices  
rejuvenated

Major Teacher of Voice

American Conservatory Chicago, Ill. Kimball Hall

### RICHARD DE YOUNG

Teacher of Singing

Teacher of many famous concert, radio and opera  
artists. Associated teachers in languages, har-  
mony, solfège, classes in operatic repertoire under  
famous conductor. Phone: Delaware 2338.

721 North Michigan Ave. Chicago, Ill.

### FAY EPPERSON

School of Whistling

400 Fine Arts Bldg. Chicago, Illinois  
410 S. Michigan Blvd.

# Are You Aiming for the Opera?

(Continued from Page 574)

parts of the building, are being coached in their special routine. An opera may be in preparation a week before solo singers, chorus, "supers," and orchestra meet together on the stage for the all important final rehearsal. The orchestra is generally the last unit to join the others. Before it does, stage rehearsals are accompanied at the piano by one of the assistant conductors. The conductor directs from score, the stage director moves about the stage, and the chorus master stands in the wings where all the members of his group can see him, even if he has to mount a ladder to effect complete visibility.

On the day of the performance, the wardrobe and make-up departments prepare the materials that enable the music to come visibly to life. While the leading singers generally supply their own costumes, the opera company maintains complete wardrobe equipment for the secondary singers, the chorus, and the "supers." The wardrobe department delivers the costumes to the various dressing rooms during the late afternoon hours, and the singers find their robes ready for them when they come to dress. First the make-up goes on. Crayon wrinkles; false eyelashes; grease paint; powder. Then the wig is adjusted, and the make-up master makes a tour of inspection of all dressing rooms, to convince himself that the appearance of each singer is as it should be. Next the costume goes on, and the wardrobe master makes a similar tour

of inspection. No one steps forth upon stage without the approval of those department heads, who are responsible for the appearance of the "show." And while the dressing room corridors ring with famous voices, warming up with and vocalises. At last, the call boy rings his rounds, tapping at the doors and announcing, "Twenty minutes before the curtain—ten minutes before the curtain."

## The Play Is On

NOW THE OVERTURE BEGINS, and the boy announces that, too, since the seeproofed doors which separate the from the dressing rooms allow not a to pass. The singers must be at their in the wings from which they enter, minutes before they are due to ap. Singers not needed for the opening are specially called. The rap on the the call, "We are ready for you please"; and the "show" is on.

The audition candidate of last ye singing at the Metropolitan Opera—years of private study, months of p ration, and weeks of immediate rehe and drill. And when the critics hear see him, he may be surprised to find there are still points aplenty that polishing. If you are aiming at the o it is a good thing to know what you to expect there. But do not expect to a at the Metropolitan without Metro standard vocal material and experience

full time. No Cost or Obligation. Write for com-  
plete details TODAY! Address:

CIRCULATION DEPT.  
THE ETUDE MUSIC MAGAZINE  
1712 CHESTNUT ST., PHILA., PA.

Write, "I saw it in THE ETUDE."

COVER FOR THIS MONTH—The or this month portrays a group of boys of thousands of such school-boy throughout the country. While playing a school band or a school orchestra a far greater musical advantage than of most of these lads enjoyed, the young fellows deserve even more in opportunities. Their musical horizons be widened and their future musical experiences made more enjoyable by the additional study of the piano. They will be performers on their chosen solo or participating instruments if they learn piano study the melodic, harmonic, rhythmic qualities of a wealth of music available in such completeness to any instrument. The basic photograph used on this month's cover is the work of Harold Herbert Studios, Philadelphia, Pa. An artist was commissioned to add the decorative pieces to finish out the subject for the month.

**FALL BARGAIN OFFERS**—This month had another chance" is the remark after they discover they have missed opportunity. "Presser's Fall Bargain" represent another opportunity for those who neglected to take advantage of the "Publication Offers" on any sets of studies, collections of music, can music literature books added to the catalog during the twelve preceding months. These "Fall Bargain Offers" are Introductory Offers" on Presser's new publications issued during the 1938-1939 season. Most of them already have won many prizes. Here is a chance for those friends to another copy at a special low cash and it is a chance for others to secure a copy at a real saving. Only on the "cash with order" combined with the of gaining new users of these recent publications is it possible to make these Introductory Offer" price reductions. The "another chance", but it expires on the calendar's turn to Oct. 1, 1939, with the ability of enjoying the Bargain Offer after that date.

**ETUDE MUSICAL BOOKLET**—Because the Theodore Presser Co. in its inception specialized in serving workers not having in any near-by districts anything in the way of a store carrying a representative stock of musical, standard, educational, or sacred publications, it has found it necessary to make inquiries as to sources from which might obtain information, when the supply of such information would run beyond the average letter.

In the larger cities free public libraries, comprehensive collections of musical books, provide a source of reference for music students, music teachers, club workers, etc. Such folk, however, in smaller cities, towns, and lesser-sized communities, not possessing such free library and such persons not wishing to inquire sums personally in building up a music library, represent many of the whom the Theodore Presser Co. gladly render helpful service over many years. Requested facts are supplied in letters since it would be impossible to send and four page letters to those asking for information as Biographical Data on Composer, How to Get Rid of Shyness in Public, How to Accompany, How to Conduct a Music Memory Contest, How to Organize a Music Club in Your Community, What Music to use for Weddings, How to Become Proficient in Sight Reading, etc. The Theodore Presser Co. began a booklet series known as *The Etude Musical Booklet Library*. Thus, someone getting a substantial amount of biographical information on Brahms, Chopin, MacDowell, etc. could be told that for 10¢ in stamps they would be sent a booklet giving excellent biography and a portrait of the composer.

Otherwise, there are 10¢ booklets on the subjects mentioned. Perhaps in this there is some subject about which you like to have information, so why not postal request to-day for a complete set of the books in *The Etude Musical Booklet Library*. They are a convenient pocket-size, only 10¢ each it is a good investment in a few of these every now and then, and to your store of useful musical information.

**CIRCLE-O-KEYS**—There is no better way for music students to make certain musical knowledge just a matter of course with them than to be able to see in concise, visual form that musical knowledge as it sits up on the musical staff. This *Circle-O-Keys* is a clever vest-pocket size device. It consists of a heavy paper flat sleeve or envelope with open ends. The card that fits in this sleeve has one side covering sharps and the other side covering flats. The sleeve has printed on it five lines of the staff, and on each line and, in each space utilized for sharps or flats given in a signature, a round hole is perforated. There are other openings, and when this card is so that through the hole opposite the words "Number of Sharps" the figure "1" shows up, through the hole beside the word "Major" the letter "G" shows, and through the hole beside the words "Relative Minor" the letter "E" shows, and through the perforation on the top staff line the one sharp, "F-sharp", required for the key signature, shows itself. Through another opening lower in the sleeve the details of the minor scale progressions are shown, giving both the melodic and harmonic scales.

In similar fashion, by moving the card to whatever letter is wanted opposite the major or minor opening, there is instantly given the number of sharps or flats and the relative minor scale progressions. In other words, this card, in its cleverly devised sleeve, in an instant will tell such things as the name of the notes and rests, their time value, and where they appear on the staff; the name of all major and all minor keys; the signature relation between the major and minor keys; the names of the sharps and flats of each key; and the notes that are raised or the half steps cancelled in the melodic scale and in the harmonic minor scale.

It shows the key of any composition for whatever number of sharps or flats are used as the key signature of that composition, or vice versa for any key it will show the number of flats or sharps required for that key signature. It shows the names defining the steps of the scale—that is Tonic, Super Tonic, Mediant, etc. It is a quick checking pocket medium for music-minded folk and it also shows a simple form of transposing.

These charts are sold singly at 10¢ each, or for the convenience of teachers buying them in quantities of a dozen or over there is the rate of \$1.00 per dozen, and in a lot of 100 or over the price is at the rate of \$8.00 per 100. The Theodore Presser Co. has sold thousands of this *Circle-O-Keys* device which has been endorsed by many well-known music educators.

**THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES**—When you received this issue of *THE ETUDE* it may have awakened you suddenly to the realization that Summer is almost gone and that soon it will be necessary to banish all thoughts of care-free vacationing from your mind. This breaking away from pleasant warm-weather associations is never a happy task, but it does have a bright side in as much as it heralds the coming of a new music season.

The exciting development of embryonic ideas soon will demand all of your attention, and, if you are pressed for time, you may be tempted to overlook some of the less important details. Perhaps your plans for collecting portraits for reference work and scrap

book projects will be one of the "less important" matters likely to be neglected.

This is where *The Etude Historical Musical Portrait Series* (See page 554 in this issue), will prove a real help because it supplies, in one set, portraits of practically all of the world's best known musicians together with brief, authoritative, biographical data. These are presented in alphabetical order on a "Series" of sheets, and each sheet of 44 picture-biographies is printed separately—costs only 5 cents.

**PEEKING OVER A PUBLISHER'S SHOULDER**—"Inside information", when absolutely authentic, has possibilities of being very helpful. It is just such helpful information that the active music worker obtains in learning what publications a publisher is finding it necessary to reprint to keep stocks abreast of orders for those publications. Here is a "peek over a publisher's shoulder" giving a chance to identify some of the many items that were put on the printing order sheets of the last 30 days. Full information with any one or a number of these publications may be had by requesting the Theodore Presser Co. to send them "on approval."

**AN UNUSUAL BOOK**—The Theodore Presser Co. has accepted the distributing agency for a book that is different from anything else upon the market. This book is *The Music Album* by Samuel G. Houghton. It has not been an easy book to prepare since it involved special binding problems, costly pin-hole perforation of sheets of stamps, time-taking typographical layouts, and to be presented in a satisfactory manner it required over 150 pages, each page 7" x 10", bound between heavy board covers. In a way it may be termed a "stamp album" to collect and record your musical experiences and memories.

The more prominent of the many composers represented in this book each have a full blank page to accommodate notes on that composer, his works, etc. There is a portrait stamp for each of the 30 composers so covered, and this gummed-back stamp may be glued on the proper page, giving a portrait to accompany the birth-place and birth and death dates which are printed in the book for each of these composers. Similar data is given on many other composers, who having fewer prominent works, are accorded less than the page space. There are sheets of other stamps on blue, yellow, and pink gummed paper for use in the squares allowed for certain symphonic works, operas, songs, piano selections, quartets, airs, etc., etc. When these have been heard, space on the stamp permits writing in the data as to the date, artist, orchestra, or whatever else you want to remember upon hearing a work.

In supplied text, *The Music Album* makes it possible to keep records on what you have heard of 1,623 compositions, and the composers whose works you have heard out of 235 composers. There is ample blank space for the addition of many more compositions and composers, should you be so fortunate as to pass the average record of the truly appreciative music lover. This is a book for music lovers of all ages, and for the genuine student-lover of music, it can be developed into a priceless lifetime possession. In its unique way it helps its owner to record his musical memories, to tabulate the music he comes to know, to guide him as to the music he ought to know, to give him a wide acquaintance with music selections and their composers, and to preserve his opinions of music and artists he has heard. Considering all that this book makes possible, and considering the production problems it gave its publishers, it is reasonably priced at \$2.50.

**CHANGES OF ADDRESS**—When returning to the city from your country home, please advise us at least one month in advance, giving us both town and country addresses to insure against copies going astray. Wrappers for each issue of *THE ETUDE* are printed very much in advance of the date of publication and we should have ample time in which to make the change. Thank you for your co-operation.

**FINE MERCHANDISE GIVEN IN EXCHANGE FOR ETUDE SUBSCRIPTIONS**—If you prefer merchandise instead of a cash commission in return for securing subscriptions to *THE ETUDE*, here's your opportunity to secure valuable articles which you will find both attractive and useful. For each \$2.00 subscription secured, (not your own) we credit one point toward any reward in our catalog. The following items will give you an idea of the merchandise offered:

**Bon Bon Dish:** A footed Bon Bon Dish will come in very handy as a container for shelled nuts as well as all kinds of candy. This one is 5 1/2" in diameter and has a bright chromium finish that will not dull or tarnish and can be kept clean by simply washing. A splendid "little" gift—a fine prize. Your reward for securing ONE SUBSCRIPTION.

**Smoker's Set:** Here is a novel Smoker's Set in the form of a miniature cobbler's bench. It has a polished maple finish and includes a covered glass cigarette container, two match holders, and a glass ash tray. A practical gift for the smoker. Your reward for securing ONE SUBSCRIPTION.

**Chromium Plated Cake or Sandwich Tray:** A combination of chromium and glass with a chromium swinging handle trimmed in crystal, diameter, 10 1/2". Your reward for securing FIVE SUBSCRIPTIONS.

Send post card for complete list of rewards offered for securing subscriptions to *THE ETUDE*.

## CINDERELLA—A Story With Music for Piano

By ADA RICHTER

This book is one of the added delights for the young piano student of today. Through this story-telling book, the young piano beginner gets real pleasure in playing little pieces that help his or her progress. The pieces help express the emotive qualities of the story. Further individual interest in the book comes to the young pianist through the fun that may be had in coloring the nine full-page illustrations of the experiences of Cinderella. As a

show piece for young piano beginners the material in this book before an audience, dramatizing the story or presenting it in pantomime with various pupils playing the piano and assisting in singing the texts to some of these musical numbers.

## PLAY AND SING—Favorite Songs in Easy Arrangements for Piano

By ADA RICHTER

With this collection the young pianists along in their first year or the beginning of their second year of study may have lots of fun and satisfaction. Mrs. Richter, who has been very successful in providing things to enlarge the repertoire as well as the scope of activities of young piano pupils, has arranged 40 favorite melodies in such a way as to have them effective for piano solo recreation or for piano accompaniment to singing without going beyond the ability of the young pupil. The index divides the songs. There are favorites youngsters learn to sing in school, songs that come to us from other lands, songs that are individually American, songs from operatic sources, and songs which our grandparents sang long ago. Like Mrs. Richter's book (*My First Song Book*) preceding it, *Play and Sing* gives promise of interesting some beyond the juvenile stage who like to "pick out tunes" at the piano even though they have had no lessons, or perhaps only a very few lessons sometime or other, in piano playing.

## 28 MINIATURE ETUDES—A Book of Studies for Third Grade Piano Students

By ELLA KETTERER

This book is a particularly interesting group of studies for the piano student. They may be taken up at the beginning of third grade work and used as supplementary material throughout most of the season's study. Each etude has a somewhat descriptive title and is virtually a short piano solo selection, although each one does cover definitely some of the technical equipment pupils should work to gain in the third grade of study. There are such phases as hand work, triplets, the trill, syncopation, staccato, left hand alone, development of the weak fingers, simple suspensions, broken thirds, changing rhythms, repeated notes, arpeggio chords, wrist work, preparation for turns, chords and octaves, ascending and descending arpeggios, broken chords, etc.

(Regular Price, 75c)

### Offer No. 4

## TEN STUDIES IN BLACK AND WHITE—For Piano

By MANA-ZUCCA

Just the type of material to help the piano student of today move onward in about the grade four stage. Each of these study offerings is in the "study piece" style. The titles, as well as an indication of the technical phases covered, are—*A Misty Scene* (legato), *A Skyline* (hand stretching and accuracy), *Dancing Spray* (wrist attack and rhythm), *Autumn Leaves* (octave staccato), *A Seascape* (arpeggio accompaniment to right hand melody), *A Spanish Scene* (rhythmic study), *Still Life* (legato), *Clouds Over the Ocean* (double notes), *The Fountain* (velocity), *Flowers in Bloom* (quick attacks). These studies are well produced in the *Music Mastery Series* make-up and the name of the composer is assurance of their musical interest.

### Offer No. 5

## FIFTH YEAR AT THE PIANO

By JOHN M. WILLIAMS

This latest addition to the immensely successful "year by year" piano course by John M. Williams is proving a refreshing discovery to many teachers adopting it for the teaching of pupils at this stage of piano development. It is refreshing to the teacher because there is no necessity during the lesson period or apart from the lesson period to take time to annotate the study material. The selections used as study material are analyzed as to study points and everything is so set up that the teacher is able to carry the pupil along more satisfactorily and more rapidly than the average work offering study material for this grade usually permits. The fact that Mr. Williams has selected as a basis for study material such numbers as Dvorak's *Humoreske*, Grieg's *Butterfly*, Lack's *Esquise*, Humperdinck's *Evening Prayer*, Nollert's *The Raindrop*, Lack's *Valse Arabesque*, and a few other interesting compositions enhances the value of this book to the pupil. Certain definite technical needs not covered through such compositions are met by wisely selected and carefully edited Czerny Studies.

## FRAGMENTS FROM FAMOUS SYMPHONIES—For Piano

Compiled and Arranged by WILLIAM BAINES

Mr. William Baines has produced, in these arranged excerpts from the symphonies of such composers as Dvorak, Schumann, Mozart, Schubert, Tchaikowsky, Brahms, Beethoven, and Haydn, a splendid means by which young piano pupils as well as pianists of limited playing ability may enjoy producing on a piano keyboard the fine music to be found in these melodic excerpts. The recent increase in the number of symphonic orchestras throughout the country as well as the popularity of symphonic music in radio progress has virtually made necessary a collection of this type for pupils along in the second grade of study. This collection also is of a character to provide real pleasure to the grown-up piano beginner.

## ONE STRING SOLOS FOR VIOLIN BEGINNERS—Violin Part (Offer No. 7) Piano Acc. (Offer No. 8)

By KATE LA RUE HARPER

These are solos for pupils taking private instruction or interesting unisons for violin beginners receiving group instruction. The violin part carries an illustration for all but a few of the pieces. The clever little verses which form part of each selection as well as the musical notes are printed in an easily readable size. The violin diagrams indicate the finger positions on each string as solos for each string are presented. This is real beginning material since only three fingers are used and there are no accidentals in the violin part of any piece although not all of them are written in the key of "C." There are four selections given for each string. The books are in a convenient oblong make-up. The piano parts are easy to play and they carry the text as well as the violin part in score. Be sure to use the proper offer number to designate when you want the Violin Part (Offer No. 7) or the Piano Part (Offer No. 8) or both.

## ORGANIST'S RESOURCE—A New Collection of Organ Music

By I. V. FLAGLER

I. V. Flagler was one of the pioneers in this country in making up compilations to give organists a wide variety of playing material in convenient form, at a reasonable cost. Mr. Flagler did some publishing of his own accord and the Theodore Presser Co. fortunately secured the publishing rights on the material. A number of these volumes were Mr. Flagler's heirs, not having an organization for conducting music publishing business, decided to dispose of them. From all of this fine material the Theodore Presser Co.'s editorial staff has chosen for this volume 28 numbers which represent the cream of Mr. Flagler's excellent arrangements of original compositions for organ. This attractive and flexible volume in its heavy paper cover runs 88 pages and is bound in oblong style.

## 16 MODERN ETUDES—For the Advanced Trumpet Player

By JOHN HUBER

In these days of great musical achievements, particularly with instrumental ensembles, no accomplished player of the trumpet whether in the advanced student stage or the professional player realm can afford to be deficient in embouchure, finger technique, articulation, phrasing, style, speed, or breath. For the development of the advanced student to real playing ability and for the daily drill, in which every accomplished player should indulge, these studies cover such details to perfection. As an added feature to the book the author has included a very interesting duet for two advanced performers.

### OLD'S OWN BOOK OF GREAT MUSICIANS—Brahms

By THOMAS TAPPER

In this past year it finally was possible to provide the three additional biographies that many teachers have wanted to see added to *Old's Own Book Series of Great Musicians* which they have found so useful for use in widening the young music pupil's horizon and deepening the pupil's zest for music. Brahms' was one of the added. This is an excellent condensed biography of Johannes Brahms told in simple, straightforward fashion without the use of any pictures. Accompanying it is a sheet of pictures to be cut out and pasted in the 20 spaces provided for them throughout the text pages. Blank pages provide space for the young pupil's review in his own language of what he has learned about this interesting composer. The book and cord are provided together with illustrated directions for the youngster to bind the completed pages within the substantial cover which carries a two color title page.

(Regular Price, 20c)

### WARD CARDS FOR MUSIC PUPILS (Second Series)

These attractive cards (size 5½ x 3½) has the appearance of a water color portrait in miniature with an accompanying water etch of either the composer's birthplace or some other building, or an operatic scene that would be natural to associate with the composer. The reverse side gives a short biographical sketch, a reproduction of a bit of original manuscript, and the autograph of the composer. The composers in this Second Series are: Rimsky-Korsakow, Saint-Saens, Sibelius, Moussorgsky, Rossini, Moszkowski, MacDowell, Grieg, Elgar, von Gluck, Dvorak, Debussy, and Bizet.

## Offer No. 15

### ANNUAL OF FUGUE

By PRESTON WARE OREM

The works covering theoretical musical subjects by this author are considered by many to be unequalled in blazing a direct pathway to an understanding, enjoyable view of the particular subject covered by each book. Instead of the student finding himself involved in a maze of puzzling, contradictory rules and a lot of higher mathematical mathematics he soon sees from the author's explanations and original illustrations that anyone with average intelligence may learn something of the Resources of Fugue Construction, going into Imitation in Two Parts; Imitation in Three Parts; Double Counterpoint in the Octave, in the Tenth, and in the Twelfth; Contrapuntal Sequence; The Fugue Form; The Tonal Fugue; and How to Analyze a Fugue.

(Regular Price, 75c)

### ADDITIONAL CHRISTMAS CAROLS For Junior Choir By WILLIAM BAINES

A majority of these 15 Carols are lesser known carols insofar as the American audience is concerned, although they have long been a part of the Christmas traditions of the Bohemian, Austrian, French, Old Welsh, and Kentish folk groups from which they were derived. The main purpose in this publication and the arrangements for Junior Choir is to provide the Junior Choir with some Christmas carols. Arrangements are for unison singing except in one number where an *ad lib* second part is provided in a portion of the number.

### THE MANGER PRINCE

Christmas Cantata for Mixed Voices

By LOUISE E. STAIRS

Stairs' cantatas have been enthusiastically received by choir groups everywhere. Melodic inspiration and the judgment and ability in her musical settings in sympathy with the sacred import of the message are most apparent in this excellent Christmas Cantata. All of the voices are utilized and there are duets for soprano and tenor, soprano and alto, and a trio for soprano, alto, and tenor. The choir plays an important part and brings the Cantata to a fullness of joy and adoration in the closing selection. About 40 minutes in length.

(Regular Price, 60c)

## Offer No. 18

### HAIL! KING OF GLORY

An Easter Cantata for the Volunteer Choir

By LAWRENCE KEATING

Last Easter season this new Easter Cantata proved to be one of the most popular. The composer is a man who has had a wide and rich experience in musical ministry, and this experience together with the exceptional gifts and melodic inspirations he possesses have made it possible for him to give this Cantata all of the musical qualities which have won it such a fine reputation. The chorus numbers are arranged for mixed voices and there are short easy solos for soprano, alto, tenor, and bass voices. Several duets and a trio give variety.

(Regular Price, 60c)

## Offer No. 19

### PENITENCE, PARDON, AND PEACE

A Short Lenten Cantata By J. H. MAUNDER

Arranged for Women's Voices By JAMES C. WARHURST

Not every church choir can do justice to the original form of the cantata for mixed voices. This new arrangement is a real help to choirmasters not having sufficient, capable, or dependable men singers, and it also provides a splendid sacred musical work for women's club choruses, or girls' college choirs wishing to use sacred material during the Lenten season. It is for three-part treble voices (SSA) in the full ensemble singing. A soprano solo voice is brought into use on four occasions with an alto solo voice having six different opportunities to participate. Sung without break it will require about 35 minutes.

(Regular Price, 75c)

Introductory Cash Price, 45c, Postpaid

## Offer No. 20

### VICTORY DIVINE

An Easter Cantata By J. CHRISTOPHER MARKS

Arranged for Women's Voices By JAMES C. WARHURST

This arrangement is a notable Easter season offering for choirs of women's voices. The musicianship to be found in this excellent sacred music composition makes it worthy of the best trained choir of women's voices yet, at the same time, the natural singing flow of it makes possible its use by groups of volunteer singers able to hold true in part singing. There are solos for soprano, mezzo-soprano, and alto voices.

(Regular Price, 75c)

### THE YOUTHFUL BARITONE

An Album of Songs for Studio and Recital

Many things have combined to rouse the ambitions of youthful singers and set new standards for youthful soloists. The private voice teacher and the school music educators, however, know full well that young men with voices not fully matured should limit their solo attempts for a few years to numbers that will not strain their voices at either extreme of their vocal ranges. This collection has a dozen excellent songs for the repertoire of the baritone singer who has not reached his vocal maturity.

(Regular Price, 75c)

Introductory Cash Price, 40c, Postpaid

## Offer No. 22

### THE YOUTHFUL TENOR

An Album of Songs for Studio and Recital

The purpose of this album of 12 songs is to provide songs for study and for program use by young tenors who are being guided sensibly in their vocal development and who are being held to using only such songs as do not call for any stress on their voices but which at the same time afford them opportunity to do full justice to their talents, staying within the vocal area that is sensible for their safe development.

(Advance) Offer No. 49

Combined order for above  
named 4 Symphonic Skele  
ton Scores

In listening to symphonic music not every listener can follow the melody line as it moves through a mass of variations and counterparts with all of the variety of instrumental colorings and the grand symphonic structure also calling for the attention of the listener. Miss Katzner has very cleverly worked out some of a "trail guide" that helps the average listener keep to a melodic pathway while enjoying the symphonic music. In each of the first four of this series of *Symphonic Skeleton Scores* Miss Katzner presents the unbroken melody line keeping to a staff, yet showing what instruments are playing at each particular point and also making it possible for the eye to assist in guiding the ear in the different themes and variations in each movement, measures, phrases, periods, etc., as the various instruments participate. These easy-to-follow *Skeleton* give promise of bringing greater joy to the listener of symphonic music whether it be over the radio or in the conventional symphonic concert. This series of *Symphonic Skeleton Scores* predict a wide spread use for them in music education and music appreciation work, particularly since it is so much good symphonic music now available on records.

OUT OF THE SEA

An Operetta for Children in One Act

Book and Lyrics

By ETHEL WATTS MUMFORD

Music by LILY STRICKLAND

It is very easy to understand how the composer of this operetta would have a delightful time giving a musical background to this fantastic operetta book for children with such picturesque characters as King Neptune, Undina, The Sea Serpent, The Oyster, The Hermit Crab, The Fiddle Crab, and Davey Jones, an inquisitive scientist delving into the mysterious life below the sea surface, an aviator, and two children among the earth folk included in the cast. Just picture a stage setting on a lonely seashore and the costume and situation with such characters and you have some idea of the things with which the author and the composer worked to such fine advantage in making this splendid one act operetta for children. There is a lot of beauty, life, and go to the music and every child is easy for young singers to handle. The vocal parts carry directions for staging, costumes, and dialogue and gives the music and dialog complete. No more than one copy may be ordered under this advance publication offer.

JACK AND THE BEANSTALK

A Story with Music for Piano

By ADA RICHTER

In the foreword, the author says: "This book grew out of my experience in teaching piano classes. In these classes it has been my custom, after a period of concentrated effort, to provide a rest period in which the children are allowed to choose what they like most to do. The usual request is, 'Tell us a story.' In my endeavor to correlate the children's demand for a story with my own desire to make of the period something musically useful, I tried telling the story with illustrative music improvised on the piano." This "story with music" book may be put to many uses. Detailed suggestions for recital programs based upon this story are outlined. It is especially suitable as a book for Mother or Teacher to read and play for a child. For piano classes, it provides excellent supplementary material in which the music may be used for "extra work" and the illustrations colored for "busy work". The piano solos illustrating the story are of about second grade. Some are with words which may be sung. The book is published in the practical oblong size, 12 x 9 inches, and is illustrated with a number of line drawings. Some of the pieces are *Climbing the Beanstalk*, *Fe Fi Fo Fum*, *The Golden Harp Plays*, *The Chase*, *Chopping Down the Beanstalk*, and *The Giant Is Gone*.

EIGHTEEN SHORT STUDIES  
FOR TECHNIC AND STYLE

By CEDRIC W. LEMONT

GRADE III-IV

In these eighteen short studies, melody has been so well combined with technic as to make easier and more attractive the task of learning them. Also, the composer has shown that style and technic can be taught effectively without having to use the more difficult keys. Among the studies are problems in legato, staccato, triplets, octaves, chords, arpeggios, running passages, phrasing, pedaling, left hand melody, finger control, double thirds, double sixths, etc., including equal development of right and left hands.

TWELVE MASTER ETUDES  
IN MINOR KEYS, Op. 29

For Piano

By FRANCISZEK ZACHARA

These *Etudes in Minor Keys* display to advantage the composer's inventive and melodic gifts set off to advantage by a fine musicianship. There is much in these *Etudes* to make them useful in the advanced student's piano education. Work in octave and chord playing, scale passages, intricate rhythm designs, and other technical demands are set forth in these *Etudes*, which range from grade 6 to grade 8. They are to be issued in the *Music Mastery Series* form and therefore it will be seen the advance of publication price is a genuine bargain price.

MELODIES EVERYONE  
LOVESA Collection of Piano Pieces for the  
Grown-Up Music Lover

Compiled and Arranged

By WILLIAM M. FELTON

Sold Only in U. S. A.

The joy which accompanies the handclasp at a meeting of old friends is no more keen than the gratification experienced by music lovers when they discover a book containing a generous lot of old and cherished melodies. Many pieces of bygone days, acceptable at the time in their original form, now need some harmonic revision and alteration to meet present day requirements. The contents of this book will include good arrangements of some of the melodic gems from folk music literature, together with some of the best known numbers from the masters, as well as several spirituals and pieces in dance style. The various numbers comprising the contents will be assembled under the following classifications: Arrangements of Folk Songs, Ballads, Gems from Grand Opera, Musical Comedy, Overtures, Selections from the Classics, and Pieces in Light Rhythmic Style. Each number will be especially arranged, fingered, and pedaled, and the grading will run from 3½ to 5. The numbers in this album will be welcomed particularly by adults for recreational playing. Teachers also will find them to be splendid assignments to encourage and develop a pupil's sight reading ability.

CHRISTMAS CAROLS IN  
VERY EASY ARRANGEMENTS  
FOR PIANO DUET

Here we have a dozen of the best known Christmas carols in easy arrangements for four hands at one piano. This collection should mean much to those teachers who are besieged every Christmas with requests for pieces for church or school entertainments. As it is usually the case for the younger children to be called upon for such entertainment, it should always be possible to find among them at least two who are able to play first or second grade music; and that is about all that is required to perform the music in this collection, both parts being equally simple. Some of the numbers can be used to support the singing of these carols. The following list of contents will be found both appropriate and full of variety: *Away in a Manger*, *Jingle Bells*, *Silent Night*, *Jolly Old St. Nicholas*, *Joy to the World*, *I Saw Three Ships*, *It Came Upon the Midnight Clear*, *O Tannenbaum*, *O Come All Ye Faithful*, *The First Noel*, *O Little Town of Bethlehem*, and *Hark! the Herald Angels Sing*.

SIDE BY SIDE

A Piano Duet Book for Young Players

By ELLA KETTERER

These ten tuneful duets are for young players early in their first year of piano study. In neither part will a beginning pupil have any trouble since the playing passages stay within the five finger position. There are a few octaves but these are only for pupils who can play them since the single note will suffice. While there is a variety and a definiteness in rhythmic demands these duets are easy and no smaller note division than an eighth note is used. There is key variety without taxing the music comprehension of the beginner. Only the keys of C, G, F, B-flat, D, A Minor, and G Minor are used. The two parts to be played are of equal interest and in a number of cases the Secondo part carries the melody in the bass. Much more space might be used in telling of the special merits of this little duet book but for the teacher alert to the best materials for the young pupils we need only to point out that the creator of these duets is none other than Ella Ketterer.

CHILD'S OWN BOOK OF  
GREAT MUSICIANS—  
DVOŘÁK

By THOMAS TAPPER

This series of booklets, by which children become intimately acquainted with the main facts concerning the lives of our great composers, has proved so popular that teachers want more composers added to the series. This new booklet will tell about Antonin Dvořák, famous Bohemian composer of such musical gems as *Humoreske*, *Largo* from the "New World" Symphony, *Slavonic Dances*, *Songs My Mother Taught Me*, and many others. Like the previously issued booklets of this series, a set of pictures accompanies this book. These are to be cut out and inserted in their proper places. After reading the biography and pasting in the pictures, the child then writes his own story and binds the book (art album style) with a silk cord and needle furnished with each copy, thus making his *Child's Own Book*.

TWELVE CHRISTMAS  
CAROLS FOR BRASS  
CHOIR

Arranged by ROSS WYRE

The popularity of brass ensembles at the Yuletide season prompts us to make available the most familiar Christmas carols in expert arrangements for various combinations of brass instruments. In addition to their usefulness at church services, these arrangements are ideally suited for school work and should fill a long-felt need for material of this type for seasonal programs. With four-part harmony in open position as the basis of the scoring, transpositions for alternate instruments provide parts for all brass players. The instrumentation includes:—1st B-flat Trumpet, 2nd B-flat Trumpet, 1st Trombone (Bass Clef), 2nd Trombone and Tuba (Bass Clef). A quartet of two trumpets and two trombones is the normal combination, but various other groupings are practical. The E flat or F Horn may substitute for 1st Trombone; the Baritone may substitute for 2nd Trombone. The Tuba may be added to larger groups. An optional piano part may be used to supplement combinations of two, three, or more instruments. One complete set of parts, including piano will be provided under one cover and may now be ordered at the low advance of publication cash price. Separate or additional parts are not obtainable under this advance offer.

ALL-CLASSIC BAND BOOK

For Young Bands

Arranged by ERIK W. G. LEIDZÉN

Those familiar with the work of Mr. Leidzén can appreciate what has been done for the school band material. The following list of contents indicates the quality of music these selections bring to the repertoire of young band players:—*Lovely Maiden*, Haydn; *At Twilight*, Schumann; *Minuet*, Bach; *Soldiers' March*, Schumann; *Romance*, Martini; *First Waltz*, Schubert; *Andante*, Beethoven; *Reverie*, Mendelssohn; *Blushing Roses*, Mozart; *Minuetto*, Verdi; *Meditation*, Handel; *Polonaise*, Bach; *Cradle Song*, Schubert; *Queen's Romance*, Haydn; *Galotte*, Handel; and *Air*, Gluck. The instrumentation is as follows:—C Flute and Piccolo, D-flat Piccolo, E-flat Clarinet, 4 B-flat Clarinet parts, E-flat Alto Clarinet, and B-flat Bass Clarinet, the Oboe, the Bassoon, 2 E-flat Alto Saxes, the B-flat Tenor Sax, the E-flat Baritone Sax, 3 B-flat Cornet parts, one of which may be used for B-flat Soprano Saxophone if desired, 2 Horns in F, 2 E-flat Alto Horns, 3 Trombone parts in Treble Clef, Baritone Euphonium in Bass Clef, Baritone Horn in Treble Clef, Bass Horn, Tympani, Drums, and a Conductor's Score which provides a piano part that may be used in rehearsal.

### WHEN THE MOON RISES

A Musical Comedy in Two Acts

Book and Lyrics by JUANITA AUSTIN

Music by CLARENCE KOHLMANN

All of those experienced in producing operettas in high schools and junior colleges who were invited to review the manuscript of this operetta feel confident that it will prove even more satisfying than the previous success of these writers. The gypsy group that becomes involved in the situation that arises at Cedar-glades, a New England resort hotel, is responsible for the entire Romany way of settling important things frequently was deferred. "Till the moon comes up" is a beautiful melody. With so much melodic beauty in the solos, dances, a quartet, and a number of choruses, the music side of this operetta, and entertaining, lively and romantic action in the story, this operetta has much to offer an audience and everything that could be expected to inspire its participants to a successful performance. In singers there are five male and five female soloists required, and there are three speaking parts for male characters. The work is for four-part mixed voices. The score, giving the dialog and the complete music, may be obtained at a saving on advance of publication offer.

### THE MONARCH DIVINE

A Christmas Cantata for the Volunteer Choir

Text by MATTIE B. SHANNON

Music by LAWRENCE KEATING

Most wonderful happening of all the ages, the miraculous birth of Christ. It has been the beloved theme of myriads of writers in all languages, and it never grows old in telling. *The Monarch Divine* is a fine setting of the familiar Christmas story, which, because of its melodic and poetic quality, renews the joy of contemplating the religious significance of the events at the time of our Saviour's birth. It consists of twelve acts, but not difficult, selections, presenting a variety of voice combinations; solos for soprano, alto, and bass, duets for soprano and tenor and baritone, numbers for women's voices, besides five selections for the mixed voices. Time of performance is forty-five minutes. A single copy of this cantata may now be ordered at our advance of publication cash price with the promise to be made upon publication, which will ample time to take up rehearsals for this Christmas.

### AT THE CONSOLE

A Collection of Pieces for Home and Church, Arranged From the Masters, with Special Registration for the Hammond and other Standard Organs

By WILLIAM M. FELTON

Sold Only in U. S. A.

In response to the wishes of the many in this country now playing electric organs the Theodore Presser Co. decided to issue this album and placed with William M. Felton the responsibility of compiling a collection, arranging the numbers, and indicating the desirable registration for electric organ utilizing both the pre-set and harmonic drawbar devices of the Hammond Organ, as well as the registration for all other organs. Mr. Felton has had a wide experience as an organist and in the days when the pipe organ was taken up in such grandeur by motion picture theaters he presided at the console in prominent theaters in such cities as Los Angeles, Denver, and Philadelphia. His church organ experience covers many years, and the church position he now holds, in one of the beautiful suburbs for which Philadelphia is noted, finds him presiding over a Hammond Organ. The volume he has under way is very promising and he has searched out very desirable selections from Bach, Handel, Tschai-kowsky, Grieg, Liszt, Bizet, Piere, Chaminade, Durand, and also has made special arrangements of favorite melodies from other sources.

### THE THRESHOLD OF MUSIC

A Layman's Guide to the Fascinating Language of Music

By LAWRENCE ABBOTT

A series of articles has been appearing in *The Etude Music Magazine* by Lawrence Abbott and it has proved a notable contribution to music literature. Many of those who have read the articles want them in some permanent form and, even though Mr. Abbott has written this material "for the person who doesn't care about being able to write harmony but merely wants to know about harmony in order to become a more intelligent listener", it would be to the advantage of every private teacher, every school music educator, every active music club worker, and to those in the general public who do want to become more intelligent listeners to read this book and to have it at hand for re-reading and reference. Mr. Abbott has met the needs of these listeners and at the same time has provided much that is enlightening, interesting, and helpful to all lovers of music, as in this book he quotes from the works of Beethoven, Bach, Brahms, Wagner, Debussy, Puccini, Dvorak, Franck, Mendelssohn, Tschai-kowsky, Chopin, and other classical composers, while at the same time he uses excerpts from composers who have written in lighter veins as Victor Herbert, Oley Speaks, Franz Lehar, Johann Strauss, Ethelbert Nevin, and even some of the present day writers of popular music, not forgetting the masterpiece of the late beloved Gershwin, *Rhapsody in Blue*.

## The Fascination of Two-Piano Playing

(Continued from Page 602)

recently performed several times in this country. This and the two-piano concerto of Harl MacDonald had their world premiere on programs of the Philadelphia orchestra, with Jeanne Behrend and Alexander Kelberine at the pianos.

### National Awakenings

"THE ADVANCE OF MUSICAL APPRECIATION in the United States, during the last quarter of a century, has been astounding, especially in a country where it is necessary to pay so much attention to business, in order to make what Americans consider a good living. Other nations are content with less, but demand more artistic and spiritual refreshment. Mexico, for instance, is our next door neighbor; but the attitude toward music upon the part of its general public is a far more intimate and personal one. Music is one of the great enthusiasms in the life of the Mexican. In certain other countries, there is an ultra reserve. In Holland, for instance, it is the custom not to applaud until the intermission. This is not so inspiring for the artist, as he never knows which composition on his program has pleased the audience most!

"The layman in Mexico makes his music a matter of deep concern. It is not at all infrequent for an artist to announce a cycle of eight concerts in the short space of three weeks, devoted entirely to the Sonatas of Beethoven. These may attract audiences of fifteen hundred or two thousand people for each performance.

"Mexico has usually many famous visiting pianists. A notable one last season was Claude Arrau, from Chile, who has a prodigious memory and technical facility. It is claimed that he can give any of two hundred different programs on short notice.

"Mexican audiences are very demonstrative and critical. It is not improbable that they will hiss and even march out of the hall in a body when they do not approve of a program. There is a story told of a tenor at the State Opera, who was so badly hissed in the first act of "Aida" that the appearance of another tenor for the rest of the opera was demanded. On the other hand, the enthusiasm of the Mexicans knows no bounds when they are carried away by a great performance; and at times they forget themselves in vociferous expression common to that of the spectators in the bull fight arena.

## Secrets of a Big Technic

(Continued from Page 603)

seem like minor details, and yet they are important enough to spell the difference between playing a difficult passage perfectly or stumbling through it."

### Nuggets of Accordion Wisdom

IN CLOSING OUR INTERVIEW we asked Magnante to give our readers a few more bits of advice on how they should proceed if they wish to follow in his footsteps. Here is the advice as it was given:

"Study harmony, and particularly the construction of chords. I attribute my aptitude for memorizing to the fact that I have a knowledge of the harmonic structure of a selection.

"Grasp every opportunity to play before people. Do not wait until you think you are a good player, but start with the most elementary selections, for only in this way can you overcome nervousness when playing in public. It cannot be taught.

"Listen to good music in concerts, on the radio and from recordings. Cultivate the society of musical friends. Study the biographies of great musicians. Much can be

learned from them. Try to broaden your musical knowledge in every way possible.

"Study selections which are within your grade. Most accordionists retard their progress by trying to play music which is too difficult for them.

"The reason some accordionists never progress far is because they get to a certain point and are satisfied. They do not try to advance themselves. No matter how good you are, continue to practice and study. If you are an orchestra accordionist, strive to be a soloist so that your name will be known. If you are a soloist, try to be a better one. There is always more room at the top of the ladder than at the bottom and the only way to get there is by hard work."

The foregoing advice by Magnante is not only inspiring but also very practical, and by observing his precepts accordionists will reap much benefit.

\* \* \* \* \*

Pietro Deiro will answer questions about accordion playing. Letters should be addressed to him in care of THE ETUDE.

## The World of Music

(Continued from Page 556)

ROBERT BERGMANN'S "HOT SYMPHONY," written for the New York World's Fair, has been given its first performance anywhere when on a program of the Concerts Poulet of Paris.

A SIBELIUS FESTIVAL, consisting of six programs devoted to the most important works of the great Finnish master, has been recently held in London. Organized and directed by Sir Thomas Beecham, this was a rare homage to an artist still living.

A NATIONAL MUSIC COUNCIL has been organized, under the auspices of the National Federation of Music Clubs, for the purpose of promoting a closer cooperation among the sixty or more organizations promoting musical interests in the United States.

THE ENGLISH SCHOOL MUSIC ASSOCIATION held recently its seventy-seventh Festival which featured a national chorus of three thousand voices, at the Alexandra Palace, with R. Walker Robinson conducting. At the same time, at Queen's Hall, was held the Tenth School Orchestra Festival and Competition.

M. EDOUARD MANGEOT, widely known piano manufacturer of Nancy, France, has celebrated his golden jubilee in this activity. At the Universal Exposition at Paris in 1878 he exhibited his first piano with an iron frame; and his piano with a double keyboard, exhibited at that time, is still to be seen in the Museum of the Conservatory of Brussels.

THE BACH SOCIETY of Cincinnati, one of the oldest in the United States, has merged with the University of Cincinnati Bach Society, to continue the traditions of the late Emma Roedter, who founded the society in 1897.

A FESTIVAL EVENT in the musical season of Stockholm, Sweden, was the recent first performance of Hilding Rosenberg's new opera, "The Marionettes," which had a great success.

THE MOZART FAMILY CORRESPONDENCE, as translated by Emily Anderson, has been widely mentioned in England as "The most important publication (musical) of the year 1938."

ELIZABETH A. GEST

## Golliwogg's Cakewalk (Debussy)

By Mrs. M. J. Brace

The Golliwogg a-riding went  
Upon a bale of hay;  
For every ride he paid a cent,  
So he could ride all day.

He wore a spur upon each heel—  
Of clothespin it was made;  
The saddle was of orange peel,  
His lance a garden spade.

### Theme of Golliwogg's Cakewalk

His hay horse stumbled on a root,  
And Golliwogg fell down;  
He tied a cookie on each foot  
And cakewalked back to town.

## The Pillars of Music

By Annie Charles Smith

AFTER the recital everyone told Betty she played very well.

"Oh, it is easy," answered Betty; "all I have to do is to remember two things. One is a secret my teacher told me."

"Tell us about it," said Mary.

"Well," replied Betty, "although it is a secret I will tell you, because my teacher did not say not to tell. To play well I must have well shaped hands. And to have well shaped hands we have to keep our wrists loose and our fingers curved. Now to do this my teacher said to pretend that the hand is a palace and the fingers are the pillars to keep up the roof. But the fingers have to be curved to let plenty of light into the palace."

"Well," said Mary, "if that is why you play so well I am going to try it, too."

"So am I," declared Dorothy.

"So am I," exclaimed the others in chorus.

## THE FOUNTAIN

## The Patient Piano

By J. LILIAN VANDEVERE

THERE WAS ONCE a piano which stood in a pleasant room; but it was lonely because no one ever came to play it.

"I don't enjoy standing here alone," sighed the piano, "I was meant for making music." Then, with a deep sigh, it sadly sang,

*"Oh dear, Oh dear, how happy I'd be  
If somebody wanted to play on me!"*

Perhaps some one will come, if I keep on waiting." And the patient piano waited.

Before long a small brown dog came trotting by. "Perhaps the little brown dog can play," said the piano. He sniffed at the piano, jumped up on the bench and wagged his tail; then he put his two brown paws on the keys and played a funny tune.

All at once he got down from the bench in a great hurry, as if he thought it would be much better if no one knew he had been playing the piano.

As he scampered off, the piano cheered up and said,

*"I'm glad he left. I really must say  
The little brown dog should not try  
to play."*

Perhaps some one else will come"; and the patient piano waited.

Then pattering along came a silky black cat. "Perhaps the little black cat can play," thought the piano. She rubbed against the piano, jumped up on the bench and leaped right on the keys. Her four soft paws made a funny tune as she struck one key after another.

Then the silky black cat jumped down in a great hurry, just as if she, too, thought it would be much better if no one knew she had been playing the piano.

Then the piano continued,

*"I'm glad the cat stopped playing,  
because  
You never make music with four  
black paws."*

Perhaps some one will come and play"; and the patient piano waited.

Then bustling along came a woman. She had a duster in her hand. "Perhaps she can play," said the piano, hopefully. "Dear me," the woman exclaimed, "how dusty this piano is; but small wonder, since nobody ever plays it." She put her duster on a lot of keys at once, which made a queer sound; then she, too, hurried away.

So the piano went on with its rhyming,

*"I'm glad I'm clean, but still I may say  
That dusting is never the way to play."*

Perhaps some one else will come and play." And the patient piano waited again.

Then along came a toddling baby. "Perhaps the baby can play," said the piano. The baby could just reach the keys with his little fat fists and he struck all the keys he could reach. Then he ran away as fast as his short legs would carry him, just like he thought it would be better if mother did not find him playing the piano.

And the piano went on,

*"The baby tried, but still I insist  
You play with your fingers and not  
your fist."*

Perhaps some one else will come and play." And the patient piano waited.

Then tramping along came a boy. He was whistling and the piano was pleased. "Ah, surely the boy can play," said the piano. The boy sat down and began humming, while picking out a tune with one finger. He was not quite sure which keys to play, so he tried experiments. Outside some one called, "come out and play ball." So the boy hurried away; for, to him, it was much easier to play ball than to pick out tunes on the piano.

"That boy knows very little about music," said the piano.

*"He found a tune, but jerky and slow.  
One's fingers must really know where  
to go."*

Perhaps some one else will come and play," and the ever patient piano waited.

Then a little girl came by. "Perhaps the little girl can play," smiled the piano. The little girl sat down, opened her book and began to play her new piece. Her fingers skipped nimbly over the keys and nearly always found the right ones.

"I believe this little girl can make music," said the piano.

*"How soft, how sweet! I'm certain that  
soon  
This little musician can play a nice  
tune."*

The next day the little girl came again and played still better. The patient piano was so pleased it could hardly stay in its own corner. When the little girl could play her piece without looking at the notes and without making any mistakes, she played it for the whole family.

The patient piano chuckled to itself and said proudly,

*"I knew I'd find the one who could  
play,  
The one who's been practicing every  
day."*

And I deserve to hear real music after waiting so long. You see, I have been a very patient piano."

## River Songs

By ALETHA M. BONNER

Let us sing gay songs of rivers,  
Songs that everybody knows;  
As, *The Beautiful Blue* .....;  
And, *Where River* ..... *Flows*.  
Then to these add, "*Old Man* ....."

With its rippling rhythmic swing;  
Next, *Way Down Upon The* .....;  
All together now—let's sing!  
(Answers: Danube; Shannon; River;  
Swanee.)

## The Forecast

By Gertrude Greenhalgh Walker

"MOTHER, may we hold our picnic in Lincoln Woods tomorrow?" asked Bruce. "Maybe," answered Bruce's mother, "but we had better make sure it will be a fine day before we ask any of your little friends to join us. 'Oh Bruce, turn on the radio now; it is just time for the weather man to give us his daily forecast.'"

So Bruce turned on the radio just in time to hear the announcer say, "Cloudy to-day with showers late this afternoon. Tomorrow, light variable winds with fair weather over this portion of the country."

"Goody goody, now we may plan to-morrow, can't we, mummie," urged Bruce.

"Yes, indeed, we will go tomorrow," agreed his mother.

Then Bruce became real thoughtful. Radio is certainly wonderful.

"Mother, how can the weather man be so sure of his predictions?"

"Well," answered his mother, "the weather man gets reports from all over the country. He knows that if a cold current of air is rushing towards a warm

current of air, something is bound to happen; and when he is given their traveling speed he comes very close to knowing just what and where that happening is going to be. His charts and signs are very accurate."

"H'm, I see," said Bruce. "I'll bet Mr. Brown has some sort of a forecasting system to tell what kind of a music lesson I'm going to have for her. Sometimes she will say, just as I come into the studio, 'Oh, we are going to have a good lesson to-day.' Then sometimes she waits until I play one piece before she will say, 'Well, I see where we are going to have a little trouble to-day.' I sure would like to know how she does it."

"That is easy, son," answered his mother. "If you enter the studio on time for your lesson and have a cheerful smile; get your music ready quickly; sit erect especially while playing; play your scales and arpeggios right; without any hesitation; or, if your teacher asks for your memory work first and you know it; then she can forecast a splendid lesson. Remember, son, the approach to a lesson period and the attitude throughout the hour, do much to make or mar a splendid lesson. Forecasting weather and music are both alike, inasmuch as one must read the signs to judge accurately," said Bruce's mother.

"Thanks, Mum," said Bruce. "You shall be a help to a fellow. I'm going to try to have no storm signals in my lesson Thursday; and it's always going to be fine weather in music hereafter for me."

# JUNIOR ETUDE—(Continued)

## Jelly Glass Music

By Priscilla M. Pennell

NE had practiced her piano lessons fully all winter, and both she and her were much pleased with her progress. But summer was fast approaching, one day she rushed into the living room waving a letter excitedly. It was Aunt Sue, inviting her to spend a week on the farm after school closed. Her mother was only too glad to let her little sister have a well earned vacation in the country, and in due time the great day of departure arrived.

It was such fun on the farm, roaming the fields, feeding the chickens, and watching Uncle Ned milk the cows. But there came a spell of rainy weather, and Arlene began to wish Aunt Sue had a piano so she could play the pieces she loved. Anyway, she could pretend. So she sat at the kitchen table and hummed as she ran her fingers down the edge. Aunt Sue, who was washing potatoes, noticed this and thought of a plan.

"Arlene, would you help me a little?" said Aunt Sue. "Run down, please, to the cellar and bring up some empty jam jars of different sizes and shapes. I'll try to bring too many at a time. It'll be several trips."

"But you're not making jelly, Aunt Sue," Arlene said in astonishment. "What are you doing to do with the glasses?" "You'll see," said Aunt Sue smiling. "We're going to make jelly but we are going to make something else."

"I'll wonder what it could be all right," Arlene went to get the glasses. When she had brought about fifteen to the kitchen and Aunt Sue had finished preparing the vegetables for dinner, she waited patiently to see what would happen. Aunt Sue took a teaspoon, and holding it gently between her thumb and forefinger, tapped the back of the bowl lightly against one glass and then another.

"Why, why!" cried Arlene in surprise. "It almost sounds like music, but most of

it is badly out of tune, it seems to me."

"Never mind," said her aunt. "We can easily fix that. First, let us find those that come near to the right pitch. We can make them lower but not higher."

They found one that sounded like high *do* and one that sounded like *ti* just below it; one that was a little too high for *sol* and one that was a little too low for *re*. By adding a little water to the *re* glass they tuned it to low *do*, and a little water in the *sol* glass brought it down to the correct pitch. Now they had an octave with two of the correct notes in between. By trying different glasses with different amounts of water they finally produced a perfectly tuned scale. Arlene was so excited her eyes shone. She found she could play many of the tunes she knew and she became so interested she did not want to stop for dinner, but as Aunt Sue insisted she must eat, she set the glasses aside on the window sill until later.

After the dishes were done, Arlene hastened back to the glasses, but was dismayed when they sounded dead and out of tune.

"Oh that's nothing," Aunt Sue reassured her. "Just stir the water with the spoon and they will ring true again." Which they did.

Aunt Sue put a little strip of sticky paper at the water level of the glasses that needed it, to make it easier to tune them the next time, so that Arlene could play them whenever she wished. The next day the sun came out again, but Arlene liked her musical glasses so much that she often played them when she came in from the fields.

When her visit was over she took them home with her, and when her music club had its first meeting in the fall she played some of the well known songs on the program. Her friends liked them so much that many of them made a set of musical glasses for themselves.

## LETTER BOX

DEAR JUNIOR ETUDE:

I love music and like to practice. My teacher requires me to memorize all my pieces, and I have a repertoire of twenty pieces, mostly in third grade.

I am enclosing a writeup about my music, which I clipped from our newspaper. I hope you will return it when you have read it.

From your friend,  
EVELYN PERRIN, (Age 8),  
IOWA.

DEAR JUNIOR ETUDE:

We are writing to you for the Mozart Club of Italy, Texas, and we want to tell you how much we enjoy the Junior Etude. Most of our club material is taken from your pages.

The purpose of our club is to get more people interested in music. We are not all pianists; for within our club we have a Harmonica Band, an A Capella Choir, and our School Quartette. Every month we have a piano recital with the numbers selected from our gold star pieces. This month we are studying Beethoven. We are enclosing a picture of our club. We wish every club a successful season.

From your friend,  
BETTY MOORE (Age 11), President  
SUE WARD (Age 11), Secretary

## Enigma

By Morris Heitschmidt (Age 14)

My first is in *children*, and also in *echo*;  
My second's in *hermit* and also in *yellow*;  
My third is in *help*, but is not in *fort*;  
My fourth is in *fool* but is not in *sport*;  
My fifth is in *foreman* but not in *induce-*  
*ment*;

Put them together and find an instrument  
(Answer: 'Cello)

## Junior Etude Contest

The Junior Etude will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Put your name, age and class in which you enter, on upper left corner of the paper, and put your address on upper right corner. If your contributions takes more than one sheet of paper, do this on each sheet. Write on one side of paper only. Do not use typewriters and do not have anyone

Subject for story or essay this month, "Musical Biographies." Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by September. Names of prize winners and their contributions will appear in the December issue. The thirty next best contributors will receive honorable mention.

### RULES

copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

## The Orchestra

(Prize Winner)

THE ORCHESTRA is a wonderful thing which beautifies music many times. The chords produced by an orchestra may be mighty, or they may be very tender. The conductor of an orchestra is very important. What would a class do without a teacher? The same thing would be an orchestra without a conductor; there would be no team work.

An orchestra is different from a band, yes, very different. The band has more wind instruments while the orchestra has more strings. I personally prefer an orchestra, but of course that is a matter of taste. Some of our large cities have very fine symphony orchestras. In my opinion swing should not be played on such holy things as orchestras!

ERNEST BEUTLER (Age 10), Class C,  
Wisconsin.

## The Orchestra

(Prize Winner)

THE MOST eloquent and capable instrument in the world is the modern orchestra. It is the instrument whose employment by the classical and romantic school of composers marks the high tide of musical art. It is an instrument which is never played upon without giving an object lesson in musical analysis, without inviting the eye to help the ear to discover the cause of the sounds which ravish our senses and stir up pleasurable emotions.

With all the changes that have come over the orchestra in the last two hundred years, the string quartet has remained its chief factor. Its voice can not grow monotonous or cloying; and, beside its innate qualities, it commands a more varied manner of expression than any of the other sections of the orchestra.

I consider the orchestra a necessary factor in the lives of people of to-day.

WILLIAM COMO (Age 13), Class B,  
Massachusetts.

## Musical Instrument Building

By E. Mendes

1. Add a letter to a propelling implement and find a horse of a certain color; add another letter and find a musical instrument.
2. Add a letter to the fruit of the pine tree and find an ugly old woman; add another letter and find a musical instrument.
3. Add a letter to a row and find "belonging to them"; add another letter and find a musical instrument.
4. Add a letter to a short sleep and find suffering; add another letter and find a musical instrument.
5. Add a letter to father and find a sharp knock; add another letter and find a musical instrument.

## Answers to April Beheading Puzzle

Chart-hart; Hours-ours; Opine-pine; Place-lace; Irate-rate; Newer-ewer. Beheaded letters give CHOPIN.

## Prize Winners for April

Class A, Marjorie Ann Portz, Age 15, South Dakota.

Class B, Janice Markley, Age 13, Pennsylvania.

Class C, Johnson Black, Age 9, Ohio.

## Honorable Mention for April Essays:

Marjorie Ann Portz; Betty Louise Beach; Ruth Klausner; Wyatt Reeves; Louis Bonelli; Herbert Rile, Jr.; Ann Hurst; Marlene Arnold; Estelle Rapport; Mary Helen McNabb; Joan McGinnis; Betty Landis; Norma Kasle; Jim Leeman; Virginia Lee Pelt; Marcella Gordon; Vernon Leigh Bell; Elizabeth Williams; Beverly Rowe; Hilda Garthwaite; Irene Munsey; Dorothy Ennold; Sydney Andrew; Marta Bean; Bill Jenks; Ola Peters; Marian Marston; Nelson Pettinger; Elle Pearson; Marjorie Knox.

## The Orchestra

(Prize Winner)

THE ORCHESTRA plays a great part in the life of any community or school so fortunate as to have one. No one need be a musician to appreciate in full the richness and beauty of fine music well played. The soft strains of the orchestra put the audience in a relaxed mood for enjoyment. In our school we save our band for the peppy occasions and the sporting events.

Did you ever look over an audience and see the faces brighten up when the orchestra begins to play? Magically in every heart it asks a question, and from each face it reflects the answer musically; the answer reflects the same the world over. Of course, the orchestra is beloved by all.

JEANETTE SIGMAN (Age 14), Class A,  
Indiana.

MOZART MUSIC CLUB  
Italy, Texas

## Honorable Mention for April Puzzles:

Lorraine DelBoe; Joan B. Ford; Elizabeth Williams; Louis Bonelli; Jacqueline Desmarais; Betty Jean Cooper; Betty Ostrowsky; Eula Reeves; Dorothy Etherson; Doris Somerville; Donald Etherson; Betty Madigan; Edna Price; Sara Wilson; Rita Elaine Scoggin; Mildred Manners; John Moffett; Virginia Wihs; Roberta Riddle; Jim Leeman; Dorothy Strong; Ethel Masterson; Madge Meyers; Arnold Winters; Mary Belle Wells; Josephine Gunther; Annabelle Eckert; Martha Mayhew; Anna Nelson; Edward Hilton.

## Strange Music Makers

(Continued from page 569)

pitch is the *treble* and the lowest is the *tenor*. The usual explanation for this terminology is that in a set of ten bells the largest, and hence the lowest, was called the *tenor* or, later, the *tenor*.

The art of bell ringing has been practiced since Mediaeval times. When a series of bells is rung over and over, each time in a different order, the term "change ringing" is applied. The number of possible changes on any given series of bells is determined by multiplying the number of bells serially together; thus on three bells, only six changes ( $1 \times 2 \times 3$ ) can be produced. But twelve bells can be rung in no less than the astonishing number of 479,001,600 different changes. The fullest peal ever rung was carried out in 1761 at Leeds, Kent, England, when fourteen men, relieving one another, rang 40,320 changes.

What is the biggest musical instrument in the world? It is the two hundred forty tone Riverside Church Carillon, four hundred feet above the streets of New York, and consisting of seventy-two bells. The clapper of the biggest bell weighs two tons by itself.

### No Ordinary Organs

IN THE OPPOSITE EXTREME, a tiny pipe organ only one foot high, yet complete in every detail, was built for Titania's Palace, the famous fairy castle of visionary Sir Neville Wilkinson. It has one manual, five stops, thirty pipes and a tiny hand power pump. So tiny is this instrument and the keys so narrow that they must be played with a match stick.

The strangest organ in the world is that built by J. F. Pearson, an unemployed English musician, from old tin cans, scrap lumber and string. It plays well, and critics claim that its tone is comparable to that of expensive theater organs.

Another curiosity in music is that your piano is not in tune, and it never has been. This may sound shocking, but it is true. No keyboard instrument, as a matter of fact, plays in exact tune. For example, C-sharp and D-flat are not theoretically of exactly the same pitch; but on a keyboard they are represented by the same key producing a tone that differs very slightly from either. The piano, of course, has its mechanical limitations, because it has only eighty-eight notes; while there are no less than ten thousand distinct tones within the range of human hearing.

The first piano ever built was a baby grand. Its maker, Bartolomeo di Francesco Cristofori, called it a "Gravicembalo col Piano e Forte," which means "harpsichord with soft and loud." Eventually the instrument became known as the pianoforte and later simply piano.

The best pianos require as long as six years to complete, but the finest violins often are the result of one hundred years of patient work. Much of this time, however, is taken up by the seasoning of special wood until it attains the proper quality for correct sounding.

Violins have been made from glass, metal, sugar, a steer's horn, and even the jawbone of a mule. A man in New Jersey built a violin that stood fourteen feet high. A St. Louis artisan made one only two and one-half inches long; and it really played.

It might be well here to mention that Antonio Stradivari, greatest violin maker the world ever has known, refused to sign his name to the instruments he turned out late in life, in fear that some small error might escape the scrutiny of his failing eyesight. Eight years before he died, Stradivari bought a tombstone for his own grave; but the marker was a second hand one. Under the great violin maker's name, that of Francesco Villani can still be seen.

## Victorian "Hot" Music

IN THIS DAY OF "SWING", when popular taste seems to run to "hot" music, it is amusing to recall the strange instrument invented in 1875, by a German, that produced real hot music. Called the pyrophone, it consisted of various glass tubes of different lengths which gave forth musical tones as a hydrogen gas flame played up and down within them.

Benjamin Franklin, that versatile jack-of-all-trades of American history, included among his achievements the invention of another strange musical instrument which he called the armonica. It consisted of several glass discs mounted on a common shaft which could be turned by a foot treadle. Franklin wetted his fingers with

Gilmore assembled the greatest array of musicians ever to play together at a series of concerts. In all, there were 22,860 musicians under his direction; the two thousand instruments in his orchestra were supplemented with military bands of all nations, numbering eight hundred fifty individuals; and a chorus of twenty thousand singers joined with the instrumental forces.

As a climax to his mammoth musicale, Gilmore astounded his audience with a rendition of Verdi's *Anvil Chorus* from "I Trovatore", which only a genius such as he could think up. Ten Boston firemen beat lustily on fifty anvils; and a battery of cannon outside the great hall let go a tremendous salvo when Gilmore triumphantly touched an electric button. Boston's ears are still ringing.

## Next Month

THE ETUDE for October, 1939, Will Have a Dozen Features Any One of Which Is Worth the Cost of the Issue.

### How People Are Swayed By Song

Mark Sullivan, one of the most brilliant of all American columnists, tells with true journalistic vision what he has seen in his busy life when people have been swayed by song. Harvard bred, smart, human and pointed, few people can express ideas with the conviction and force of Mr. Sullivan.

### How to Make Money By Teaching the Piano

This article by Walter Elliott of California is the first in a series of three designed to discuss in very practical and direct fashion those means whereby the teacher may increase his income without resorting to fantastic or unsound methods. Few teachers can afford to miss these articles.

### Marian Anderson

Philadelphia born and bred, she came as a young girl to the office of the Editor of THE ETUDE to be trained in one of his songs. He at once realized that he was listening to a rare voice. Since then, in Europe and America, she has become one of the most discussed of all singers, because of the natural richness of her voice, the purity of her style of tone production as well as of interpretation, and of her magnetic personality. Miss Rose Heylbut presents an unusual interview with this remarkable singer.

### The Art of Two-Piano Playing

New vistas in musical accomplishment have been created by the increasingly popular teams of two-piano players. In conservatories and colleges, all over the country, two-piano material is becoming more and more in demand. Silvio Scionti, famous Italian-American pianist and author of this article, and his wife Isabel, have made sensational duo-piano appearances in both Europe and America.

### Time, Only, Tells

Paul Hindemith, self-exiled German Aryan, musical iconoclast, whose music is *non persona grata* (unwelcome) in the land of his birth, is widely played in other countries, where there is a demand for the unusual. He makes clear that the only judge of musical worth is time, indisputable time. If with the flight-years music is still approved, it is of real value. You will find this a most worthwhile article.

MARK SULLIVAN

## "Married Music"

By ESTHER WALLACE DIXON

A CRUSADE should be started for encouraging the married women of America to develop their musical talent. Alibis for lack of time to practice are very prevalent among our American women. A slogan of "One hour a day for music" would do wonders for the development of music in the home; and then parents would no longer have the alibi of "It's no use to give our daughter a college education in music, because as soon as she gets married she will drop her music."

\* \* \* \* \*

## Do You Know?

That Wagner, Mozart, Verdi and Puccini seem to be the Four-Power Dictators of the world's operatic fare?

That more than three hundred and fifty tunes have been published in the United States, under the title of "Memories"?

## Luring the Child to Love the Piano

(Continued from Page 566)

little tone, free articulation but not generated, in order that the finger may its note directly, and understand the animism of the touch. Occasionally with the wrist to make sure that it is free, the hand remains firm. Gradually we dare to increase the tone, thanks to independent attack and more and strength in the finger.

This exercise is a severe one, based on principle of the first importance; it may be undertaken only when the hand has been already strengthened and knows to obey; and also when the interest of a child has been awakened.

The "positions" never should be practiced long at a time, but several times during the day. Little exercises and little games from the early exercises always should alternate with them. Thus trained hand will become conscious of itself will develop in a sort of Swedish gymnastics, starting from natural principle making the right muscle work at the time.

We are thus far from countenancing contortions which sometimes have been attributed to the Polish master, through faults of pupils who were without zeal, but not understanding. Leschetzky desired above all things, that, as far as possible, one should learn to make use of resources in one's own hand, by the reasonable means and the most heuristics. He often said, "From the head, the fingers, not from the fingers to the head! Seek for yourself; and do not wish to copy another who plays in his style—a style which probably is not yours."

### The Incurable Thumb

THE THUMB MUST WORK BUT LITTLE at first, and then only *pianissimo*, without leaning the key. For it is large, heavy, and clumsy and must be trained. It will be made supple by being moved about on the palm, beneath the hand, which must remain motionless and never flatten itself so that it impedes the movements of the thumb.

These movements must proceed backward very swiftly, interspersed with short pauses. The thumb must learn to make the skips as indicated for the other fingers, and always with extreme lightness. The scale may next be played by the thumb, descending thus: CB—CA—CG—so on. C is played by the thumb, and other note by another finger, which must be the same throughout the exercise, must be chosen in advance: the second, then the third, the fourth, and even the fifth. The thumb remains in its place beneath the hand. The hand turns a little in the direction in which the thumb is moving. It thus permits the other finger to move with certainty toward its note, in the direction from which the thumb will emerge on its turn. (See illustrations No. 7 and 8.)

The return to C must be made very rapidly. It is always followed by a short pause, which precedes the next departure.

The left hand will practice this exercise in the opposite direction, ascending. This movement which draws the arm toward the body is always easier than that which draws it away. Exercises for single fingers always should be interspersed with exercises for speed. In the singing lesson every finger must play freely, as already described.

All of these slow exercises are to be practiced with the back leaning against a chair, in order to keep the muscles of the back free and the faculty of deep breathing unimpaired.

### Operas — Symphonies — Radio Music — Phonograph Records

Here are the stories of the world's greatest operas—and biographies of such colorful musical giants as Wagner, Beethoven, Brahms, and 8500 OTHER FIGURES of the musical world . . . together with clear interpretations of great musical works. And here is your guide to the finest phonograph records and radio music.

This book contains almost 15,000 SEPARATE ENTRIES identifying various musical terms and characters, and telling you how to pronounce them *correctly*. To get a better idea of the tremendous scope of its contents READ CAREFULLY the Partial List below.

### Only \$2.95—If You Decide to Keep It Easy Terms If You Want Them

Let the Music Lovers' Encyclopedia show you how to enjoy to the full the pleasure you may be missing as—day after day, evening after evening—the most inspiring music Man has ever composed is made so readily available to you and your family.

See for yourself why this is a book which you and your children should have! Simply mail the coupon and it will be sent to you for 5 days' free reading.

### SEND NO MONEY—Read It 5 Days FREE

Send no money. When this De Luxe Edition is sent to you merely accept it for five days' free examination. COMPARE IT with any book of its kind selling for 4 or 5 times its price! Then, if you wish to return it, do so. If, on the other hand, you feel that it opens up to you a whole new world of musical enjoyment, send us only \$1 and the balance in two payments: \$1 one month later, the 95 cents one month after that. (Only \$2.95 in full, instead of its former price \$6.00.)

You risk nothing in mailing this coupon except the cost of the stamp to send it. Will you mail it at once? Nelson Doubleday, Inc., Dept. E.10, 111 Eighth Avenue, New York City.

## Partial Contents of this 900 Page Book

**8500 COMPOSERS**  
musicians, vocalists, music critics, writers—giving names, dates, works, brief biographies.  
Up-to-date material on modern figures, classical and popular, such as Gershwin, Ravel, Tippet, Stravinsky, Gladys Swarthout, Paul Whiteman, Jerome Kern, etc.  
36 articles on the lives and music of great composers . . . by Deems Taylor, Huneker, Newman, Krehbiel, and other authorities.

**90 OPERA SYNOPSIS**  
The stories of 90 operas—plot, principal characters, composer, librettist, place and date of first performance, etc. Every opera included in modern repertoires, plus some of the rarer works.

**1000 DEFINITIONS, PRONUNCIATIONS**  
How to pronounce every foreign name and word common to music—

a 168-page pronouncing and defining dictionary. A complete phonetic table of pronunciation for American, enabling them to use correctly proper names, abbreviations, and musical terms in 16 languages.

**INSTRUMENTS**  
Thorough descriptions of all instruments of the orchestra, with histories, tonal ranges, peculiarities, relations to the orchestra as a whole, and greatest exponents of each instrument.

**9 CHARTS**  
Interesting charts of The Bach Family Tree—The Keyboard, Scales and Intervals—Dance Rhythms and Symbols—Times and Rhythms—Graces and Embellishments—Greek Modes—Church Modes—and a chart showing Absolute Pitch, and Ranges of Voices and Instruments.

**NOTATION, HARMONY, FORM**  
Explains simply, and in non-technical language, about sonatas, over-

tones, modern harmony, altered chords, symphonic poems, movements, dominants, canons, and many other musical terms.

**29 SPECIAL ARTICLES**  
29 modern, non-technical articles on all phases of music—Acoustics, tory, and technique—Acoustics, Counterpoint, Radio Music, The Opera, Phonograph Music, The Conductor, Piano Studies, The Orchestra, The Organ, Orchestration of Theatre and Dance Music, and many others.

# THE WORLD OF MUSIC

**ROBERT TEICHMULLER**, famous piano teacher of Leipzig, died recently, two days after his seventy-sixth birthday. A native of Brunswick (Germany), he prepared for a virtuoso career and played many times at the Gewandhaus Concerts but was compelled to abandon this work because of an inflammation of sinews, and so he turned to teaching. He became associated with the Leipzig Conservatorium in 1897, was made a Professor in 1908, and became head of its piano division in 1920. He knew Brahms, heard Liszt and Clara Schumann play, and counted many artists among his friends.

ROBERT TEICHMÜLLER

**MUSICAL POSTAGE STAMPS** are to be issued by the United States Post Office Department, honoring our American composers, Edward MacDowell, Victor Herbert, Ethelbert Nevin, Stephen Foster and John Philip Sousa—a part of a series of about thirty-five recognizing American authors, poets, musicians, scientists and inventors.

**THE AMERICAN SOCIETY OF RECORDER PLAYERS**, of Provo, Utah, gave in July a three day Festival of music of the Thirteenth to the Eighteenth Centuries for the recorder, viola d'amore, lute and other instruments of that musical era. This group of musical antiquarians possesses one of the largest collections of recorders in the United States. Provo holds also the distinction of being one of the liveliest centers of American Indian musical research in our land.

PAUL CALLAWAY

**PAUL CALLAWAY**, organist of St. Mark's Episcopal Church of Grand Rapids, Michigan, has been called as organist and choirmaster of Washington (D. C.) Cathedral. A native of Illinois, while a cadet at Missouri Military Academy he won first prize in the piano division of the Interscholastic Competitions held at the University of Missouri. At twenty he began five years of study with Dr. T. Tertius Noble, during which time he was organist and choirmaster of St. Thomas' Chapel.

**JEANNETTE VREELAND**, eminent American festival soprano and Bach interpreter, died July 20th, at the home of her parents in Denver. Born in Los Angeles, she was taken to Denver by her parents, to study with Percy Rector Stephens, her only teacher, to whom she was married in 1921.

**SIR DANIEL EYERS GODFREY**, foremost of Band Leaders of the British Isles, died on July 20th at the age of seventy-one. Sir "Dan" came of generations of bandmasters. He attended King's College School and then the Royal College of Music from which he received the Bandmaster's Diploma in 1890 and was appointed conductor of the London Military Band. In 1893 he began his memorable career at Bournemouth, the famous seaside resort, first as conductor of a band of thirty-one musicians, and twenty years later he was giving six hundred concerts a year with an orchestra of symphonic proportions, at fifty cents admission.

## Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

**BELA BARTOK**, eminent Hungarian composer-pianist is announced to visit us during the present season.

**THE ROBIN HOOD DELL** concert season of Philadelphia closed on August 16th, when the most successful series of this fine movement became history. Miss Frances A. Wister, Chairman of the Women's Committee of the Philadelphia Orchestra, spoke gratefully of the united sentiment which had made this triumph possible.

**RISÉ STEVENS**, young American contralto of the Metropolitan Opera Company, is announced for the rôle of *Carmen* for the Glyndbourne Festival of next summer.

**DANTE FIORILLO**, of Westfield, New Jersey, has been named as the Pulitzer Prize winner in the field of music for this year. The award carries with it a travelling scholarship of fifteen hundred dollars for the continuance of studies with the advantages of European instruction.

**MENDELSSOHN'S "ELIJAH"** was presented on August 27th, as open air opera at the New York State Fair Coliseum, with a chorus including the Rochester Chapel Choir of sixty voices and the Syracuse A Capella Choir of sixty-five voices. Mark Love of the Chicago Opera Company sang the rôle of *Elijah*, and John T. Clough, conducted.

**HOMER HENLEY**, widely known violin teacher and writer of San Francisco, passed away on June 23rd at the age of sixty-seven. He was long a valued contributor to our singers' columns of *THE ETUDE*.

**PERHAPS THE LARGEST ORCHESTRA** ever assembled played at the Western World's Fair at San Francisco, on June 25th when ten thousand junior musicians combined in playing *Treasure Island March* written especially for the occasion by Carl Stiska, *Merry Widow Waltz* and other popular numbers. Edwin Franko Goldman, guest conductor of the event, led the massed band in his own *On the Mall*.

**FERRUCCIO BUSONI'S "Doctor Faustus"** is announced for its first performance in Italy during the coming season of the Teatro San Carlo of Naples.

CARROLL GLENN

**CARROLL GLENN**, violinist, has received the annual Town Hall Award, as having given the most outstanding performance of the year by an artist under thirty years of age, in the popular concert room of New York. The award carries with it the conferring of an illuminated scroll and an engagement in the Town Hall Endowment Series of the ensuing season which in this case will be played on February 14th.

**AN EISTEDDFOD**, instituted on July 1860, in the little mining town of North San Juan, California, by Welsh pioneers of the gold rush era, was held this summer at the Golden Gate International Exposition.

**GIOVANNI GAIDA**, a well known Italian violin maker of London passed away on July 9th, in his seventy-seventh year. His instruments "possess a marked individuality and an excellent tone" and the larger proportion of them are in the possession of professional players.

**ALEXANDER LIPPAY**, composer, conductor, teacher and impresario, died on March 3rd, in Manila. After experience in the opera houses of Mannheim, Cologne and Frankfurt he drifted to Manila where he became known as the "Music Bringer" of the Philippines. As leader of the Manila Symphony Orchestra, for which he trained many of the musicians, as director of the Academy of Music of Manila, and as the moving spirit in enticing the world's great artists to stop on their world routes, he developed in these stranded Pacific islands a genuine musical culture and love for the finest products of our greatest creative geniuses in the tone language. Verily a prophet has gone to his reward; and his works shall live.

**HISTORIC LA SCALA OPERA HOUSE** has been rechristened and henceforth is *Teatro della Scala* instead of *Teatro alla Scala*; that is, it is of instead of at. Research in La Scala Museum authenticated the change.

**HENRY TOLHURST**, widely known throughout Great Britain as a violinist and organist, and especially as composer for the violin, passed away on July 9th. A native of London, born in 1854, he was also conductor of the Lee (Kent) Philharmonic Society and the founder of the Guildford School of Music.

(Continued on Page 685)

## Competitions

**PRIZES OF TWO HUNDRED FIFTY DOLLARS and One Hundred Fifty Dollars**, each, are offered for the best and second best Concert Piano Solo and for the best and second best Entertaining Piano Solo, entered in *THE ETUDE* Piano Solo Composition Prize Contest. Competition open to all composers excepting members of the staff of *THE ETUDE* and employees of the Theodore Presser Co.; closes November 1, 1939; complete information will be found on Page 676 of this issue.

**THE CHICAGO COUNCIL OF TEACHERS OF SINGING** offers its annual prize of One Hundred Dollars for a song to words chosen from the Psalms, by the composer. The prize is endowed by the W. W. Kimball Company; the competition closes November Fifteenth; and complete information may be had from Walter Allen Stults, P. O. Box 694, Evanston, Illinois.

**THE PADEREWSKI PRIZE COMPETITION** offers \$1,000 for the best work for Chamber Orchestra, and a second \$1,000 for a concerto or other serious work for a solo instrument with sym-

phonic orchestra. Works must not exceed fifteen to twenty minutes in length and must be received before February 1, 1940.

Full information from Mrs. Elizabeth C. Allen, Secretary Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

**A PRIZE OF FIVE HUNDRED DOLLARS** is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

**A PRIZE OF ONE THOUSAND DOLLARS**, with a possible Six Hundred Dollars additional, is offered for a "Concerto for Violin with Orchestra" by a native American composer. The prize is furnished by an internationally known violinist, with the option of giving première performance of winning work. Competition closes April 30, 1940. Particulars from Violin Concerto Committee, % Carl Fischer, Inc., 56 Cooper Square, New York City.

**AN ANTIQUE MUSICAL INSTRUMENT EXHIBIT** is to be an important feature of the Tenth Annual Chicago Antiques and Hobby Fair at the Stevens Hotel from November 13th to 18th. Harpsichords, square pianos, melodeons, zithers, harps, trumpets, and all the other instruments that lulled, serenaded, dirged or mobilized people of earlier days will hobnob with barrel organs and hurdy-gurdies. Dr. Hewitt A. Waggener, of Hollywood, will exhibit his collection of saxophones made by their inventor, Adolph Sax, about 1850.

**PRINCE MAHMUD**, twenty-one year old brother of the Sultan of Trengganu, is a student of the violin.

**ALL JOHANN STRAUSS' PROPERTY**, including his personal estate and rights to his music, has been decreed by the municipality of Vienna to be the property of the city, the composer's descendants thus losing all their holdings.

PAUL AMBROSE

**THE CANADIAN COLLEGE OF ORGANISTS** held its annual convention on August 28th to 30th, at Hamilton, Ontario. A profitable program was carried through, with lectures and lecture recitals by widely known artists, with social events and sight seeing interspersed and a closing banquet to crown all. Paul Ambrose, for many years a popular organist and composer at Trenton, New Jersey, is chairman of the Hamilton center of the C. C. O. and also president-elect of the national organization for the current year.

**CATEAU STEGEMAN TRACY**, widow of Dr. James Madison Tracy, has received from Central University of Iowa the honorary degree of Doctor of Music.

For thirty-eight years Century music has enjoyed distinction of being one of the finest editions published, yet its price is but 15c a copy.

The following list are featured some of our very best issues, including the works of four of today's most popular composers.

Teachers, pupils and players will find them all of equal value, especially Kay Armour's "Modern Piano Method" and Walter Rolfe's "Book on Harmony." You can buy them at your dealer or direct from us.

Teachers who use and recommend Century music to the everlastingly grateful parents who can't afford the high prices generally asked for teaching aids, Century music helps you hold your old pupils also aids in enrolling new ones.

Your money refunded without question, if not satisfied with your purchase.

## NEW and IMPORTANT

### MODERN PIANO METHOD FOR BEGINNERS

by  
**KATHLEEN ARMOUR**  
PRICE 15c EACH PART

There is something decidedly new and original. It is divided in five parts in sheet music form and each sells at the regular price at 15c per copy, which helps the pupil to start the study of the piano with little financial outlay. This modern work is based on the middle C approach and is so clear and step-by-step that the pupil is playing little tunes almost at once. Profusely illustrated. Teachers, be sure to see this outstanding work.

Part I—Learning Letters on the Keyboard  
Part II—Notes, Bars, Time Signatures  
Part III—Five Finger Exercises  
Part IV—The 2/4 Time Signature  
Part V—Introducing the 8th Note

### CENTURY PIANO SOLOS, 15c ea.

# "MUSIC, NOW, MORE THAN EVER"

**T**HIS is the second time that THE ETUDE MUSIC MAGAZINE has presented an editorial upon this subject. When the war horror of 1914 broke upon the world we made clear to our readers that, in the intense nervous strain of the hour, music was one of the providential gifts of the Almighty, destined to help mankind stand the terrific inhuman pressure.

Since that unthinkable war, the musical situation in America has changed radically. At that time it was indicated by THE ETUDE that our isolation from Europe could not fail to prove a means for starting new energies in America, which would vastly improve and broaden all musical interests in the new world. We have need only to call the attention of our readers to the following amazing changes which have occurred since Sarajevo:

**FIRST:** *The unprecedented musical achievements in public schools in all parts of America, setting new standards for the entire world.*

**SECOND:** *The pronounced elevation of standards in American symphony orchestras, choral organizations, and in chamber music.*

**THIRD:** *The creation of new music schools of the highest possible type in various parts of the country. These schools rank with the foremost institutions for musical education in all lands.*

**FOURTH:** *The publication in America of an enormous number of excellent musical works and musical books of extremely high character.*

**FIFTH:** *The creation of huge and far-reaching organizations for recording and broadcasting music upon a scale far greater than in any other country of the world.*

Broadly speaking, through events entirely beyond our control, our musical interests in America, educational, professional and industrial, were compelled to advance in the years succeeding the great war and were benefited more than during the entire preceding century. Certain mutations in the art and the industry itself affected a few disadvantageously for the time being, but these conditions were in no way attributable to the war. America certainly had no wish or design to profit from the unthinkable disasters of others. It has given millions in the past to succor those in distress overseas. Nevertheless, in 1914 those business and professional men and women who went about their affairs, minding their own business and redoubling their energies, as our President suggests at this time, had few business or financial worries.

The war of 1914, detested and unwanted by everyone in America, unquestionably placed music upon a new basis in the United States, a basis of independence which compelled the most distinguished artists and teachers of the world to come to America and work with Americans to create what is now the most eminent musical center of all history. We wish that this musical prosperity might have come to us through less tragic circumstances than the cataclysms which the cosmic march of fate brought upon our colleagues in Europe.

THE CRADLE OF LIBERTY  
*Independence Hall in Philadelphia as seen from the rear during a patriotic celebration.*

Wide World Photos, Inc.

The outstanding military music of the past fifty years, the magnificent marches of the late Lt. Comm. John Philip Sousa, U. S. N. R. F., were written by one of the kindest and loveliest men we ever have known. Firm and understanding, associated all his life with the Army, the Navy and the Marine Corps, his motives were entirely patriotic rather than combative. In the Great War he was one of the first to enlist as a "dollar a year" man. Notwithstanding this and his fearless attitude, he hated fighting and quarrels, and no man was happier when the armistice was declared.

THE ETUDE, published on Chestnut Street, Philadelphia, just about a mile from Independence Hall, the "Cradle of Liberty," is a musical educational magazine. It cannot permit its opinions to be swayed or colored by political, racial or religious conditions.

The founder of THE ETUDE, the late Theodore Presser, as is well known, was born in Pittsburgh, Pennsylvania in 1848. His father, Christian Presser, and his mother came from the Saar district on the borderland between France and Germany. Personally, he was intensely American and a man of great tolerance and human breadth. While he naturally had a sincere respect for the *gemüthlich* German people, German science and industry, as well as German culture, he had a bitter hatred of brutal militarism, which he had inherited from his French speaking father. The men in whose direction all of his interests now rest are all Americans with ancestry reaching, in many instances, back to the earliest settler days of our country. All of the publishing traditions and policies behind THE ETUDE are unshakably American in practice and in spirit. It has in its employ men and women of many different nationalities, races and creeds. The private opinions of the editors of a magazine or of the employees of a business might differ from the general policy, but in the case of THE ETUDE we can assure our readers that all those concerned in its publication are wholeheartedly American, and American as judged by the ideals, principles and constitutional foundations of our country from its beginning.

THE ETUDE prays that the conflict abroad may be mercifully short. It feels the deepest sympathy for all who are subjected to the cruelties resulting from hate, intolerance and the injustices of war. We hope that our friends in all lands, who have devoted their lives to the art of music, may be spared.

Meanwhile we are confident that American workers in the field of the tone art will labor more energetically than ever to bring our public to a realization that music and music study are providentially destined to help us in enduring the ghastly burden which war brings upon the minds and souls of all, whether combatants or noncombatants. When the pressure upon your nervous system seems unbearable turn to your music, and you will find a relief, a solace, and a sanctuary which will bring you rest and peace.

"Music, Now, More Than Ever."

# Youth and Music Discipline

MANY readers of THE ETUDE have already seen the United Artists' film, "They Shall Have Music," in which Jascha Heifetz plays the stellar rôle. The astounding virtuosity and masterly interpretation of Heifetz will, of course, command first attention from musicians, and this film is notable for the extraordinary tonal reproduction of his playing. It is the best sound film we ever have heard. Another factor, which is of most importance to all players on the violin, is that the great magnification, which the moving pictures make possible, shows Heifetz not as a diminutive individual playing upon a stage possibly one hundred, two hundred or three hundred feet away from the student observer in a concert hall, but Heifetz in the huge proportions of the motion picture screen. It presents cinematographically thousands of pictures of his hand positions, his technical agility, and his bowing, which cannot fail to be most impressive to violin students and teachers.

Music teachers will be enormously interested in the very sympathetic acting of Walter Brennan as the old music teacher in this film. In this portrayal Brennan's notable genius rises to one of its greatest heights. The playing of the California Junior Symphony Orchestra, as well as that of some extraordinarily precocious youngsters, is also very noteworthy.

However, far more than these artistic achievements, there is in this picture a broad human, exceedingly interesting and exciting story, which has unusual educational and sociological significance. In fact, insofar as its objectives are concerned, the script might have been prepared by the editorial staff of THE ETUDE, as it represents the very things for which THE ETUDE has been endeavoring for many years to secure recognition. (If you read the editorial in THE ETUDE for September, "Musical Crime Prevention," you will know just exactly what this means.) In the Heifetz picture a group of boys, smothered by the restrictions and oppressions of the slums, encounter the uplifting influence of music and gradually they are raised out of the dregs of human life into a higher sphere.

Now all this would be poppycock, if it were not substantiated by fact and experience; and THE ETUDE has for years been collecting these facts and experiences. In two great settlement schools, the East Side Music Settlement School and the Henry Street Music Settlement School in

the lower East Side of New York City, amid just such slum conditions as this picture shows, there has not been, with the thousands of pupils who have passed through these schools in four decades, one single pupil who, after admission to the school, has been brought before the Juvenile Criminal Courts. This is based upon reports furnished to us by the schools. A letter just received at THE ETUDE office from the famous Hull House Music School in Chicago, located in a district showing the second highest juvenile delinquency rate in the city of Chicago, gives the statements of the directors of the school during the last forty years, Miss Eleanor Smith, Miss Gertrude Smith and Miss Alice Birmingham. These indicate that no continuous student, among the thousands who have studied at the school in this period, ever has been charged with delinquency, although during the same period, hundreds of children in the district have required court attention. While in all music settlement schools there are students from other more fortunate districts, the majority come from the environment of the School.

The absorbing power of beautiful music is one of the greatest disciplinary forces in life. This same principle applies to children in all classes, and in many cases even more so to the so-called fortunate children in homes where there is plenty, which frequently means "plenty of indulgence," bringing disaster to these undisciplined children. This is something which surely calls for the serious attention of all civic minded people.

At a private view of "They Shall Make Music," just before its New York appearance, your editor sat beside one of the greatest police commissioners New York has ever seen, Commissioner Mulrooney, and he said that this picture

should do an enormous amount of good, because it is based upon actual conditions which can be remedied by music.

THE ETUDE strongly recommends all of its readers to see "They Shall Make Music" and urges the parents of children, everywhere, not to miss it.

We heartily wish that every legislator of city, state or nation, could see "They Shall Have Music," so that they might, once and for all, realize that the purchase of music lessons, or the purchase of musical instruments, is not a process of pouring money down an artistic rat hole, but rather that of making future citizens through a training not possible by any other means.

We are pleased to receive news from Hollywood that other important cinematographic productions of a high order, with a very decided appeal to the vast music loving public, are to be issued shortly.

HEIFETZ "MOVIE" DEBUT

*The new Heifetz picture proves to be a momentous argument for the value of music study in making fine citizens.*

# How People Are Swayed by Song

By MARK SULLIVAN

An Interview with the Distinguished Author and Commentator

Secured Expressly for THE ETUDE By FLORENCE LEONARD

Millions of Americans know the name and sound wisdom of Mark Sullivan, through his widely syndicated newspaper articles, and through his memorable books. He is here persuaded to turn his penetrating journalistic eyes upon music and brings to light many delightful facts which our readers will be eager to peruse.

Mr. Sullivan was born at Avondale, Chester County, Pennsylvania, in 1874. He was graduated from Harvard in 1900, and received his L.L.B. in 1903. He has honorary degrees of Litt.D. from Brown University and Dartmouth College, and the degree of L.L.D. from Washington and Jefferson College, Bates College, and St. John's College. He has been a member of the Board of Overseers of Harvard University, Brownly Lecturer at Yale, and a member of the Board of Visitors at the U. S. Naval Academy. His best known work is his contemporary history of the United States, in six volumes, known as "Our Times."—EDITOR'S NOTE.

THE MOST DRAMATIC EXAMPLE that I recall of masses of people swayed by song was in the Progressive Party movement of 1912. In the "mageddon" which Theodore Roosevelt precipitated by throwing his hat in the ring, great crowds surged up down the streets of New York, singing. They put ardor and reverence of a crusade into two old and familiar songs, one religious, *Onward, Christian Soldiers*, the other semi-religious, a revival of the Civil War song, the *Battle Hymn of the Republic*.

The effect of these stirring songs by thousands of voices, on the emotions of both singers and listeners, was phenomenal. No art of oratory could match these marching-crowds as a thriller of souls.

Another remarkable example, where the song had a wholly opposite effect, was at the time of the National Democratic Convention of 1920, in San Francisco. The song was *Tammany*. Sung by the New York delegation, with its band as accompaniment, the word "Tammany," blown out into *Ta-a-aman-c-c-c-c*, had, because of the huge vocal sound and the peculiar rhythm of the syllables, such an eerie effect that it created a Tammany fever in the listeners and did harm, undeservedly, to the democratic cause.

The head of any nation, who desires war, knows that he can depend on song to rouse and to keep alive the spirit of war among the people. *The Marseillaise* and *Die Wacht am Rhein* are two famous examples of the war song; and they have created more war spirit among the enemy of their respective nationalities than any fiery oratory of statesmen.

Now what is cause and what is effect in this matter of the influence of singing, is hard to determine. The "why" is still more difficult to analyze, and it goes very deep. The influence of scents and the memory of them are rated as perhaps the strongest of influences. But the influence and associations of sound are so strong as to be difficult to understand.

## Sounds of the Voice Have Influence

THE SOUNDS OF MY PERSONAL VOICE, without reference to words, can have a strong effect on the emotions of my hearers. The sound of a syllable with an O, as in *glorious* or *bold*, distinctly affects the ear. President Roosevelt, by his effective use of inflections of his voice, over the radio, could move people by reciting the Polish alphabet. There is a deep significance in this fact, especially since the world came into the world.

In every book I have written I have made the test of reading it aloud to a man and having him read it aloud to me, in order to make sure of a musical effect, a agreeable effect, to find the "euphonious word," I write, of course, for the word that is intellectually exact, and also I strive to make sentences that are rhythmical to the ear.

Have you read "Ethan Frome?" No. Then will you answer these questions: Does the *sound* of the title suggest comedy or tragedy as the subject? Yes, tragedy. Does it suggest summer or winter? Yes, winter. Does it suggest that the scene is laid in the South or in New England? New England, of course. Whenever I have asked these questions of anyone who did not try to analyze, but thought merely of the sound, I have always received those answers. See what that woman did! With her

combinations of vowels and consonants she suggested the whole mood of her story.

## Sounds That I Remember

I HAVE ALWAYS BEEN SUSCEPTIBLE to sound effects. The *clank, clank* of the whetstone against the scythe, the low and high notes of the ax in the woods, and the swish, roar and crash of the falling tree; the two pitched whine of the crosscut saw, high for the faster sawyer, lower for the slower one; these are vivid in memory. The bells, as I heard them across the hills; the frogs—especially the voices of the "knee-deeps" not yet fully out of the swamp, all are potent to evoke the past. But these sounds were not the only ones which early fixed my attention. The differences in vowel sounds, such as my father's pronunciation of *ea* (tea) as *ay* (tay)—eighteenth century English preserved in Ireland after it had changed elsewhere; his accenting of syllables to conform to the cadence of Elizabethan verse (as I afterward learned); and particularly his violin playing of old Irish tunes; these sounds and similar ones made impressions on my mind which never can be erased. Perhaps they explain in part why the importance of song in a nation's history has been of such great interest to me.

Plato said, in "The Republic," "The introduction of a new kind of music must be shunned as imperiling the whole state, since styles of music are never disturbed without affecting the most important political institutions. The new style, gradually gaining a lodgment, quietly insinuates itself into manners and customs; and from these it issues a greater force . . . goes on to attack laws and constitutions, displaying the utmost impudence, until it ends by overturning everything, both in public and in private."

Certain it is that the mood of a whole country at a given time has its relation to the popular music of that time. It is true also that a strong national mood may be created by popular music. The general mood is now a gloomy one, but if some one of great vitality were to step up to the radio with a "Yip-I-Addy-I-Ay" song, the mood would change all through the United States.

## Typical Moods in Songs

A SONG OF THE LATE 1920's, expressing the spirit of the boom years, was called *My God, How the Money Rolls in*. The words ran,

*My sister she works in the laundry,  
My father makes synthetic gin,  
My mother she takes in washing,  
My God, how the money rolls in.*

But about three years later everyone was singing a different tune, *Brother, Can You Spare a Dime?* and that tune lasted, with its mood, until the elections of 1932, when a vision of hope found expression in *Happy Days Are Here Again*. Then, after only two or three years, everyone was singing *The Music Goes Round and Round*, and a good many things besides music were going round and round. I cannot yet name the logical successor to that song. It may not have been written.

## Some Effects of Jazz

THE JAZZ PERIOD is a most distinctive era in the popular music of America. It began longer ago than is commonly realized. It began in 1911, with *Alexander's Ragtime Band*, written by Irving Berlin. This song "set the shoulders of America swinging with [a new] syncopated jubilation," as Alexander Woolcott wrote. It marked a revolution in American popular music and it corresponded with a revolution in popular manners. For it was about this time that women began, generally, to smoke, that they began going to night clubs—then called cabarets—and that the short skirt came into vogue.

At the same time there came similar changes in dances. "Ragtime" became popular, as the song *Everybody's Doin' It*, attested. The favorite dances were the turkey-trot and the tango. (About 1914, when our government had some difficulty with Mexico, the hesitation waltz, then popular, was borrowed to describe President Wilson's Mexican policy, his alternate truculences and timidities as "one step forward, one step backward, sidestep, hesitate.")

The old waltz and the two-step fell into disuse. The popularity of the ragtime dances continued and grew more extravagant until about 1920, which was the real period of jazz. The waltz, with its gentle sentimentality and stately dignity, had been a part and a symbol of the standards of manners that accompanied it, its *tempo* the *tempo* of the national pulse. The rowdy gate crashers that elbowed it to the side of the room came in a jeering spirit, jeering at old time styles of music and dancing.

## Origins of Jazz

DID THE NEW STYLE OF MUSIC originate in the South, as some writers believe? In the old darky songs, those which had by this time achieved a secure place in American song lore, there was surely to be found that syncopated rhythm which later became the chief substance of the ragtime. It is in the first lines of *Car-ry-y-y me back to old Virgin-ny-y-y*, and of *Swing low-ow-ow, sweet chariot*. But it is also found in other music. It is a characteristic of the Hungarian rhythm, the "Hungarian catch," and it may

have become popular because of the strange infusion of alien tastes—Hungarian, Russian and others—in the great metropolis of New York. For in any country, at any time, the popular vogues of art, music and drama, are determined by the metropolis. By the momentum acquired there, they spread throughout the country.

## Enter the Coon Song

BUT THE ARTIFICIAL EXTRAVAGANCE of the cakewalk, in the early 1900's, the extravagant response to rhythm, exaggerated beyond even the darky's natural response, began the vogue for "ragging it," and marked the transition to the new kind of song, the coon song.

Mark Sullivan

The true darky songs, because they reflected pathetic conditions, were nearly all mournful. The last of these was written about 1880, by James A. Bland, a Negro. *De Golden Wedding* and *Oh! Dem Golden Slippers* were in this collection. But then there came a period of nearly ten years in which no new ones were written. In 1900 appeared the coon song, and this was typical of a change in the Negro as well as in the popular music.

The first type of song represents the spirit of the American Negro. It is indigenous to the country. The second type represents what the white folks taught the darky to think the white folks would like from the darkies. Many of the coon songs were written by persons not familiar with Negro life, or only familiar with it as it was found in the background of a city like New York.

The difference between these types of song is illustrated by comparing two written about the same subject, but a generation apart. *Gib 'Me dat Watermillion* was composed some time before 1882, in Tennessee. It was sung for more than thirty years, beginning in 1894, at the Gridiron Dinners in Washington, and was heard with unvarying delight by eight Presidents of the United States. The second verse runs thus:

*Oh, de ham bone am good, de bacon am sweet,*

*'Possum meat am very, very fine;*

*But gib me, oh gib me, oh how I wish you would,*

*Dat watermillion hangin' on de vine.*

The coon song which was written in 1900, and many miles from Tennessee, has a different title, more nasal in sound, "Lam', Lam', Lam'."

*Cow meat am good and sweet, roast veal it am fine,*

*Kidney stew I love, too; pork chops am divine;*

*But of all de meats dat's good to eat, from turkey down to ham,*

*De one dat tickles ma palate de most is lam', lam', lam'.*

The coon songs which attempted accurate characterization dealt with the new Negro, his altered status, his effort to adjust himself to an economic system evolved by the white man, as well as with his racial characteristics. The relationship of these songs to jazz and jazz dancing is clear, whether they are considered as causes or as results.

### Lasting Appeal in a Song

IF ONE SEEKS FOR PERMANENT POPULARITY, for lasting influence of a song, it seems hardly too strong a statement to say that it is found in words of sentiment, perhaps verging on sentimentality, in music of the same type, yet music which conforms to standards of good writing and avoids the bizarre. The sales records of one such song, during the years of 1898 to 1928 reached a total of 2,670,750. This included all arrangements of the song. The name of that song is *The Rosary*. The words were written by Robert Cameron Rogers, the music by Ethelbert Nevin. "It touched hands with the most exalted in poetry and music; it stands out in this record of popular songs like a solitary tall lily in a garden rather given to marigolds and zinnias," as I have written elsewhere. How it influenced audiences Mme. Schumann-Heink told vividly. At the first familiar phrase of the introduction there would be a burst of applause. Then came silence that grew tenser and tenser. "I can see and feel on every face before me," she said, "that what is in my heart is in theirs." This song "was to music what Watt's *Hope* is to pictorial art, something so definite and concrete as instantly to thrill the simplest understanding of beauty, while conveying no offense to those most conscious of being aesthetes—a contribution to the emotional enrichment of the average man, to the elevation of the people's taste, a service best understood when *The Rosary* is compared with some of the other sentimental songs of the

period." A jewel rare in its beauty.

### Value of Music for Young People

I MYSELF NEVER HAD ANY LESSONS in music. I regret that lack. I believe that all children should be required to study music up to a certain point. For all arts are related to each other. I say to my children that if the government should collapse there is always one way of earning a living. Any one, who can sing a song, play a tune, tell a story or give an oration, can pass the hat and be sure of his living. One who can sing a song is a big man, even to-day. What is writing a novel but the prelude to passing the hat? The primitive form of all such endeavors was a "Come all ye" song, or story—and the hat was passed. The next

development was hiring a hall and selling admissions.

### Music in the Home

I DEPLORE THE DECLINE in the habit of making music at home, in the family. In our day music has become too easy to get, vicariously. At home all we now need to do is to push a button or turn a knob; but at home, when I was a boy, we children had to amuse ourselves. We told stories, we sang songs; my father would get out his fiddle, tune the strings, and begin his repertory of songs from Ireland, to which he had added only a few American tunes, such as *The Virginia Reel*; *Old Folks at Home*; and other such favorites. My brothers

(Continued on Page 677)

## Increasing the Attendance at Pupils' Recitals

By NELLE S. SCALES

FROM ALL PARTS of the country we have the complaint from teachers that attendance at recitals of music pupils has decreased to an alarming extent. Many teachers cannot always get the parents to attend. If many of the recitals are similar to some we have attended in the past months, our sympathy is wholly with the parents.

We had an opportunity to attend recitals given by the pupils of two notably successful teachers of primary and intermediate grades, the same grades taught by the writer. Because the recitals were public and the enrollment of each teacher was large, we expected to see many people in the audience; in reality we saw fewer people than attend our own recitals.

We were given printed programs covering two whole pages, listing the name of the composition, composer, and performer. The recitals began fifteen minutes late, and lasted one and fifty minutes, and two hours, respectively! The pupils performed beautifully, almost perfectly, but not an explanation or annotation was given during the afternoon. We enjoyed much of each recital, but this would not have been the case were we not a teacher; and in being a teacher, we realize further such recitals should not be given too often.

We as teachers should take into consideration that times have changed. Parents are busy. They do not feel that they have two or three hours to give just to see Johnny or Mary play the little pieces, or she has played dozens of times at home, however much it might encourage Johnny or Mary, or the teacher. And encouragement to the pupil and teacher is the basis of attendance at all recitals nowadays, if people want music, all they have to do is turn the dial of the radio and get something from symphonies down. How talented primary and intermediate pupils may be, and however perfectly they perform, they are still just embryo musicians as far as the general public is concerned and it is very easy, indeed, for the parent to get an overdose at one recital.

With primary pupils there should not be more than a thirty-five minute recital, preferably twenty-five, and that with explanations; the children dearly love to hear them, and it is found that, having given few explanations, they feel a greater responsibility in playing a composition. Sometimes the whole recital is given in the form of a play, and including four, six, and eight-hand numbers—children love them and so do the parents.

With intermediate grades, we lengthen the program to forty minutes (never more than forty-five). If there are too many pupils for that length of recital, they are divided and give group recitals. Printed or mimeographed programs are used, giving the place, date, hour, name of composition, composer, and performer; at the bottom of the page the time limit allowed is indicated: "Entire program not more than — minutes." Also "Public is cordially invited." We send a copy to the parents of each pupil, post some in conspicuous places; and send one to the local newspaper. When the time for the recital arrives the hall will be filled with at least one member of every pupil's family, many friends of all. We let nothing keep us from beginning on time. When the recital is over, many people say that it is not long enough. We thank them and invite them to be on the alert for our recitals during the year. Then, if we do not already have their names on our mailing list, we slip back and put them

## FIFTY YEARS AGO THIS MONTH

PERLEE V. JERVIS,

widely recognized American authority on piano playing and musical essayist, finished an article, "On the Use of the Pedal," with these illuminating paragraphs:

"There are many peculiar effects to be produced with the aid of the pedal; one or two examples are given by way of illustration. Put the pedal down at the commencement of the last arpeggio of the cadenza in Seeling's 'Loreley'; then play the first five notes with the left hand, the next five with the right, taking the upper B-flat with the left; now release the pedal, still holding the notes with the right hand, then remove the fingers of that hand, still holding the B-flat with the left. When neatly done, this produces a novel effect. Again, put down both pedals at the first measure of Rubinstein's 'Kamennoi Ostrov,' No. 22; then commencing *ppp* make a very marked crescendo to the end of the measure, followed by an equal sudden dim. at the beginning of the second measure, striking the keys just enough to pro-

duce the faintest possible tone, and holding both pedals through the two measures. This is an effect difficult to describe, but a beautiful one when carefully made. Many other pedal effects will occur to the thoughtful student.

"The pedal should be so neatly handled that the listener is hardly conscious of its use. The dampers should never be allowed to fall upon the strings with an audible sound, for, in addition to the unpleasantness of the blow itself, there results a vibration of the strings that will be sure to blur the playing. Neither should the pedal itself be struck with the foot, keep the heel always upon the floor with the point of the shoe resting upon the pedal, and raise and lower the foot from the ankle joint, never removing the foot from the pedal while the latter is in use.

"If, in addition to these mechanical rules (which are by no means exhaustive), the pupil possesses an ear made sensitive by careful listening to his own performance, and has some knowledge of harmony, as well as the principles of phrasing, the use of the pedal will, instead of obscuring, lend new beauty and clearness to the playing."

## Shall We Educate the Parents?

By RUTH E. WOODS

MOST PARENTS want their children to have the advantage of some musical training. Perhaps they are able to give their children advantages which their parents were not able to give them, and they wish to realize their ambition in the children. So the mother calls Miss X. who has "given" lessons to other children in the neighborhood, and asks her what she charges and how many pupils she has—not what her teaching aims are or about her procedure with children.

Often a teacher who would do outstanding work if she had the chance is handicapped by these parental attitudes. She would like to give her pupils an experience in rhythms and listening and singing, and then permit them to grow into the performance of music. But no, a child's mother wants him to play as soon as possible, not aware that a meaningful experience might enhance his future years.

It is ideal to let the children make their own instruments and then to learn to play them. The aim is not to make each child a soloist, but to be a part of an ensemble. Too few parents realize the value of ensemble music as a creative experience for themselves and their children. There are groups over the country enjoying "A Little Night music," but these groups are

rare, though growing rapidly in number.

To insure regular practice periods the piano should not be in the family living room. A child cannot play his lesson when mother is entertaining her bridge club, or father wants to listen to the radio, or when someone wants to talk over the telephone.

An excuse familiar to the music teacher is "home work." The writer is interested in a movement to abolish home work. But, because such work gives the parents more leisure, they want their children to study at night. They had to, why shouldn't their children? Do parents sometimes like to punish their children, though they are not conscious of such a wish?

Encourage your child to learn music that he may let the rhythm of the ages flow through him in interpreting the classics; that he may play for some friends to sing or to dance; that he may be a part of a group in contributing, not the solo, but perhaps just a needed inner harmony; and last of all that he may sometimes enter into the realm of make-believe where he may feel that there is perhaps somewhere someone who understands the peculiar longing of his childish soul to be understood, not admired for playing a florid composition which brings only a caress to the ego.

PAUL HINDEMITH

# Time, Only, Tells

By

PAUL HINDEMITH

A Conference with the Most Discussed of  
Modern Composers, Secured Expressly for  
The Etude Music Magazine

By HOWARD DONGAN LAIRD

Paul Hindemith was born at Hanau, Germany, November 16, 1895. His family is Silesian. He lives in Switzerland and his music is barred in the land of his birth, not because of any racial restriction, but because the powers that be do not approve of his kind of modernism.

He is said to have been an able violinist at the age of thirteen; and he studied at the Hoch Conservatorium under Arnold Mendelssohn and Bernard Sekels. It is something of a surprise to those who learn that for many years he played in cinemas, dance bands and in musical comedy theaters. For eight years he was concertmaster in the Frankfurt Opera and became familiar with the operatic repertoire. Jovial, bland, blue-eyed and extremely unassuming, it is hard to believe that he is recognized as one of the leading young iconoclasts in his country.

For many years, he devoted his attention to quartet playing. The Amar-Hindemith Quartet became a leading group of Europe. His works, performed at European Festivals, commanded wide attention for their constructive and radical tendencies. On the other hand, he regards his own music as "Gebrauchsmusik" (practical music, or music of the people). His early works reflected the types of his great predecessors: Brahms, Strauss, Debussy and Reger; but his later works are distinctly Hindemith and none other. He has composed ten works for the theater including "Mathis der Mohler," an opera in seven scenes. There are seven works for large orchestras, including a symphonic suite from the opera "Mathis der Mohler"; two concertos for small orchestras; and compositions for other instrumental groups; making, all together, over forty works. Of piano solos and piano duets, vocal solos and choral numbers, there are nineteen in all, to which may be added two sonatas for organ and twenty-one pieces for special objectives and occasions, including his music for the movies and for mechanical instruments. When he was attacked in his native land for writing music that was unacceptable to the New Régime, he was ably defended in the Allgemeine Musikzeitung, by Dr. Wilhelm Furtwängler. While treated personally with consideration in his native land, it was made clear to him that the governmental authorities of the Third Reich would not tolerate his works. Therefore, his remarks in this conference are of especial interest.—EDITOR'S NOTE

TIME IS THE ONLY TEST by which a work of art may be properly appraised. Unless a composer consciously chooses to cater to a known and definite public taste, which is infinitely different from that which the world already knows, he is likely to suffer bitterly from the attacks of those who are valiantly fighting for the music of yesterday and who resent change of any kind. This has happened so many times in the history of art, particularly musical art, that it seems almost tedious to mention it. What, for instance, in this day could be more obvious than the beautiful, clean, pure architectural lines of Franz Josef Haydn. Everything seems so simple, so clear, so open, when placed beside the music of some of our later composers. Yet, in Haydn's own day, well established critics tried to influence Emperor Joseph II by calling Haydn a trickster and a mountebank. One of his worst crimes, according to his critics, was trying to form a new school; and his compositions were classed as trifling, hastily put together, and overloaded. Imagine this of Haydn, whom so many musical snobs now reject as unbearably old fashioned! One can still learn much from "Papa" Haydn.

"When we come to Beethoven, he is found faced by a barrage of offensive criticism which in this day seems comical. Listen to this! One of the most gifted composers and critics of the period was the Bohemian, Johann Wenzel Tomaschek, who wrote of Beethoven, "Harmony, counterpoint and eurhythm, and particularly musical aesthetics, he did not seem to have overly much at heart; hence, his larger works are defaced by occasional trivialities." Only in the archives of the largest libraries can one find and preserved any of the one hundred and ten works of Tomaschek, Beethoven's critic. They are practically never heard in this day, except as relics of a departed era.

Richard Wagner had to contend with a wave of acid repective like that which has greeted few other composers. This did not come from enemies, but from those who were convinced that Wagner was all wrong and they were all right. Wagner's critics are now chiefly known because they deliberately bumped their heads up against the wall of Wagner's marvelous artistic structures. Let us recall some of the criticisms which the genius of Bayreuth had to read. When "Das Rheingold" was given in 1869, the Munich critic of the Berlin Echo wrote:

"When the King (Ludwig) left the box there broke out an immense tumult of applause and hisses: in the end the enthusiasts conquered, for politeness forbade, when the curtain was raised, that the exhausted singers should suffer after nearly four hours of strain. The success of the opera can be regarded as at best an equivocal success." Even the celebrated critic, Hanslick, wrote that he "regretted that he had to undergo the torture of hearing 'Das Rheingold' again."

## The Source of Originality

"THE BASIS OF ALL worth while composition must be, of course, inspiration and worth while musical ideas; after these comes technic. There seems to be an impression that there is in this day, too much of technic. It is my impression that there is not nearly technic enough. One cannot learn how to be a composer, in the modern sense, by a few years of harmony, counterpoint and theory in a conservatory. It requires years of daily intimacy with music of all kinds, not merely the process of playing it or hearing it, but that of investigating and studying this music as a great natural phenomenon. One must have had fine teachers, when they can be obtained; but what we learn from teachers is only the first step of a grand escalier, a magnificent staircase ascending to the clouds. This is the process which all great composers have followed, particularly such modern masters as Strauss, Pfitzner, Reger, Debussy and Stravinsky.

"When a composer writes, he must be able to do so without any consciousness of technic. A great novelist or a dramatist surely never thinks of grammar, of syntax or rhetoric. If he were obliged to do that, everything he wrote would be artificial, unnatural and temporal.

Moreover, some very fine authors have hardly ever studied grammar in a formal way. What they know they have imbibed unconsciously through association with cultured people. For the same reason I think that it is unfortunate that so many composers expect to get their inspiration from a keyboard. Ivory and ebony keys, or fiddle strings, are poor sources of originality. It is true that, while improvising, an excellent melody may crop up; but the best ideas are those which come when one is thinking of music only and not of any instrument. A piano keyboard is sometimes very desirable for trying out compositions and revising them. Many composers use the piano legitimately for this purpose. That is, a keyboard is very useful as an instrument of control, but its value as an instrument of invention is not great.

"In my own case, I am almost always on tours; and, if I had to wait for a keyboard or an instrument, I could not compose anything. You see, I am presenting the importance of imagination in composition. To me, the composer must be wholly unhampered by mechanical contrivances of any kind. This presupposes absolute pitch, which I possess. It is my conviction, however, that absolute pitch is by no means merely a gift. I believe that it can be cultivated, that almost anyone with musical inclinations can by means of intense concentration and

untiring practice develop absolute pitch. Certainly this is an interesting subject for experiment which many teachers may test with their pupils. What is absolute pitch? Nothing but pitch memory. If one can remember the quality as sound, the timbres, such as the timbres of the flute, the violin, the French horn, the harp; if one can remember colors, red, blue, green, yellow; why is it not possible to develop a sense of absolute pitch?

### Inexhaustible Fundamentals

"PROBABLY THE MOST ICONOCLASTIC music, the most radical, the most revolutionary, has been written during the last twenty-five years. Every extreme has been now apparently touched. This does not mean that all rhythmic and chordal combinations have been accomplished, that the composer

of tomorrow can have no new and inviting field to enter, but it does mean that his fundamental means have already been established.

"Some new tone colors may be added to the composer's palette; but these cannot make material changes in the structural basis of music. Electrical instruments afford an interesting field for speculation. I have been very much interested in them for years; but it is far too early to prophesy what may be done in developing a new *modus operandi* in this field. Certainly nothing can ever take the place of the real players in person, whether they play individually or in groups such as in your magnificent orchestras of Philadelphia and Boston. Musical standards in America, as in other countries, vary from the lowest to the highest, but the standards set by

the foremost American organizations are as fine as the best to be found anywhere in the world. More than this, American audiences are fair, open-minded, and filled with curiosity to hear new works with new ideas and new styles.

"The process of creative composition is a wholly individual matter. Musicians, for the most part, have composed not so much because they wanted to, but because the force to compose is irresistible. Social changes, politics and war may affect the composer's life, as they did the lives of every master from Palestrina to the present day; but, just as the springs continue to flow and the trees and flowers throughout the world continue to bloom, so more and more will music continue to be created, despite philosophies, ideologies, -isms, airplanes, submarines and a world of strife."

# Radio Flashes

By PAUL GIRARD

WILLIAM S. PALEY, president of the Columbia Broadcasting System, stated recently that last year was one of the most fruitful of years in Columbia's program operation. Improvements in established programs and developments of new ones led to better programs and better program balance.

"It is interesting to note that since the rôle of radio broadcasting has become continuously more important," says Mr. Paley, "as a means of mass communication of information—in addition to its rôle in the field of entertainment, education and culture—there is increasing evidence of quickening of public thought on this subject." The most spectacular developments in broadcasting services during the year he contends, were in the field of international news; at the same time the American national scene was also a source of considerable news broadcasting. Of the programs which have become accepted by CBS institutions, the Church of the Air continued to bring Sunday religious services to its large audience; the New York Philharmonic-Symphony Orchestra increased its audience of nationwide listeners; the Children's Hour grew in merit and approval of children, parents and educators; the Columbia Composer's Commission provided a splendid new group of musical works for radio; and the American School of the Air found greater acceptance in the class rooms of the nation.

Sooner or later, it was bound to happen. Yes, they have a musical quiz on the air. If you do not know about it, and are interested, tune in Sundays at 4:00 P.M. EST (Columbia network). The program is appropriately entitled "So You Think You Know Music!"

Richard Leonard, production director of the NBC Symphony Orchestra, believes that the radio would appeal to Wagner, Berlioz, Rimsky-Korsakoff and other great composers of the past, if they were alive to-day, "not because of any limitation, but because of its new possibilities of sounds and combinations of instruments. He feels they would be writing for it, they were here."

"Radio has enabled composers and conductors to discover in music," says Mr. Leonard, "defects and weaknesses that have always been inherent to it. In their efforts to correct these defects in broadcast music, conductors have given the classics a new eloquence." He feels that more conductors should follow the lead of Stokowski, Toscanini and Bruno Walter in their willingness to experiment with broadcast music to get the best results in dynamic shadings and balance.

When a conductor sends part of his orchestra off-stage for a distant effect; when an entire brass section leaves its accustomed position to play into the open piano with the strings held down by the *sostenuto* pedal; when a trumpeter directs his tone into a bucket of water; when one clarinetist plays without a mouthpiece and another plays with only a mouthpiece; when radio musicians do things of this sort, they are pioneering in a new technic for radio music of the future.

Who are these pioneers? Chiefly the dance bands, Mr. Leonard says. It is the dance bands which have taken the lead in augmenting the scope of orchestral music by exploiting radio's electronic principles. The novachord, the Sousaphone, the electrical guitar are some of the by-products

## The Tragedy of a Deaf Musician

### The Dramatic Fate of Friedrich (Bedrich) Smetana

By DR. WALDEMAR SCHWEISHEIMER

SMETANA, THE GREAT CZECH composer, like Beethoven, became deaf. Also, like Beethoven, he was fully aware of the tragic nature of his fate. On one occasion he described the difficulties with which he had to contend: "Just imagine the whirl of music within a man who has lost his sense of hearing. Nobody has the slightest idea how a deaf person's thoughts evaporate. If I do not write them down at once, after a little while I do not know what they are, and I was famed as a possessor of a phenomenal memory!"

Smetana's life span ran from 1824 to 1884. He was, in his day, a famous pianist and a good friend of Franz Liszt, who had recognized Smetana's talent very early. Twice during his childhood he was seriously ill, although not much is known about the nature of his disease. For several years Smetana was occupied as conductor in Göteborg, then in Prague, where he conducted at the Prague National Theater. One of his first operas was "The Bartered Bride," which was an immediate and great success. To-day it is well known in all civilized countries. This opera was written in 1866. In 1874 the composer's hearing was so seriously impaired that he was obliged to leave his position as conductor at the opera. Thereafter he lived in the country.

At first he noticed that he heard a sound differently in each ear: the high notes sounded differently in his right ear than in his left ear. However, his deafness bothered him less than the humming and the noises in his ears, which were louder than his inner sense of musical hearing. This was exactly the same as with Beethoven who always stated that his deafness bothered him less than the noises which he heard constantly. In addition, Smetana showed signs of dizziness which made him stagger when he walked. He went to see many physicians, some of whom forbade him to listen to music, in order to spare his sense of hearing, while others tried local treatment. None of these treatments, however, were successful.

For a long time Smetana was troubled by an irrepressible A-flat major chord, which he heard in the highest position as though played by piccolos. In this state he wrote a series of important compositions of which he said, "Of all these works I have not heard one note, and yet they lived within me and produced, by mere imagination, tears of emotion and enthusiasm and delight." At times he would be so badly depressed by his suffering that he

SMETANA

would sit for hours without motion and think of nothing but his misfortune.

Like Beethoven, Smetana tried to forget his suffering in his work. He has illustrated by music his tragic fate, with touching impressiveness, in the last movement of his celebrated string quartet, "Aus meinem Leben." Smetana has told about the reasons for the creation of this work in a letter, which shows clearly that he had then already fully realized the grave importance of his disease. "For six years, I have been completely deaf," he writes. "Since that time, no one sound has reached my ear. I have to imagine the sounds and can thus hear them as in a dream only. And thus I wrote this quartet as a reminiscence of a better and past time. I have described the beginning of my deafness, and I have attempted to show it in the manner as I have done it in the *finale* of the quartet with the E<sup>4</sup> (the second E above the treble staff) on the first violin. For weeks before I was completely deafened, I had been pursued each evening between six and seven o'clock by the loud sound of the A-flat major chord (A-flat, E-flat, C) in the highest position, as if played by piccolos. This would last half an hour, sometimes even a whole hour without interruption, and I could not do anything about it. This occurred regularly, daily, like a warning call for the future. Therefore I have tried to represent this terrible catastrophe in my fate by the shrill, yelling E in the *finale*. That is why this E must be executed *fortissimo* during its entire length."

Smetana had no pains in his ears. During the performance of his opera "Libussa" (1881), the composer could not hear one sound. Yet he was not discouraged in his work. He wrote, during this period, some

of his most particularly beautiful songs.

Smetana's illness took a completely different course from that of Beethoven, who, it is true, was entirely deaf during the last years of his life but was in all other respects mentally well and efficient. In the year 1882 Smetana's ability to speak ceased (motoric aphasia), pointing to a disturbance in the brain. Beside the noises in his ears, he believed he heard voices. He wrote, "In my head there is not only a hum, it also speaks with many voices. It whistles or sings, a discord of voices whose originators I cannot see, they laugh and insult me; they call me an idiot." He then wrote a second string quartet, in C major, which he introduced with the words: "Composed during a nervous disease which was originated by deafness."

During the occasional bright interruptions of his disease, which developed progressively, he completed his last opera, "The Devil's Wall," and a composition, "Carnival in Prague." He suffered manic-depressive outbursts and sudden phases of exaltation, he saw hallucinations, and finally insanity seized the composer. In 1884 he was taken to an insane asylum in Prague, where he died after a short time.

There is no uniform explanation for the type of Smetana's deafness. A certain Czech physician believes that the composer had Otosclerosis (hardening of the ear), that is a disease of the middle ear, which causes the auditory ossicles to grow together. However, he does not give proof for this diagnosis. Other physicians give as cause for the ear disease, the composer's disease of the brain, which has been diagnosed as general paralysis. In any case, it is probable that the nerves of hearing had been affected, not the middle ear.

The same thing applied to Beethoven: the progressive deafening diminished the musical value of his compositions in no way. The deafness appeared in both cases only after the composers had mastered thoroughly the entire technic of instrumentation and composition. The case of a person who was born deaf is entirely different from that of a person who has become deaf during his life. For the former, sound and music will remain a secret that cannot be solved; just as, for a person who was born blind, the color of the rose, which he can smell and touch, will always remain inconceivable.

For decades, Smetana could hear normally. Thereby, he had gathered enough experience to be able to make use of this training during the last, the deaf period of his life.

OF THE MANY QUESTIONS that have been put to me by young contraltos, all over the country, there is one so often repeated that it seems a good point with which to begin a talk to singing students. The question is, "How far up shall an alto voice carry its chest tones, and where shall the high register begin?" Vocalists who think in these terms are laboring under the false impression that the deeper voice has three separate registers: the deep range, the middle range, and the high one. They appear to believe, further, that there are separate boundaries within the tonal scale, which can be marked off, much as the separate colors are marked off on a color chart. As long as such an impression persists, there is need for correcting it.

As a matter of fact, there is no such thing as a boundary of range within the complete tonal compass. Of course, there is a note below which one cannot go; similarly, there is a note above which one cannot go. But between those two natural limits, the vocal scale should be completely even and unbroken. The purpose of scale building is to effect a uniform passage from deep tones to middle ones, from middle tones to high ones. The full scale—which takes long years for its mastery—must progress from tone to tone smoothly, without the slightest variation in color or quality. Thus the mental approach, which thinks in terms of frontiers of range, defeats the very purpose of practicing. That, perhaps, is the best answer to the question. Try to get rid of the habit of charting your voice into separate little islands of range. Actually, they do not exist. Try to approach your work with the idea of a single tonal line, along which you pass

# Some Reflections on Singing

The Etude Music Magazine

By ROSE HEYLBUT

evenly, smoothly, without the slightest break or change of color.

## *We Follow the False*

WE HAVE BEEN LED into this error of breaking up the natural range of the voice into little sections, by a loose use of such terms as "upper tones," "middle voice," and their like. These, in themselves, are entirely proper, provided they are correctly employed. The middle voice, to my mind, is best defined as that compass of tones which is most natural and most frequently used. Both in practice and in the interpretation of songs, the middle notes

of the voice are sung more often than those at either extremity. In scale building, too, the young singer begins with the note that lies most smoothly in the voice, and adds higher and lower tones only after the first note has become sure. It might clarify matters, perhaps, if the term "middle voice" were regarded less as a boundary of range, than as the average, natural singing voice. It does lie between the upper and lower tones, to be sure, but it is a mistake to think of it as a sort of vocal equator that divides the full scale into smaller sections, requiring different technical approach. Teach yourself to think of your scale as a single straight line, and the problem of range will become much simplified.

The next thing to be considered is the question of chest tones. Actually, there is no such thing as a chest tone. Progressive teaching methods are rooting that curious expression out of the singer's dictionary of terms; but one used to hear a great deal about "singing on the chest," and the very fact that questions about "chest tones" still arise proves that the matter has not been entirely settled. We know, of course, what the term "chest tone" means; it is that curiously thick, heavy tone which comes as the result of forcing the voice. Its weightier quality has been most mistakenly confused with the darker coloring of the contralto voice. But the true contralto color cannot, and must not, be forced; either it is natural, or it is not contralto. The true alto voice carries its heavier timbre and darker color into the highest tones of its scale. Pushing on the voice in order to force quality is nothing more or less than faulty vocal production. "Chest tone" has neither meaning nor value—except as something of which to rid one's self.

## *On Common Ground*

CORRECT VOCAL PRODUCTION is the same for all voices, regardless of range or color. The breath must be supported by the strong muscles of the

abdomen; it must be vocalized, in small quantities at a time, against the vocal cords; and it must be resonated in the cavities behind the nose and above the soft palate. There is no other way of vocalizing correctly; no way, for example, of resonating tone "on the chest." The method I have outlined so briefly is the natural way of singing, and therefore it is easy. That is to say, it can and should be easy, if it is not hedged about with unnatural restrictions. It is an odd thing to realize, but at one time of our lives, we were all perfect vocalists. That was during our babyhood. Watch a little baby as it coos, or even cries, and you will see the perfect coordination between breathing and vocalizing. Notice, too, that the baby's tones are always round and full. That is why a tiny mite of a child can make so much noise. It has vocal power because its breathing and production are entirely natural. It is only as one becomes self-conscious about the vocal instrument that bad habits creep in, and the old, natural habits have to be relearned. Tones which deviate from the natural method of resonance are harsh and forced. They are unpleasant to listen to, and ultimately, they harm the voice.

While the natural method of singing can be made easy by a correct approach, it is no easy thing to sing well. That is because these natural methods of breathing and emission must be thoroughly and consciously mastered into a system that is at all times completely controlled. Oddly enough, the more natural a function is, the more difficult it is to control. We go through the involuntary motion of blinking the eyelids several thousand times a day; but just let us concentrate on it for a minute or two, and this blinking will increase so rapidly that it becomes annoying. The singer's task involves three important steps. First, she must find her way back to that early, natural manner of vocalizing. In the second place, she must analyze this correct vocal emission, and become minutely aware of how it feels. In the third place, then, she must synthesize her feelings so that she knows exactly what she is doing, and can control her tonal progress with each note she sings. The baby's full, round note is natural enough, but uncontrolled. The singer's tone must be equally natural, and, in addition, it must be the result of willed control.

## *The True Teacher*

THE SINGER'S MOST VALUABLE HELP comes from the teacher who not only knows what he is about but also is able to impart his counsels in a way that strikes home. I have always felt that teaching is a rich career in itself. Occasionally one hears a rather doubtful career aspirant saying, "I'll give myself another year, and then, if I don't succeed as a singer, I can teach."

An attitude as deplorable as that should be discouraged. The real teacher does not regard his work as something to which to resort when other goals have failed. He consecrates his life to the education of others, and makes his work as rich and vital as that of any public performer.

In preparing for a vocal career, the student should avoid the mistake of thinking in terms of time. I am often asked, "How long shall I study? How long will it take before I can give concerts?" And I am sorely tempted to answer, 'Probably forever.' Because the beginner, who goes to work in such a mental attitude, is hopelessly on the wrong track. The determining factor in building a career is not time, but the student's ability to assimilate knowledge, and to give back what has been learned in the form of controlled accomplishment. Some students are more gifted than others; they learn more rapidly; they have fewer obstacles to overcome. All these conditions must be taken into consideration. Art cannot be sketched out on time table principles. While I am ardently opposed to

MARIAN ANDERSON

Singing at the Lincoln Memorial in Washington for one hundred thousand listeners.

hurrying a career, I feel that the student who masters her work at an early age, should not be kept back simply because she is young. An early start can be helpful, provided that matured critical opinion finds the student's abilities sufficient to warrant it.

### As Child, So Woman

MY OWN START was an early one. Indeed, I have expressed myself through my voice as long as I have known myself. I clearly recall that when I was something under three years old, I was given a little stool as a present. In those days, my mother did her own work, and she would leave me alone in the dining-room while she was busy in the kitchen. I would sit on my stool, before a tiny table, and make believe that I was playing piano accompaniments, as I sang. The room was papered with a flower pattern, and the border of the wallpaper was all of flowers. As I played and sang, I saw kindly, friendly faces in the flowers, that laughed and sang with me. My mother used to say that I was a "good child," to play so nicely by myself. Actually, I was not a bit good. I was having a glorious time, singing and enjoying myself with my make believe friends.

At six, I joined the Junior Choir of our church in Philadelphia. This church was well known for its music, and the Junior Choir, of forty voices, was often invited to sing in other churches and even in other cities. But when train fare for forty became an item, a selected quartet would be sent instead of the entire group. I was always chosen. At thirteen, I joined the Senior Choir as well, singing with both groups until I was eighteen. My aunt, who had a fine soprano voice, was also a member of the choir, and we often sang duets. I had much experience, too, as substitute soloist. Our regular soloists had no salary; consequently they were responsible to no one for their Sunday appearances, and business or pleasure often interfered with their volunteer service. On such occasions I was called upon for the solo, singing a soprano solo an octave lower, or a bass solo an octave higher. Thus I tested out my natural range and became thoroughly acquainted with public singing.

Dr. Parks, our minister, fostered musical interest by inviting distinguished soloists to perform for us. Roland Hayes, who is one of our greatest singers, Florence Cole Talbot, and many others came, and I was allowed to appear on the program with them. Our guests were accomplished musicians, of course, and they sang classical arias and *Lieder*; but I was called on to supply the program's English songs, the words of which were understandable to our congregation. These performances gave me new incentives. Understanding nothing, at that time, of German, French, or Italian, I would hang upon each note of the music, trying to draw the full richness and meaning of the songs from the music alone. And I tried to learn how to give that meaning to others, also without the aid of words. I knew, of course, that the words and music of a song are equally important; but nonetheless, it was excellent practice to try to project the mood and meaning of a song so completely through *music alone* that a person not understanding the words could still carry a definite impression away with him.

During my second year at high school I earned the attention of John Thomas Butler, the distinguished Negro actor, who offered to pay for singing lessons for me, if my family consented. Up to that time, I had never had a singing lesson. Mr. Butler sent me to Mary S. Patterson, who heard me and offered to teach me without pay. Some months later, the Philadelphia Choral Society gave a benefit concert for me, and sent me to work with a leading contralto and teacher of Philadelphia, Agnes Reifsnnyder.

But it was through our high school principal that I came to port. Dr. Lucy Wilson had the pioneer idea of encouraging the

girls not merely to go to work, but even to work at the thing they loved best. She knew that, above all things, I wanted to sing; and, through the good offices of Lisa Roma, she secured me an introduction to David Bispham. Dr. Wilson paid, herself, for my audition with Mr. Bispham; but he was taken by death before I could begin work with him. Miss Roma then took me to Maestro Boghetti, with whom I have worked ever since. I have had no special vocal problems to overcome, and have developed my voice along the natural lines of *bel canto* (beautiful singing) that I have already outlined.

I have no special practice rules. I work

on the material at hand, rather than on formal *vocalises*. I never sing when tired. Since a long season of concert touring brings with it an inevitable amount of fatigue, there are days when I do not practice at all. Under such circumstances, the strain on the entire physical organism, of which the voice is but a part, would undo the good of practicing. When I am especially interested in a song, I may keep at it for hours at a time. But I never sing in full voice longer than one hour a day, and not that much at any one time. The well used voice does not tire; still it is wiser not to overdo. In the matter of practice, each

## RECENT RECORD RELEASES

By PETER HUGH REED

ADMIRERS OF PROKOFIEFF'S MUSIC will find his orchestral fairy tale, *Peter and the Wolf*, played by the Boston Symphony Orchestra (Victor set M-566), one of his most ingenious and witty scores. A narrator (actor Richard Hale) tells the story, which the music not only enhances but emphasizes. As an experience this work is both unique and intriguing. Mr. Hale does a superb job, and so, too, do Dr. Koussevitzky and his men. To tell what the work is all about would not be fair to the prospective listener, but let us say it is designed to appeal to both old and young. And, in the most ingenious and diverting manner, it will enhance one's knowledge of orchestral instruments, in case he is not sufficiently up on them. Cheerfully melodic, cleverly rhythmic, and frankly humorous, this work has already proven a welcome variation in the symphonic field.

It is gratifying to observe that the American conductor, Howard Barlow, turns away from the beaten path in some of his recordings with the Columbia Broadcasting Symphony Orchestra. Following his splendid performance of Haydn's seldom heard "Symphony in B-flat" (B. & H. No. 98), Barlow gave us recently the classic overture to the opera "Iphigenie en Aulide" (Wagner edition) by one of Haydn's most distinguished contemporaries, Christoph Willibald Gluck (Columbia set X-138). This is music that belongs on the record library shelf beside the great overtures of Beethoven, Mozart, Berlioz and Wagner. As a musical expression of exalted tragedy it may have its equal but probably no superior. Coupled with the overture is an *adagio*, intended originally for more intimate treatment, heard here in a string orchestra arrangement.

Stokowski's latest Bachian contribution, an arrangement of the *Fugue in C minor* from Book I of the "Well-Tempered Clavier," stretches this essentially keyboard music beyond its composer's intentions. Tonally it is effective, but in the record it is more Stokowski than Bach (Victor 1985). Coupled with this is a *Gagliarda* by Frescobaldi, the famous seventeenth century Italian organist and composer. This is one of the loveliest arrangements of old music Stokowski has given us, its transcription being more justified since the work was originally written for the organ.

Turning his attentions to Wagner's tribute to his wife and son, the *Siegfried Idyl* (Columbia set X-139), Weingartner gives a performance that is distinguished for clarity and precision. Emotionally, Weingartner is more restrained than any of the dozen or more conductors who have played this work for records. One recognizes playing of secure comprehension and taste, yet feels that this essentially romantic music deserves more expressive freedom than it is accorded here. From the reproductive standpoint, the set is highly satisfactory.

Arthur Fiedler, conducting the Boston

"Pops" Orchestra (Victor set M-569), gives us a swaggering performance of Wagner's "Rienzi Overture" and of the *Fest Marsch* from "Tannhäuser." The music of *Rienzi's* prayer used in the overture is played with more of the spirit of the dictator than the suppliant. Loudly recorded, this music may be difficult to reproduce on some machines. The impression gained, after hearing these records twice, is one of noise rather than of pomp and pageantry.

One does not refute the assertion that few works in the great piano literature have more universal appeal than Liszt's "Concerto No. 1 in E-flat major." Yet, as we recently pointed out, the quality of his "Second Piano Concerto" is far finer. One wonders why the first has so much more power with an audience; perhaps it is its virtuoso qualities and unfettered ostentation that inevitably provide a great soloist with the perfect show. It is a curious commentary on the phonograph that it has not turned to the eminent pianist Emil Sauer for a concerto recording prior to this. At seventy-six, this noted pianist of a former generation still retains much of his former technical skill, but hardly his earlier buoyancy. It is not to be expected. Yet, the tradition of Liszt is honored in his playing of this work (Columbia set M-371), for Sauer was a pupil of both Liszt and Rubinstein. With the aid of Weingartner and excellent recording, Sauer makes a historical contribution to the phonograph; one he should have made, in our estimation, ten years ago.

A colleague of ours has said that if he were trying to introduce a novice to the music of Domenico Scarlatti, he would recommend Robert Casadesu's "Collection of Eleven Scarlatti Sonatas" (Columbia album M-372). Casadesu's fastidious shaping of musical design has been happily revealed on records before (Mozart's "C minor Concerto"), so we need not stress those qualities now. Suffice it to say, for sensitivity of touch and rare coloring this pianist's performance of eleven Scarlatti sonatas is unmatched. Although originally written for the harpsichord, this music is equally effective on the piano. The collection here is a well chosen one, containing only two that could be called well known.

As a young and promising Polish virtuoso, it was essential for Chopin to write concertos in order to strengthen his position as a composer. Accordingly, in his twentieth year he composed his F minor and his E minor concertos. The one in F minor, the second in order of publication, was the first in creation. When it was first played in Warsaw, after Chopin's first Viennese success, the work was favorably received. As in the E minor one, the slow movement of the "Concerto in F minor" is the core of the work, notably representing Chopin's genius for creating poetic elegies. A new recording of the "Concerto in F minor" enlists the services of Alfred

(Continued on Page 677)

## Music of Worth in the Movies

By VERNA ARVEY

IN PURSUANCE OF A POLICY which started with the screen appearances of Leopold Stokowski, Charles R. Rogers, Paramount producer, last spring invited Walter Damrosch, veteran conductor, to appear in his film "The Star Maker." Just as Stokowski appeared on the screen as an actor as well as conductor (playing himself), so will Damrosch. It is the expectation of the astute producer that Americans everywhere, young and old, will be glad to see on the screen the very personality who so long has been only a voice coming over the National Broadcasting System musical appreciation program.

It will be recalled that this seventy-five year old musician has been a dominating figure in our musical life for over half a century. When he was but twenty-three he was chosen to conduct German opera at the Metropolitan Opera House in New York; he was also invited to conduct the New York Symphony Orchestra in a performance that was so successful that he was selected as permanent conductor of that organization. For the past fifteen years he has devoted himself to the encouragement of musical talent and appreciation among the youth of America.

So it was with a feeling of pride that Hollywood welcomed him to the film center. Journalists turned out in full force to interview him, and garnered some interesting facts. They discovered, for example, that he was not nervous at the prospect of appearing before cameras, since he merely enacts a rôle that he has played in real life for many decades. In fact, he plays the rôle of Walter Damrosch discovering a young artist. In this case the latter is fourty-year old Linda Ware, whose voice he really admires and for whose talent he predicts a great future. These writers also found him expressing the hope that someday some composer will do for the screen what Wagner did for opera when he "simply took the old operatic traditions to shreds and made new ones."

The greatness and sincerity of the man himself is evidenced by another incident. Vernon Steele reports that Damrosch was offered a goodly sum of money by David O. Selznick to compose the music for "Gone With the Wind." He was completely deterred by the suggestion and the remuneration also appealed to him, so he read the book carefully with that in mind. At his conclusion, he decided that he could not do the work as well as any number of musicians now in Hollywood and that his heart would not be in it as it must be in every piece of music he creates. He declined the invitation. How few other musicians are gifted with that much courage and frankness in the face of financial temptation! To a commercial musician, inspiration matters little. To Damrosch, it matters a great deal.

Incidentally, Max Steiner was the man finally selected to do the composing, arranging and conducting for "Gone With the Wind." Because he is a good craftsman, his finished score should contain much of musical interest.

### Helpful Octaves

By ANNETTE M. LINGELBACH

WHEN a particular phrase, group of chords, or arpeggio run, proves too difficult for a smooth rendition, the juvenile student may be instructed to play it in each of the seven or eight octave positions on the piano.

This repetition, through memorizing the phrase, will increase the speed and beauty of the pupil's playing, while affording him pleasure in the different tonal effects of the octaves.

# How to Make Money by Teaching the Piano

## Prerequisites

**Technical Competence**, which will enable the teacher to play any of the material he teaches, is essential. He must be prepared to give a clear, definite explanation of fingering, phrasing, dynamics, key signatures, time signatures, and meter, occurring in each teaching exercise, in order to acquaint the student with the correct rendition of the work at hand. He must have mastered all the major and minor scales and arpeggios, and several compositions suitable for program performance. The teacher must be equal to the demands of any usual occasion calling for artistic rendition.

**Harmony:** The beginning instructor must have a fundamental knowledge of harmony, covering the formation of major and minor scales and chords, as well as of dominant and diminished seventh chords. Musical terms should be at his tongue's tip—at least the more commonly used ones. This knowledge may be supplemented by a standard musical dictionary such as Grove's, in which may be found lesser known definitions and data.

**Musical Form:** The instructor should have sufficient knowledge of musical form to enable him to explain simple melodic structures to the pupil. Motives and phrases may be pointed out to the students in teaching compositions. By teaching the use of simple musical phrases, the student is enabled to analyze the piece into its fundamental phrases (or motives), thereby gaining a comprehensive understanding of the whole composition. It is well to illustrate the relationships among motives closely resembling one another. This will provide the pupil with a basis on which to develop a more complete knowledge of musical form.

**Music Appreciation** is a desirable component of the teacher's background, as it makes possible the discussion of musical ideas and thoughts of various composers. The usual course, taught in the public high schools in music appreciation, harmony, and theory, constitutes sufficient training for the private teaching of beginners. One should be satisfied, however, with this amount of knowledge; it suffices only as minimum teaching equipment. If a teacher should start his career with this minimum experience, he is advised to make a habit of reading good publications, a list of which appears in the bibliography at the end of this series.

The teacher has a responsibility to himself which demands continuous broadening of his background and musical perspective. Wider understanding of music brings greater ability to apply the knowledge which one already possesses, and it brings a deeper appreciation of the art. It may be that tones are but noises when falling upon the totally inexperienced ear.

If the instructor is financially able, he may attend a summer session at a nearby university to increase his pedagogical equipment. Most summer courses are offered for very reasonable fees. Those who are unable to attend an institution of higher learning need not despair; there is nothing taught in the great universities which a person may not learn by himself, provided he is endowed with sufficient intellectual curiosity. Extension courses are offered by many colleges of music at very reasonable rates.

**Personality** is a very important element in one's teaching career, and it must be considered among other prerequisites. The teacher must strive to develop a sincere interest in children, and he must be alert to discern their points of view. He must study their individual problems, be able to select the proper material for their needs. Such a mental attitude on the part of the teacher will create an effective approach to juvenile problems. Then, to gain youthful confidence, a cheerful demeanor should be maintained.

The teacher should have a strong missionary fervor with respect to his profession, which implies a desire to instruct and assist. These virtues, of course, are incorporated in a sincere attitude toward the progress of the pupil.

Self-confidence and a cheerful disposition are golden. The instructor must be confident of his own ability; an aloof approach to the public will never bring success. "Believe in yourself."

The aspirant should bear in mind that he is initiating himself into an honorable profession—one that serves the cultural life of the community and one that distinguishes itself.

By

WALTER ELLIOTT

Prominent Piano Pedagog of the Far West

The author of this treatise is Supervisor of Music in the Tehachapi Union High School of the Pacific Coast. It has been written out of an experience which enables him to discuss his theme in a vigorous manner that is both convincing and decidedly helpful to the young teacher. His thoughts on the vital question of "Acquiring Pupils" are packed with practical suggestions.—EDITOR'S NOTE.

effort to do so. No possibility of developing a pleasing presence should be neglected.

## Acquiring Students

THE GREATEST PROBLEM of the beginning teacher is that of acquiring students. There are important principles which may be laid down in this respect, but always it is to be remembered that acquiring students is an art and not a science. A teacher is successful in acquiring pupils if he puts forth active enterprise, if he is alert to his opportunities, and if he is persistent in his purpose. His own personality is an asset of great importance, as has been previously pointed out.

**Newspaper Publicity** is helpful. At the outset of one's career, he may make an announcement through the local paper, and usually the editor will write a news story to be printed in a prominent place in the paper. Since the teacher will require professional statements and stationery, these may be purchased at the news-

paper office and the transaction will further good will in this direction. Editors make it their business to know everyone worth knowing, and they are usually able to suggest names of prospective students.

The beginning teacher must not ask himself, "Why should not parents send their children to me for instruction?" Instead, he must ask himself, "Why should students be sent to me?" To this question the proper answer is that music is a cultural subject, and, whether or not children become professionals, they will certainly develop some understanding and appreciation of good music. Music gives a person a broader outlook on life, and wider scope of human culture. The primary concern of the piano student should not be to acquire an impressive technic, which is really a mechanical performance; instead, his chief interest should be to cultivate natural expression and musical appreciation.

It is the experiencing of tonal beauty simultaneously with the effort put forth to manipulate the keyboard properly that makes for a sound musical education. Such a nucleus, carefully nurtured, may later develop into fine musical ability—in either voice, an instrument, or the dance. A musical training never should be denied a child who shows natural aptitude. Musical impulses manifest themselves early in childhood, and the little songs and play dances of the child bear witness to experience along this line.

The objective of music teaching to-day is the encouragement of this innate love of tone and rhythm and its development to the highest possible degree. Once the child's desire for music is definitely developed, various technical devices are available to direct its progress in sound channels.

WALTER ELLIOTT

A good personality enables one to mix with all varieties of people. It is a universal tendency of human nature to be attracted to cheerful persons. Cheerfulness arouses the positive impulses of one's associates, rather than their negative qualities. "Laugh and the world laughs with you; weep and you weep alone."

**Appearance:** The piano teacher should dress well. A pressed suit, polished shoes, fresh necktie, and so on, are good investments. People are not impressed by eccentricity and carelessness of dress. The day of the long haired musician is past, and with him has gone his peculiar haberdashery.

**Active Enterprise** and self-promotion are further prerequisites. The beginning teacher must expect to put forth considerable energy in building his career. He must bear in mind that, at the outset, his time will not be bought unless he really goes to work just as any salesman would do to sell his merchandise. To sell his time, the teacher must acquaint his friends with the fact that he has something desirable to sell, and he must endeavor to display his merchandise in an attractive manner. This undertaking requires energy of purpose and a great deal of ingenuity. Enterprise will enable the teacher to put the tricks of the trade into practice.

Technical equipment and personality may be stressed as the prime teaching prerequisites. Of course not everyone is vivacious and cheerful by nature, but anyone can make a definite effort to be cordial in his social relations. A sensible bit of advice to anyone is to control his temper; for, when he shows anger, his listener gains an immediate advantage over him. And the time may come when the very person who angered him may become a friend, when there will remain a latent feeling of past unpleasantness. If one knows another person to be mistaken and unwilling to be convinced, it is better to allow the error to discover itself to him. A higher regard for the teacher's character will then result.

The qualities of an attractive personality can be developed to a considerable degree, if one makes a deliberate

## Identification with Community Life

PERHAPS NOTHING ELSE will be of greater assistance in acquiring pupils than a lively interest in the life problems of the vicinity. All organized groups offer this opportunity in one way or another, among which are churches, business clubs, women's clubs, lodges, parent-teacher associations, and all such activities. One should not hesitate to take advantage of each situation as it arises, wherein a few words may be mentioned about music and teaching.

Pastors are usually able to supply leads. If you are not already acquainted with the community minister, he should be made your next acquaintance; at the same time it is graceful to make an offer of assistance with music during the services. The pastor will very likely announce your name from the pulpit and state your plan to teach.

It is often possible to play the piano or organ for Sunday church services. An occasional solo as an offertory, which will not interfere with the incumbent pianist of the church, will always be appreciated by the pastor and members. It will display, again, the teacher's ability and his desire to be an asset to the community. He will acquire the backing of the minister and will receive introductions to prospective students who attend Sunday School. He may also meet the parents of these children, and through various such efforts he may anticipate satisfactory rewards.

All this may be done wholeheartedly and sincerely, with a preponderant spirit of neighborhood service. Altruism will necessarily enter into one's community activities; if he is chiefly concerned with making money, his service can be classified only as unethical. The teacher must have the cultural interests of the community at heart, and the community will reciprocate by taking an interest in him.

There are some piano teachers who are in a position to help the Sunday School teacher by accompanying songs during classes. If the opportunity offers, he may also teach a class or perhaps conduct a Christian Endeavor or Epworth League meeting. Interest in music can often be stimulated among these young people.

Conversations frequently lead to mention of music. One should emphasize, whenever possible, that piano lessons are an important factor in the character formation and cultural development of a child. At the same time, good taste will prevent the teacher from committing breaches of professional restraint.

The Principal of the grammar school may be approached, and he too may be asked to make personal announcements in classes. Perhaps the piano teacher will be allowed to appear before the student body to present a brief recital—first to eighth grade children are all eligible prospects for instruction. In giving a recital under these conditions, two good selections may be played in case there are other items on the program; otherwise a whole group of interesting compositions may be presented. Just at the end of the performance, one flashy piano solo will be very appropriate, to bring the recital to a climax. Be sure that you pick the kind of pieces that children will like—something to excite their imagination, such as Claude Debussy's *Golliwogg's Cake Walk*. A few words can be said about each piece to emphasize the idea that the composer had in mind when he wrote it. Keep in mind that you are dealing with untrained ears when you are working with children.

### Promoting Community Interest

A GENERAL INTEREST IN MUSIC may be furthered by the teacher if he will enlist the services of some distinguished pianist, whom he may know, to give a concert in coöperation with an organized group of civic minded townsmen. Women's clubs will prove especially coöperative in this

respect. An endeavor of this kind will surely attract interested parents, some of whom may be approached at a later time concerning piano instruction for their children. The teacher may likewise expect to be asked about piano lessons by some of the parents.

These events should be well advertised by means of hand drawn posters, mimeographed circulars to be distributed by school children, and by news stories in the local papers. Distinguished musicians usually have newspaper mats, and their pictures may be run in the paper with the news story. They are ordinarily quite willing to help further community interest in music, if one approaches them in the proper manner.

These musicians often supply their services on a percentage basis, or for a reasonable fee. To defray the expenses which are incurred, tickets should be printed and sold in advance of the event. It is advisable to invest the \$1.50 or \$2.00 charged by the commercial printer for these tickets, as the neatness of the print contributes to the dignity of the affair.

Coöperation of local businessmen may be obtained by calling on them and asking for donations to make it possible to bring such a fine musician to town. If the businessman is asked to donate, he should be given a few complimentary tickets; the number of tickets to be given may be determined by the donation. After the concert is over, the teacher may call again to inquire how the event impressed the sponsors. Such con-

versations can easily lead up to teaching and teaching prospects.

All of these ideas are tricks of the trade and will, in one way or another, bring the desired pupils to one's studio. The central thought is to break in aggressively at the start and make people music conscious. The musician has something to his advantage when he makes the public aware of the fact that he has an interest in community betterment. There will be always someone to perceive the good which is involved.

Tickets should be turned over to the organization which may sponsor the affair, and this organization will appoint a ticket committee. In some cases, committees may take entire charge of proceedings while the teacher remains as initial sponsor.

If the school should wish to coöperate, the children may take home two or three tickets each, to be sold to friends.

There is also the possibility of the teacher choosing to rent his own hall, to buy advertising space in the paper, and to take charge of ticket sales himself. In whatever manner the event is carried out, enterprise on the part of the teacher will bring about the desired results.

### Bringing the Celebrity

TO ILLUSTRATE HOW SUCH A PROJECT may work out in practice, the following personal experience may be related. For some time I had heard an eminent artist perform over the radio network, and admired his performance so profoundly that I felt a sudden desire to study under the man. It so

happened that I was situated in a small town somewhat over a hundred miles from the city in which the artist lived. The desire to study under this individual grew until one day I went to the telephone office and found his address in the directory proceeded to write the artist, telling him of my great pleasure in hearing him perform over the radio, and inquired concerning his fees for lessons, at the same time telling him that I was very desirous of studying under him.

A few days later an answer arrived acknowledging my letter and stating that he was very interested in me but that his lesson fees were extremely high. Undaunted, I proceeded to write another letter in which I repeated my resolve to become a pianist as nearly like him as possible. This time I added a few lines to tell him that his fees were beyond my financial means but that I would make every effort to get to him just the same. The return answer to this letter was much more encouraging. This time the gentleman decided to give me an audition to see what I could do. The outcome was very interesting. I decided to teach me for half price, since I had so far to come for the lessons.

A date was set for my first lesson and when the time arrived I was there at his studio to begin my career as a pupil of this fine artist and to initiate a friendship that will live with me for the rest of my days. I cannot say that all famous musicians have the time to spend on mediocre students, but I will say that this gentleman proved his greatness, not only as an artist, but also as a very sincere friend. After several months of study and progress our friendship grew stronger and more personal. During that time my studies with this artist became known in the community in which I lived. So much was asked about my acquaintance with the master teacher that I decided to inquire personally if he would condescend to visit our town and perhaps give a recital. There was at first a slight hesitation; but, after I had described the interest taken in him by the townspeople, the dear old gentleman gladly gave his consent to come.

The next thing for me to do was to make preparations for his coming. First of these was adequate publicity, and thanks were due the local editor for his generous coöperation in this matter. Weekly articles were published free and willingly, to announce the coming recital. When the day arrived everything was in readiness for the concert. A piano distributor from a nearby town donated the use of one of his professional instruments free of charge. The schools and clubs also assisted in promoting the event. It seemed that when the ball started rolling, everything went along with it.

Here and there, groups of people stopped me on the street to inquire about the master pianist; everywhere there was interest shown toward the coming event.

The concert proved very successful; people from far and wide came to the little town to hear this fine musician. Untold publicity, that money could not buy, was derived from this single venture.

After the performance the master was introduced to a number of prominent citizens; and, when asked what he thought of performing for such a small town, he politely remarked that it was the same as playing for a large family of friends. The warmth and hearty welcome he encountered proved that everyone thoroughly appreciated and enjoyed the concert.

The teacher will find himself acquiring students several years later as a result of publicity attendant upon ventures such as these.

Setting a date for a concert is a matter of considerable importance, especially in a small town. One should avoid conflict with other events, and it is best to select a time when little else is taking place to attract public attention.

(Continued in THE ETUDE for November)

"YOUTH TO THE FRONT"

This picture of the Nazareth, Pa., boys and girls Drum Corps could have been duplicated scores of times at the New York World's Fair. These visiting bodies added incessant color and motion to the great exposition.

### THANKS FROM MME. CECILE CHAMINADE

Monte Carlo  
France  
July 16, 1939.

DEAR DR. COOKE:

I come to ask your advice in reference to the quantity of charming letters and cards which I have received every day during the past two weeks. I would answer all these wishes referring to my birthday anniversary, but it seems impossible to begin to thank everyone, especially as some letters do not bear addresses, and others are not very legible.

I would be grieved not to show my feeling for all these manifestations of good wishes and sympathy, and I come to ask you if it would be possible to have some lines in your grand journal, "The Etude," so that I could make known to the authors of these letters that I have been very much impressed by their many expressions of sympathy, and that not being able to answer all, I beg them to accept my affectionate thanks.

I count upon your kindness to render me this service and, if that is not possible, will you please give me another idea. Thanks in advance, and believe me, please, in my deep and sincere appreciation of the kindness of my American friends,

C. C. CHAMINADE.

EDVARD GRIEG, AT THE OUT-SET of his career, had the good fortune to win the friendship of Ole Bull, who with his great heart welcomed his young countryman to the artistic life of Norway, and tried to induce him to join in the establishment of a Norwegian Academy of Music. In his invitation, Ole Bull wrote: "My business in the world is Norwegian music. I am not a painter, not a sculptor, not a literary man. I am a musician. And as such my nation must believe me when I say that I hear a wonderfully deep and characteristic sounding board vibrating within its breast. The aim of my life has been to draw strings across it and enable it to speak out, so that its deep voice can resound in the hall of the temple and, as Norway's own church music, carry the preacher's word to the hearts of the people; so that, on the battlefield, it may bring the nation's hearths and homes to the minds of our country's defenders; so that it may sound out from orchestras to build up our Norwegian art on a sure foundation; so that it may ring out from pianos all over the country into family life, where these notes will speak to the feelings, shaping and elevating more than all the speech in the world—unsurpassable in charm and clarity. I have spent my life in the endeavor to scale the same grey peak as have the other Norwegian artists, to overcome our denationalized musical sense."

#### Grieg as Student

AT THE LEIPZIG CONSERVATORY, Grieg found anything but the congenial atmosphere he had expected. Of Louis Plaidy, his piano teacher, he wrote: "His method of teaching was about the driest imaginable. As he sat during the lesson hour planted close beside the piano, a little fat, bald man, listening to his pupil's playing, his right forefinger behind his ear, he would repeat continually till one nearly died of boredom, the words 'Immer Langsam, stark, hochheben, langsam, stark, hochheben!' (always slow, loud, raise high, slow, loud, raise high). It was enough to drive one crazy."

In Ignaz Moscheles, however, he found a different kind of a master. Although, like other teachers in the ultraconservative school, Liszt, Chopin and Schumann were taboo. Of Moscheles, Grieg writes: "Hard things are said of old Moscheles as a teacher. I must defend him with the utmost warmth. It is true that he was naïve enough to believe that he could impress us when during lessons he set himself on all possible occasions to run down Chopin and Schumann, whom in secret I loved. But he could and did play beautifully, sometimes for almost the whole of the lesson. Especially fine were his renderings of Beethoven, whom he adored. They were faithful, full of character, and noble without any striving after effect. I studied with him dozens of Beethoven's sonatas. Often I had not played four bars before he would lay his hands over mine, push me gently off the stool and say, 'Now listen to what I make of it.' In this way I was initiated into many small technical secrets and learned to appreciate to the full his brilliant interpretations."

"It was said at the Conservatory—though as luck would have it I did not witness it myself—that during lessons he would give his pupils the following advice: 'Play diligently the old masters, Mozart, Beethoven, Haydn—and me.' I cannot vouch for the truth of this, but mention it because at

Grieg while a student in Leipzig

## A Musical Viking

### New Vistas of the Life of Edvard Grieg

From a Recent Comprehensive Biography

By DAVID MONRAD-JOHANSEN

With the permission of the Princeton University Press and the American-Scandinavian Foundation

There is something essentially heroic about the life of Edvard Grieg, modest, retiring, candid, but fearless. Most of his existence was given over to fighting his everencroaching physical frailties. A glorious and beautiful spirit in a body weakened by tuberculosis, he resembles Chopin, Stevenson and Keats. His humor, his delicacy, his freshness, combined with his northern vigor of soul are inimitable. He made himself one of the most distinctive figures in musical art despite the fact that he is not famed for any great symphony or opera. The author of his new biography, one of the richest which has yet appeared, is David Monrad-Johansen, himself a noted Norwegian music critic and composer, who depended upon musical conferences with Grieg's widow for much of his material. The work has been excellently translated by Madge Robertson, and becomes a "must" book in any adequate musical library. The following selections from this volume give interesting and penetrating pictures into the life of the great master of Norway.—EDITOR'S NOTE.

his desire I grappled with his "Twenty-four Characteristic Studies, Opus 70," which I do not regret having studied with him indefatigably from beginning to end. I liked them and did my best to satisfy both him and myself. He may have taken note of that, since he became steadily more sympathetic towards me. And a quite simple, to be sure, but for me momentous 'success' it was when one day, after I had played one of his studies without having been stopped once, he turned to the other pupils and said, 'See, gentlemen, that is musical piano playing.' How happy I was! That day the whole world was bathed in sunshine for me."

#### Pupil and Pedant

HIS HARMONY STUDIES WITH RICHTER, the great theory expert, were almost disastrous. Richter hammered away at Grieg with his strict theories, but one cannot shape jewels

by hammering them. Papperitz and Hauptmann, however, understood the young man better. He writes of Hauptmann: "Finally, I had lessons from Moritz Hauptmann, and I still thank that dear old man for all he taught me through his fine and intelligent observations. In spite of all his learning, he represented for me the absolute anti-scholastic. For him rules signified nothing in themselves, but were an expression of nature's own laws. An episode, that in a weak moment I might call a 'success.' I will put in here. Before I knew Hauptmann—I was not yet sixteen and still wore my child's blouse—I had attained in Privat-Prüfung (a kind of yearly private examination in which all the pupils, without exception, had to take part) the honor of being allowed to play a piano piece of my own composition. When I had finished and had left the piano, I saw to my great surprise an elderly gentleman get up from

Edvard and Nina Grieg in 1904

the teacher's table and come towards me. He laid his hand on my shoulder and said only, 'Good day, my boy. We must be good friends.' It was Hauptmann. Naturally I loved him from that moment. Ill as he was in the last year of his life, he gave lessons at his home, the Thomasschule, Sebastian Bach's old residence. Here I had the happiness of getting to know him more intimately. I remember him on his sofa in dressing gown and slippers, his spectacles almost touching my book of studies, which still retains more than one spot of the yellow brown snuff that was always dripping from his snuffy nose. He used to sit with a big silk handkerchief in his hand so as to forestall the drops. But he had no luck. Then it was used as a cloth to wipe the book of studies, where its traces are still plain to see."

### Youth Survives Waterloo

WITH CARL REINECKE, HOWEVER, he did not fare so well, as he tells in the following remarks: "In my last year at the Conservatory I had lessons in composition from Carl Reinecke, who had then just entered upon his new duties as conductor at the Gewandhaus Concerts and master at the Conservatory. To illustrate how things went at those lessons, I will only say that I, who had announced that I knew nothing whatever either of the theory of form or the technique of string instruments, was ordered to write a string quartet. I felt that a thing like that might as well have been proposed to me by our porter N.N.—so utterly absurd I thought it. It made me think of my old nurse. If she wanted me to do something I didn't feel able to and I objected, 'I can't,' she would answer, 'Put can't away from you and take hold with both hands.' This saying, which has many a time put courage in me, did it here too.

"What Reinecke did not teach me I tried to pick up for myself from Mozart and Beethoven, whose quartets I studied diligently on my own initiative. I got through my task in some kind of a way, the parts were written out and were played by my fellow students at one of our private ensembles. The director of the Conservatory was in favor of the performance of the quartet at the Haupt-Prüfung (public performance of the best works of the students). But Ferdinand David, the distinguished violinist and teacher, who was present at the rehearsal, thought otherwise. He took me aside and gave me the advice—as well meant as it was wise—not to let the quartet be performed. 'Die Leute werden sagen, es ist Zukunftsmusik!' (*The people will say, it is music of the future*) he said. In thinking it Zukunftsmusik he was, however, mistaken. It went the Schumann-Gade-Mendelssohn way. But that it was an utterly undistinguished piece of work I realized very soon and have been extremely grateful to David for preventing its performance.

"After the negative 'success' meted out to my first string quartet, Reinecke said, 'Next you must write an overture!' I, who hadn't a notion either of orchestral instruments or of orchestration, was to write an overture! Again I thought of our porter N.N. and of—my nurse. I set to work with the reckless abandonment of youth. But this time I was defeated. I sat literally stuck fast in the middle of the overture and could not get any further.

"It was fortunate for me that I heard so much fine music in Leipzig, especially orchestral and chamber music. That compensated for the instruction in the technique of composition which I did not get at the Conservatory. It developed my mind and my musical critical sense to the highest degree, but at the same time it confused the relationship between what I wanted to do and what I was capable of doing, and this confusion was the result of my stay in Leipzig. It would have seemed to me quite natural if neither the director of the Con-

servatory nor the teachers had taken any interest in me, for in the three or four years I was there I achieved nothing that could awaken expectations of a future. When, therefore, in these glimpses of the Conservatory I have had to find fault with several things, both in persons and in the institution, I hasten to add that I take it for granted that it was, first and foremost, my own nature that led to my going out of the Conservatory almost as ignorant as when I went in. I was a dreamer with no turn for competition. I was heavy, not very communicative, and anything but quick to learn. We Norwegians develop, as a rule, too slowly to be able to show fully at eighteen what we are capable of. However that may be, I didn't in the least know how to deal with myself."

### An Idyl of the Heart

AFTER LEAVING LEIPZIG, Grieg went to Copenhagen, Denmark, where he remained from 1863 to 1866, coming under the fortunate influence of Gade, and also the gifted Rikard Nordraak.

In Copenhagen he also resumed his friendship with the lovely Nina Hagerup who was to become his wife and the greatest influence in his life. Nina was his first cousin, and like Edvard, had been born in

Bergen but had lived most of her life in Copenhagen. Those who heard her inimitable recitals with her husband praised her beautiful voice, and her musicianship. Grieg wrote of his wife as follows: "While I was acting as conductor in Christiania, in 1866-1874 (her voice just at this time reached the height of its glory), she performed many times. The audiences of that time, had, however, a very primitive outlook, and their conception of art was too brutal for them to appreciate renderings which laid emphasis mainly on the inner spiritual life. In the end it came to be that we made music only at home for ourselves or in the company of friends. But in Copenhagen, where I gave concerts almost every year, my wife was the darling of the artists and of the music-loving public. All my songs from this time on came into being with the inevitability of a law of nature and were all written for her. To give my feelings expression in romances became from now on a condition of existence, as necessary as breathing. In the songs from my second period (from about Volume III in the Peters Edition) the connoisseur will be able to observe a greater tendency towards contemplation, towards digging deeper into myself. My wife's interpretation became by degrees correspondingly spiritualized."

According to Nina, her betrothal to

Grieg came after they had played the "Symphony in B-flat major" of Schumann as a duet. The magic of the romantic Schumann evidently overwhelmed the couple. Their marriage was opposed by the parents of both; but, according to form, this did not expedite the matter, for although they were engaged in 1864, they were not married until 1867. This was one of the idyl romances of musical history. Listen, however, to what Nina's mother said of Edvard on the eve of their marriage, "He nothing, has nothing and writes music one will listen to."

### Winning the Lion's Accolade

HOW RIDICULOUS WAS HER OPINION shown by a lengthy letter which was received from the Abbé Franz Liszt in Rome, to whom Grieg had sent a copy of his now immortal "Sonata, Opus 8." Liszt wrote with the fullest enthusiasm a praise of the young man's work: "It has given me sincere pleasure to read your sonata. I find it a composition vigorous, thoughtful, original and containing excellent material, indicating that you will rise to the highest ranks." This valuable letter enabled Grieg to get a stipend from the government and the whole situation was

(Continued on Page 680)

## A Magnificent Musical Undertaking

DR. WALTER DAMROSCH

FOR TWELVE YEARS Dr. Walter Damrosch has conducted the NBC Music Appreciation Hour. The general plan for the coming year remains unchanged. There are four series of programs (A, B, C, and D) graded to meet the requirements of different age levels. Thus, Series A, at 2:00 P.M. (Eastern Standard Time) on the days announced, is devoted to orchestral instruments and the human voice; Series B (2:30 P.M.), to music as an expressive medium; Series C (2:00 P.M.), to the musical forms; Series D (2:30 P.M.), to the times and works of the great composers. As an innovation for this year, in Series C and D the entire second act of Verdi's "Aida" will be broadcast from the Metropolitan Opera House, preceded by Dr. Damrosch's verbal explanations.

Here are the dates of the broadcasts as scheduled:

| Schedule of Broadcasts             |               |                               |  |
|------------------------------------|---------------|-------------------------------|--|

\* 2 to 3 P. M., Eastern Daylight Saving Time.

\*\* Broadcast from the Metropolitan Opera House, New York, by special arrangement with the Metropolitan Opera Guild.

An idea of the richness of these programs may be obtained from the following rather amazing list of over one hundred and fifty compositions to be performed. In many instances these works are to be obtained also upon records; and the catalog numbers are accordingly given in the list thus enabling students, who may desire to hear the works repeated over and over again, to do so. It is also possible to secure student's work sheets and teacher's guide at nominal prices:

| Composer            | Title   | Series and Cont. |
|---------------------|---|------------------|
| Bach                | Gavotte in D, from 6th 'Cello Sonata (7322)                             | B-               |
|                     | Passacaglia and Fugue in C Minor (14580-1)                              | D                |
|                     | Pastorale in F  | D                |
|                     | Suite No. 1, in C (11993-4-5)   | C                |
|                     | Prelude and Fugue No. 1, in C (11923)                                   | C                |
| Barber, Samuel      | Symphony in One Movement  | D-               |
| Beethoven           | Concerto in E-Flat ("Emperor") for Piano and Orchestra: Finale (7642-3) | D-               |
|                     | "Coriolanus" Overture (12535, 11909, 9279)                              | C                |
|                     | "Egmont" Overture (7291, 35790)   | D                |
|                     | "Fidelio": Quartet, "How Strange a Mood"                                | A                |
|                     | "Ritornel of Athens": Turkish March (1196)                              | A                |
|                     | Serenade in D, Opus 8: Polonaise  | B                |
|                     | Symphony No. 2: Larghetto (11257-8)                                     | D                |
|                     | Scherzo (11258)   | C                |
|                     | Symphony No. 3: Funeral March (8670-1)                                  | B-               |
|                     | Symphony No. 6: Peasants' Merry-making (6941)                           | B                |
|                     | Symphony No. 9: Scherzo (8425-6)  | A                |
|                     | Finale (8430)-  | A                |
| Berlioz             | "Damnation of Faust": Minuet of the Witches (14231)                     | A                |
|                     | "Harold in Italy" Symphony: 1st Movement                                | A                |
|                     | "Roman Carnival" Overture (12436)                                       | A-6; C           |
| Bizet               | "Carmen" Suite No. 1:..   | A-               |
|                     | Dragoons of Alcala (6873)   | A-               |
|                     | "Carmen" Suite No. 2: Guard Mount (6874)                                | A-               |
|                     | Gypsy Dance (6873)  | A                |
|                     | "L'Arlesienne" Suite No. 1: Adagietto (9113)                            | B-               |
|                     | Prelude (7124, 9112)  | A-3; C           |
|                     | "L'Arlesienne" Suite No. 2: Minuet (7125)                               | A-1; C           |
|                     | Farandole (9113)  | C-1; C           |
| Brahms              | "Academic Festival" Overture (12190)                                    | A-7; D           |
|                     | Serenade in A: 1st Movement   | D                |
|                     | Symphony No. 3: 3rd Movement (12040)                                    | D                |
| Chabrier            | "España": Rhapsody (4375, 1337)   | A-               |
| Chopin              | Tarentelle, Opus 43 (8251)  | A-               |
| Corelli             | "Christmas" Concerto Grosso: Final Allegro and Pastorale (21947)        | D                |
| Czibulka            | Minuet of the Fly   | B                |
| Damrosch, Walter    | "The Man Without a Country": Intermezzo                                 | C                |
| David, Adolphe      | The Idyll   | A                |
| Davidson, Harold G. | Concert Square Dance  | B                |
| Debussy             | "Copellia": Dance of the Automaton (12527, 6586)                        | B                |
| Dvorák              | In the Spinning Room  | B                |
|                     | "New World" Symphony: Largo (8738-9)                                    | A                |
|                     | Slovakian Dance No. 7 (4351, 36926)                                     | C                |

(Continued on Page 682)

WHO HAS NOT HEARD from the lips of young pianists such expressions as, "Bach is highbrow and dry as dust." "Bach is good for technical development only." "The pedals could never be used in playing Bach." There are reasons for such widespread attitudes. Whatever is presented in an unintelligent, uninteresting and uninspired manner, is sure to evoke similar responses. But why "pick" on Bach? Is he not universally called "The Father of Music"? That his works can be presented in an intelligent, interesting and inspired way, every artist and competent teacher will agree.

Polyphonic (many voiced) music is more complex than homophonic (one voiced) music. It is not necessarily easier to project one than another. As we will presently see, there is a considerable mass of polyphonic music which is easily playable. On the other hand, much homophonic music is difficult to render. Obviously the success of rendition depends on the player's understanding and scope. It is but fair to conclude that many of the above attitudes toward Bach's music are traceable to mental laziness and indifference and that, in all likelihood, those who so express themselves do not present homophonic types in any attractively musical manner.

#### Canonic Imitation

HANS VON BUELOW SAID, "The soul, or rather the foundation, of all polyphony is imitation," and the most practical approach to the mastery of this musical device is the *Canon*. An excellent preparatory work by Heinrich Pfizner is entitled "Systematic Training for Polyphonic Playing." It is of the elementary grade and presents a sane and interesting solution of the mechanics of the execution of polyphonic music.

We are fortunate in possessing a most charming work of elementary and intermediate difficulty in the "Two Hundred Little Canons" by K. M. Kunz. The vast majority of these musical tidbits consist of but one line and none of them exceed two lines. The easier examples are in the simpler keys, and only by degrees are more difficult signatures and rhythmic patterns introduced. A number of editions include actual analyses, which are most helpful. A third work, one which deserves wider use in our country, is the "Canons and Fugues" by Klengel (1784-1853), in two volumes. These belong to the intermediate and advanced grades of difficulty.

#### Bach's Inventions

WE HAVE THUS FAR SEEN that even the most elementary polyphonic types may have musical and art values. After mastering the canons, the next logical steps are the "Two Part Inventions" by Bach, his "Little Preludes and Fugues" and finally his "Three Part Inventions." The Busoni edition of the inventions, is a model of earnestness and musical interest.

All of the above compositions, when properly studied, are anything but "dry as dust." While they do not, it is true, bear fancy titles, they were neither conceived nor intended "for technical development only." We grant that, as titles, *Invention, No. 1* or *Fugue, No. 10* are un-descript in the same sense as "Prisoner No. 22345." Like prisoners so numbered, some of these compositions, none the less, retain their inherent individualities and values. The student has not solved his problems until, and unless, he has liberated these souls and expressed these individualities by means of attractive sounds. It was not the fashion in Bach's day to attach values to musical compositions other than specific dance forms, sonatas and the like. Such appellations do not convey clues to aesthetic content or to interpretation. While these could easily have been attached to them, we are met by just another challenge

# How to Make Polyphonic Playing Interesting

## Practical Doorways to the Art of Performing Interwoven Melodies

By

Sidney Silber

*In a German Conservatory we used to hear an old pedant play almost daily one of the Bach Chorale arrangements for piano. His performance was as monotonous as that of a stamping machine. Years later we heard the great Busoni play the same piece, and his transcendent performance was unforgettably beautiful. Polyphony is more than ever a part of music. Modern composers are amazing in their free contrapuntal treatment. We advise our readers to secure "The Art of Interweaving Melodies" by Dr. Preston Ware Orem, and discover the devices that composers, from Palestrina to Stravinsky, have used to make their music fascinating.—EDITOR'S NOTE.*

to that most important ingredient of music making—*imagination!*

For example, if the dominant mood of a fugue be playful, it might be called *Fuga Giocosa*, if melancholy, *Fuga Patetica*. Let us try to name a few of the numbers found in the first book of Bach's "Well Tempered Clavichord." *Prelude, No. 1* could be named *Meditation*, or *Improvisation*; *Fugue, No. 5*, in D major, *Fuga Eroica*; *Prelude, No. 8*, *Elegy*; *Prelude, No. 10*, *Scherzetto*; *Prelude, No. 16*, *Nymphs and Shepherds*; *Prelude, No. 20*, *Children at Play*; *Prelude, No. 22*, *Passion Chorale*; and so on with practically all of them.

#### Are Fugues Riddles?

IN RUBINSTEIN'S BOOKLET, "A Conversation on Music," his interlocutor asks, "But is not the fugue, after all, a dry, scholastic form?" To which the master replies, "With all others, but not with Bach. He knew how to express all imaginable emotions in this form. If we take the 'Well Tempered Clavichord' alone, the fugues are of a religious, heroic, melancholy, majestic, lamenting, humorous, pastoral and dramatic character—alike in one thing, their beauty. Add to these the preludes, whose charm, variety, perfection and splendor are all entrancing."

Fugues represent:

1. The highest form of tonal logic;
2. Musical conversations or arguments.

Limitations of space do not permit outlining the formal structure of some of these fugues, interesting as this would be. That

phase of study need not be gone into very deeply at the outset. Later, it will be instructive to become acquainted with the many and varied types. Information concerning formal structure will be found in E. Prout's book "The Fugue." Other references are, "Fugue," by James Higgin; "Analyses of Bach's 48 Preludes and Fugues," by Dr. Hugo Riemann. Articles on the fugue are likewise in "Grove's Dictionary of Music and Musicians," as in Stainer's and Barrett's "Dictionary of Musical Terms." It is well, however, to bear in mind that the mere possession of this mass of learning does not guarantee the ability to project the musical contents of fugues artistically. It is interesting and helpful to have an intellectual grasp and command of musical form; but this is, after all, only the mental side. What I am stressing is the sensuous, emotional phase; that which, unfortunately, is most frequently overlooked and which accounts, in great part, for the lack of interest in polyphonic study.

#### The Plastic Touch

IN ORDER TO PRESENT FUGUES in an artistic and musical way, the student must develop the power to press down simultaneously several keys with different degrees of pressure or weight. This touch, so characteristic of the piano at its best that, in fact, it may be called "the lure of the instrument," is plastic touch. The effect upon our ears is precisely the same as the images made upon the eyes when looking

through a stereoscope. To those who may not be acquainted with this ingenious device, it may be said that by placing an oblong card on which are pasted two identical photographic views, side by side, on an adjustable rack, and focusing the same to the individual's vision, all objects on the card are seen through the glasses as they appear in Nature. That is to say, there is a definite foreground, middleground and background; in a word, perspective. Polyphonic music must be heard in the same manner. In passing, we would impress young pianists with the necessity of projecting homophonic music in the same manner. If a melody, with harmonic background, is not produced in this way, the general tonal mass will be flat and—dry as dust.

#### Example and Precept

TO USE POLYPHONIC MUSIC SOLELY to gain finger control and finger independence is a fool's errand. How can any musically inclined person be expected to work at anything which fails to engage his musical interest? Five finger exercises, where incessant literal repetitions of short bits are employed, as in Herz and Pischner, can produce only brain fog, musical inertia and musical vacuity. There is nothing inherently bad in the Herz or Pischner exercises. It is in their unintelligent use that harm may result. In the hands of the vast majority of young players, the temptation to become mechanical (which is but another word for soulless) invariably leads to mind wandering—that awful foe of concentration. It is possible to indulge in a reasonable number of literal repetitions of such bits and to play them artistically; but the chances for such presentation diminish with the increase of repetitions. The human mind and soul are so constituted that sameness begets lack of interest and attention. Hence, a good rule to observe is: *Do not do the same thing too often in the identical way.* For that matter, five finger exercises, scales and arpeggios can and should be played musically. In other words, vary the dynamic and rhythmic intensities and patterns. This is the everurgent requirement for music-making. *Avoid becoming a slave to monotony!*

#### That Two Voiced Fughetta

WHAT A HAPPY-GO-LUCKY THEME is presented in the following *Fughetta* from Bach's "Little Preludes and Fugues."

Ex. 1

Can you not imagine a violoncello giving forth this theme? And the other part, which enters in the fourth measure, could easily be played on a viola. Here we have two friends discoursing musically with one another. A pleasant conversation! You will find it helpful to play each part separately, always producing less sound in the places where the other voice part (that is not the initial theme) appears. Play the parts, at first, without any accessories or embellishments, such as the *mordent*, *pralltriller*, and the like. Only after facility is attained, should these "musical frills" be added to the main line. They are, after all, only incidentals and beautifiers.

It would be equally uninteresting to play each part and each voice with one and the same pressure or weight throughout. This is either unmusical or nonmusical. The essence of music making lies in the importance given to interrelated factors. The only feasible way in piano playing is to exert relative pressures or weights on the several tonal lengths, the strong and weak beats, by observing dynamic changes, *crescendo* and *decrescendo*, as well as fluctuations.

(Continued on Page 685)

# The Threshold of Music

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

## Borrowed Chords and Altered Chords

### Part II

**M**ANY TIMES YOU WILL COME ACROSS the false dominant seventh spelled as if it were a true dominant seventh. Do not let this prevent you from recognizing it. Sometimes this deceptive spelling is done through the ignorance or carelessness of the composer or publisher, especially in the case of popular music. Sometimes it is done deliberately, on the theory that even though the notation may be technically incorrect, the chord is easier to recognize when spelled like a dominant seventh. Phonetic spelling, in other words. Again, some musicians argue that it is correct to spell such a chord as a dominant seventh, since it can be best explained as a triad with the flatted seventh added merely as a splash of vivid color—thrown in for seasoning, like nutmeg in apple pie. In that case the chord would simply be called a borrowed chord, and not an altered chord. Choose whichever theory you prefer.

Here are two examples, both from the realm of popular music, illustrating the false dominant seventh which is an elaboration of the subdominant triad—an *A-men* chord with fancy trimmings. The first is from *Kalua*, by Jerome Kern. The second example is from *Can't We Be Friends*, from "The Little Show" by Kay Swift.

Ex. 11

Ex. 12

This quotation from *Kalua* by Jerome Kern; the next one, from *Can't We Be Friends* from "The Little Show" by Kay Swift; and the later one, *Op' Man River* from "Show Boat" by Jerome Kern, are presented by permission of the Music Publishers Holding Corporation, owners of their copyrights.

In the second song the chord is spelled as if it were the dominant seventh of E-flat, the altered note being written A-flat instead of G-sharp.

Here is another false dominant seventh—this time an elaboration of the sixth-floor triad borrowed from the minor. It is from *Rockin' the Boat* by Hugo Frey.

Ex. 13

This article is the fourteenth in a series on "The Doorstep of Harmony." The first appeared in *The Etude* for January, 1938.

This quotation, from *Rockin' the Boat* by Hugo Frey, and the next one, from *Dear Old Pal of Mine* by Gitz Rice, are reproduced by permission of G. Ricordi & Co., owners of their copyrights.

The chord in the first measure, marked 47a, sounds like a dominant seventh belonging to the key of A-flat, but it is really an elaboration of the triad on La\* in G minor. Instead of having a triad dovetailed above it to make a true dominant seventh (E-flat, G, B-flat, D-flat), it has an altered triad dovetailed below it (making the seventh chord C-sharp, E-flat, G, B-flat).

The false dominant seventh which is based on the minor sixth-floor triad is frequently borrowed from the minor key to which it belongs and used in the corresponding major key. Do you remember that old tune, *On the Beach at Wai-ki-ki*? If so, cudgel your brains and recall how barber shoppish the next to the last chord sounded. It was a false dominant seventh, borrowed from the sixth floor of the tonic minor. Here is a similar use of this same chord, from *Dear Old Pal of Mine* by Gitz Rice.

Ex. 14

The false dominant seventh is the one marked 47a.

Another chord which flies under false colors is a pseudomajor triad, famous in musical circles under the name of "Neapolitan Sixth." The reason why it is called a "sixth" chord is not relevant at the moment; that will be explained later. It is supposed to have originated in Naples, but we will not go into that either. It sounds just like a major triad; in fact, we would be perfectly justified in calling it that, and in explaining it as a borrowed chord belonging to a related key. But well informed professors of music prefer to ex-

\*The use of these syllables in this work is not to be confused with their use in the Movable Do system of sight singing, in which the keynote of the minor retains the use of the La which was the sixth tone of the scale of its relative major. In the present writing Do is used as the name of any keynote, major or minor.—Ed.

plain it this way: The supertonic triad in C minor (Ex. 15a).

Ex. 15

is altered by flattening its root (Ex. 15b) after which it may be inverted and used as in Ex. 15c.

In other words, you can start with the diminished triad on Re of the minor scale, and by lowering its root obtain an altered chord which gives the impression of being a major triad belonging to an entirely different key.

You will come across this imposter surprisingly often. It occurs, for instance, in Chopin's famous *Prelude in C minor*. In this piece the composer fools us momentarily by using the chord first as a *real* major triad in an actual modulation from C minor to A-flat major, and then, in repetition, as a *false* major triad in the best Neapolitan fashion: Here it is.

Ex. 16

|               |   |   |                |   |   |
|---------------|---|---|----------------|---|---|
| C minor:      | 1 | 4 | 5              | 1 | 6 |
| A-flat major: | 1 | 4 | 5 <sub>7</sub> | 1 |   |

The Neapolitan Sixth is the one which appears in the fourth measure, marked 2a. The similar sounding major triad occurs in the second measure, marked 4 in the key of A-flat.

A slight variation of the Neapolitan Sixth appears in an equally famous prelude. The chord which harmonizes the first note of the familiar three-note theme of Rachmaninoff's *Prelude in C-Sharp* minor is an elaborated version of this distinctive altered triad.

Ex. 17

This quotation has been transposed into the key of C minor, partly because it is easier to read in this key, and partly so the student can compare its harmony with the little succession of chords in Ex. 15c of this article. X marks the elaborated ver-

sion of the Neapolitan Sixth. Of course really is neither a Neapolitan Sixth, a major triad at all but is one of the false dominant sevenths. The presence of B-natural in the left hand part of the chord in question makes it an altered seventh chord belonging to the seventh floor on scale (Ti). However, the only difference between it and an ordinary Neapolitan Sixth is that the Re triad, instead of being alone, had a Ti triad dovetailed to lower half before it was "Neapolitanized." The resulting effect is a little richer, otherwise the same as that of an ordinary Neapolitan Sixth.

Here are a few more cases of chords which have been borrowed, or altered, both, as they appear in *Nina* by Walter G. Samuels.

Ex. 18

This quotation from *Nina* by Walter G. Samuels is reproduced by permission of Sam Bros.—Joy, Inc., owners of its copyright.

Here is a piece in D minor which introduces at x a dominant ninth chord belonging to the key of A-flat major. Its presence there is a sort of musical pun. Two of the right-hand notes of the chord, G and D-flat, sound exactly like the two most important notes of dominant seventh harmony in D minor, G and C-sharp.

Ex. 19

So the composer has substituted in place of the dominant seventh in D minor, which ought to have been the next to the last chord, a borrowed ninth chord, thus bringing a fresh coloring to the piece. Note also that the next chord (at y), instead of being a simple tonic D minor triad, has been enriched by the addition of B-natural, so we will have to call that a borrowed chord, too. It is Re seventh in the key of A minor, borrowed to "double" for the tonic triad in the key of D minor.

Other examples are found in *Op' Man River* from "Show Boat" by Jerome Kern.

Ex. 20

At x we have a diminished seventh chord belonging to E-flat minor, borrowed to enrich an E-flat major tune. At y we have a more complex chord that admits of two explanations. It can be labeled an altered version of the diminished seventh chord already mentioned, with D lowered to D-flat; or we can call it a borrowed chord—So<sub>7</sub> in G-flat major—introduced

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

## The High School Instrumental Program

By

WILLIAM D. REVELLI

IN THE SEPTEMBER ISSUE of THE ETUDE we had under discussion some of the problems incident to the organization and functioning of our grade and junior high school instrumental program. These groups are, of course, precursors to the high school instrumental organizations on which we center our hopes and activities. The grade and junior high groups are present but the beginning and intermediate steps of our instrumental work, and it is felt that the attaining of a complete schedule would be aided by a discussion of the high school instrumental program. Behind a discussion of this type lies the realization that in each case there are differences in set-up, personnel, organization, and membership. The type of program most effective in one locality might be unwieldy and ineffective in another; and in any case the ideas and initiative of the director decide to a great extent the manner of the program. Yet we can follow the lines begun in the junior program suggestions and develop a high school program in keeping with the ideals and purposes set forth for these preliminary instrumental groups.

### Objectives

THE OBJECTIVES of the preliminary groups are a counterpart of the aims of the senior groups; and, in accordance with the principles set forth previously, our high school groups would:

1. Continue to develop an appreciation and an understanding of the best in our band and orchestra music literature;
2. Develop further the technical skills and proficiencies upon the individual instruments as begun in the preliminary groups;
3. Provide opportunities for the development of individual leadership, musically and otherwise;
4. Promote the desire for creative expression and personal satisfaction in performance through full and chamber music ensembles;
5. Try to "socialize" each student, making him understand the full values of his membership in the musical unit.

On the whole, striving for these objectives would encompass a wholesome improvement of the participant. Musically the student should improve his precision and control, his expression, style, technic, reading ability, and general understanding of important musical works. Socially he should gain greatly from the requirements of a social group such as a band or orchestra, which cooperation, the exact performance of an individual part, and mutual understanding are so essential to the welfare of the ensemble.

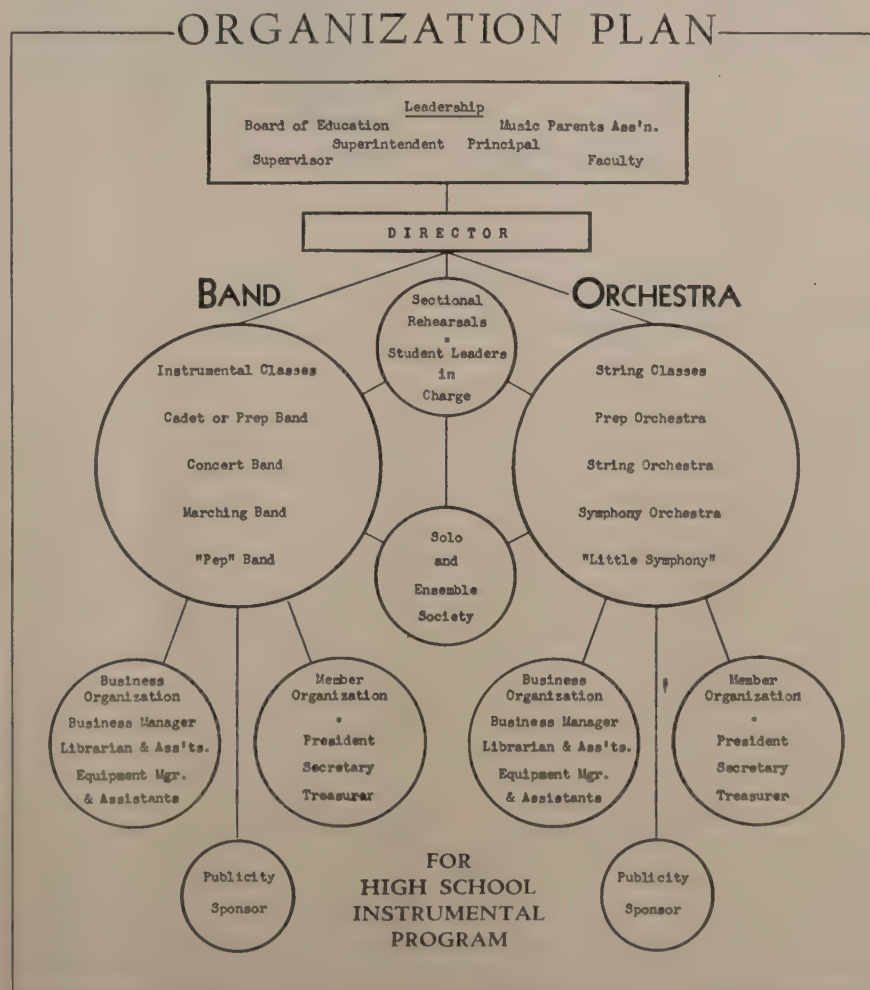

Perhaps the objectives listed are idealistic, but their attainment would certainly be keeping with the high plane of our modern educational policies. In some ways the instrumental education program has its peculiar advantages in being able to provide opportunities for growth in each student of characteristics and capacities which are so recognizably desirable.

### Organizational Set-up in the High School Program

THE MODERN AND PROGRESSIVE high school instrumental program should include by

all means far more than just the regular band and orchestra rehearsals. If the preliminary groups have provided the required training, students leaving these pre-high school classes will now have the ability and technical skill to enable them to enjoy the experience of ensemble, solo, and chamber music performance more fully than ever in

Band units  
Beginning Wind and Percussion Classes  
Cadet or Prep Band  
Concert Band  
Marching Band  
"Pep" Band  
Orchestra units  
Beginning String Classes

their earlier stages of training.

Therefore, the ensemble, solo phase of musical activity should be more greatly stressed in the high school program. Naturally, much of this activity will be extra-curricular, with special rehearsals called before and after the regular school day. In our high school program, then, we can list the following organizations whose functions fit into a complete set-up for the modern high school instrumental plan:

Prep Orchestra  
String Orchestra  
Symphony Orchestra  
"Little Symphony" Orchestra  
Combined: Solo and Ensemble Society  
The beginners wind percussion and string classes consist of those students who failed to begin their instrumental study during the grade or junior high levels. There is, however, a definite place for them. Although they do not usually excel, they are

serious and interested students, compensating for lost time in beginning their instrumental studies, by diligence and application. While arrangements for this group should not be overdone, the opportunity for this type of student should be provided.

The Preparatory (Prep) or Cadet Band constitutes a training group for those students who are not qualified for Concert Band membership through lack of experience or talent. This would be true of the Preparatory Orchestra as related to the String and Symphony Orchestras. If the enrollment of the instrumental department is such as to permit it, it is well to insist that all students serve at least one semester in the Prep organization. Along these lines, membership in the Concert Band and in the Symphony Orchestra should be gained by examination only.

The Cadet Band and Prep Orchestra rehearse daily, and are accredited with half of the credits given to Concert Band and Symphony Orchestra. These organizations should have an individuality and dignity of their own, so that while they do feed the concert groups, they will have functions and a place in the program important enough to hold the interest and enthusiasm of their members.

The Concert Band meets daily and should be composed of selected musicians. This organization is composed of the best of the winds, and the director is wise to choose with an eye to quality rather than numbers.

The Marching Band membership consists of the personnel of both the Cadet and, so far as possible, the Concert Band. Marching drills are held after or before school hours. This organization is important in its power to build school and community spirit. It can be a real source of pride.

The "Pep" Band is made up of a selected group of twenty to twenty-five players which rehearses once a week before or after school. It appears at pep rallies, assemblies, basket ball games and similar events. Naturally, no extra credit is granted this group.

The String Orchestra is more and more being recognized as a separate organization in the high school program. It should be rehearsed frequently, preferably at the regular orchestra period, with winds excused for a sectional rehearsal. This allows for separate study by the orchestral woodwinds. Under the advice of the director and guidance of the student leader these winds can go over material written expressly for such groups, as well as cover the "spots" of the regular orchestral numbers. The strings, on the other hand, will study literature of the string orchestra. One of the advantages of dividing thus lies in the fact that tuning the strings is often more exacting, and there is not the idle waiting and loss of time on the part of the winds.

The Symphony Orchestra rehearses daily, and is composed of the best players of the department. Here again admission to this organization is by examination only, with closest attention to quality. The two concert organizations are the groups which represent the best efforts of the instrumental program; upon their success hinges the worth of the entire program for any serious director.

The personnel of the "Little Symphony" is selected from the twenty or twenty-five

# THE ETUDE MUSIC LOVER'S BOOKSHELF

By B. MEREDITH CADMAN

## More Rosa Newmarch

Since 1900 Rosa Jeafferson Newmarch (Mrs. Charles Henry Newmarch) has kept her pen busy enriching the critical and appreciative literature of music. While a large part of her life (she is now eighty-two) has been given to books and articles upon Russian and Czecho-Slovakian masters, she has found time to do a most valuable work in connection with the program notes for the Queens Hall Orchestra concerts of Sir Henry Wood. In all, she has made a really magnificent musical literary gift to England and to the world. Her latest volume is the fifth in the series of the "Concert Goers Library" of descriptive notes, and it includes terse understanding notes upon thirty orchestral compositions, largely those of modern composers, such as Bartok, Bax, Bloch, Debussy, de Falla, Hindemith, Holst, Janacek, Rachmaninoff and Sibelius.

England still holds to its quavers and demisemiquavers, which make books published in England difficult for some American readers to enjoy.

Pages: 98  
Price: \$1.50  
Publishers: The Oxford Press

## Classic Hymns

The hymn literature of the world now has a background of centuries. Many of our best hymns are over one hundred years old, and several go back three hundred years. Martin Luther's "Ein Feste Burg" is dated 1597.

A new hymnal, "Christian Worship and Praise," includes six hundred and ninety-nine hymns selected from thousands and representing as nearly as possible hymns that are classics, along with the best of the more recent works that are likely to become classics. The Editor is Henry Hallam Tweedy, and he is to be congratulated upon his selections and the fine manner in which they have been edited. The book is designed to meet the requirements of any orthodox group desiring a comprehensive volume suitable for christian worship.

## Black and White Harmony

The black and white piano keys form a very effective background for the study of harmony, if they are properly employed. In fact the pupil who can write harmony exercises and hear the tones as he writes them is rare. Eventually, of course, those who desire to become composers must do this; but at the outstart the piano is an immense help. Most students study harmony, however, because it is an essential in any worth while system of studying musical interpretation. A knowledge of harmony is more or less useless until it is flexible, and by this we mean that the student must be able to identify chord progressions rapidly and easily. To do this, the system of analysis by the centuries old system of shorthand known as "figured bass" (Generalbass in Germany; Basso continuo in Italy; Thorough-bass in England; Basse Chiffree in France); is very valuable. Ever since Peri (1561-1633) and Monteverdi (1567-1643), figured bass has been part of the legitimate equipment of most students. It is possible and enjoyable to study har-

mony without it; but, since so large a part of the musically trained public is familiar with it, there is a definite advantage in taking it up.

A new "Keyboard Harmony," by Modena Scovill, is an addition to an already long list of books upon the subject. The author has handled the material excellently, particularly from the standpoint of combinations for dictation. With alert teachers and reasonably smart pupils who can play the piano up to the fourth grade, excellent results, as well as a lot of highly intelligent diversion, can be had from this very practical book. The writer likes the book because it is short and concise on text and long on practical examples. The author is instructress in music education at New York University.

## Née Hickenlooper

**T**HAT Olga Samaroff (*Sah-mah'-răv*) Stokowski, born Hickenlooper, was persuaded by the keen and energetic impresario, the late Henry Wolfsohn, that no matter how fine her talents or how excellent her training, it would be impossible to succeed in this country as a pianist with the name of Hickenlooper, represents a turning point in the entire musical attitude of America. Miss Hickenlooper was proud of her name. She was a second cousin of the Civil War General, Andrew Hickenlooper, of Cincinnati, Ohio, and she had in her polyglot veins the blood of the New England Palmers, Lacy's, Stantons, Aldens, Piersons, Cheeseboroughs, Minors, Goldens, Goddards, and Darlingtons, as well as of the German Loenings and certain French and Slavic ancestors. Wolfsohn explained that the names of her fine Anglo-Saxon ancestors were all right for membership in the D.A.R., but were unfortunately taboo for a concert program, and that, unless she could dig up something with an "off", an "itch" or a "ski" on the end, a career as a pianist was impossible.

It was not, therefore, until she found the same Samaroff dangling upon a remote branch of the family tree that Wolfsohn was really enthusiastic. Olga Samaroff. Here was a name that would meet the commercial needs of the *entrepreneur* in providing the local managers with a means of selling tickets. Wolfsohn was a wise man, because the people of America, in those days, were so commercially minded that they judged everyone who might be in their own racial class as cold and devoid of artistic talent. So the little American pianist, born in San Antonio, Texas, practically gave up her family name for one of an ancestor of whom she knew little and cared less.

On one point, however, the young pianist was obdurate. Wolfsohn insisted that an American début without European press

notices was unthinkable rash. Olga insisted that this concession to assumed European superiority should be dispensed with; and she made her New York début on January 18, 1905, with the New York Symphony Orchestra, and Dr. Walter Damrosch conducting.

The struggle leading up to this is characteristic and interesting as the more mature Samaroff tells it very graphically in her recently published book "An American Musician's Story." After her American training she went to Paris as a young girl and studied with Antoine Marmontel (then over eighty) and Ludovic Breitner. She then received the first scholarship ever

OLGA SAMAROFF STOKOWSKI

given an American girl at the Paris Conservatoire. There she studied with Delaborde. Meanwhile she lived in a convent and pursued her general education. Her word-sketch of life at the Conservatoire is a most picturesque one. She next left Paris and, with her grandmother as companion, went to study in Berlin. There she became the pupil of Ernest Hutcheson, Ernst Jedlicska and the noted American teacher of theory and composition, Otis B. Boise, himself a pupil of Hauptmann, Richter, Moscheles and Kullak. Upon leaving these teachers, she did not step to the concert hall but to the altar with a Russian civil engineer who was her husband for three years, during which time she lived in Berlin and Petrograd. At the end of this period she divorced her husband, Boris Lautsky and also had her marriage annulled by the Pope (what a wonderful stage name, for that day, "Borislautsky" would have made).

Returning to New York with a capital of only four hundred dollars, she was obliged to depend upon her mother and grandmother to finance her Carnegie Hall venture. This they did in grand manner, by putting up virtually every dollar they owned. It was a huge gamble along unexplored ways, but her success has been extraordinary. In fact, in a few months she had paid off her indebtedness to her family; and she attributes this as much to the good

business management of her mother as to her own ability. Successes in Europe followed by more struggles in America; soon she was "made."

The entire book is told in casual "fire talk" fashion, which makes it very readable. Mme. Samaroff gratefully states her good fortune in having, at the start, the help of Miss Dehon, a friend of artists, who recognized the keyboard genius of the young woman. She then pays a tribute to men and women of means who have munificently helped young artists.

The chapter upon "Some Aspects of Life Upon the Concert Stage" is just what the aspiring artist needs to know and answer scores of his questions.

In 1911 she married Leopold Stokowski. Naturally the chapter "Behind the Scenes of an American Orchestra" is one of the most engaging in the book. There are numerous references to Stokowski's internationally recognized ability as a "supreme" conductor, but with laudable good taste there are few personal comments upon marriage with the great leader, which terminated in 1923 by divorce.

The remaining chapters of the book deal with "Music and the World War," "The War Musical Education in the United States," "Life as a Music Critic in New York," "The Schubert Memorial," "Tracing the Pattern of Musical Destiny," and so on, outlining modestly and properly the author's brilliant and useful career. The book is an excellent one for the study of a most interesting background of musical life during the past few decades.

## Immortal Franz

The many faceted life of the great Franz Liszt has been an unceasing attraction to writers ever since those days when he was amazing Europe with his virtuosity, shocking it with his romances, real or reported, impressing it with his regal generosity, not merely of money, but also of his spirit and of his own precious time, as well as astonishing it with his occasional resorts to monastic piety. It was Liszt's peculiar privilege to be in intimate contact with practically all of the great musicians of his time. Despite the fact that those who would belittle him try to make him out as a flashy showman, who would stoop to tricks like that of sending his self bouquets to be delivered over the footlights, Liszt, on the contrary, was a man of tremendous power, fine originality and extraordinary training. There are those who feel that Richard Wagner was enormously indebted to the genius and guidance of Liszt, and that Liszt's great ability as a composer had as powerful an influence upon the master's life as did Beethoven to whom he paid incessant homage.

It has remained for a Hungarian writer, Zolt Harsanyi, to place Liszt in a novel, which is really not a novel but a fictional presentation of the life of the famous musician told with all the brilliance, power and charm of a novel, but very evidently based upon a microscopic respect for the main facts of the composer-pianist's life.

The dialogue in the book is, of course, for the main part entirely imaginary; but it is uncanny in that it seems to proceed without suspicion of fabrication from the mouths of the actual characters.

(Continued on Page 665)

Realizing that many of our readers may have difficulty in securing the books listed in this department, THE ETUDE MUSIC MAGAZINE will be glad to furnish its readers with these books at the price given, plus the slight charge for transportation and delivery.

# THE TEACHERS' ROUND TABLE

Conducted Monthly by GUY MAIER  
NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

## Student Recitals

"Several teachers in our town want to cooperate for our mutual benefit. We do not want to 'organize' a union or anything like that, and just a kind of musical club does not seem enough. We have met once a month at each of our homes, and had discussions, papers on various musical topics, and have played some ensemble music, and so on, but there does not seem to be any incentive to continue. What we would like to know is 'where we go from here?' Could you help us?"  
A. C., Colorado.

I wonder what answers the readers of this page would give you if they were put in the spot. Therefore, reading the description of "Doctor" Maier, I beg all you gentle (and not so gentle!) readers to knit your brows and scratch your heads for a solution of the activities and objectives of a music teachers' organization. Think hard! What would you suggest; better still, what are the teachers of your town doing to solve this problem? But, to return to your query, first you must ask yourselves why you are organizing. I should say it is:

1. For protection against price cutting, pupil snatching, "catty" rivalry, and so on.
2. To try to raise professional standards and prices.
3. To stimulate teachers and students toward a more vital interest in piano playing.

For some years a prominent musical foundation brought the teachers of certain cities together by arranging monthly student recitals in which pupils of members of the group participated. There were no favorites; no one was given precedence; equal pupils of each teacher were chosen in turn. In the cities where this plan was organized, the long range results were astonishing. Miss A soon learned that her standards were much lower than Miss B's; that the quality of music her pupils played was not up to that of other teachers. Her parents, of course, came to the recitals in droves, and they were quick to recognize differences in quality and accomplishment. What happened? A significant raising of music teaching standards in the city; friendlier rivalry between teachers; a desire to learn more modern methods; the kind of student stimulation; larger classes and other surprising results.

The very fact of bringing teachers and students together not only made cooperation necessary but also effectively broke down barriers. It was an honor to be chosen to play at these outstanding musical events. The recitals were held in the salesrooms of small auditoriums of a leading music store—which of course stimulated piano and music sales. The Foundation usually had a prominent artist—one of its teachers—to hear the recital and to inspire the students by talking or playing to them. Unfortunately, I believe this policy has been discontinued by the Foundation; as a consequence most of the cities have given up the student concerts. What a pity this is! But there is no reason why enterprising groups of teachers everywhere, with or without the help of the music stores, could not embark on similar projects. Kansas City has a flourishing Music Teachers' Association with an unbiased committee to pass on the fitness of applicants to appear in the recitals. Santa Monica (population 55,000), California, has a plan which has worked admirably for the last

seven years. An association of forty piano, violin and voice teachers gives monthly student recitals on a cooperative basis. One of the teachers acts as permanent secretary and organizer for a very small fee; she must be a clever diplomat, for after seven years and seventy-two recitals she has received no threatening letters—in fact, is still a very popular citizen! Expenses are met by each teacher paying fifty cents for every pupil who plays. Whenever possible students are chosen in turn, but sometimes play only in case they can be used for a "special" program. Under special events, comes a yearly "boys'" concert, programs for young children, ensemble recitals, or a Mozart or Beethoven program, at which some popular local minister speaks on the composer's life. Why not try a similar plan in your city?

## Practicing Scales

I have wanted to write to you for advice for a long time, and at last have mustered enough courage to do so. I am not a teacher, but a music student, sixteen years old, as yet not especially advanced.

I study with the best teacher in this city, who gives me finger exercises, scales and studies to improve my technique. But here is my trouble: he makes me practice scales slowly with my wrist dipping down with each tone I play: he says it is to keep relaxed and to get a better legato and more strength. Now, it seems to me from watching good pianists play, and also from what I read in *THE ETUDE* that this is not a good way to practice scales. Is it necessary to do this? Can I develop speed with this method?—K. B., Texas.

Tick! Tick! Tick!  
"Breathes there a man with soul so dead—" Who *Etude* pages ne'er has read? Why not chip in with some of the other students and present him with a year's subscription? You could do this quite painlessly at Christmastime—after this reply to your question has been printed.

I am shocked to know that persons are still permitted to give piano lessons (I don't dignify the process by calling it teaching) who have not the remotest notion of a sensible technical approach to the instrument. Yours is by no means the first complaint I have had on the score of dipping the wrist in passage work. With the loudest of loud speakers, let me proclaim once for all that it is impossible to develop speed or balance with anything but the minimum movement of arms, hands and fingers. Playing the piano well demands the elimination of every iota of lost motion. Can you walk or run across the floor, if it is being joggled up and down? Try it sometime at one of those "Fun Houses" at your nearest amusement park!

In piano playing, which exacts incredible speed, accuracy and "shading," it is most important to keep the larger levers as quiet as possible. In other words, when the fingers leap and run all over the keyboard, hands and arms must make the least possible up and down movement. They must offer all possible help to the fingers—smooth, lateral sliding along (elbow-tip); slight rotation (forearm); freeing and reinforcing the fingers; and giving secure but elastic foundation to the unencumbered fingertips. Whether you play with high, low or medium hand, your wrist must remain level during the progress of all scales and arpeggios.

Do not be fooled when someone says,

"Oh, the dipping of the wrist is only done in slow practice to keep you relaxed; when you go fast you won't dip." Bah! In slow practice your mechanism must perform exactly as it does when speeded up. The coordination of the various parts is the same; do not let anyone deceive you about it.

If more young students were as thoughtful about piano playing as you are, teaching standards would take an upward leap; healthy, intelligent scepticism would force teachers to take drastic steps to remedy their glaring technical deficiencies.

## Meat and Potatoes

I have a pupil sixteen years old who, because she is older than the average beginner, has progressed rather rapidly and is now going through her third book of Kohler. Now that she is approaching her age level, things are coming harder; she said as much in a recent lesson. I explained to her that all that had gone before was like "milk and salads" and now she was beginning to get into the real "meat and potatoes" of music.

I had planned to give her Burgmüller, Op. 105, but I am afraid this is too difficult. I want something that is melodious, not too difficult, and still progressive. Can you fill the order?—C. C. H., New Jersey.

Take her off Kohler and give her something more up to date like the Goodrich "Preludes" or Thompson's "Studies in Style," or make her feel very adult by assigning Felton's "Progressing Piano Studies" for grown up students.

## Repeaters

I have a boy pupil, age fourteen years, who is quite remarkable in some ways, absolute pitch, very painstaking, and so on. I have him practically prepared to give a recital including such numbers as Mozart's "Sonata in G," Chopin's *Minute Waltz* and *Macurka* in A, Mendelssohn's *Spring Song* and *Consolation*, Grunin's *Song of the Mea* and Bach's *Two-part Invention, No. 11*. He knows these pieces from memory, perfectly. I believe he could play any measure in any piece that I would ask for. Now! When playing these numbers for me he will hesitate and maybe start in one particular spot say three or four times. Please, can you suggest something that will get him over this repeating? He is very accurate in everything he does, and I think perhaps this one virtue may be at the root of the fault.—Mrs. T. H., New Mexico.

I have a pupil, thirteen years old, who has studied with me three years, but lately has begun to repeat measures even when correctly played. She says they do not sound right to her, but I feel she is repeating until she looks at the next measure. Her mother says she is in perfect health and is not nervous. I will lose her if I can not find a way to stop this.  
—Mrs. N. J., Missouri.

"Repeaters" like the above examples are usually bright, conscientious adolescents, thirteen to fifteen years old, who are going through a sort of "perfectionist complex" so common to middle 'teen age boys and girls. Haven't you come across young people who, after years of laxity in matters of physical appearance or hygiene, suddenly and fanatically devoted all their spare time to cleaning up, brushing teeth, combing hair, manicuring nails or "primping"? No matter how insignificant or unimportant the condition, nothing short of perfection satisfied them.

At first, parents and teachers are relieved at the change, but soon this unwonted zeal irritates them, and then the clashes start! But, if left alone, the "perfectionist complex" soon melts away and the young-

sters enter some other and (we hope!) more favorable stage of their development.

When a student transfers this zeal to piano playing, I give profound thanks; forthwith I dose him with his own medicine, by deliberately assigning daily exercises for conscious pausing. Ask him to close his eyes, and blindly point to some measure of a piece he knows; then, after opening his eyes and looking thoughtfully at the whole measure for a few seconds, to play it in *tempo* perfectly and without pause—not stopping until the bar line is hurdled. After the first tones of the following measure are played, his arms bound lightly upward and fall to the lap (as in the "impulse" practice often described here). Perfection must be attained the first time. Under no circumstances permit a second chance. Only a few minutes daily are to be spent in this process. But, insist that the instant, accurate control be at first confined to isolated measures, each considered a single impulse, with arm rebound at the finish. After a week or two, assign two or more measures, still regarding each group as one impulse. Soon, the student is impressed with the necessity of thinking out an entire progression before playing. Such practice stimulates and challenges adolescents, teaching them that they can play accurately only as fast as they can think, and that they must bend every energy to thinking as far ahead as possible.

Such exercises will also answer that incessant plea of music teachers, "How can I develop speed in my pupils?" Just try it and see. Be sure to keep the "impulses" short and simple at the beginning, but insist on top speed after the group has been well learned.

## Playing Notes Perfectly

1. I have a girl pupil about thirteen years old. She is bright, likes good music, plays with expression, but at times plays wrong notes. When she has finished playing a piece and I point out her mistakes, she insists that she played it much better at home. I am at a loss what to say to her; it is very annoying to be told that by a pupil.

2. Have you any system to make pupils take their lessons regularly? There are so many other attractions, that they just say they have not had time to practice.—M. K., Pennsylvania.

1. Surprise her by agreeing with her. Say, "Yes, of course, you played it better at home—sometimes." "What d'ya mean, 'sometimes'?" "Oh, just this, that you have practiced quite a lot this week, and played it over often, haven't you?" "Uh, huh." "Well, once in a while when you were tired, you probably played it not so well—everybody does that, even I sometimes—and then a few mistakes crept in here and there, didn't they? You see, our brains are so complicated that the moment a wrong note is played it sticks in our mind; but then when you get a little uncasy, or are put to a test as at our lessons, poof! that wrong note jumps out to defy you. So, there's only one thing to do all the time, practice so carefully, and do not allow yourself to repeat anything more than once, so that you never play any but the right notes!"

That ought to hold her.

2. Yes, offer your students blocks of ten or twelve lessons at a slightly reduced rate—payable in advance—with the proviso that missed lessons will be made up only in case of illness, if notification is given on the morning of the lesson day.

# The Hungarian Dance, No. 6

## by Johannes Brahms

### A Master Lesson

By

MAURICE DUMESNIL

\* \* \* \*

OF COURSE EVERYONE IS FAMILIAR with this *Hungarian Dance*. It is one of Brahms' most popular compositions and certainly a favorite among the two sets written by the master in 1869, originally for piano, four hands. Many instrumental combinations have been published, including orchestra and band, and one hears it frequently over the air. Hence the question arises at first thought: was it advisable to devote a lesson to an arrangement, and more, to a simplified version?

The answer is most decidedly in the affirmative. Here is a very brilliant recital piece, full of color, rhythm and that fascinating *Magyar Stimmung* (tuning of the scale); certainly an excellent number for closing a group, or a program. In a more concise form, it contains some of the elements typical of the Liszt "Rhapsodies." The original two hand version is derived from the four hand score first conceived, however, and it is practically unplayable in the correct *tempo*, because it is overloaded with notes and the intervals are most awkward. Of the many pianists whom we have heard play it, none actually respected the text. One of these occasions was when François Planté, dean of the French pianists who died a few years ago close to his ninety-sixth birthday, performed it at one of his last Paris appearances. This was one of his favorite encore pieces, and his interpretation of it was supremely distinctive, elegant and aristocratic. He was, in his heyday, a rival of Liszt and Anton Rubinstein, and it was the latter who once said: "This Planté, he can play my *Valse Caprice* better than I do!" Indeed, while Rubinstein played the middle section *fortissimo*, and often fell out, Planté reached for those high notes gracefully and *pianissimo*, treating them like gems. He probably also played this *Dance* better than the natives!

Later, I heard Emanuel Moor go through it in his own improvised fashion, one day when his rambling thoughts led him on the subject of the Hungarian folklore. Moor was born near Budapest, and throughout his life he remained unfalteringly attached to the melodies of his native land, despite the fact that he became a British citizen and ultimately lived in Switzerland. The inventor of the double-keyboard piano which bears his name admired greatly the Brahms "Hungarian Dances," but he contended that they were generally played without the proper tradition and were often disfigured into "salon music," thus losing their nobility and their atmosphere of languorous violins and frenzied dancers.

#### A Unique Contribution

THE "HUNGARIAN DANCES" occupy a special place in the production of Brahms. He always insisted that they were mere adaptations of genuine popular tunes. Nevertheless, they bear in their working

out the unmistakable stamp of the master and show us that, next to his symphonies, quartets, trios and sonatas, he could be equally successful when handling the smaller and lighter forms. In fact the native music of Hungary exercised upon him an actual influence, and it is not uncommon to hear some of it in his chamber music productions, one striking example being the *Finale* of the "Piano Quartet in G minor."

If we consider the date of Brahms' birth, 1833, we find that these "Dances" belong to the already mature period of his career, despite their fresh, youthful and alert spirit.

The *Dance No. 6* is simple and almost classical in structure. With the exception of a few measures (51 to 54 go into F major), it remains steadily in the key of

The first chord is played loud and wrenched off the keys; and, in spite of the dot, one must push down powerfully and into the full depth, in order to avoid dryness. Do not be afraid to lift the right hand at least seven or eight inches high, so the second beat can take its proper aspect. We can compare this motion to that of a rubber ball striking the ground, rebounding, and falling down to stay put.

Measure 2 is played *a capriccio*, with fantasy, as if hesitating. The *tempo* has suddenly slowed down. The triplet in sixteenth notes can be interpreted thus,

in order to avoid a sluggish feeling. The dotted notes with *legato* sign indicate a

MAURICE DUMESNIL

Distinguished French Pianist, Conductor and Teacher.

D, oscillating between major and minor. The two "ideas" of the first part branch likewise into the same *vivo* differently treated in each instance. The *Andante* constitutes the *trio*, with its accustomed *da capo* and *coda*.

The opening measure must be played in such a way as to set the scenery and create the atmosphere. Be careful not to attack before being thoroughly prepared. Much of the effect of any performance depends upon this initial impression. Consequently, it is recommended, after sitting down, to take time, get the fingers ready, set the wrists, and concentrate the mind upon the quality of tone to be extracted from the keyboard. *Mental attitude* must always precede *technical realization*.

*portamento* (non-staccato) which continues in the next measures, up to the *vivo*. The *tempo* should be slightly picked up in measures 3, 4 and 5, and also 7, 8 and 9. Measure 6 is played like measure 2. At measure 5 lift the hand again as at the opening, but this time with charm and elegance; the wrist should be held flexible and the grace notes delivered fast. Measures 10, 11 and 12 are a repetition of 2, 3 and 4; still, the *ritardando* must be more pronounced and the volume of tone tapered off. Throughout this first portion it is advisable to bring out the upper notes in the right hand, slightly more than the lower ones; however difficult this may appear, it can easily be done by a slight stiffening of the fingers concerned. It is good prac-

tice to exaggerate at first and to play upper notes *forte* and the lower *piano*; thereafter the volume can be adjusted to the suitable proportion. Let us think of this passage as being played by two clarinets, the first one more clearly heard than the second. Orchestral performances constantly call, on the part of the conductor, for delicate and even finitesimal tonal adjustments of this kind, and pianists can derive much profit in developing their imagination along similar lines.

At the *vivo* (measure 13) there comes a complete change, and it occurs abruptly, as a surprise. One must pass from lingering freedom to sharp rhythm and revert brusquely to the decision of the opening. No more *rubato*.

Contrasts are most effective when the constitutive elements work together in a balanced proportion. In the present case:

1. *Tempo* (here the *sostenuto* becomes *vivo*).
2. *Shading* (the *piano* turns to a *forte*).
3. *Expression* (the improvisation-delivery becomes a fiery, dynamic rhythm).

These principles, varied as convenient, apply to all styles and all periods of music.

At measure 19, it is a tradition to slow down the *tempo* slightly, after striking the B, and to carry this through to measure 21, where the figure in sixteenth notes must be played once more with snap and crispness.

#### "Spirit" and "Basses"

THE SECOND "IDEA" EXTENDS OVER measures 22 to 33. Here is where one can have plenty of dash and fire! Special attention is to be given to the left hand; two different kinds of attack are used: the notes of the beats must be strongly marked, while those off beat are played more lightly and superficially. It was Charles Marie Widor who once said: "The pianists do not play enough basses," in which he was right, since the basses are the foundation of the harmonic edifice and to neglect them means the collapse of the whole structure.

At measure 34, the contrast is pure dynamics. *Non-legato* touch is used in the left hand while the right hand brings out the upper notes of the chords like a percussion effect, or as a piccolo would come through, somewhat shrilly, in an orchestral performance.

The run at measure 39 must convey the impression of a skyrocket soaring upward, and, after the top note, the hand and forearm go up frankly, then fall back to the B where once more the *tempo* is slowed slightly through the next measure.

The *Andante* brings a new element; it is dramatic and somewhat pompous, the phrase retains a great character of dignity and stateliness, which should prompt us as to the keynote to the interpretation. Here the tone must be rich and full. The sonorous octaves in the bass must be separated, but attacked with much weight from the forearm.

Measure 46 is played *martellato* (hammered, detached) in both hands. Be exceedingly careful to keep strict time, and be sure not to hurry. Every sixteenth note in this measure has its own importance and must be emphasized. An exact *tempo* in this whole passage is absolutely necessary, and the slightest carelessness in this respect would be fatal. The same applies to measures 51 to 58 and 59. This section is played *vivace*, and one must pitch right into the new faster *tempo* exactly on the first beat of measure 51, without working up towards it. It is important to give special care to observance of punctuation.

Measures 55 to 59 are played *staccato* and playfully, with a "wiping" touch.

We now come back to the beginning (*da capo*), and this reexposition may be played exactly like the first time. It

FASCINATING PIECES FOR THE MUSICAL HOME

GYPSY SONG

From Carmen

GEORGES BIZET

Arranged by William M. Felton

Grade 3. Allegro moderato M.M. ♩ = 116

The musical score for "Gypsy Song" is written for piano in 3/4 time, key of D major. It begins with a piano (*p*) dynamic and a tempo marking of Allegro moderato (M.M. ♩ = 116). The piece is characterized by a "sempre staccato" articulation. The score includes various dynamic markings: *p* (piano), *mf* (mezzo-forte), *mp* (mezzo-piano), *f* (forte), and *ff* (fortissimo). The piece is marked "Ped. simile" (pedal simile) in the middle section. The score consists of 16 measures across 10 staves. The piece ends with a final chord in the right hand.

*espressivo la  
melodia*

FRANCESCO B. DE LEONE

The musical score for "A Winter's Tale" is composed of several systems of music. The first system includes a piano introduction with a melody marked *espressivo la melodia* and dynamics *pp* and *p*. The second system features a "Flute like" section with a melody marked *dolciss.* and *dim.*, and a bass line marked *p* and *a tempo*. The third system continues the "Flute like" section with a melody marked *ten.* and *pp*, and a bass line marked *mf* and *sentito*. The fourth system includes a section marked *Languido assai* and *molto espress.*, followed by a section marked *ppp* and *dolce e stent.*. The fifth system features a section marked *calando un poco* and *mf a tempo*, followed by a section marked *espress.*. The sixth system includes a section marked *tenderly e rit.* and *ppp*, followed by a section marked *poco a poco cresc.*. The seventh system features a section marked *allarg. molto* and *di più*, followed by a section marked *molto espress.* and *ppp*. The eighth system includes a section marked *subito* and *rit.*, followed by a section marked *D.C. ten.* and *p*. The piece concludes with a "Fine" marking.

# GO, LOVELY ROSE!

Edmund Waller  
(1606 - 1687)

W. LAWRENCE CURRIER

Moderato e teneramente

The musical score is written for voice and piano. It begins with a piano introduction in 4/4 time, marked 'Moderato e teneramente' and 'mf'. The piano part features a series of triplets in the right hand and a steady bass line in the left hand. The vocal part enters with the lyrics 'Go, love-ly rose! Tell her that wastes her time and me, That now she knows, When I re-sem-ble her to thee, How sweet and fair she seems to be. Tell her that's young, And shuns to have her graces spied, That hadst thou sprung In'. The piano accompaniment continues with a rhythmic pattern of eighth and sixteenth notes. The score includes dynamic markings such as 'ff', 'dim. e rit.', 'mf a tempo', and 'agitato e crescendo'. The key signature has three sharps (F#, C#, G#).

# ROMANY CAPRICE

RUSSELL WEBB

Adagio appassionato

VIOLIN

PIANO

The musical score for "Romany Caprice" is written for Violin and Piano. It begins with the tempo marking "Adagio appassionato". The Violin part starts with a series of eighth notes, followed by a more complex melodic line. The Piano part provides a harmonic accompaniment with chords and moving lines. The score includes various dynamics such as *f* (forte), *cresc.* (crescendo), *rit.* (ritardando), and *mf a tempo* (mezzo-forte at tempo). The tempo changes to "Allegro" in the latter half of the piece. This section features more rhythmic patterns, including triplets and sixteenth notes. Dynamics like *mf* (mezzo-forte) and *ff* (fortissimo) are used. A *rall.* (rallentando) marking appears in the middle of the "Allegro" section. The score concludes with a final cadence. The key signature is one sharp (F#), and the time signature is 2/4.

**Più mosso**

This section of the musical score is titled "Più mosso". It consists of four systems of piano and bass staves. The piano part features complex rhythmic patterns, including triplets and slurs, with dynamic markings of *mf* (mezzo-forte) appearing in the first, second, and fourth systems. The bass part provides a harmonic foundation with chords and single notes, also marked with *mf*. The key signature has one sharp (F#), and the time signature is 4/4.

**Allegro**

This section of the musical score is titled "Allegro". It consists of four systems of piano and bass staves. The piano part begins with a *ff* (fortissimo) dynamic marking and includes slurs and accents. The bass part also features slurs and accents. The key signature has one sharp (F#), and the time signature is 4/4. The section concludes with a final chord in the piano part and a bass line ending with a dotted line and the number 8.

PRIMO

Allegretto M.M. ♩ = 126

The musical score is written for a single melodic line (PRIMO) on a grand staff (treble and bass clefs). The key signature has one flat (B-flat), and the time signature is 3/4. The tempo is marked 'Allegretto M.M.' with a metronome marking of ♩ = 126. The score begins with a mezzo-piano (*mp*) dynamic. It features a variety of musical textures, including single-note passages, dyads, and chords. Fingerings are indicated by numbers 1-5. A section marked 'dim. e rit.' (diminuendo and ritardando) leads into a section marked 'molto p a tempo' (very piano at tempo). The score includes several trills and grace notes. Dynamics range from piano (*p*) to fortissimo (*ff*). The piece concludes with a 'ten.' (ritardando) marking and a final chord.

## The Etude Music Lover's Bookshelf

(Continued from Page 640)

The Harsányi family is one of the most distinguished literary lineages in history. They have been writers for centuries, and Zsolt is its most famous living representative. In the preparation of this extraordinary book, he visited most of the centers in which Liszt was active and unearthed scores of original letters and documents hitherto unknown. These are not introduced in the story, as in the customary biography, but rather in the form of a perfectly natural narration, so that the reader is given the singular illusion of living in the time of Liszt and passing through one of the most unusual periods in musical history.

Liszt has been accused of having an itinerant heart, and certainly his many love affairs would tend to confirm this. It must be remembered, however, that he was one of the most spectacular figures of an age that was very free and easy in such matters; and Liszt was the brilliant beacon toward which feminine *lepidoptera* were irresistibly drawn. The author, nevertheless, has made a tragic picture of a man seeking happiness and beset by many women to whom he became devoted only

to awake to disappointment, save in the case of the Princess Sayn-Wittgenstein, whom he was prohibited from marrying through the intrigue of her family. The story of the heartless Countess Marie d'Agoult, the brilliant half-Jewish writer whose works appeared under the name of Daniel Stern, is told with accuracy, and leaves the reader with sympathy for poor Franz. Mother of Franz's three children, one of whom was to become Cosima von Bülow-Wagner, she caused the pianist many heartbreaks.

Most of all, "Immortal Franz" is a very interesting, absorbing book. It appeared originally in 1937, in an expensive edition with an excellent translation by Lynton Hudson. It is now published in the Blue Ribbon Books, at one dollar. It is not for children, but the writer recommends it to adults who would enjoy an exciting and captivating story of one of the most extraordinary figures in all art history.

## How Can We Make Our Pupils Think?

By SUSAN M. STEEDE

*"Do not weep for this weird creature.  
 For she was a music teacher  
 She could not make her pupils think  
 So was not loth to cross the brink."*

So WROTE a well known and successful teacher to a friend, the editor of a western musical magazine, but a few weeks before her death at the age of seventy.

How to make our pupils think is a problem for us all. Personally, where young Bobby or Johnnie is about to play, say, the B-flat major scale, the writer's suggestions to him are usually somewhat on these lines.

"Now remember that your fingers are like men who have a job to do, and you are their boss. If you do not know exactly, in your own mind, what each of them must do, can you give them clear orders?"

"No. Very well then. You must now find out just what you want them to do. How many black keys have to be played in this scale that starts on B-flat? Touch each of them calling each by name." (One little pupil likes to say "Hello" to them. "Hello

B-flat, Hello E-flat," he greets them.) "Now, how about the fingering? What note must the fourth finger of the right hand play?"

"B-flat. Yes, that is right, remember that B-flat is always the job for the fourth finger, and that no other finger may take it from him."

We proceed similarly with the left hand. Bobby must clearly recall the notes and rules for fingering before he begins to play.

His thinking powers are stimulated in the same way, before he begins to play a new piece. He is asked to give the meanings of the key and time signatures, and to tap out the rhythm of several typical measures before playing, so that he has some idea of its difficulties before he sounds the notes.

Of course this method of approaching our problem can, and indeed must, be varied according to the needs, and according to the personality of the pupil. The main point is that we must teach in such a way as will lead our young students to think, think, think.

## Music in China

By J. W. HULFF

THE SCIENCE OF MUSIC was firmly established in China when the Egyptians built the first great wonder of the world, the pyramids, about 2900 B. C.

Nowhere in all the world does the student of musical history find such a wealth of interesting information as in China.

Unfortunately, about the year 240 B. C. all writings of a historical nature, except those of agriculture, divination and medicine, were destroyed by royal edict.

We know that Confucius, in 551 B. C. wrote about "ancient" music; but we have no definite information previous to that time, owing to the sweeping order of destruction of valuable historical data.

In the interior of China the favorite musical instrument is still the shen. It is played by drawing in the breath and resembles a Chinese teapot with seventeen reeds of various sizes protruding from the top. The performer plays by placing his mouth on the spout of the "teapot" and drawing in his breath. Each pipe has a small reed of copper with a hole that is closed by a finger when a tone is to be

heard. Four of the pipes produce no tones. The thirteen tones range from B-flat, third line of the treble cleff, to E-flat on the third line above the staff.

The Chinese sound giving bodies are: Skin, represented by the drum, clay, by an instrument similar to our ocarina; gourd, by the shen described above; stone, by "L" shaped tone producing stones hung upon a frame and struck with a mallet; silk, by the kin, made of twisted strings of silk over a wooden frame; metal, by trumpets, gongs and bells; wood, by bamboo flutes.

One of China's old musical instruments is the se or che. This instrument has fifty strings. The modern se has twenty-five strings, plucked with ivory picks. In playing, the performer usually strikes two strings simultaneously in octaves.

Chinese instrumental scales are chromatic in character; vocal scales are diatonic, leaving out two notes of the seventh, giving a five-tone or pentatonic scale. The popular singing tone is a nasal falsetto, produced with the mouth partly closed.

## PIANO TEACHERS!

HERE'S AN OPPORTUNITY to become a local service representative for one of the world's great pianos—MATHUSHEK.

Distinguished in the field of fine piano building since 1863, MATHUSHEK PIANOS are acknowledged as being among the outstanding creations in the progressive development of the piano.

We suggest communicating with us for further details regarding this opportunity. Or, if you happen to be coming to New York for the World's Fair and we have come to a tentative agreement, we will ask you to be our guest for a day at the well-known Narragansett Hotel in New York. After a visit to the factory, negotiations may be completed.

Write immediately for details regarding available territory which does not conflict with our present dealer relationships. Special preference for accredited teachers.

Muscle Lovers: Write for Mathushek's Musical Map of Manhattan and the Fair!

## How to Develop CREATIVE INSPIRATION In Music

HOW do others get ideas? Is Inspiration a gift; is it a talent that can be developed by anyone; is it the result of patience and persistence; or is it the "divine right" of genius only?

Here is a sensible, easily-read, significant book that tells how inspiration can be induced. It tells how Beethoven, Brahms, Tschalkowsky composed and created—and how closely the student of music can follow in their footsteps. A very valuable book . . . for composers of all kinds and all ages." — *Etude*, 15 fascinating chapters.

# THE SINGER'S ETUDE

Edited by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

## Stepping Stones to a Singer's Success

By W. WARREN SHAW

**N**EARLY EVERY ONE who is in reasonably good health and who can "carry a tune" can learn to sing—and sing well. It depends mostly upon the personal "urge."

Advanced age, if not too advanced, is not such a serious handicap to vocal achievement as is generally supposed. We often hear a person of mature years say, "Oh, I am too old to learn to sing. If I had commenced to study earlier in life perhaps I might have been able to do something with my voice, but now of course it is too late."

This sounds rather pathetic for those who in retrospect review neglected opportunities; but the adage, "It's never too late to mend," fits in here very nicely. If you are not a near centenarian, there is time to enjoy the blessing of having a melodious and capable singing voice.

Admittedly, it is better to commence to train the voice at the age of fifteen or sixteen, than at fifty or sixty; but remember that in these days people are young at sixty . . . particularly the ladies.

Jean De Reszké, the famous Polish tenor of the early part of this century, used to say "The last thing to leave us is the voice." Which may well sound a note of wisdom, as well as of hope, to all potential singers who never have sung, but would rather like to try. At any rate, whether you are sixteen years old or sixty years young, you may reclaim lost ground and, without further wistfulness, still learn to sing.

There is a very good reason for this belief, because we know of many cases where the study of voice has been taken up long after the usually prescribed limit, with highly satisfactory results to both the students themselves and their friends, and sometimes to the interested public.

Campanari and Bispham are instances of singers who achieved world-wide fame as leading baritones of their day, after having commenced their vocal studies comparatively late in life. There have been prima donnas who did the same thing; but it was kept secret because it was necessary for them to "arrive" at the Metropolitan presumably at a very early age.

Sometimes the urge to sing can be gratified almost at a moment's notice, by the few who are peculiarly gifted both in musical talent and vocal endowment, and this without much preparation or practice. They even may please audiences. Again, there is an army of singingly disposed people who would just love to sing but do not dare to try, because some one might hear them. Such timidity and lack of confidence rapidly disappears, however, after a short period of study; and often it develops that the timid beginner becomes a singer of authority.

### No Excellence Without Labor

EVEN THE WELL ENDOWED natural singer must study, and study persistently, before

he may hope to emerge as a recognized artist. Highly important is the growth of musical knowledge and understanding.

There have been a great many truths concerning the vocal mechanism which have been established by scientific investigation, the knowledge of which may be very useful in the course of training; but such knowledge is best treated as a background of understanding of physical processes in order to establish confidence in the mind of the singer. The most important thing to understand is the nature of the vocal mechanism.

We may say briefly that the tone producing mechanism (vocal muscles and cords) is involuntary in its action, while the muscles governing speech forms are voluntary. This means to the singer that he should not try to do anything with the vocal mechanism. The control of the voice (air-waves) is imperative, but not the direct control of the breath. Nor should the control of the breath be a direct objective. It is merely consequential or incidental to correct tone production and develop a proper articulation of consonants. The correct action of the vocal mechanism must be induced, but never can be compelled. These muscles are gradually strengthened by use—always remembering that they respond only to the will to make a tone or series of tones. All interference

with their normal functioning is caused by the swallowing muscles which are contiguous. The swallowing muscles are voluntary in their nature, and consequently interference can be removed.

With the general understanding that in the throat there are two separate and distinct sets of muscles which are diametrically opposed in their normal functioning, we are safeguarded against many pitfalls which lie in the path of students, during the process of voice development and management. This may be better understood when we consider that during the act of swallowing we cannot produce a tone; the vocal muscles are then quiescent. When one is making a tone—either a vowelized tone or a hum—the swallowing muscles should be quiescent. In the pronunciation of words there is always the necessary interference with pure tone production, through the use of consonants; but this interference is not necessarily and should not be long continued. The slogan for the singer should be: "Vowels long, consonants short."

### Home Study; Then to a Teacher

IF YOU HAVE THE DESIRE to learn to sing and at the same time feel a little timid about going to a teacher in your present vocal condition, you may commence a course of study at home, and thus improve the character of your voice considerably.

## The Student's Repertoire

By CLAUDE BELLPORTE

THE SINGER who would succeed must have a varied repertoire, calculated to bring out his best and most varied possibilities. The study of this should begin in his comparatively early student years, while he yet has the judgment of his teacher on which to rely and to help him to avoid wandering into unprofitable paths.

Now the very first requisite for a successful addition to one's repertoire is that it shall so lie within this singer's compass of voice that he or she can sing its every tone without the least effort or constriction. If a tone cannot be produced with absolute spontaneity, so that it rises spontaneously from the larynx, floats freely on the breath, and resonates till it fills every cavity which nature provided for a tone in its particular range, how is it ever to vibrate with that appropriate emotional thrill which will carry the message of the singer to the heart of the listener?

With this qualification fulfilled, perhaps the very next is the choosing of a song with an emotional plane that is at least comparatively within the natural experience of the singer. To allow or encourage a girl in her middle "teens" to attempt the *Un bel di* of the heartbroken *Cio-Cio-San* in "Mad-

ame Butterfly" or the tragically emotional *Vissi d'arte* of "La Tosca" is nothing less than vocally criminal. What can unsophisticated girlhood know of the ravaged souls of these heroines? And yet we almost every day hear their pathetic efforts coming from the studios of voice "butchers." Undertake a friendly argument with their teachers (?) and they will hide behind a futile, "Let her do the best she can now and she will do better later." Better let her spend her time on analyzing and interpreting something of which she can somewhere near sound the musical and emotional depths. After to this has been added others of a progressively deeper significance, perhaps in eight or ten years she may reach that technical and emotional plane where she can give something like a satisfying interpretation of these master inspirations. But, to the young singer and to the teacher, we would say, "Hands Off" the grand histrionic *scena* till the student has acquired that sureness of tone production, of vocal style, and of æsthetic soul life which will enable her to approach these sacred heights without risk of ruin to both her natural voice and that sense of respect that should be felt for her art.

However, after a certain amount of progress, it is advisable to go to a teacher who knows how to sing—just as you would to a piano or violin teacher who knows how to play. Vocal instruction from organists, accompanists, coaches and music who have never learned to sing, should be strictly avoided. Your vocal teacher, however, should be a musician.

If home study is begun without the assistance of a competent teacher, it should begin with single tones within easy range and continue with short scales and arpeggios. The mental attitude is of first importance. The approach should be firm and fearless. Exercises should be sung with the idea of spontaneous expression. A tone or series of tones, may be virile and expressive, even without the use of words.

The best quality of tone is produced when the fundamental tone is stronger than any of its overtones. The fundamental tone is the vibration of the cords in their entire length. Overtones are the vibration of the various segments of the cords. All vowelized tones are complex in character, containing both fundamentals and overtones. The use of a properly produced hum is best for establishing the fundamental tone, but it is of course found that it is better to practice vowel exercises first.

Begin by standing erect on both feet, stretching the body upward and expanding the torso gently all around—back, front and sides. You now have taken all the breath required to sing a phrase of ordinary length, without having thought of taking breath. During inspiration the mouth should be slightly open to avoid sniffing or the contraction by suction. A vacuum has been created in the lung cells, into which the rushes of its own weight, without being drawn in. This was explained in an article on correct breathing, in THE ETUDE, April, 1939.

We now are ready to begin practical vocal study, for which we will use Exercise 1, A and B.

### Ex. 1

Practice first with "ah," and, when it goes smoothly, then introduce the other vowels—aye, ee, oh, oo.

"Ah" is the only vowel you can use without trying to form it. This is the reason that the Italians call it the only natural vowel. This vowel can be sung by merely opening the mouth and making a tone without any thought as to vowel formation.

Now sing the hum, and break sharply from the hum into the vowels as indicated in our next exercise.

### Ex. 2

A good way to secure the correct

en the mouth wide and sing "ah." While singing the "ah" suddenly close the tone going and open the and you will find yourself singing

return to the "ah" singing the ex-smooth legato style. This will help the voice. As Mme. Rethberg says, me, every tone in the voice must ed." Yes, they must be plotted, then ed, and then sung with rhythmic while the words of the phrases

Exercise 3, do not try to lift the gen-point of tone as the pitch rises and

ing the exercises do not try to k the breath; and make no attempt the voice anywhere. Any attempt ither one of these things will be to cramp the natural action of the mechanism, from the start. Remem- the mechanism is set up instantly hout effort, and that the vocal sm lies wholly within the larynx. Mechanism springs into action when a to make a tone, or series of tones. called "The urge to sing." Avoid ude of mechanical fixation, remem- hat the vocal mechanism is invol- n its action. Pitch changes are in x and instantaneously respond to l urge.

er to avoid all unnecessary respon- n tone production, we should have l concept of how the vocal mechan- s when freed from interference. s, in speaking or singing words, is d of tone, noise, and mixed sounds. ng we should produce well defined owel sounds), disentangled from eding consonant, the following con- or both. These are necessarily used ound the words. In articulating ts, we must use mixed sounds; but s possible we eliminate the noise

voice then, is produced by a dual sm acting in close relationship but ultaneously. The art of fine tone on and clear diction requires the combination of vowel enunciation onantal articulation. This tone pro- mechanism, remember, is governed untary muscles responding only to to produce tone; but the speech

## Prima Donna's Pranks

ORLD DOES MOVE, and one proof of is the disappearance of the for- trific egotism and tyranny of the onna operatic singer.

related that Patti was outraged her name was not printed suf- larger than Nevada's on a bill- and to conciliate the injured song- he poster had to be reprinted. account of the dissatisfaction of his onna, Bizet wrote thirteen differ- of Carmen's first aria in act one celebrated grand opera of that She had refused to sing the first

again in illustration of the mad formerly perpetrated by artists their terrified managers or the ers of operas, it is related that one hen Mme. Gerster was billed to "Lucia," her manager suddenly re- word from her saying that she was to sing, claiming to have a sore

mechanism is governed by voluntary muscles (direct control). These two sets of muscles are capable of acting entirely in- dependently of each other. You can speak without producing tone, and you can pro- duce tone without the use of words. Speak- ing in a whisper can be distinctly under- stood, but there is no tone. The vocal muscles are then quiescent. In this case the false cords act as the vibrator.

These are relevant facts and should be thoroughly understood through practical application of such knowledge. The broad concepts of vocal expression may be re- served for more advanced study; but inter- pretation, in a limited sense, should occupy the mind, from the very beginning of study.

It is not so much what one sings as how he sings it.

This familiar phrase from a popular anthem

Ex. 4

Pre-pare ye the way of the Lord.

will serve to illustrate the necessary sepa- ration of consonantal speech and tone pro- duction in order to have clear diction and tone without interference.

Stand erect and expand to breathe, all around the midriff, back, front and sides. Do not take a hasty breath by suction. Then speak the syllables "pre" and "pare" with a slight trill of the "r" in "pre" and energetic speech at the front of the mouth, using the tip of the tongue and lips. Open the mouth freely and promptly on the syllable "pare," following a quick articula- tion of "p." Accent the "ye" strongly and again strongly the "way." Open the mouth freely on the word "of." Articulate "the Lord" with a snappy "the," and then climax the phrase by a quick articulation of "L" followed by a well sustained "o" in the word "Lord," and do not attempt the final "d" in "Lord" until the full value of "o" is in evidence. In short, do not prolong intro- ductory consonants nor anticipate final con- sonants. Remember the slogan, "Vowels long (proportionately) and consonants short."

Above all, let the singer not forget to be a well-rounded musician; one who has a good working knowledge of the piano, so that he can play his own accompaniments and study a song as a complete work of art; one who knows harmony, counter- point, and musical form, so that he can in- telligently estimate the worth of a composi- tion; one who knows musical history and biography till he has a definite idea of the various periods in the development of music and can recognize the characteristics of the various masters and their contribu- tions towards the present important place of music in the art life of the world.

## She Wants to Be An Opera Singer

Q. I am a girl, sixteen, and I have studied voice one and a half years. My teacher says I am advancing fast. I am determined to be an opera singer. How does one study to be an opera singer? I shall be out of High School in another year, and I want to be prepared for what I have to do next in the line of study.—H. B.

A. One of the most important things necessary to prepare for an operatic career is to have a good, well rounded education. Laurits Melchior, the famous Wagnerian tenor, pointed this out in an interview in THE ETUDE for July, 1937, and specified familiarity with languages, literature and the other arts as being absolutely essential. Besides these you must have a beautiful, strong, well trained voice, a pretty face, a fine stage presence, a healthy body, the ability to act, and a fine musical memory, in order to succeed. It takes years of hard work and self-denial, to learn all that must be learned; and only the most talented reach their goal—an operatic career. Therefore start learning all these things immediately.

## The Soprano with a Break Between Her Registers

Q.—I am eighteen years of age and have been studying two and a half years. A few days ago I auditioned for a choir and was told that there is a distinct break between my upper and lower registers. The director said that I should sing first alto, since this would smooth over the break, as it is caused by closing my throat upon certain tones; but my singing teacher does not agree. Will singing alto help or injure my voice?—J. K.

A.—You must first decide whether you are a soprano or an alto. You cannot be both, and it is not good for a soprano to sing alto for any length of time. The break in your voice is caused, not by closing the throat, but by using the vocal cords in two different ways upon the low and the higher tones. Your teacher should explain this to you thoroughly so that you understand it clearly and learn to sing the entire scale in one way. Perhaps the slow, quiet singing of down scales, something like this,

and seeing that there is absolutely no change in the register or the quality from the top to the bottom, may help. Transpose this by half-steps upward, only as far as it can be done with absolute ease. A bad habit, such as yours, is hard to cure.

## VOICE QUESTIONS Answered

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

### A Strained Voice

Q. This letter is written not only on behalf of myself but also of vocal students who, through improper training and delving into the technic or anatomy of voice have become hopeless and disgusted.

I have a pleasant quality of voice, a good ear and a tremendous volume. I possess marvelous health and more than average intelligence. I had not much money and I worked hard to pay for my studies. After two years I began to feel a terrific strain, when singing. I complained to my teacher regarding lack of breath control and strained upper register, but he told me to be patient. Then I developed a tremolo and I began to go flat upon the high tones. I could not even sing a few songs without fatigue and strain. On the high tones my tongue would go up and my palate come down closing my throat. Even my breathing was faulty—my ribs contracting when taking a breath and expanding when exhaling, which to my knowledge is wrong.

I was taught to sing exercises at furious speed and to scream at the top of my voice. However, I went to a vocal teacher recently who said I had a lovely but badly trained voice. I have been reading books upon singing, and am convinced regarding my faults and their causes. Please reveal whether there are any decent vocal teachers who do not charge fabulous prices for tuition?—V. B.

A. For obvious reasons it is evident that the editor of Voice Questions cannot criticize the work of any singing teacher nor recommend personally another one. There are many excellent vocal teachers in and about every great city in America, quite able to lead you back to the proper way of singing, provided you have not strained your vocal cords and throat muscles. Try one. If he does not work sensibly for beautiful, unstrained tone, drop him like a hot brick, for another. It is impossible to diagnose exactly what has been wrong with your singing, without hearing you. From your description, however, I would say that you have been forcing your voice, endeavoring to do with mere strength what

you should learn to do with skill, patience, and intelligence. Freedom and comfort during the emission of a tone are all important; and no good and attractive tone is possible without them.

The books of which you speak, which treat of the psychological aspect of singing, are excellent. It might be well for you to study them and to try to understand them practically. Most of all you need to find a teacher who will lead you back to a simple, natural, easy production of voice, instead of one which is full of effort and stiffness.

### How to Sing a Passage from Handel's "L'Allegro"

Q.—How should one sing the passage, "Laughter holding both his sides" from Handel's "L'Allegro"? It is marked staccato and written ho(ld). Should it be sung in imitation of laughter?—L. M.

A.—The eighth notes are very staccato, except the eighth to the word "laughter" in measure 1, and to the words "holding both his sides" in the last measure.

### The Great Scale

Q. What is the "Great Scale"?—J. M.  
A. In her book, "How to Sing," Lilli Mann recommends an exercise which she calls the Great Scale. It is as follows. Sing slowly.

It may be sung on various vowels. It is a fine exercise for developing smoothness control of the voice, but it is strenuous and should not be attempted if the voice is fairly well developed.

### Colds, Infected Tonsils

Q. 1. I am a girl fourteen years of age, with a vocal range from A-flat below middle C to above high C; and my ambition is to coloratura and to sing in the Metropolitan Opera Company. What type of voice have I?

2. I am troubled with colds that I seem have all the time. The doctor says my tone are in a bad way. Would it change my voice especially my high tones, to have the tonsils removed? My voice seems harsh and when I practice, when I sing before an audience it becomes clear on the lower tones trembles above A-flat the first ledger line at the staff. Will this continue?

3. Please give the names of some classical and popular songs. Are Gounod's and Schubert's Ave Maria too hard for me?—M.D.C.

A. 1. You are very young and as yet your voice is not entirely developed, therefore proceed very carefully and do not strain your voice by singing too loud, too high or too long at a time. Your range is good; but without personally hearing you, it is impossible for me to classify your voice.

2. Your many colds suggest a chronic infection of the tonsils, especially as your doctor says they should be removed. This infection doubtless spreads into the throat and into the larynx itself, which would account for your tones being harsh and "wharpy." When you are before an audience you probably beforehand and your voice is better. Silectomy, if it is skillfully performed, will not hurt your voice but will improve it and your health also.

3. Both Gounod's and Schubert's Ave Maria seem rather difficult for you at the present time. Content yourself with simpler songs; your tonsil operation is over; and, then, under the advice of a good teacher, perhaps you may undertake more difficult ones.

# THE ACCORDION DEPARTMENT

## The Accordion Combined With Other Instruments

By PIETRO DEIRO

As told to Elvera Collins

FOURTEEN YEAR OLD accordionist recently was heard to remark that he wished he could hurry and up so that he could be an orchestra. His teacher hastily explained that it was not necessary for him to wait, as he could begin immediately and form his own orchestra. He could then be growing up as well as physically.

We listen to interesting radio interviews with prominent orchestra leaders and we find that most of them began their careers when quite young, by first picking up with one other player, then a trio or quartette, and by finally forming their own small band or orchestra. The nature of this sort provides excellent experience; and knowledge can be gained by which could never be learned otherwise. There is a distinct advantage in starting young, because tolerance is shown a full group of musicians, and criticisms demands upon them are not so great as when they are accorded more advanced musicians. A young player has an opportunity to grow into the orchestral field and to comprehend its requirements, and this serves as an incentive for him to study.

Many opportunities to play will present themselves; for every community, large or small, is interested in a group of ambitious young musicians.

The accordion lends itself particularly as a primary instrument for the formation of a small group of players. The depth of its tone provides a sound background for all other instruments. It can be combined with string instruments in the playing of concert music or with instruments for popular dance music. Furthermore, being a portable instrument, it will be in demand many times when a piano is not available.

Coming of the fall season always brings new ambitions; and it is a fine time for young folks to start new ventures. At home work assignments are not so great at the beginning of the year, so extra time can be devoted to music. Some assistance will be required in the selection of music and general supervision; but we are sure that music teachers will cheerfully cooperate with any of their students who are trying to form a small orchestra.

### The Orchestra in Formation

OUR DISCUSSIONS feature the accordion, and take as an example a young accordionist of about fourteen years of age who assumes that he wishes to form his own orchestra. We believe that he should be capable of playing third grade accordion and should have some knowledge of music, at least of the formation of an orchestra. The instrumentation of his group depends somewhat upon his musical tastes and who may be interested in the venture. Perhaps he may have a friend who can play the violin. This would provide excellent practice, because hitherto the accordionist may have played only solos; so he will be his opportunity to learn to play in an ensemble while the violin plays the melody and the accordion plays the obbligato. In such cases the accordionist should arrange for a octave coupler of his right hand key-

board so that the lower reed is out and only the higher reed plays, as this produces the best effect with a violin obbligato.

It is suggested that these two instruments rehearse together for a short time and become accustomed to each other's playing before adding other instruments. The guitar combines nicely with these instruments, and other stringed instruments could be the mandolin, viola, violoncello and string bass.

If our young leader finds that his musical friends specialize on brass instruments, he could begin rehearsing with a saxophone and later add a clarinet, another saxophone, trombone, cornet and drums.

Incidentally we might say that the above mention of various instruments will answer the many questions which are directed to this column about what instrumentation to combine with an accordion. It will also answer questions of parents who have one child playing the accordion and wish to know what instrument would be recommended for a second child to study.

### The One Instrument Ensemble

PERHAPS OUR YOUNG ACCORDIONIST might decide that he would like to have an accordion orchestra. The new modern accordions with multiple register switches make it possible to simulate the tones of various instruments so that many novel effects can be worked out.

The question of musical arrangements for such groups is an easy one because recently the leading accordion music publishers have concentrated their efforts on fine four-part arrangements of well known standard selections. Favorite waltzes, marches, and all other rhythms, are now available in quartet form. Most of these are arranged so that the first part is a solo, complete in itself. This would be played by the accordionist leader. Adding the second part forms a duet, while the addition of the third and fourth parts forms a trio and quartet respectively. The advantage of such arrangements is that it permits the combining of players of different ability. The third and fourth parts may be taken by players who are not so advanced as the others. Of course, the group can be enlarged to have as many players as are desired and the parts can be assigned so they will be properly balanced.

Group playing of this kind forms a valuable part of musical training, as many students get along very well so long as they play a solo or with another instrument playing the same part. As soon as they hear a counter melody they become confused. This probably sounds peculiar to advanced students, as we are all prone to forget our early difficulties.

Large accordion bands help to train students, but there is often an inclination on the part of players to be careless and to think their mistakes do not matter as they will be covered up by other players. A small ensemble makes it imperative that each member play his part perfectly.

Another argument in favor of youthful orchestras is that the members feel that they are getting together for recreation and that they are rehearsing, which seems different from merely practicing at home. They receive excellent musical training

(Continued on Page 688)

*Light as a fiddle*

They say of this  
**New Soprani**  
**AMPLIPHONIC**  
**MIDGET GRAND**

It's simply irresistible, this new light Soprani Ampliphonic "Midget Grand"! So tiny, by contrast with the big concert accordions. Yet it has 34 treble and 90 bass keys, giving complete range, the most beautiful tone, and positively amazing volume!

This new Soprani Ampliphonic "Midget Grand", is actually smaller, and much lighter even than little 12 bass accordions. This reduction in size and weight, made possible by Soprani's patented Ampliphonic reed block, triples the fun and the ease of playing for recreation, enjoyment, profit. Ideal for boys and girls, men and women who play for pleasure. See, try this new Soprani "Midget Grand" at your dealer's, or write direct for illustrated description and complete details. No obligation. Send coupon now.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

OF ALL MUSICAL ORGANIZATIONS, there is none in which so much of personal and musical pleasure can be injected as in the church choir. Of course the ideal would be to have every one associated with such an organization to contribute equally; but choir members have no well developed wings concealed under their garments; and, till the good day of some such conditions, much of the lubrication of the choir machinery will fall to the lot of the choirmaster, director, or conductor, according to the dignity with which the church Music Committee enshrouds him.

For the present we shall leave the highly desirable and essential social activities of the group in the capable hands of the chairman and committee...responsible for these pleasures and shall give our full attention to some musical problems involved in the successful maintenance of such a group. And again it is on the conductor that the chief burden will rest.

To be successful, the choir director must, first of all, have an instinct for vocal effects in ensemble. That is, he must be able to hear the voices of each part, as an entity doing their phrases accurately; but apart from this and more essential is the ability to judge the effect of all these in unity. Though, as a rule, there are but four parts to require attention, still in each of these parts will be a variety of individual voices to provide an endless source of interest, not to mention the perplexing problems.

Now in all well written vocal compositions the general effect will be pleasing. There will be dissonances, for the same musical reason as that to intrigue our appetites we add condiments to our food. But, whatever the musical art injected into the creation of a vocal work, the skillful composer will conceive things of beauty in such a vocal manner that "art conceals art" and the voice finds, in a well written song, a natural vehicle for display. At the same time the music is worthy the effort and will be a pleasure to the ear of the listener.

## A Chief Source of Interest

IN THE WELL WRITTEN string quartet the composer manages to give each instrument something to say, and that in an interesting manner. This type of writing should be more frequently found in the church anthem. Not contrapuntal puzzles and fugal intricacies entirely beyond the average choir, but things in which each voice part is given something interesting to do, with an occasional chance at the leading theme.

Good part writing centers, for the most part, about that series of notes where each group of voices will sound at its best. Of all the composers, Handel seems to have had the most delicate feeling for the natural qualifications of the different voices. Especially did he understand how to favor and to bring out the best in the upper registers of the male voice. The brilliant, bell-like, and frequently upward soaring passages so often heard in his works are largely due to his judicious employment of the higher notes of the bass, tenor and soprano. His alto parts seem a bit overshadowed at times, perhaps due to the fact that the feminine contralto was but beginning to be used in choral works of his day, so that he felt hampered by the limitations of the boy alto. Some of his late

works surely glorify the contralto voice. Master contrapuntist that he was, his themes are always grateful to the voice. Though his choral writing never has been surpassed, still, with a bit of patience and enthusiasm, many of his finest flights are not beyond the ability of the competent church choir; and, once really tasted, they will remain favorites.

## Wherein Lies Appeal

ANTHEMS CONTAINING AWKWARD INTERVALS and unvocal progressions are almost sure to be cordially out of favor with choir singers, and are a never ending source of annoyance and anxiety to the leader. Those with a fair amount of modulation are advisable, because of their more continued freshness of interest. An occasional one with a transition or "drop" to a key of second relationship will be relished, if this has been skillfully handled by the composer. An unpleasantly obvious and uniform tonality throughout depresses and irritates.

A certain amount of singing in unison is to be encouraged. It is both effective and grateful for a chorus. The best results may be expected when the middle and upper tones predominate. Alternate passages of unison and harmony may offer splendid contrasts. A choral passage leading into a sudden robust unison theme in the upper middle register of the voices can be a thrilling climax. In such passages the director must be alert that some low bass does not sing an octave below the rest, destroying the ensemble and presenting an irritating growl to the listener's ear.

Singing without accompaniment is also an important feature of choir work. At first but a few measures will be sufficient; and, if well chosen where harmonies are very clear, they will be appreciated by the congregation. Attacks and releases must be most scrupulously rehearsed. In fact, such a passage should be so nearly memorized that the singers can give at least seventy-five percent of their attention to the conductor; just so that they are able to locate

the proper notes when needed for the to follow.

Troublesome phrases must be rehearsed separately. This is not always popular with members, but is absolutely essential for a finished performance. The parts not being encouraged to feel that a listener is on the way to success; or may be asked to sing their own part silently while a difficult place in another part is being mastered. In a particularly intricate passage, each part should be studied separately, whilst the others do the same.

The alert choir leader soon learns that the anthem which sounds attractive, when played on the piano or organ, may be ineffective when done by voices. The difference in timbre is too great. Anticipate large effects may be missing. This is why the cultivation of the inner ear for vocal effects becomes necessary. To be able to judge accurately, it is necessary that the leader remembers the particular vocal quality of each set of voices and to hear this quality as the parts are read.

This may be well illustrated by comparing two different harmonic arrangements of some familiar hymn tune. It is not infrequently found that in one hymn book the note or two, or a phrase, may be given to the tenors, as in Example 1a,

which in another setting is transferred to the alto, as in Example 1b. Of course playing the hymn through, the two settings will sound identical; but, when sung, will make a difference! The male voice begins, at Middle C, to partake of a brilliant trumpetlike quality; whereas the female voice is here entering its lower register and becomes more mellow than penetrating. The one may be more or less thrilling while the other is apt to be at least soothing, if not dull. The leader must keep these qualities in mind when reading new settings, or be prepared for some gentle surprises.

A quartet may add distinctly to the interest of a service; and often a familiar hymn or gospel song may be very effective. If used with four chosen voices in the usual plane, then there is but the invitation to receive attention. But the men's quartet and the ladies' quartet may each in its own field both interesting and decidedly effective. To make a suitable arrangement of a hymn or gospel song for either of these combinations, calls for no little skill on the part of the leader. The parts must be carefully distributed so that the ear is to be pleased.

One of the most common faults, especially in arrangements for male voices is "muddiness," caused by too much of the harmony being assigned to the lower register of the voices, as in this arrangement of *Wonderful Peace*.

## HE BUILT IT HIMSELF

The gentleman standing beside the organ is Dr. Oatman, optical specialist of Dubuque, Iowa. From his boyhood he always wanted to build a pipe organ, and here it is in his own home. It took him years to build and organists declare that it is an excellent instrument.

home, studio, church

So many naturally low voices singing almost entirely in their lower compass produce a grumbling effect not suggestive of the sanctuary. With a quartet of ladies' voices, their lighter nature will be quite agreeable to the ear; in fact, if kept a bit subdued, the general effect may be quite ethereal.

Ex. 3

That which, in close harmony, is undesirable for male voices, may be excellent in effect if the parts are spread out, as here presented.

Ex. 4

Another weakness, too often found, is the uninteresting part provided for the first bass. If possible, each voice should be provided with at least "snatches of tune" as a concession to holding the interest of its singer, as here exhibited.

Ex. 5

Then arrangements which depart from four part harmonies have a special appeal. Duet or solo bits, if for but a couple of measures, add immensely to interest for both singers and audience.

Ex. 6

An arrangement for solo with quartet refrain, or with a solo for the first bass with the other three voices humming their parts as an accompaniment (and no organ) will bring laurels for the brows of the quartet members and the director.

The ladies' quartet or chorus has many possibilities. Unaccompanied and in a well balanced *pianissimo*, it may be ravishing to the ear.

Ensemble work of the mixed type demands a special watchfulness. It is so easy for the tenor to overshadow the alto. The bass, too, except on the deeper notes, will need to exercise self-restraint. When any one voice has a prominent part, the others, of course, should furnish a balanced but comparatively subdued accompaniment. A beautiful quartet of this type, heard all too seldom, is the *O Come, Every One That Thirsteth*, from Mendelssohn's "Elijah." What has been already mentioned as a freely moving bass is here wrought by a master hand.

The choir leader must know, and know well, just that of which the human voice is capable. He must give consideration to its limitations; for a tone forced or badly produced cannot by any possibility blend with others. He should be familiar with the best examples of part writing. Just as organs differ, so no two choirs are ever quite identical; and the wise director will deal with his group neither above nor beneath its powers. A good choice of choir music is decided not simply by what may be sung with passable correctness but also by the text and sentiment which will be mentally grasped as it appeals to each singer's intelligence and sympathy.

*The Hammond Organ imparts glorious new richness and beauty to the music you love*

Schubert's Serenade, Handel's Largo, Ave Maria, The Lost Chord . . . now you can play the old favorites on your own complete organ which fits modest purses and living rooms

THOUSANDS OF PEOPLE are already finding a wholly new interest in life . . . playing a remarkable instrument which adds *new depth, new interest, new variety* to familiar music. It's the famous Hammond Organ, which puts at your fingertips a myriad of glorious tones.

Only a few short years ago, music lovers in moderate circumstances seldom even dreamed of having a beautiful complete organ, right in their own homes. Today, thanks to the Hammond, this joy is well within your reach. The Hammond takes little space, its price is almost incredibly low . . . yet its lovely tones have been praised by eminent musicians: Eugene Ormandy, Percy Grainger, Koussevitsky, Deems Taylor, and many others.

See and hear the Hammond at your nearest dealer's. He will be delighted to have his staff organist play for you. He'll be glad, too, to explain how easily you could buy the Hammond out of income. Or, for full information, write Hammond Instrument Co., 2929 N. Western Avenue, Chicago. In Canada, address Northern Electric Co., Ltd., Montreal.

Using no bulky pipes or reeds, the Hammond fits in a four-foot square, is ready to play when connected to an ordinary electric outlet. Anyone with a piano background finds it easy to play right from the start.

THE HAMMOND NOVACHORD is the world's most fascinating new musical instrument. Played like a piano, it simulates the tones of strings, wind instruments and offers many entirely new tones of its own. Don't fail to hear it.

**The HAMMOND ORGAN** \$1250

OVER 2500 CHURCHES USE THE HAMMOND—IT IS A FITTING  
MEMORIAL GIFT FOR YOUR CHURCH

## Singing Them In

By MARY B. ROUNDS

YOUNG PEOPLE invariably like to sing. They also enjoy socials and parties. The formation of a young peoples' choir in any church assures a thoroughly enjoyable organization and at the same time fills a very real church need in this modern day and age.

It is also true that a choir loft full of enthusiastic young people, lifting their voices in the great hymns of the church, acts as an incentive to the older portion of the congregation to see that the pews are correspondingly well filled.

A young peoples' choir should function much the same as any social organization, with regular meetings, officers, dues, and, of course, rehearsals. A good plan is to have a short business meeting with roll call, secretary's and treasurer's reports, penny collection, discussion period (discussion of the sermon of the previous Sunday with an occasional prize to the most worthy "discussionist"), rehearsal, and recreation followed by refreshments.

Real talent may be discovered in such a group, and the developing of this talent

is a joy to any choir master or organist. Occasionally soloists or a senior choir may be invited to sing. If soloists cannot be induced to sing gratis, the young peoples' choir should experience a real sense of pride in being able to finance these treats with funds derived from entertainments, sales, suppers, and other events, which will prove profitable as well as enjoyable.

There undoubtedly will be some members who are not, and never can be, singers. Still they wish to belong, and they should be welcomed at all meetings and social affairs. These nonsingers may pass the collection plates on Sunday mornings; they may act as ushers; they may take charge of the singing books and post the hymn numbers, and they may take an active part in the business meetings and discussions.

It is surprising what an asset a well organized group of young people can be, and the very fact that they are attending church regularly and really taking in the sermons each Sunday morning will be a genuine cause for rejoicing among the membership of any church group.

### Preserving Priceless Folk Music

Countless individuals in numerous walks of life, have contributed to our treasury of songs and ballads. It is richer than that of any other country. Too much of it has remained scattered or unrecorded. The time has come when preservation of this valuable old material is threatened by the spread of popular music of the hour. . . . The music division of the Library of Congress is vitally interested in collecting these old verses and tunes. The collecting must be done in a scholarly manner and the collection should be made freely accessible to scholars. There are now in print a number of American folk song collections, some of them specializing in certain fields, others of a general nature. None of them is exhaustive. Although there are some that are excellent in their way, a good many are gathered at random and without discrimination."—Carl Engel.

## ORGAN AND CHOIR QUESTIONS

### Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Will you discuss the use of the tremulant in church music, and whether or not it is correct when accompanying vocal solos and anthems?—J. D. M.

A. The use or omission of the tremulant in accompanying depends on the passage being played and whether its use is effective. There are passages in both vocal solos and anthems where the use of a moderate tremulant in accompanying might be effective. The very marked tremolo present in some organs probably would prove objectionable.

Q. In the stop list enclosed would it be more advantageous to substitute a Voix Celestis for a set of Chimes on the Great? What would be the approximate cost of such an organ?—W. C. H.

A. The substitution of a Voix Celestis for a set of Chimes is a matter of preference, though we should consider the Voix Celestis more useful—included in the Swell Organ, of course. The price of an instrument depends on the builder selected, and we suggest your asking various builders for such information.

Q. I am a boy, twelve years of age and very much interested in the organ. I have had three and one-half years of piano and four years in band work. Do you think this enough training preliminary to starting organ, if I keep up my piano work? I have a very fine teacher who charges me \$1.50 per lesson for one hour. Do you think this is too much? I am enclosing list of stops included on the organ on which I take my lessons. Are any stops included by which I might obtain a trumpet effect?—S. H. S.

A. If you have a fluent piano technic and are large enough physically for organ requirements, you might start organ study, provided you keep up your piano work. We do not consider the price of your lessons too high. No stops, which will give a real Trumpet effect, are included in the specification you enclose. If your Oboe is "loud," you might try using it with the swell open, but it probably will not produce the real Trumpet stop effect.

Q. What is a Diaphone? Who publishes and what is the cost of "How to build a Chamber Organ" by Milne? Do you know of any organ companies near Fort Madison, Iowa? Is there a builder of Reed Organs in Quincy, Illinois? If you had one thousand dollars to spend for an organ, would you buy a duplicated, unified home organ, or a three manual and pedal, motor blown, reed organ? How much do you think that a rank of pipes (85) should be worth, if they were taken from a tracker organ, say seventy years old? Did these older organs ever have a rank that extended to 97 pipes? If I build a full keyboard I will have to have a 97 range so as to have a 16', 8', 4' and 2' stop from one rank. How much would a Vox Humana of the same age and type be worth? An Oboe? A Trumpet? Would an organ of enclosed specifications be considered a church or theater organ? I have been informed that there is not much difference except that a theater organ has more extra and novel stops. Is that so? The Echo organ is played from the Swell manual. Is this correct? Should the instrument be a three manual? Is there any set method in which the stops are placed on the console? If there is, please give me the general idea. Should every organ, if possible, have a Vox Humana? An Oboe? In an organ of twenty speaking stops is it good to have two Open Diapasons on the Great, one on the Swell, and one on the Pedal, also a Stopped Diapason on the Swell? I have not found a way to make the couplers non-reversible—that is, when the Swell to Great is "on" both organs play the same stops.—A. F. R. L.

A. For a description of the Diaphone we quote from "Organ Stops" by Audsley. "The name of a stop invented by Hope-Jones. It is of peculiar construction. The tone of the Diaphone pipe is created by pulses or vibrations generated in its resonator by the rapid motions of a pallet actuated by a compressed air (pipe wind) that enters the boot, which contains the mechanical portion of the pipe. The pallet simply closes and opens the lower orifice of the resonator so many times in a second, according to the size and pitch of the pipe, acting much in the same manner as the striking tongue in an ordinary lingual pipe" (for more extended description see book mentioned). "How to build a Chamber Organ" by Milne can be secured through the Publishers of THE ETUDE for \$3.00. There are several organ builders in Illinois, Kansas and Kentucky. We have no record of any reed organ builder in the town you mention, though there may be such firms in that vicinity. The policy of THE ETUDE does not permit our expressing a preference for any particular type of instrument. We doubt whether 85 or 97 note ranks of pipes were used, at least to any extent,

seventy years ago in tracker organs, and use in a tracker organ would not affect cost of the pipes, which would be dependent on the condition of the pipes, tone quality, metal composition, and so forth. We can quote the price of the pipes you mention, you might ascertain such cost from organ builders or organ pipe makers. You do state whether the specification you enclose is that of a unit or "straight" organ. As stated, it might make a fairly satisfactory church organ, though no Octave 4' is included. Theater organs frequently include stops that are not included in the usual church organ. It would, of course, be an advantage to have a third manual to control the 16' Organ. The manual on which it would be playable on a two manual instrument is a matter of preference on the part of an individual. Console arrangements vary with different builders. The including of a Vox Humana, Oboe would also be subject to individual preference, but the classical organ would include the Vox Humana in preference to stops ordinarily required for that type of instrument. One Open Diapason on the Great should be sufficient in an organ of two stops. The Swell Diapason might be of Violin Diapason type. A Pedal Open Diapason should be included. A Stopped Flute 8' of some sort is usually included in the 8' Organ. We notice in your specification both Gedekt and Stopped Diapason 8' in the 8' Organ. As these stops are practically the same we would not advise both being included, would omit one and thus be able to add another individual stop. Couplers are not reversible in the manner you mention.

Q. I am somewhat puzzled by the wavy lines in the second measure and also in the measures of the organ piece Ghost Pipe. Licurace-Cuto. I will appreciate it if you will explain how these two measures should be performed.—G. W.

A. The horizontal wavy lines, to which refer, are intended to indicate trills, and passages should be performed accordingly.

Q. I am Minister of Music in a church that has started a fund for a new organ. They ask my advice on matters, and I would appreciate your advice on these questions. Will kindly send me a list of builders in a church with —? The church will spend between eight and ten thousand dollars. What action do you consider best? Would you recommend three manuals? What type of console would you suggest? I have heard that tone of a — is unsurpassed, but they do not give you as much for the same amount of money. Is it better, in your judgment, to buy from a builder who will give you more for your money, or from one who gives more attention to quality? The console will probably be renovated and I have been thinking of a raised platform. Do think this is advisable? As I play movements from the symphonies, I would like to have the following stops: French Horn, Clarinet, Keraulophon and Tibia. Are the specifications supplied by the builders the best for balance?—K.

A. As you will see by the note at the head of this department, the policy of THE ETUDE will not permit us to make recommendations of any specific instrument or type of action. At the price you mention, we suggest a two manual instrument, and that you communicate with various builders and base your decision on the firm you think best equipped to meet your needs. The type of console is a matter of preference, though we feel that the traditional is to a return to the draw-knob style. As we do not know conditions, we cannot intelligently advise you as to the desirability of a raised platform. If there are certain stops that you wish included in the specification, you should inform the builders to whom you wish to refer for prices and specifications. It does not necessarily follow that specifications supplied by a builder insure a satisfactory balance of tone. Different ideas on the part of the builder influence the final tone regulation, and so forth, may influence the results.

Q. I have played the piano and the organ for several years, and can play hymns and chorales without mistakes. I want to learn to play brilliant pieces at the proper tempo. I can play them very slowly. Whenever I try to speed up I stumble. What kind of exercises would you recommend? I have several Preludes and Fugues from the "Well-Tempered Clavier" every day, but also Largo or Moderato.—D. K.

A. Our advice is to "persevere" and play the numbers only as rapidly as you can play them correctly. Increasing the speed as proficiency increases. Practice separately passages where you "stumble," and use phrasing exercises for fluency of finger technic.

# BANDS AND ORCHESTRAS

## The High School Instrumental Program

(Continued from Page 639)

better players of the Symphony. Like the Pep Band it fills special requirements and functions on special occasions. Rehearsals are held once a week, either before or after school.

### A Select Group

FROM BOTH BAND AND ORCHESTRA comes the Solo and Ensemble Society, and, rather than being loose knit, it, too, can be carefully organized. Rehearsals are at the convenience of all concerned. In previous discussions in this Department we have gone into the matter of student leadership, and it is with this group, as well as with the sectional rehearsals that the values of effective student leadership are brought to the fore.

The Solo and Ensemble Society is composed of those students interested in the study and performance of solo and ensemble compositions. The scope of their activities may be set by the director, but more often than not the enthusiasm and interest of the participants set the pace. In many high schools this rehearsal period is used for the preparation of and for the spring festival competitions.

At first sight the multiplicity of groups and organizations mentioned herein appears overwhelming. One wonders when time can be found to keep them active, for much has to be done before and after the school day, with the special units. The full ensembles meet, of course, during the regular school hours. The intricacies of such a program seem greater, and are so, in the small high school where instrumental music has not as yet been given its due recognition by the administration. The problems of scheduling, academic conflicts, inadequate time, and short handed teaching staffs certainly will not allow for such a complete plan of organization in the high school as herewith set forth. Yet it might be a goal to work for—a rational plan whose ultimate achievement will more than compensate for the effort involved. As has been pointed out, the plan might need altering to suit the size and needs of a community.

The task, then, of working out a fine plan falls upon both the administration and the instrumental director. In many instances the administration is sympathetic to the problems facing the director, and anxious to aid in their solution. Some have met the situation by devising a rehearsal schedule which occurs on the hours at which the academic classes are having study periods, or during an activity period. Others have "staggered" rehearsals in such a manner that they are possible with a minimum of conflicts. The extent of coöperation is naturally dependent upon the attitude and interest of both administrator and director toward the purposes of their work. The importance of instrumental education in the scheme of general education is being more and more recognized and provided for; and it is often up to the ingenious and hard working director to plan the instrumental set-up so that the results will cause every member of the community to take notice and finally to lend his support.

Usually it will be found that in those communities where the grade and junior high school instrumental program operates efficiently, the high school instrumental program, too, functions very smoothly. Such a set-up takes care of those students who are desirous of continuing with music seriously, as well as those who receive real benefits from participating in the instrumental program. Due to concentration of population

in metropolitan areas, the complete plan is more often in operation there—especially since so many of the students are studying with nearby conservatory teachers. But modern rapid transportation and the lessening of isolation of rural communities are changing the picture in the small inter-urban community, and in many consolidated schools such a plan has been put into effect with excellent results.

### Engagements and Functions

WHILE EXPLOITATION of the various musical units is undesirable, they should be given every opportunity to appear in public. Rehearsals have more meaning and are more effective if each group is assured that the material being rehearsed is certain to be performed publicly.

The Symphony Orchestra should play not less than two major concerts per year, one each semester, and in addition present at least two matinee performances before the student body at junior high and senior high assembly programs, and at the Spring Festival. Broadcasts and accompaniment of the school opera are also advisable if time permits and the organization is capable.

The "Little Symphony" appears at plays, assemblies, banquets, and frequently at formal affairs of a civic nature, where use of the complete symphony would be cumbersome and inappropriate. The Prep Orchestra can be used to augment the Symphony Orchestra in the performance of some simple compositions at the Spring Festival.

Like the Symphony Orchestra, the Concert Band should present at least two formal concerts. Where the arrangement is suitable to the occasion, a combined band and orchestra program would be particularly effective and would promote the welfare of the entire instrumental program. The Cadet Band, upon occasion, can augment the Concert Band for numbers not beyond its capacities.

In addition to these programs, a series of twilight (or vesper) Sunday concerts is advisable. These concerts, if scheduled to begin at 4.30 p.m. and kept to within an hour's length, provide excellent opportunities for the performance of music of a religious as well as a secular nature, that would otherwise probably never be programmed. These vesper concerts, though they last through the winter months, can become a vital force in establishing community spirit and coöperation between church and school. This is particularly true in the small community, where mutual understanding and effort would be of lasting good influence.

In connection with these events, the various church choirs and soloists can be used to good advantage at appropriate times. Another workable idea is the alternation of concerts by band and orchestra, thus reducing the rehearsal load of each as well as giving variety and interest to the series of concerts and appearances by the different instrumental organizations.

### Student Officers and Assistants

THE HIGH SCHOOL INSTRUMENTAL program, as we have discussed it, would be hopelessly ineffective if it were to depend on the efforts and activity of the director alone. Too often an inadequate staff has meant the difference between a progressive and a backward unit. The selection of a staff of officers and assistants serves a double purpose. Not only does the director receive material aid in the functioning of

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## The Vital Elements of Virtuosity

By GAYLORD YOST

THERE ARE THREE major principles which constitute the "secret" of great attainment in the executive field of music, and upon which perhaps every outstanding virtuoso has, consciously or unconsciously, based his mechanical equipment. There can be no high order of technical achievement without them.

These principles are:

- The development of the greatest possible strength of the weaker muscles used in playing.*
- Absolute freedom of the movement of the fingers, hands, arms and body (erroneously called relaxation.)*
- Extremely slow practice.*

There can be little freedom of movement of the fingers unless the finger muscles have attained many times more strength than is actually required in playing. This great margin of strength paves the way for the necessary freedom of movement and endurance. Speed also is absolutely dependent upon this strength, not to mention the very important quality of clarity of articulation. Methods of attaining this great strength vary with different schools of teaching but those schools, which fail to develop the maximum strength in their students, likewise fail in bringing them to complete realization of their talent. Some schools of violin playing, it is true, have based the development of the left hand upon the principles enumerated and, in consequence, the representatives of these schools have a brilliant left hand technic.

The principle of very slow practice is a truism that is patent to every music student who has had a few years of study, but the immense value of this principle, in its deepest psychological and physiological aspects, is so universally forgotten by the more advanced music students of to-day that it must be constantly emphasized. The conscientious teacher, in this age of mad speed, finds his most difficult task to be that of securing complete coöperation from students in the matter of this discipline.

In the field of bowing, some schools have failed in applying the first and most important principle in this art. From the period of Tartini on down to the present day, there has been no universally accepted theory of bow technic and tone production.

One school has taught that the hand should have the greatest possible latitude and freedom of movement at the wrist joint; while others have taught that the fingers must move and have great flexibility in change of bow stroke. Some have taught that the wrist and elbow should be held in a high position and other teachers have maintained that these same joints should be held low. Also in the manner of gripping the bow there has been a wide divergence of procedure. One school insisting that the bow should be held lightly with the fingers while another taught the direct opposite: that it should be held firmly—with what degree of firmness remained

an unknown quantity. But all schools have unanimously agreed that bowing is the most difficult technic in string instrument playing; and for three centuries, few of the masters or players succeeded in analyzing and elucidating a definite and infallible physical basis of tone production and bow mastery. Thus everyone worked more or less in the dark, groping for light but being entirely imprisoned by a great wall of ignorance.

True, occasionally, some player would emerge from the darkness and dazzle with his brilliant bowing and opulent tone, but rarely could he impart this magic technic to others. In fact it is to be seriously doubted if he actually knew how it had been acquired. Hence, the solution of the bowing problem has been, with many, a hit-and-miss method of procedure with no definitely logical physical basis. Therefore, it is easily understood why the universal shortcoming of string instrument players, both great and small, has been tone and bow mastery.

### An Uncertain Path

THE AUTHOR STUDIED in Berlin with a pupil of Joseph Joachim and the posture taught there in holding the bow is open to serious question. For many years I then followed the Franco-Belgian school and finally the school founded by the late Leopold Auer, who, although a pupil of Joachim, departed considerably from his master's teaching. However, nowhere in the literature available on the subject have we found any definite and infallible method of tone production. Not one of my teachers, or the many famous violinists with whom I have come in contact, has shed any light, beyond abstruse generalities, upon the physical basis of bowing. It is true that one is cautioned to keep the upper and lower arm in a light and unconstrained condition; also he is told to practice the bow strokes with

attention to the production of a pure and singing tone, without excessive pressure. But no one tells how to do this. Great stress has been given to the so-called "wrist movement" especially stressed by Joachim, who was a great artist but a poor teacher, as is evidenced by such widespread misunderstanding among his pupils.

### The Way Cleared

TO DR. SERGE BARJANSKY must go all the credit for making a most important and valuable discovery in string instrument playing. He has revealed this discovery in a brilliant monograph: "The Physical Basis of Tone Production," for string instrument players. Dr. Barjansky was one of Professor Julius Klengel's most gifted pupils and received his degree in science from Odessa University. He has had a long and successful career as a concert violoncellist. Having this scientific background together with his artistic urge for perfection inspired him to solve the right arm problem once and for all. There are several important phases of the Barjansky technic which, if followed for a few months, will develop not only a large, singing tone of entrancing quality but also the control and complete mastery of all bowing strokes, including the much disputed up and down bow *staccato*.

It was Steinhausen who disclosed the fallacy of the excessive wrist movement in bowing. To all enlightened players of to-day, it is recognized as an error; and for some time now, its use in changing the bow stroke at the point has been abandoned. However, many teachers still err in cultivating the finger and wrist stroke at the frog of the bow. The moment the wrist position is changed laterally, in relation to the lower arm, the fingers must also be changed in their position relative to their grip on the bow; and this means that the

bow grip is momentarily lost and hence control of the tone. The assumption that the finger-wrist stroke at the frog of the bow makes the change of stroke in is easily demonstrated as erroneous.

In changing the bow stroke at the whether the finger-wrist stroke is used or not, there is a point at which the bow stops in order to reverse its direction; the smoothness of this change is considerably increased by the non-participating the fingers and wrist; which can be unmistakably demonstrated beyond any doubt. However, in making a whole bow stroke there is necessarily a compensatory movement in the wrist joint; and, for this reason, the wrist joint must be kept free from tension. In order to draw the bow across the strings at right angles to there must be constant compensatory adjustments in the shoulder, elbow and joints, for it would be utterly impossible to approximate this right angle stroke out these adjustments.

There are two important levers for in bowing, as Barjansky shows: one formed by the four fingers with the thumb as fulcrum, the purpose of which is to solidate or unite the hand and fingers the bow. These members must be considered as unmovable parts of the bow tone producing lever is formed with fulcrum at the elbow, the power exerted the bowing muscles and the weight of the resistance of the vibrating strings. Barjansky method has to do with the proper application and distribution of strength manipulating the bow. The greatest possible strength of the forearm muscle with full freedom of movement, will insure tone production and bow mastery.

The ingenious calisthenics which Barjansky has discovered in order to develop bowing apparatus are almost magical in their effect and quite contrary to all precepts of the famous schools of violin playing. But the main test of any theory is Does it work? In testing the Barjansky theory by this criterion we are immediately forced to conclude not only that it works but also that it is perhaps the quickest way to master what was formerly a mysterious and elusive technic. The whole theory is entirely sound and, what is more, the work of a man of genius. His theory is a contribution to string instrument playing.

## Make Friends of the Masters

By J. W. HULFF

A STUDENT OF SHORT STORY writing will study the technic of the best writers, both old and modern; so does the embryo painter study the methods of well known artists. Just so, the violin student, who wishes to develop his talent for composition along correct lines, not only should listen to good music but also should discover how great composers produced effects that were different from their contemporaries. Frederic Chopin, for instance, introduced a new style of piano music that produced richer and clearer chords. While it is true that Chopin was essentially and almost wholly a writer of music for the piano, it will repay the student of the violin to note that Chopin produced his dreamy, delicate and beautiful compositions by spacing the lower notes of

the chords wide apart instead of spacing them evenly as was the custom of his contemporaries and the famous musicians who preceded him.

### Study the Masters

IF THE STUDENT would study Brahms' methods of composing, the latter's music would not seem dry and difficult of understanding. Brahms never cared for popular approval and lived solely to create beautiful and perfect music—music that grows on one by repetition. Brahms wrote in practically every form except operatic, and none of his music is commonplace.

Bach, who may be called one of the fathers of modern music, invented the scale that is known as the "tempered scale." No student of the violin should be allowed to

leave out the study of this master's music.

May the violin student always remember that the world is waiting to give him a fortune to one who will translate music the spirit of America. The American composer, who perhaps the nearest to this goal was Edward Dowell, with his music of the American Indian, the woods, the seas and the of our beloved country.

The student who hears the best music of this world should not be a dreamer, enjoying without thinking. His minds, open ears, open hearts and eyes are requisites for the student who would create. It need not be necessary your name commence with "B" just because the three great musicians of the world were Brahms, Bach and Beethoven.

is essential that their works should be beautiful and the true. Remember the physical handicap of the man who directed performances of his to the end of his life. Beethoven, who was deaf, conducted the orchestras play-

ing his compositions, which numbered amongst them the "immortal nine symphonies." Many of the famous composers of the past spent the best years of their lives in poverty, the one exception being the happy Felix Mendelssohn who had rich and appreciative parents.

## The Violinist and His Nerves

By NELLIE G. ALLRED

THE MOST IMPORTANT asset of the violinist, aside from an in-born love of his instrument, and the ability to play, is a healthy nervous system. For he is dependent upon his nerves more than he often realizes. The performance of a piece of music might be said to begin at the beginning and the end of his playing. His nerves enable him to stop the string at the particular place on the board to produce the tone specified on the printed page of music; and his nerves enable him to manipulate his bow to produce, at will, short, crisp *staccato*, long, sustained *legato*, or playful, light *spiccato*.

Of course every performer has his own peculiar system of memorizing. And there are as many varied systems as there are performers. Some players assert that they carry a picture of the printed page in their mind's eye; others say that when they have memorized a common key their fingers automatically strike the right key or stop the string at the right place, as the case may be. But mentally, it all amounts to this: The nervous system, through the coordination of a series of sections, muscles, and periods, is so influenced that it enables his fingers and his bow arm (in the case of the violinist) to repeat the passages automatically, as it were, almost without thought. There is a story of a famous pianist who did not know that he had memorized a work until he could play it correctly, with all proper shadings, while reciting a poem, and reading a book. In other words, he put

himself through the final test of being able to play a composition absolutely without thought—with his mind on something entirely different. And why did his fingers mechanically strike the proper keys, with the right degree of strength, now quickly, now slowly? Because of the effect constant repetition had had on his nervous system, and its reaction, in turn, upon the movements of his fingers. (Not recommended as a way to sympathetic interpretation.)

A violinist who had suffered from a so-called "nervous breakdown," and had been ill both physically and mentally for several weeks, once remarked, upon resuming his practice, "The doctors told me I had recovered, but I am still ill. I can tell it in my playing. My muscles no longer coordinate. My nervous system is still shot to pieces. Why, I no longer have a vibrato—I have a shake!"

A healthy state of nerves is perhaps more essential for the violinist than for the performer on any other instrument. The need for coordination is so much greater with him. His muscles must coordinate to hold his instrument in position; to cause him to stop the string at the proper interval; and to manipulate the bow, simultaneously; to produce an even, sympathetic vibrato.

So the violinist really owes more to his nerves than he commonly supposes. Perhaps he does not realize it while he is still in possession of all his nervous faculties. But should he ever be so unfortunate as to become nervously unstable, he will most certainly realize the part played by his nervous system in his career as a violinist. For in truth a healthy state of nerves is one of his most valuable assets.

## Musical Knowledge Competition

By ADA E. CAMPBELL

THIS IS MORE INTERESTING and invigorating than these short courses in musical knowledge, which are not given in the selected music study book.

On the bulletin board in the studio or living-room, five interesting Musical Knowledge questions may be listed weekly, for a chosen number of weeks. The students are requested to copy these notes and memorize them. At the end of a period of ten weeks, a competition can be arranged. Twenty or

more items of knowledge which have been listed on the board will be given to each student to answer on paper, and the one obtaining the highest correct answers will receive a prize.

A few Musical Knowledge Questions:

- How old was Stradivarius when he died?
- What is the length of a violin bow?
- What is the weight of the average violin bow?

## Piano Solo Composition

### PRIZE CONTEST

#### Four Generous Prizes

##### CLASS ONE

**Concert Piano Solo** (See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

##### CLASS TWO

**Entertaining Piano Solo** (See Description Below)

**FIRST PRIZE - \$250.00**

**SECOND PRIZE - \$150.00**

##### Class One

#### CONCERT PIANO SOLO

First Prize—\$250  
Second Prize—\$150

Manuscripts entered in this class should be solos of average length written for the more advanced pianist. This does not mean a number demanding virtuoso ability for its rendition, since there are many appealing piano solos played in concert by master pianists, yet which are played frequently by many who may be generally described as advanced piano students or accomplished pianists. Any form such as the prelude, waltz, caprice, nocturne, etc., may be used, but the judges will be influenced more by compositions possessing the qualities of spontaneity and melodic freshness than by those written in the strict pedantic style.

##### Class Two

#### ENTERTAINING PIANO SOLO

First Prize—\$250  
Second Prize—\$150

The publishers of THE ETUDE are firmly convinced that there is a definite place in the teaching repertoire for the recreational piece which reflects something of the present-day tendency in its rhythmic and harmonic design. Such pieces also are enjoyed by the average pianist and his or her intimate audience in the home or in small social groups where entertainment is the paramount consideration. Radio pianists catering to a wide and varied audience also appreciate compositions of this character. This class affords a splendid opportunity for the composer whose writing talent inclines toward pieces such as *Soliloquy*, *Holiday*, *Serenade for a Wealthy Widow*, *Nola* and *Flapperette*.

This Prize Contest is open to all who wish to enter it, excepting members of the staff of THE ETUDE MUSIC MAGAZINE and employees of the Theodore Presser Co.

#### THIS CONTEST WILL CLOSE NOVEMBER 1, 1939

THE ETUDE MUSIC MAGAZINE feels that a Composition Contest of this character will stimulate composing efforts directed toward supplying present-day pianists (of whom there are many giving formal and informal recitals) with some new material for their audiences to enjoy, and that composers also will be moved to bring forth for those who play chiefly for their own amusement some new piano solos for them and their friends to enjoy.

Only Piano Solos will be considered in this Contest.  
Do not send compositions of any other character.

#### CONDITIONS are simple.

All entries must be addressed to:—

THE ETUDE PIANO COMPOSITION PRIZE CONTEST  
1712 Chestnut Street, Philadelphia, Pennsylvania

All manuscripts submitted must have written at the top of the first page—For THE ETUDE PIANO COMPOSITION PRIZE CONTEST.

The real name of the composer-contestant must not be placed on the manuscript. Write a fictitious name on the manuscript and write that same fictitious name on an envelope. Seal within that envelope a slip of paper with the real name and full address written upon it, and bearing in the lower left hand corner also the fictitious name. This sealed envelope should be attached to and sent with the manuscript. By this system judging may be kept free from any considerations other than the merits of each composition. One of the

The Piano Compositions winning prizes are to become the property of THE ETUDE MUSIC MAGAZINE with full publishing rights vested in its publishers, the Theodore Presser Co.

Contestants may enter compositions in both classes.

Although there are two prizes in each classification, the publishers of THE ETUDE expect to find a number of the manuscripts not winning prizes to be deserving of publication, and accordingly expect to offer some contestants who are not prize winners an opportunity to realize something on their composing efforts by offering to purchase the manuscript for regular publication purposes.

greatest reasons for conducting a contest after this fashion is to assure the unknown composer the opportunity to have an equal chance with composers of established reputations. In this contest all are welcome to participate and every manuscript submitted will be reviewed by a number of competent judges. Their decisions will be impartial and final.

No composition already published shall be eligible for entry in this contest.

No variation nor any adaptation of a previously published melody shall be eligible for entry in this contest.

The pedantic type of composition such as those running to involved contrapuntal treatment of themes should be avoided.

## VIOLIN QUESTIONS *Answered*

By ROBERT BRAINE

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

#### Studies by Dounis

J. P. T.—I think highly of the technical studies by Demetrius Dounis. They are used more in Europe than in this country. I do not know the price. Write to the publishers of THE ETUDE Music Magazine, who no doubt can send you this information.

#### A Violin by Jusek

M. C.—I do not know any violin teachers in any of the Connecticut cities who teach the Carl Flesch method of violin playing. Possibly you could find out by writing to the publishers of the Carl Flesch works. 2. You could no doubt trace your violin, made by John Jusek (Guarnerius model), and obtain information of its maker by writing to one or more dealers in old violins whose addresses you will find in the leading musical journals.

#### The Hopf Violin

Mrs. R. V. A.—I cannot tell you a thing about the quality and value of your "Hopf" violin without hearing and seeing it. As a rule, the "Hopfs" are not of much value and command small prices. At one hundred fifty dollars your father paid a very high price eighty-seven years ago. There were two German violin makers named Hopf: David Hopf, Quittenbach, near Klingenthal, 1760; and Christian Donat Hopf, Klingenthal, 1736.

These violins are of moderate quality, and value, although some are better than others. The highest price I have ever known to be quoted for a Hopf violin was one hundred twenty-five dollars, in an American catalog. This violin was made in 1810 and described as follows: "Flat model. Back: one piece of curly maple with sides to match. Top: spruce of medium grain. Brown varnish. Fine condition. Soft tone."

#### Deciding Upon a Career

J. C.—So many questions of this kind come to me. Unless I could hear you play and judge of your talent, I fear it would be quite impossible to tell what your chances are of becoming a virtuoso violinist. As I understand it you commenced at the age of ten, and studied more or less regularly until your present age of twenty. Part of the time you studied with a teacher and part of the time by yourself. You seem to have quite a repertoire of difficult pieces, including some of the standard concerti. If you play these well, you have gone far, considering the small opportunities for study you have had. My advice would be for you to study for a few months under a good teacher, so that he could judge your talent and technical ability. Or better still, enter a college or conservatory of music, in a large city, where you could have first rate tuition, and also orchestra practice, where music of the symphony grade is taught and played. After a year of such study, your teachers could advise as to your talent, and you yourself could decide whether to continue, or to give it up.

#### For Sticking Pegs

H. T. Y.—After a very rainy spell, the pegs of the violin stick in the peg holes, and at times it is almost impossible to turn them. If the pegs, where they fit into the peg holes, are rubbed with a lubricant, and the peg then rubbed thickly with common blackboard chalk, the pegs will turn easily; the chalk will serve to keep them from slipping.

#### The Beginning Teacher

A. C. S.—1. Without hearing you play, or knowing anything about your technique, I cannot say whether you would make a success of violin teaching. You seem to have had much experience in violin playing, and you no doubt could develop into a good teacher. However, violin teaching is, to a great extent, a "gift"; for some people seem to have a natural talent for it, and others not. The fact that you can play the piano accompaniments to the compositions you would use in teaching is greatly in your favor and would help you in obtaining pupils. It would be a fine opening if you could get a position as assistant to a successful violin teacher. You could play accompaniments for her pupils, and teach the beginners. In this way you would develop into an experienced violin teacher, and a good accompanist as well. 2.—The fact that you like children and like teaching children, is greatly in your favor. 3.—By all means take the summer course at Chautauqua. You will get many good ideas about violin playing and teaching from it. Listen to all the good violin playing you can. With a year or two of practical teaching, you will soon see whether you have a real aptitude for it.

#### Spiccato Bowing

R. J.—1. The bouncing bow, *spiccato*, or *saltato* (Italian), is played in a variety of ways. It is usually played in the middle third of the bow, a little toward the frog if a loud tone is required, and more towards the point for a softer tone. Throw the hair of the bow lightly on the string, so that it will bounce up and down, like a small rubber ball. Never throw the bow violently on the string. A prominent authority, Eugene Gruenberg,

says, "This stroke is of an elastic, staccato, bright, and light-weight tonal character, allowing much variety of shading, as to dynamic gradation of passages, this, however, within the boundaries of a moderate caliber. Heroic, violent, and imposingly powerful tone effects do not exist within the domain of the rebounding stroke."

If you wish to learn this stroke as it really should be played, I would advise you to take a few lessons from a first rate violin teacher. Even if you can only take a half dozen lessons, you could learn the principal elements of this stroke, which would enable you to practice it correctly as long as you live. 2. The "Concerto in A minor," by Accolay would be considered rather difficult for a ten-year-old violin student.

#### A Violin Inscription

R. H.—The makers of old violins frequently placed inscriptions on the backs of the violins. In the inscription on the back of your violin, the wood of the violin is supposed to speak, saying, "As part of the wood of living tree, I was silent, but now that I am dead, I can sing (that is, the tree was chopped down and dead)." I do not know who made these violins, but they are more valuable curios than as practical instruments. A deal in old violins might tell you who made the

#### J. B. Accolay

L. Y.—J. B. Accolay was the composer of a "Concerto in A Minor," which has become very popular as a teaching piece as well as a student recital number of medium grade. The queer part of the whole thing is that one seems to be able to find out who Accolay was, where he taught, or anything about him. The writer of the present query belongs to musical society in California. They wished to discuss the life of Accolay at one of the meetings, but no one was able to find anything in the library about him, and his name was not listed in the encyclopedias. Of course the information on this musician exists somewhere, but "where?" is the question. I doubt he was a European violinist, and his name probably may be found in some European Encyclopedia, but which one is the question?

#### A Violoncello Invention

C. K.—1. I am afraid it would take a large amount of research, to find just what the adjustable peg was added to the violoncello. It is probably a comparatively recent invention, but I have never seen it mentioned in recent works on this instrument. No mention is made of it in recent encyclopedias of music, describing the latest improvements in musical instruments. It is an interesting fact to know, but of no special importance. If you look through enough works on the manufacture of the violoncello, no doubt you will find a history of the invention and the name of the inventor, although I have personally never come across it.

2.—Rare old French violoncellos, with fine sympathetic tone, are very scarce and difficult to find, so I would advise you to treasure the instrument with great care.

#### "Hot" Music for Violin

A. L.—1. Within the past twenty years there have come into existence in the United States various kinds of crude music, bearing all sorts of peculiar names, such as "Ragtime," "Hot Time," "Hot Fiddle," "Jazz," "Swing," and so on. These depend principally on their peculiar rhythms for their popularity, as, to a great extent, they had the origin on the dance floor. They have achieved a tremendous vogue in the United States and are heard mostly in dance halls, night clubs, and similar places. Strange to say the "hot music" has crept into the better class orchestras, and occasionally musicians of these organizations have taken it up, more by way of novelty than anything else. Not having devoted much study to this class of music, I am not familiar with the instructional books on jazz, "hot" music, ragtime and so on, but there are such publications, and teachers of this style. These are found principally in the large cities. A postcard addressed to the publishers of THE ETUDE would bring you information regarding these instructional books.

One of the leading compositions in jazz, the "Concerto in Jazz," composed by my son Robert Braine, Jr., of New York. This has been played by the Paul Whiteman orchestra, also by leading violinists, accompanied by the best known symphony orchestras, all over the country. It was composed as a novelty, and to demonstrate the capabilities and technique of jazz. 2. Your violin, labeled Robert Paulus' "Markneukirchen" is a specimen of the workmanship of that school. Markneukirchen is a well known German school of violin making, and contains many talented members. Although none of them have achieved real greatness, I do not know where you could obtain the facts of Paulus' life and career, although some German work on the violin might contain them. I have never seen the details of Paulus' life in an American publication.

# The High School Instrumental Program

(Continued from Page 673)

strumental program, but the students e direct benefit musically and socially e responsibilities assigned to them ning the band or orchestra.

the busy director, the business or- tion officers are indispensable, and e selection of business manager, li- n, and equipment manager will do toward the smooth operation of or- tional rehearsals and appearances. business manager handles the finan- publicity, trip schedule, and other ss affairs, and can lift quite a load e director's shoulders. The librarian is staff of assistants cannot fail but ed in the all important task of ing, mending, copying, supplying ithdrawing music parts. The extra ment owned by the instrumental de- ent needs the attention and care of sible person, and it is in that ty that the equipment manager gives st service.

group spirit, for general welfare, or the social activities of the band chestra, the member organization has ce. The group itself can select its officers, and these students oftentimes their activities even further in the agement of sectional rehearsal per- , solo and ensemble participation, extending aid to the business officers es when the stress of their duties is

sponsor holds a unique position in l to band or orchestra. Sometimes gh school organization has "girl rs," sometimes there is a faculty or, or just a vitally interested person. the activities of the instrumental

department must be brought to public at- tention the sponsor may be the deciding factor in arousing sufficient interest and in attracting audiences.

Most of the instrumental students can aspire to hold one of the positions on the staff, or to become a sectional leader or student leader of the band or orchestra. The development of character and per- sonality that often comes with holding one of these positions is in itself one of the finest results of careful instrumental or- ganization.

Many capable directors have devised sys- tems of band and orchestra awards, through which the members of these groups may have a material way to show that they have been loyal and assiduous, capable and active in their school's music program. Most instrumental groups have some sort of pin or emblem which is given as merit award for attendance, promptness, interest and support. It is our feeling that the joys of participation, and the experi- ences and happy associations coincident with band and orchestra work, constitute sufficient reward, so that the matter of awards should not be overdone. A rare and infrequent award will be respected and sought for, and when given will have meaning.

The day of haphazard, slovenly instru- mental organization is on its way out. Like every other phase of modern education, the instrumental program must be effective but pliable, must be complete and yet appro- priate. Personalities will determine the final results, but effective organization is the framework on which personality can build a lasting structure.

## Recent Record Releases

(Continued from Page 632)

Barbirolli and an unnamed orchestra set M-567). In comparison with rformances on two previous record- f this work, Cortot's emerges as the vital, persuasive and poetically vivi- asate was a celebrated nineteenth- y violin virtuoso, with purity of style, rdinary flexibility and a rare bright- f tone. In creating his many violin founded on Spanish folk music and , Sarasate aimed to exploit his espe- cialties. In performing four of the es Espagnoles," Ossy Renardy realizes usic's stylistic qualities and flexibility plendid artistry. This is music which, to its slight intrinsic worth, can be

easily spoiled by sentimentalization. One welcomes this young violinist's playing of such old favorites as *Romanza Andaluza*, *Jota Navarra*, *Zapatcado*, and *Adios mon- tanas mias*, for his purity of style.

Jascha Heifetz playing Beethoven's "So- nata in G major, Op. 30, No. 2" (Victor set M-570) dominates the recording too much for the good of the music. His part- ner, Emanuel Bay, is not permitted to com- plement the violin in the way the composer intended, hence this chamber work for two becomes a work for one with an accompan- ist. It is a pity because Heifetz plays with much variety and coloring. The recent Mil- stein-Balsam set realized this music more appropriately.

## How People Are Swayed by Song

(Continued from Page 628)

"spell" him at the fiddle, and one m would play the accordion, some- making it sound like the bagpipes e *Campbells Are Coming*, or one play the mouth organ or the jew's On all of these instruments they were All took part in the dancing of jigs ls or solos. The mood would grow toward ten o'clock, and my father ther would sing *Shool, Shool, Shool* ah, a sign of the evening's waning.

at *Music Meant to My Father* IN HIS LATER YEARS my father told

us of his homesickness when he first came to America. He would go at evening to the highest point on the farm, where he lived with kindly Quakers; and, despite all kind- ness, he would look in the direction of Ire- land, opposite to the setting sun, and weep. Occasionally he would take his violin, and, for his solitary ear, he would play and sing one of the most poignant tunes of lone- someness ever heard:

*Shool, shool, shool a grah,  
I wish I were on yonder hill,  
'Tis there I'd sit and cry my fill  
Till every tear would turn a mill.*

\* \* \* \* \*

"I love to listen to music, and in listening I've come to think it a necessary part of life. In other words, for a well-rounded life one must have music. Furthermore, music offers the best way of using time. As leisure increases through shortening work hours, the use of music becomes more and more necessary. There are no drawbacks to music. You can't have too much of it. There is no residual bad effect like from over-indulgence in other things."—George Eastman.

# AMERICAN CONSERVATORY OF MUSIC

CHICAGO

54th SEASON

Founded in 1886 by John J. Hattstaedt, today The American Conservatory of Music is outstanding among institutions for music education in this country. Its graduates are to be found occupying positions of honor and responsibility in every department of music.

Member of the National Association of Schools of Music

**The Faculty**—One hundred and thirty artist teachers of national and interna- tional reputation comprise the faculty.

**Courses** are offered in Piano, Vocal, Violin, Organ, Orchestra and Band In- struments, Public School Music, Chil- dren's Piano Work, Class Piano, Musical Theory, Dramatic Art and Dancing.

**Certificates and Degrees** are conferred by authority of the State of Illinois and recognized the country over. Degrees conferred are those of Bachelor of Music, Bachelor of Music Education, Bachelor of Speaking Arts, Master of Music and Master of Music Education.

**Dormitories**—Desirable living and board- ing accommodations can be secured at the Conservatory Dormitories at surpris- ingly low rates. Particulars on request.

**Professional and Teaching Engage- ments**—Although the management does not guarantee positions, it has been most successful in assisting students to find remunerative situations in colleges, academies, music schools and in con- cert, orchestra, lyceum and choir work.

**Tuition** is reasonable in keeping with the times and may be paid in convenient installments. Complete particulars given in catalog which will be mailed on request.

**Students' Self Help**—The management makes every endeavor to assist needy students to find part-time employment. Many find work as teachers, accom- panists, or part-time positions working for commercial houses, etc.

Students may enroll at any time.

## FRETTED INSTRUMENTS DEPARTMENT

## Tone Production

By GEORGE C. KRICK

ON MANY OCCASIONS, after listening to a rendition of a guitar solo, the writer was unfavorably impressed with the tone quality the player extracted from his instrument. In trying to analyze the shortcomings in this respect of some of the players, we have come to the conclusion that too much attention has been given to the right hand technic, either fingers or plectrum, and not enough to the left hand fingers. Especially on the guitar, the frets in the lower positions are quite some distance apart; and, unless the fingers of the left hand are placed close to the frets, the tone will lack clearness and brilliance, regardless of the amount of pressure exerted. Too often students will devote most of their time to the development of speed, forgetting that in a musical performance beautiful tone quality should be the most important factor. In other words, on one hand we have the musical acrobat and on the other the artist.

If we place the tip of a left hand finger somewhere between two frets the string when plucked will probably produce a buzzing sound; at best the tone will be weak, even with a firm pressure of the finger upon the string. Bring the same finger close to the fret and with the same pressure the tone should be strong and brilliant.

This brings us to the first underlying principle of procuring a good tone—train the left hand fingers to drop unto the string with an energetic motion, close to the fret. We suggest this simple exercise that will help, if persisted in and repeated frequently. Adopt playing position, drop the first finger on the first string, first fret, seeing to it that the finger tip rests close up to the fret; now strike with right hand finger and be careful not to relax the pressure of the left hand finger; then place the second finger on the second fret in similar manner, at the same time keeping the first finger on the first fret. Proceed with third and fourth fingers on third and fourth frets. At this time all four fingers should be resting on the first four frets. Now shift the hand so the first finger will come to rest right near the fifth fret, having raised the second, third and fourth fingers while shifting. Repeat the exercise in this position, and continue in this manner up to the twelfth fret. This exercise should now be done in the same manner on the second string and continued on all the other strings from first to twelfth frets.

It will be noticed that as we ascend this chromatic scale the distance between the frets becomes gradually smaller; and it is suggested that the fingers be watched carefully, so they will drop unto the strings just at the proper place, and eventually will get used to the smaller distances between frets in the higher positions, and will instinctively find the right spot.

It goes without saying that "overreaching" the mark is just as bad as falling short of it, and this must be guarded against in the same manner.

## Retain the Pressure

BUT IT IS NOT SUFFICIENT to drop the finger on the right place and with sufficient pressure; the important thing is to retain this pressure during the full note values.

Now every guitarist is aware of the fact that it requires considerable strength for a finger of the left hand to continue an even pressure upon the string, and a natural tendency is to release that pressure at

once. As this is the next important in the development of a strong brilliant it is advisable to devote a great deal of time and study to the subject. For this pose we suggest scales in thirds, six octaves and tenths, playing them slowly first, from the lower to higher position, and sustaining all notes as long as possible with a strong, even pressure of the fingers. Gradually this exercise should include four, five and six string chords, with chromatic scales between.

When practicing chords of four or more notes, the student should form the habit of listening to every note of the chord as too often one or two notes of the chord for some reason do not sound distinct. Playing these chords in the form of arpeggio will help to find just where trouble lies, so that the proper remedy may be applied. As a great many chords on guitar require the barre, this phase of technic should receive special attention.

The "grand barre" is made by placing the first finger across the six strings, pressing firmly on all strings with a corresponding pressure of the thumb against the lower part of the neck of the instrument. The left wrist should be well curved and held far enough away from the fingerboard so that the first finger forms a straight line from first to and including its third joint. A little time each day should be devoted to the practice of barre chords and for this the following procedure will prove quite advantageous. Form the string tonic chord in the key of F by placing the first finger across all strings at first fret, third finger on C, A string, fourth finger on F, D string, and second finger on A, G string. Play this chord eight times, bringing out each note distinctly. Now move the left hand fingers to the next fret, keeping them in the same order and position again eight times. Keep moving this chord one fret at a time until the twelfth fret has been reached and then return fret by fret to the starting point. Each finger employed must be placed right close to the fret, to do this smoothly and correctly special practice is advised in the beginning. Once the fingers have acquired the knack of moving into the next position with accuracy, only then may one begin to increase the speed, by playing the chord once, then passing on to the next fret.

## And Now the Right Hand

SCALE PASSAGES of single notes are usually played with alternating first and second fingers, using the tip of the finger only, guard against hooking or pulling the strings. The different methods of attack of the strings can be found in detail in the Fretted Instrument column of THE ETUDE for April, 1938. It can readily be seen that in order to procure a good tone is necessary, in addition to the advice given regarding the left hand, to synchronize thoroughly the action of both hands. This is best accomplished by the daily practice of scales in all keys in second and third positions. Just a few more words of advice to the young students and to those players quite satisfied with their tone. Do not let your practice become mechanical, but let your head as well as your fingers, concentrate on what you are trying to accomplish and constantly listen carefully to your playing. Buy all the records by the great artists, listen to them, and strive to produce the beautiful tone on your instrument.

# QUESTIONS and ANSWERS

A Music Information Service Department  
Conducted Each Month

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## Ireland's "February Child"

1. Please tell me the approximate tempo of Ireland's February Child. What is the significance of the title? In what way is the tempo changed when eight, six-eight and nine-eight meter are entered?—R. H.

1. The tempo is about 138 eighth notes a minute.  
I know nothing about the significance of the title. I judge—just a guess—that it has something to do with some incident connected with the composer, as the dedication is "to A.G.M. for Feb. 22, 1929."  
Space forbids my speaking at length of interpretation of this piece; however I say that it is very important that the melody should always be prominent and be covered by the dissonant background. Advice does not apply to measures 27-28 where the melodic line is in the mid-2nd change of measure signature does effect the tempo.

## Notes Again

1. In Rachmaninoff's Prelude in C-Minor, how do you play the 11th measure from the end? In all copies I find all of notes bracketed. I know you cannot then all together. Is it correct to play the last octave with the left hand and the octave with the right?  
Should a grace note always be played the first note in the other hand or are occasions where it may precede both or notes in both hands?—Miss R. A. S.

1. These octaves are treated as grace as follows:

Usually, but not necessarily. If you like the other way play it that way. If you are studying with a teacher, do it as he does.

## Staccato Marks

1. I always thought the mark (.) above a note meant staccato but I am now wrong. In Etude Fantastique Op. 68, 2nd, by Schytte it is used throughout the piece before a slur, like this;

In Robert Schumann's Op. 15, No. 8 (M. Williams' Fourth Grade Book) 1 notation such as these just over the marks.

Is it not the fingering. This is the time I ever saw it. I would appreciate opinion.—Mrs. E. J. V. B.

1. I do not blame you for being puzzled. This is what might well be called "staccato" marking. However, playing this staccato does not make it so, as the finger is down; but why mark it so? Pupils often puzzled about staccato marks when they went to pedal. In all such cases attend to pedaling and let the staccatos go, for they will not be staccato anyway. Quite a composer will mark staccato and, at the same time, put in a pedal mark; but the staccato is marked so the finger can leave the key in order to prepare for the next note. We are in great need of a different mark for this type of staccato.

You are wrong. These are marks of fingering. Mr. Williams uses these dashes to indicate that the finger continues to hold the key. When practicing without this advice is important; but it is not necessary to do it while the pedal is down. One of the great advantages of the pedal is that it takes care of the tones while the finger is left free to prepare for the next note.

N. B.—If E. G. W. of Kentucky, who made inquiry about Dulcimers in the first item of our Question and Answer Department, Page 135 of the February issue of The Etude, will communicate with us, we have information which we think will interest him.

## Many Questions!

Q. 1. (a) Please suggest appropriate metronome marks for the Brahms waltzes. (b) Is there a particular key to their interpretation? (c) Are they performed with characteristic left hand rhythm as used in the Viennese waltz?

2. One of Brahms' ballades is taken after the Scottish "Edvard"? Can you tell me what this ballad is, or where I can find out what it is about?

3. (a) The Waltz Op. 64, No. 2, by Chopin, is marked Tempo Giusto. Does this mean that there is to be no rubato? If so, that would not apply to the second theme, would it? (b) What is an appropriate metronome mark for this waltz?

4. In the first few measures of Mozart's "Pastoral Variée" are the two grace notes played before or after the beat? Is the accent on the grace note or on the principal note?

5. (a) In measure 7 of Ravel's Pavane, are the half note and quarter note B's tied? (b) What about the B near the end of the ornamental arpeggio passage in measure 7? Is it tied to the first melody note of measure 8? (c) Why are the eighth note bars joined over the measure, as between measures 2 and 3, 4 and 5?

6. I have taken a course in piano tuning, but I feel I would like to know more about repairing piano actions. Can you suggest a suitable book on the subject?—H. L. V.

A. 1. (a) Here are Mr. Arthur Whiting's metronome marks for all sixteen of these waltzes; each mark is for a dotted half-note: No. 1. 54; No. 2. 42; No. 3. 50; No. 4. 50; No. 5. 42; No. 6. 60; No. 7. 44; No. 8. 50; No. 9. 50-58; No. 10. 66; No. 11. 66; No. 12. 50; No. 13. 50; No. 14. 60; No. 15. 42; No. 16. 42. (b) No. (c) Brahms was living in Vienna when he wrote these waltzes and no doubt this inspired him to write them. They do not have the Strauss flavor, if that is what you mean. They are more like the waltzes of Schubert. They do not have the staccato accent on the second beat so often heard in slow waltzes intended for dancing.

2. The ballad referred to is in Percy's "Reliques of Ancient Poetry" (Vol. 1, p. 57); Brahms used the Herder version, which is in German. A master lesson on this work, by Mark Hambourg, appeared in THE ETUDE for November, 1938, which may be had from the publisher. In the book by Edwin Evans, "Brahms Pianoforte Music Handbook," page 107, you can find a descriptive analysis of this ballade.

3. (a) No doubt Chopin wanted this waltz played in rather strict tempo, but I would not apply his marking to the D-flat section. (b) M.M. ♯=72, at the beginning; ♯=132, second section; the D-flat section a little slower than the beginning.

4. The grace notes are played on the beat, but the accent falls on the principal note.

5. (a) These two notes are not tied. You will know this because the curved line is above the stems, whereas a tie connects the heads of the note. (b) The B is tied to the first melody note; however, many strike the melody note again to insure a singing tone.

(c) My copy is so marked only between measures 6 and 7; 10 and 11. Ravel has marked these places in this manner so the player will be sure not to split the phrase.

6. "Regulation and Repair of Piano and Player," by William Braid White.

All material mentioned may be secured through the publisher of THE ETUDE.

## Small Hands

Q. My hand is too small to reach all the notes on the first two pages of Rubinstein's Kamennoi Ostrow. I have tried playing only the upper notes, but the effect is not satisfactory. Can you suggest a better way?—Miss A. G. S.

A. If you pay these two pages as I have indicated below, you will miss none of the notes of the chord except in measures 21 and 29, and these measures have easy reaches.

# Chicago Conservatory

Established 1857

Summer Master Class—June to Sept.—Apply Now.

those who had ignored him and opposed him was immediately changed.

Grieg did not meet Liszt until 1870, in Rome, and his letter to his parents re- counts one of the most inspiring meetings on art: "Dear Parents! This morning we were to have gone out with several Scan- dinavians to Tivoli for a few days, but what do you think happened? Yesterday afternoon, as I was sitting in the Scan- dinavian Club playing whist, in came Sgambati—a very fine pianist, I think I have spoken of him—bringing a message from Liszt that he would like to see me at his house the next morning at eleven o'clock. Though I had been looking for- ward very much to the Tivoli tour, this came first, naturally, and the plan was changed. This was not, however, my first meeting with Liszt—as you shall now hear. He has, since the beginning of the Coun- cil (he cannot bear either it or its prin- ciples), gone back to Tivoli, where he resides in the Villa D'Este. Very rarely he comes to town and on one such occasion I got to know that he was here, went right away to see him, did not meet him, and left my card. A couple of days later he went away, but just then I met Ravn- kilde, the Danish musician, who lives here; and he told me that he had just had a note from a German painter whom Liszt had asked to find me out through Ravn- kilde. He was to tell me that Liszt was extremely sorry that he had not had time to look me up and to ask if I would come to see him the next morning at ten. He was in town and expecting me. I rushed out to him. He lives close to the Titus Triumphant arch and the old Roman Forum, in a monastery. But Ravnkilde had told me that Liszt likes people to bring something with them and, alas! my best compositions have been either at home or in Germany for some time now. I had to rush up to Winding to whom I had presented earlier, a copy of my last violin sonata and to play 'Giver-giver—taker back.' Winding kept the envelope, I took the contents, wrote on the outside, 'To Dr. F. Liszt, with ad- miration'—took besides, under my arm, my funeral march from Nordraak and a book- let of songs (the one with 'Outward Bound' in it) and hurried down the street, with a little quail at my stomach I won't deny, but that I could have spared myself; for a more lovable man than Liszt it would hardly be possible to find.

"He came smilingly towards me and said in the most genial way, 'Nicht wahr, wir haben ein bisschen korrespondiert?' (Have we not had a little correspondence?) I told him that I had his letter to thank for being where I was, which drew from him a roar of laughter like that of Ole Bull. All the while his eyes, with a certain ravenous expression in them, were fixed on the packet I had under my arm. Ha, ha, I thought, Ravnkilde was right. And his long, spider- like fingers approached to such an alarm- ing degree that I thought it wisest to set about opening the packet at once. He began now to turn over the leaves, that is to say, he read the first part of the sonata through cursorily, and that there was no humbug about the reading was shown by the sig- nificant nod, 'Bravo' or 'Sehr Schon!' (very beautiful) with which he marked the best bits. My spirits began to soar; but when he now asked me to play the sonata my courage altogether failed me. I had never before tried to put the whole thing to- gether for the piano, and I would gladly have escaped having to sit and make a mess of it before him. But there was no help for it.

### A Duet of a Lifetime

"So I BEGAN on his beautiful American grand piano. Right at the beginning, where the violin breaks in with a little baroque

but national passage, he broke out, 'Ei, keck! Nun hören sie mal, das gefällt mir. Noch einmal bitte!' (Oh, how cute! Now listen, that pleases me. Once again.) And when the violin the second time slips in the *adagio*, he played the violin part high up on the piano in octaves with such be- tiful expression, so remarkably true in singing that I smiled inwardly. These were the first notes I heard from Liszt. And now we went dashing into the *allegro* the violin, I the piano. I got more and more into form, I was so happy over his pause, which in truth flowed so copiously that I felt the most singular thankfulness streaming through me. When the first pause was over, I asked him if I might play something for the piano alone and he the Minuet from the Humoresques, which you no doubt remember.

"When I had played the first eight bars and repeated them he sang the melody with me and did it with an air of her power in his bearing that I entirely un- derstood. I saw very well that it was its tional character that appealed to him. I guessed it would be so and had there- fore taken things with me in which I had tempted to pluck the national string. When the Minuet was over I felt that, if this was to be any question of getting Liszt to play, it must be now when he was ob- viously in great spirits. I asked him and shrugged his shoulders slightly; but when I said that he couldn't surely intend to leave the South without having heard a note from him, he mumbled, with a lit- tle flourish, 'Nun, ich spiele, was Sie wollen, ich bin nicht so!' (Now I will play, if you wish, I am not unyielding about it) and in a second he had out a score which he had just completed, a kind of eccles- iastical processional march to Tasso's gra- a supplement to his famous symphony poem for orchestra *Tasso, Lamento e unpho*. Then down he sat and set the key in motion. I assure you that he belched if I may use so unbeautiful an expression one mass of fire and fervor and vi- thought after another. It sounded as if were invoking Tasso's spirit. He paints garish colors, but a subject like this is just for him; to portray tragic greatness is his strength. I did not know which admire most, the composer or the pianist for his playing was magnificent. He did not exactly play—one forgets that he is a musician, he becomes a prophet who an- nounces the day of judgment so that the spirits of the universe quiver under his fingers. He invades the most secret place of the soul and delves into one's innermost being with demoniac power.

### The Lion Roars Amiably

"WHEN THAT WAS OVER, Liszt said qu- casually, 'Jetzt wollen wir mal weiter geh- in der Sonate!' (Now we will return the sonata.) and I, naturally, 'No, thank very much, but after that I shouldn't like it. But now comes the best. Says Liszt, 'Nur warum nicht, geben Sie mal her, das werde ich es tun.' (Then why not, give it me, and I will do it.) Now remember, fi- he didn't know the sonata, had never heard or seen it before, and second, it was a violin sonata with a violin part that develops independently of the piano, now above, now below. And what did Liszt do? He played the whole affair, lock, stock and barrel violin, piano, nay more, for he played with more fullness and breadth. The violin was given its due right in the middle of the piano part, he was literally all over the whole piano at the same time, without note being missed. And how, then, did he play? With majesty, beauty, genius beyond compare in interpretation. I believe I laughed, laughed like an idiot. And when I stammered some words of admiration mumbled, 'Nun das werden Sie mir de-

...en, etwas von Blatt zu spielen, ich  
ja ein alter gewandter Musiker.' (Now  
you kindly play for me. I am indeed  
old wandering musician.)—Wasn't it  
gracious and kind from first to last?  
Other big man I have met among them  
been like him. Then finally I played  
funeral march, which also was to his  
; then I talked a little with him about  
sorts of things—told him among other  
gs that my father had heard him in  
don in 1824, which pleased him. ('Ja,  
ch habe in der Welt viel herumgéspielt,  
iel,' he said.) (Yes, yes, I have played  
ver the world.) Then I took my leave  
made my way home, wonderfully hot  
e head but conscious that I had spent  
of the most interesting hours of my  
And now I am asked to go to him  
tomorrow, and naturally I am de-  
ed.

...e day after the visit I have just de-  
ed for you, the Italians Sgambati and  
lli (pupils of Joachim) played my first  
n sonata at a matinee where the whole  
onable world was present. Liszt came  
ne middle of the concert, just before  
sonata, and that was well. For I do not

put down the applause the sonata received  
to my own account. The thing is that when  
Liszt claps they all clap—each louder than  
the other."

The foregoing extract terminates upon  
page one hundred twenty-five of a four  
hundred page book which our readers will  
find one of the outstanding musical biog-  
raphies. Every page is an important pic-  
ture of the life and work of this very in-  
gratiating composer. The writer of this  
review often talked over the works of  
Grieg with the late Theodore Presser, who  
had met Grieg while a student at Leipzig,  
on one of Grieg's later visits to the Con-  
servatory. Mr. Presser, who did much for  
the promotion of interest in Grieg in Amer-  
ica, was astonished by the diminutive statu-  
re and frail body of the Norwegian Mas-  
ter, but he said, "When he commenced to  
speak, one felt at once that one was listen-  
ing to the soul of a Viking giant."

## The Hungarian Dance, No. 6, by Brahms A Master Lesson

(Continued from Page 642)

...correct, and there is nothing wrong  
ing it. Still, it is possible to obtain  
variety and more coloring, by alter-  
some of the shadings and even the  
ation and the tempo. Brahms himself  
s us the way, because in the original  
on the first motive is brought in once  
e in the last section, in a frank *allegro*.  
can bring some of this spirit into play  
May we suggest that the second time,  
after the initial attack of measure 1,  
h must be executed once more with  
and energy, the *molto sostenuto* and  
*rubato* of measure 2 and following is  
daily transformed into a more rhyth-  
and straight delivery at the same time  
e tempo picks up little by little until  
orks directly into the *vivo* at measure  
One continues then to the end, increas-  
steadily the vitality and the intensity  
e utterance. The vision should be one  
ancers who become intoxicated with  
eauty of the music and the feelings  
h it expresses. The flashing colors of  
costumes; the sort of frenzy that  
s the crowd; the exalted joy which  
eates the whole celebration; all afford  
e opportunity for our imagination to  
its course. Once more we refer to  
uel Moor: "What a splendor, those  
s in Hungary," he said, "when the  
try folks, all dressed up in their nicest  
ents, gather around the musicians on  
illage square. The violinist starts, im-  
ising. He doesn't know what he is  
g to play. It comes to him on the  
s of inspiration. It may be a reverie,  
love song, depending upon whether he  
s at the starry sky, or at a lovely  
en. On and on he plays, changing his  
is, while his companions surround him  
also improvise their accompaniment,  
onies and all. And it always ends by  
es, in which everyone joins. They all  
ne frantic with excitement, and they  
e, dance, until dawn."

### Spirit and Atmosphere

...US TRY, THEN, TO EXPRESS some of  
attractive description, especially after  
la capo and on to the closing chords.

\* \* \* \* \*

"Whatever the relations of music, it will never cease to be the noblest and  
purest of arts. It is in the nature of music to bring before us, with absolute  
truth and reality, what other arts can only imply. Its inherent solemnity  
makes it so chaste and wonderful that it ennoble whatever comes in contact  
with it."—Wagner.

There, one must take great care of the  
way in which the "building up" is carried  
out. Each measure should have more in-  
tensity, volume of tone, and speed, than  
the preceding one; but less than the one  
that follows. The "let down" in measures  
19-20 and 41-42 will be also reduced to  
a strict minimum; more of a hint than an  
actual slowing down, more in the spirit than  
in the tempo itself.

Another important point in the inter-  
pretation of a piece calling for freedom  
and tempo *rubato* is the unity of concep-  
tion. It is easy to fall into exaggeration,  
which would cause distortion. Each little  
episode and change of rhythm and tempo  
should be thought over carefully and in  
relation to the ensemble, which must re-  
tain its purity of line. Any deficiency in  
this respect would cause this lovely music  
to sound "chopped up" and incoherent.  
Debussy used to say that in his mind,  
there were only two conductors who could  
(they still do!) play "La Mer" in a way  
satisfactory to him: Arturo Toscanini and  
Bernardino Molinari; because, in his own  
words, they treated it as a whole and as  
a real classical symphony, instead of turn-  
ing it into a musical puzzle game by em-  
phasizing too much the little details.

The last chords in measures 102-103  
must be played bravely, boldly, with de-  
cision, well marked and separated, with  
short touches of pedal which will improve  
the quality of the tone. Use a forearm  
attack, right off the keys. No *ritardando*  
whatsoever; it would create an anticlimax,  
and would absolutely ruin the conclusion.

It is, of course, difficult to express ade-  
quately with words the subtleness of many  
points when the music is, as in the present  
case, distinctly representative of a nation  
and of a race. Listening to the native  
Zigeuner orchestras will prove a most val-  
uable experience; and much can be learned  
from their playing, since the genuine ones  
still retain their ancestors' secret, that  
singular power to evoke upon their fiddles  
the echoes of heroic deeds, the sighs of  
the lovelorn, and the glory of the reddening  
sunsets over the horizons of their father-  
land.

JUILLIARD SCHOOL OF MUSIC

## PEABODY CONSERVATORY

BALTIMORE, MD.

OTTO ORTMANN, Director

One of the Oldest and Most Noted Music Schools in America.

"Listen, Joe! I'm at the opera—and I just got a swell idea for a  
new swing number!"

# Aids For Good-Weather Kindergarten Activities

Teachers of young pupils will find it profitable to investigate these books of songs, dances, and pantomimes which possess such admirable qualities for entertainingly developing the thinking and co-ordinated action of little folks who must be kept occupied in summer classes, camps, homes, church schools, or other groups.

## SONGS OF THE CHILD WORLD

Three Volumes  
By  
Alice C. D. Riley  
and  
Jessie L. Gaynor

The most popular collections of children's songs published. For years these have been used in the home, in the kindergarten, in primary classes, in public and private schools, and in juvenile clubs and societies.

The songs are classified for various seasons and occasions, for various activities in the life of a child. They are educational, recreational, yes, and even devotional, as several sacred songs for Sunday school groups are included.

Cloth Bound. Price, \$1.25 each

## SONGS OF MODERN CHILD LIFE

By Jessie L. Gaynor  
and Dorothy Gaynor Blake

Begun by Mrs. Gaynor, this book was completed by her talented daughter, Dorothy Gaynor Blake. The songs were written at the suggestion of a member of the Council of Public Safety and of the Child Health Organization of America as the simplest way to set down the first principles of child hygiene. Delightfully original texts and especially charming tunes for tiny tots.

Cloth Bound. Price, \$1.00

## LITTLE SONGS FOR LITTLE PEOPLE

By Georgia B. Perry

This book of songs has been given a warm welcome by all interested and sympathetic friends of childhood. The songs are short enough to be learned by the youngest singing child, they embody both commonplace and extraordinary experiences of little children. There are songs for home, school, church and social gatherings.

Cloth Bound. Price, \$1.00

## HEALTH SONGS

By Jessie L. Gaynor  
and Dorothy Gaynor Blake

These eleven songs are those listed under the above captioned classification in "Songs of Modern Child Life," and published in an inexpensive paper-bound book for convenience and economy in distributing copies to children and parents.

Price, 25 cents

## Children's Songs

By Jessie L. Gaynor

|   |        |
|---|--------|
| The Elephant                                    | \$0.50 |

## SIX LITTLE SONGS FOR THE CHILDREN TO SING

By George Henschel

Based on the text from Scott's "Nature Study and the Child", these songs of a higher type of musical composition, appeal to children because of an unusual, but not too difficult melodic and rhythmic structure.

Price, 60 cents

## SONGS AND SHADOW PICTURES FOR THE CHILD WORLD

Verses by  
Rachel Barton Butler  
Music by  
Jessie L. Gaynor

Shadow Pictures by  
Susanne Fennimore Tyndale

Ten fascinating songs for little children, attractively gotten up in a miniature art volume that makes a most suitable gift book. The verses are printed both with the song and on a specially illustrated prefatory page. There is an element of freshness and newness to each verse. Mrs. Gaynor's music is tuneful, of course, and she always keeps her songs safely within a moderate voice range.

Cloth Bound. Price, 75 cents

## THIRTY RHYTHMIC PANTOMIMES

Song Texts by  
Alice C. D. Riley

Music by  
Jessie L. Gaynor  
Description and  
Illustrations by  
Dorothy Gaynor Blake

Dorothy Gaynor Blake

From the celebrated *Songs of the Child World* volumes Dorothy Gaynor Blake has selected for this book thirty most attractive songs. Ac, are clever "match-stick" drawings which show the rhythmic action for young people. Besides the rhythmic consciousness developed, the child thus is given early training in music appreciation and group activity work. Mothers, too, can use these rhythmic pantomimes and songs with pre-school children in the home. Suggestions for use of the rhythmic with other songs in the original volumes also are given. Complete texts, of course.

Price, \$1.25

## DANCES AND GAMES FOR CHILDREN

Descriptive Text by  
Susan Hoffman Gilman

Music by  
Jessie L. Gaynor  
Silhouettes by  
Susanne Fennimore Tyndale

A most complete and practical volume of material for the kindergarten or primary grade teacher who appreciates the value of instructive play and group activities. It contains complete directions and music for 27 dances and games that are interesting to youngsters. The illustrations are silhouettes in free-hand paper cutting.

Price, \$2.00

## Some Reflections on Singing

(Continued from Page 632)

vocalist must plan her own routine; it is important, though, that the routine be established and kept.

### Building a Repertoire

IN CHOOSING PROGRAM MATERIAL, I make two requirements. Whatever the period or "school" of the song, it must first of all be beautiful. In second place, too, it must make some special appeal to me. Only then can I draw the best from it. There are many songs which are "good" or "scholarly" or "popular," but which I do not consider beautiful music. There are many songs the beauty of which I can perceive only in an impersonal way; that is to say, they are not a part of me. And from such material I keep resolutely away. I believe that worthy interpretations result only when the singer can fuse his own inner being with the message of the composer. It is a mistake to gauge song values in terms of success, or popularity, of the vogue of the moment, or of anything at all except the sincere belief that the singer herself can bring to them. No one song may equally delight everyone

in the audience; but a sincere giving of must always command respect. And a must belong to one before it can be given to others!

No program is complete, to me, with a group of spirituals. They are my music; but it is not for that reason that I love to sing them. Music has no racial boundaries. A person can love Schubert even if he knows nothing of Vienna. In many spirituals have been arranged for by Swedes, Frenchmen, and Swiss, I have never seen our South. I love spirituals because they are truly spiritual in quality; they give forth an aura of simplicity, humility, and hope. Others may find this to be the case, too; for the spiritual is immensely well liked by Europeans who know nothing of the land or the people who produced the songs. They find in spirituals the same qualities of soul that I do; and, to express faith through humility and hope through simplicity, is, perhaps the finest thing that any work of art can achieve. I like to think of the artist as who approaches his work in this spirit

Scotch Idyll (7292) A-6;  
Dance of the Gypsy (7293)

### Scarlatti

The Cat's Fugue (1664)

### Schubert

Cradle Song (arr. C. Walther) (1856)

Du Bist die Ruh (Song) (7075, 7778)

Hark, Hark, the Lark! (Song) (4008, 6926)

Military March in D (4314, 9308, 26129) B-8;  
Moment Musical (1312)

"Rosamunde" Ballet Music No. 2 (14119)

"Unfinished" Symphony: 1st Movement (14117, 6663-4)

### Schumann

Evening Song (19854, 1727)

Piano Quintet: 2nd Movement (8686-7, 8093)

Symphony No. 4, in D Minor: Romanza (7983)

### Sibelius

Swan of Tuonela (7380)

### Skilton

Deer Dance (22174); War Dance (22144)

### Smetana

"The Bartered Bride": Polka (8694)

"The River Moldau" (12520-1-2, 11434-5)

### Strauss, Johann, Jr.

Polka, "Thunder and Lightning" (4319)

Waltz, "The Emperor" (12195, 7653, 35919)

### Strauss, Joseph

Waltz, "Village Swallows" (9993)

### Tchaikowsky

"1812" Overture: Introduction (12411-2, 7499)

Serenade, Opus 48: Waltz

### Slavie March

"Nutteracker" Suite: Dance of Toy Flutes (8663)

Suite No. 3: Theme and Variations

Symphony No. 4: Finale (14188-9, 6933)

Symphony No. 5: Andante Cantabile (8591-2)

### Vaughan Williams

Fantasia on "Greensleeves"

### Verdi

"Aida": Act II, complete (9493-4-5-6-7-8) C-6;  
March (11897)

### Wagner

"Dusk of the Gods": Siegfried's Rhine Journey (14007-8, 7843-4)

Song of the Rhine Maidens (9465)

"Mastersingers": Dance of Apprentices (1807)

Riot Scene

"Rienzi": Overture (12447-8, 6624-5)

"Rhinegold": Entrance of the Gods into Valhalla (7798, 8109)

"Siegfried": Siegfried and the Dragon (9810)

Sounds of the Forest (14845-6, 7192)

"Tannhäuser": March (12448)

"Tristan and Isolde": Love Duet (7273-4)

"Valkyrie": Sacred Fire Music (8545, 9006)

Ride of the Valkyries (8542-3, 9172) B-2

### Weber

Clarinet Concerto No. 1: 1st Movement

**COVER FOR THIS MONTH**—A charming child, the Hallowe'en season with its captivating mysticism and its mischievous and frolic, and last but not least the early association of music, are to be seen on the cover on this month's issue. We are indebted to Underwood and Underwood photographers for the photographic work giving us the picture of the little Miss Jack O'Lantern, and, for the incidental art work to the Philadelphia artist, Verna Evelyn Shaffer.

The fact that many teachers delight their young pupils with the opportunity of participating in happy little pupil recitals that in with some seasonal theme, suggested presentation of this cover. At Hallowe'en recitals, pupils may play selections characteristic of those things usually associated with Hallowe'en, since there are many pieces of appropriate titles, such as Witches, Goblins, Ghosts, Jack O'Lanterns, etc., or the young pianists may have opportunities to appear in their Hallowe'en costumes performing at the piano selections having titles fitting their costumes. We refer to pieces relating to clowns, cowboys, Harlequin, umbrellas, minstrels, historical characters, etc.

In stopping to consider this cover there may be the thought of gratitude to the teachers of piano playing who work so hard faithfully to make music study such an interesting and happy experience for children.

**CHRISTMAS MUSIC**—The average non-professional individual seeing the word Christmas around October First, the date this issue of THE ETUDE probably reaches you, is apt to be a bit surprised. But not the foresighted choirmaster, or school music teacher, who know that the time has arrived for the preparation of the annual program they are expected to present. Even before the writing of this note, mid-August, requests have been received by the Publishers for information on Christmas program material.

If you are engaged in the school music field, you may be considering an operetta or musical playlet, or a program based on traditional carols. Now is the time to examine and select material appropriate for the tastes and within the capabilities of your group. You, no doubt, will be interested in knowing about operettas such as *The Crosspatch Fairies*, Dale (60c), *In Santa Claus Land*, Rohrer (60c), *Santa's Surprise*, Aiken and McRae (75c) and the pageant-cantata *The Vision of Scrooge*, Baines (40c), an attractive telling of Dickens' famous *Christmas Carol*. If you have piano pupils in the class, there will be available this season a book of *Christmas Carols in Very Easy Arrangements* for piano duet. Also there may be obtained for members of the church or Sunday school orchestra, a new collection of *12 Christmas Carols for Brass Choir* (or Quartet) by Ross Wyre.

Choirmasters, and church music committee members, will want to look over the new Christmas cantata *The Monarch Divine* by Lawrence Keating whose *Hail! King of Glory* made such a favorable impression in the 1939 Easter season. *The Monarch Divine* will appeal especially to the volunteer choir. This and other successful cantatas, such as *The Christ Child*, Hawley (75c), *The Greatest Gift*, Petrie (75c), *The King Cometh*, Stults (60c), *The Manger King*, Wooler (60c), *The Christmas Dawn*, Spross (75c), *The Adoration*, Nevin (75c) and many others may be had for examination.

Whether your needs are for school music or church music, operettas or cantatas, anthems or children's songs and carols, organ or piano solos, you can obtain for examination outstanding publications through Presser Service. Write to the Publishers for descriptive literature, or ask that a selection of the desired type of music be sent to you "on approval."

**CHILD'S OWN BOOK OF GREAT MUSICIANS—DVOŘÁK**, by Thomas Tapper—The popular booklets in this series, brought to the number of 16 recently by the addition of the Brahms, MacDowell and Tchaikovsky booklets, are soon to have another addition in this story of the celebrated Bohemian composer, Antonin Dvořák. His memorable association with the music life of America, and his immortal contribution to musical literature, the *Symphony from the New World*, have endeared him to music lovers of this country. Children who know so well the beautiful *Largo* from this work in its various instrumental and vocal arrangements, such as *Goin' Home*, who love the famous *Humoresque*, the lively *Slavonic Dances* and the tender *Songs My Mother Taught Me*, will want to know something too about the composer.

And Dvořák's life story is a fascinating one. It is a story of a great genius, a man of

indomitable courage who through hard work and persistence overcame many obstacles and left a heritage of love and admiration for his works, not only in his native land, but throughout the civilized world.

As with the previously issued booklets in the *Child's Own Book* series, a set of pictures accompanies the Dvořák copy. These are to be cut out and pasted in designated places in the booklet. Then, after reading the text and inserting the pictures, the child writes the story in his own words and binds the book, art style, with a needle and silk cord provided for the purpose. The work thus becomes the *Child's Own Book*, an appropriate and most attractive title.

In advance of publication cash orders may be placed for single copies of the Dvořák booklet at 10 cents, postpaid. The price of the 16 previously published booklets is 20 cents, each.

**THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES**—The large number of "quiz" or question and answer programs enjoyed by millions over the radio indicates the popularity of factual revelation as general entertainment. The who, where, when, and how of things possess universal appeal. This, undoubtedly, is one of the reasons why *The Etude Historical Musical Portrait Series* has remained a favorite regular feature of THE ETUDE.

Each month it brings pictures of 44 of the world's best known musicians and musical personalities; briefly tells who they are, when and where they were born, and what they accomplished. Here is both factual and pictorial information of interest to all music lovers. Here is material of real value to students and teachers alike. Here is a feature you can enjoy with renewed interest every month. And for the convenience of those who would like an extra copy of this or any past instalment in the series for special purposes, we have printed extra, separate copies of all instalments to date. These we will be glad to supply at the rate of 5 cents a sheet.

**SIDE BY SIDE, A Piano Duet Book for Young Players**, by Ella Ketterer—Whenever possible experienced piano teachers assign piano duets early in the first grade, especially where two youngsters in one family are studying, or where chums or neighbors have an opportunity of practicing together. Piano duets are unexcelled for developing a feeling for time and rhythm, they encourage backward pupils to better efforts, and they provide fine material for recital program novelties. In the piano class they are practically indispensable.

The author's experience with these facts makes this new book especially valuable. She has included tunes using a variety of keys—C, G, F, B-flat, D, A Minor and G Minor—there is a definiteness in the rhythmic demands, no smaller note division than an eighth note appears, and both parts are kept within the five-finger position throughout, with a few optional octaves if the hands of the children can reach them. The two parts are of equal interest; in some pieces the Secondo carries the melody.

Teachers may become acquainted with this helpful book by ordering a copy now at the special advance of publication cash price, 30 cents, postpaid; the copy will be delivered when the work is issued.

**THE THRESHOLD OF MUSIC, A Layman's Guide to the Fascinating Language of Music**, by Lawrence Abbott—The author is assistant to Dr. Walter Damrosch on the National Broadcasting Staff, and in this position he has noted the growing music appreciation of the American public, especially those who do not make music a career, or even an avocation, and yet enjoy music to such an extent that they wish to know more about it, of what it is composed, how it is made.

To take up the study of harmony, as is conventionally done by serious students, would be a task; one that for many would take much of the joy out of music. Therefore, Mr. Abbott wrote for THE ETUDE MUSIC MAGAZINE a series of articles to help "listeners" to become a little bit more intimate with great music. He quotes from the works of Beethoven, Bach, Brahms, Wagner, Debussy, Dvořák and other masters; also from the composers whose writings are in lighter vein—Victor Herbert, Oley Speaks, Ethelbert

Nevin, Franz Lehar, Johann Strauss, not overlooking the masterpiece of the late George Gershwin, *Rhapsody in Blue*, and several better-than-average "popular" numbers of recent years.

These articles have aroused a great deal of interest, not only among "listeners" but among students as well, and it has been decided to publish them in book form for convenient reference. This will be a volume worthy of a place in the library of every musician and music lover and in advance of publication a single copy only may be ordered at the special cash price, \$1.25 postpaid.

**TWELVE MASTER ETUDES IN MINOR KEYS, Op. 29, For Piano**, by Franciszek Zachara—In the more advanced grades of piano study teachers frequently find it advisable to assign modern study material as a change from Bach, Chopin, Moscheles, etc. Modern compositions require a specially developed technic and many students in grade 6 and up, admiring the works of Debussy, Ravel, Bartok, Stravinsky, Scriabine, Prokofieff and other modern and contemporary composers, express a desire to add such modern compositions to their repertoires.

The author of these *Etudes* ranks among the outstanding younger pianists of the day and he also has met with unusual success in his teaching of college students. This, his *Opus 29*, includes master study pieces that reveal his inventive and melodic gifts, set off to advantage by fine musicianship. They provide the student with work in octave and chord playing, scale passages, intricate rhythm designs, and other technical problems that should be covered in the advanced grades.

The work, soon to be issued in the *Music Mastery Series*, will be priced at 60 cents. In advance of publication a single copy may be ordered at the special cash price, 20 cents postpaid.

**SYMPHONIC SKELETON SCORES, A Listener's Guide for Radio and Concert**, by Violet Katzner—

|                           |            |             |
|---------------------------|------------|-------------|
| No. 1 Symphony No. 5      | in C Minor | Beethoven   |
| No. 2 Symphony No. 6      | in B Minor | Tchaikovsky |
| No. 3 Symphony in D Minor |            | Franck      |
| No. 4 Symphony No. 1      | in C Minor | Brahms      |

The constantly increasing appreciation of good music in this country is evidenced in the many symphony orchestras now being maintained in our cities, by the frequent radio concerts of noted symphonic organizations and by the numerous recordings that are being produced, both for use on private phonographs and for public broadcasting. Even proficient high school orchestras program symphonic masterpieces, or movements from them. Naturally, these activities create what might be called "listening musicians," folk who not only listen to the lovely music of works in the larger forms, but also have an intelligent understanding of these works. Music clubs and symphony study societies flourish in many places, and earnest students follow symphony performances from the musical score.

But not all are in a position to devote time to extensive study, and comparatively few are capable of reading musical scores of 20 or more staves. For those who delight in listening with understanding to the symphonies these skeleton scores will be a boon. First Miss Katzner explains, verbally and graphically, symphonic forms in general, and then the form of the specific symphony. The works are presented with an unbroken melody line, no matter to which instrument it is assigned in the playing of the composition. The entrance and progress of the various instruments, of course, are indicated. This makes possible the quick coordination of eye and ear.

Many leading music clubs and teachers' associations have given their whole-hearted approval of these books and predict the widespread use of them. Each symphony will be published in a separate book and copies of the four mentioned may be ordered now at the special advance of publication cash price, 25 cents each, postpaid. An order for all four will be entered upon receipt of a cash remittance of 90 cents.

(Continued on Page 684)

**AT THE CONSOLE, A Collection of Pieces for Home and Church, Arranged from the Masters, with Special Registration for the Hammond and Other Standard Organs, by William M. Felton**—A book of

good organ music always is a valuable addition to the library of the busy church organist. Necessity demands that he maintain an extensive repertoire, and a volume of selections is an economical investment. Modern developments in organ building have brought into some churches and, of course, many homes, a new type of organ with an entirely new principle of

sound production, such as the Hammond, and others, in which the combinations of harmonics with basic tones are created and amplified through the medium of electricity. The color combination possibilities of these instruments really require definite and effective registration directions other than those given for standard organs.

Mr. Felton, a featured organist in the days when this instrument was used to supply the musical background in motion picture theatres, and for many years a competent church organist, is making this volume. Whether your organ is one of the modern electric type or the regulation pipe organ you will find the selections of great value, as registration suggestions are given both for the pre-set and harmonic drawbar devices of the Hammond organ and for the facilities of all other organs.

As for the material to be found in the contents, it is interesting to note that compositions have been selected both from well known and lesser known works of Bach, Handel, Tschaiakowsky, Grieg, Liszt, Bizet, Pierné, Chaminade, and Durand, and in addition several well known folk songs are included. Single copies of *At the Console* may be ordered in advance of publication at the special low cash price, 75 cents, postpaid. The sale of this book will be confined to the U.S.A. and Its Possessions.

**ALL-CLASSIC BAND BOOK, For Young Bands, Arranged by Erik W. G. Leidzén**—The mechanical details for the completion of this work are progressing nicely and the Publishers hope soon to place copies in the hands of those who ordered copies in advance of publication. As these arrangements are especially designed for use after the rudiments have been learned, copies of the parts should be received in ample time to "work up" for this season's repertoire of the first year band.

As a guide to ordering we repeat this list of contents and the instrumentation: *Lovely Maiden*, Haydn; *At Twilight*, Schumann; *Minuet*, Bach; *Soldiers' March*, Schumann; *Romance*, Martini; *First Waltz*, Schubert; *Andante*, Beethoven; *Reverie*, Mendelssohn; *Blushing Roses*, Mozart; *Minuetto*, Verdi; *Meditation*, Handel; *Polonaise*, Bach; *Cradle Song*, Schubert; *Queen's Romance*, Haydn; *Gavotte*, Handel and Air, Gluck.

The instrumentation: C Flute and Piccolo, D-flat Piccolo, E-flat Clarinet, 4 B-flat Clarinet parts, E-flat Alto Clarinet and B-flat Bass Clarinet, Oboe, Bassoon, 2 E-flat Alto Saxophone parts, B-flat Tenor Saxophone, E-flat Baritone Saxophone, 3 B-flat Cornet parts (one of which may be used for B-flat Soprano Saxophone), 2 Horns in F, 2 E-flat Alto Horns, 3 Trombone parts (Bass Clef), 3 Trombone parts (Treble Clef), Baritone Euphonium (Bass Clef), Baritone Horn (Treble Clef), Bass Horn, Tympani, Drums, Conductor's Score (Piano).

There is still time to order at the special advance of publication cash price, but this offer will be withdrawn when the books are published. Single copies of the parts may be ordered at 15 cents; if 25 or more parts are ordered the price is 10 cents each. The Conductor's Score (Piano) is offered in advance of publication at 25 cents, postpaid.

**POEMS FOR PETER, by Lysbeth Boyd Borie, Set to Music by Ada Richter** (A Book of Rote Songs)—Songs that little ones may learn to sing from memory form a happy part of childhood experiences and activities. Two things are essential to a song winning a place in the child's memory repertoire. The words, and the story they tell, must be understandable to the young mind, and the melodic line to which the words are set must stay within a limited compass, move naturally with the words, and contain no intervals awkward to a younger singer.

In setting forth these specifications, which

are well known to all who have ever had any experience in making music a part of young lives, we are likewise setting down a description of this new book of rote songs entitled *Poems for Peter*. Mrs. Borie, prominent in the social register of Philadelphia and its environs where people have a reputation for living graciously and with a love of home, wrote many verses spontaneously for her young son Peter. These poems were so clever and entertaining that they could not be retained as secret joys of one home, and as pleasure and interest in them spread there soon came the wise permission for the publication of these *Poems for Peter* in a little book.

The success of the first volume brought along the second volume, *More Poems for Peter*, and it is from these volumes that Mrs. Richter has chosen some delightful verses to make this splendid book of rote songs. The musical settings hold to simplicity and in each number there is a tunefulness that wins the juvenile singers. These songs also may be sung to little folk by mature singers.

A single copy only of this book may be ordered now at the bargain advance of publication cash price of 50 cents postpaid. Delivery will be made later this fall, as soon as the book appears from press.

**EIGHTEEN SHORT STUDIES FOR TECHNIC AND STYLE, For the Piano by Cedric W. Lemont**—The piano compositions of this composer are so well known that teachers, everywhere, will read with interest this announcement of a new book of melodious studies from his facile pen. His *Dream Pictures* (\$1.25), *Creole Sketches* (\$1.25), *Will o' the Wisp* (40c), *Elfin Frolic* (35c), *Chasing Butterflies* (35c), *Sweethearts* (40c) are classics in piano teaching literature, and his set of studies *Facile Fingers* (60c) is used by many teachers to develop in pupils

real musicianship and appreciation. In this new book melody has been combined so well with technic that the fact that they are studies hardly will be noticed by the student. Yet, each has a definite purpose in technical development and they cover such problems of the third and fourth grade student as legato, staccato, triplets, octaves, chords, arpeggios, running passages, phrasing, pedaling, left hand melody, finger control, double thirds, double sixths, etc. And, best of all, the work is designed for equal development of the right and left hands. The studies are written in the usually-used keys.

The advance of publication cash price on this set of studies is 20 cents a copy, postpaid, copies to be delivered when the book is published.

**MELODIES EVERYONE LOVES, A Collection of Piano Pieces for the Grown-Up Music Lover, Compiled and Arranged by William M. Felton**—Thousands of piano players have acquired copies of this author's *Play With Pleasure* (\$1.00), one of the most popular books of piano music published in recent years. To have at hand a volume of favorite melodies, in skilful, playable arrangements, that one can turn to for hours of keyboard diversion, is a convenience much appreciated by those whose studies have not brought their technical attainments up to the virtuoso stage, but who, nevertheless, play the piano quite acceptably.

As there are so many fine compositions generally known and loved these days because of radio performances, phonograph recordings and their use as theme or incidental music in motion pictures, a limited number only could be included in *Play With Pleasure*. For *Melodies Everyone Loves* Mr. Felton has collected equally popular tunes from grand opera gems, ballads, folk songs, "hits" from musical comedies and light operas, overtures, pieces in light rhythmic style and selections that have been made popular from the classics of Beethoven, Schubert, Liszt, Verdi, Moszkowski, Tschaiakowsky, Saint-Saëns, Debüls, Massenet, Strauss, Gounod, Chaminade and others.

These favorite themes will be given piano arrangements well within the playing capabilities of students from grade 3½ to 5. Naturally, they will appeal especially to the grown-up player, but younger folk, too, will appreciate the tunefulness and attractiveness of these favorite melodies.

During the period this book is in prepara-

tion the Publishers present an opportunity to order a copy at the special low pre-publication price, 40 cents, postpaid. Copyright restrictions make it necessary to confine the sale of the book to the U.S.A. and Its Possessions.

**JACK AND THE BEANSTALK, A Story with Music for the Piano, by Ada Richter**—Piano teachers, and school instructors having in charge classes of tiny tots, enjoy using the books of this talented composer-teacher. *Ada Richter's Kindergarten Class Book* (1.00) has been widely adopted, and her original compositions and arrangements are established favorites with teachers and pupils.

Especially interesting has been her *Cinderella, A Story with Music* in which the familiar childhood tale is told with descriptive piano pieces. Encouraged by the success of *Cinderella*, Mrs. Richter has arranged another popular children's story in the same manner—as a story to be told in class, as a collection of easy-to-play piano pieces, as a "busy work" book to be colored in otherwise idle class moments, as a little play for presentation at recitals or on school visitation programs.

Among the titles given the pieces are *Climbing the Beanstalk, Fe, Fi, Fo Fum, The Giant and His Wife, The Golden Harp Plays, The Chase, Chopping Down the Beanstalk, and The Giant Is Gone*. During the period in which this 12 x 9 oblong book is in preparation for publication single copies may be ordered at the special advance cash price, 25 cents, postpaid.

**OUT OF THE SEA, An Operetta for Children. In One Act. Book and Lyrics by Ethel Watts Mumford, Music by Lily Strickland**—School music educators, whose plans for this season include the preparation and presentation of a juvenile operetta, will find it to their advantage to examine a copy of the vocal score of this fantastic novelty soon to be published. Orders for single copies may be placed now at the special advance of publication cash price, 35 cents postpaid.

Children love to wander in the "land of make-believe" and frequently display surprising histrionic talent when cast in playlets that appeal to the youthful imagination. The picturesque characters introduced in this operetta are sure to prove interesting: King Neptune, Undina, The Sea Serpent, The Oyster, The Hermit Crab, The Fiddler Crab, and Davy Jones. Of course there are "earth-beings" characters, too. But all of the parts may be taken by children. There is much of melodic beauty in the music, yet all of the choruses are arranged for unison singing. Bits of two-part work are indicated, if the chorus is capable.

The vocal score carries directions for staging, for costumes, and for dancing numbers and gives the music and dialog complete.

**WHEN THE MOON RISES, A Musical Comedy in Two Acts, Book and Lyrics by Juanita Austin, Music by Clarence Kohlmann**—Clarence Kohlmann, in his operettas for amateur performers, gives the soloists and the chorus members in such amateur groups music rivaling that of some of the composers famed for their light operas and musical comedies which have enjoyed the status of stage hits in professional presentations. *When the Moon Rises*, in its musical continuity, provides melodic and rhythmic variety. Just as they say that a true bargain is when both participants are well satisfied, so it may be said that performances of this musical comedy will be true successes because the singers will have enjoyed their numbers and the audiences will be delighted to have heard them.

This is not a collection of beautiful solos or interesting choruses held together with a thin excuse for a story. Instead it is a definite story of gypsy intrigue that gets all mixed up with the guests of a New England resort hotel. The socially conscious guests feel that the famous singer who becomes their fellow guest is deserving of all honors and adulation but the gypsies feel that this former member of their band is worthy of less comfortable treatment. A lovely gypsy maiden would not have it so however. This

gives the social group rivalry and romance of an unexpected character. The chorus work is for four-part mixed voices and the soloists are four ladies and five men, and besides these performers there also are three me- characters having only short speaking parts.

The vocal score of this new operetta, containing the dialog and the complete music and lyrics for all solos and choruses, may be ordered at the advance of publication cash price of 45 cents postpaid. A single copy only of the vocal score may be ordered now at this price for delivery as soon as published.

**ADVANCE OF PUBLICATION OF FERS WITHDRAWN**—In time to be placed in rehearsal for performance during the approaching holiday season, three works listed in the September issue of these Publishers' Notes will be released during the current month. Church musical groups and teachers who subscribed for these in advance of publication will be pleased to get their copies in time for ample practice. Of course with the publication of these books the special advance price is withdrawn. Single copies of any of the following now may be had for examination:

*The Monarch Divine, A Christmas Cantata* for the Volunteer Choir, Text by Mattie B. Shannon, Music by Lawrence Keating is a fine musical setting of the beautiful Christmas story. It contains twelve numbers, including solos for soprano, alto and bass, two duets, choruses for the men's voices, choruses for the women's voices and five choruses for the entire choir. Time of performance, about forty-five minutes. Price, \$1.00.

*Christmas Carols in Very Easy Arrangements for Piano Duet* brings to the Sunday school Christmas celebration a much-needed novelty, and to the school program, or the holiday-season piano pupils' recital, selections that youngsters will enjoy playing and which will be most appropriate. Pupils in grades one and two will not find them difficult. Some of the arrangements may be used in accompanying the singing of the carols. Price, 75 cents.

*Twelve Christmas Carols for Brass Choir* Arranged by Ross Wyre will be a most welcome addition to the repertoire of the group of instrumentalists who are accustomed to assist with Christmas programs and who hitherto were obliged to make their own arrangements or play as best they could from voice parts. How convenient it will be to have these beloved airs available for quartets or larger groups, from the church or Sunday school orchestra, from the school band or orchestra, and for the instrumentalists who accompany the "Waits" on their Christmas Eve journeyings! There is an optional Piano Accompaniment part available, too. Price, \$1.00.

**WHEN MOTHER PREPARES A PARTY**—Not every apple that mother bought at Hallowe'en was put in the tub of water used in the bobbing for apples, a feature of the Hallowe'en Party she arranged for her children and their young friends. Of those she brought from the market some were too small, some were misshapen, some bruised, and some were far too big for the mouths of juveniles, but after mother had sorted the apples she had a fine lot for the apple-bobbing fun.

Not every music publication wins a place among those frequently used, but just as we were able to see bobbing about on the surface of the water in the tub the apples that mother considered the best for the game, so in looking over the Publisher's Printing Order each month, we can see those musical works which a great number of music users have chosen as worthy of frequent use, since a number gets on the Publisher's Printing Order only when it is necessary to print more copies to make stock replacements. Thus each month in these columns we give an opportunity to note some of the things which have been ordered reprinted.

## REWARDS OFFERED FOR OBTAINING SUBSCRIPTIONS

Music lovers, wherever, secure fine standard merchandise by soliciting ETUDE subscriptions. Why try your hand at the fascinating work? Engage your wide circle of musical friends and acquaintances, all of whom are ETUDE devotees, you can easily obtain subscriptions thus secure exceptionally high class merchandise at no cash outlay. Following are a few of the rewards offered:

**Chromium Finish Bread Tray**—Unlike ordinary silver plate, this Bread Tray does not require constant polishing. Its chromium finish will always be just as bright and attractive as the day you receive it from us. Size 13" x 6". Your reward for securing two subscriptions.

**Relish Dish**—Although labeled "Relish" this attractive item will prove equally useful for jelly, preserves, etc. The crystal dish is, of course, removable and the "dola" style base is finished in non-shining chromium. Size 11" x 4¼". Your reward for securing three subscriptions.

**Tub and Tongs**—Here is a useful item as decorative combination. Both Tub and Tongs are completely finished in chromium and the Tub has the new, modern line with new design handles. Height all, 5½", opening 5½". Your reward for securing four subscriptions.

**Scissors Set**—This two-piece Scissors Set is very practical and comes attractively packaged. Handles of scissors in three colors, red, wine and blue. It includes one pair of Felten Household Shears and one 6" Embroidery Scissors. Awarded for subscription, not your own.

**Sandwich Tray**—This unusual Tray has a swinging handle and a fine lace doily center encased in glass. The center of the doily is done in gay colors, adding to the attractiveness of the Tray. Both Tray and handle have a neatly embossed trim and are chromium-plated. Diameter 10½"; height overall 7". Your reward for securing five subscriptions.

Send post card for complete list of premiums.

**CHANGE OF ADDRESS**—In changing addresses, be sure to advise us immediately, giving both old and new addresses. Do not depend on the Post Office Department to forward magazines. They will forward first class mail, but if magazines, which are sent under a special rate, are not deliverable at the first address given, they are destroyed. Help us to give you good service.

**FRAUD AGENTS ARE OPERATING**—It is our unpleasant duty again to emphasize the importance of exercising care in placing subscriptions for THE ETUDE with strangers. Read carefully any receipt or contract offered you. Do not permit any change to be made in them. Assure yourself of the responsibility of the man or woman soliciting your order for THE ETUDE before paying any money. Thousands of fine men and women earn their livelihood by taking subscriptions, but there are others who prey on the public, collecting whatever they can and retaining entire amount. The season for active canvassing on magazine subscriptions is fast approaching. Help us to protect you from loss.

## The World of Music

(Continued from Page 622)

LEOPOLD STOKOWSKI has conducted the Philharmonic Society Orchestra of Paris in a concert at the Théâtre Chailiot for the benefit of the American Aid Society of the French capital.

THE GRAINGER MUSEUM at Melbourne University, Australia, founded by Percy Grainger, the eminent Australian pianist, is to house a collection of historical musical mementoes including a large collection of manuscripts in which the works of Frederic Delius, Edvard Grieg, Balfour Gardiner, Cyril Scott, and other famous musical friends of Grainger will be prominent features.

WILLEM VAN HOOOSTRATEN, conductor since 1925 of the Portland (Oregon) Symphony Orchestra and of summer concerts in New York since 1922, has been chosen as permanent conductor of the Mozarteum Orchestra of Salzburg.

TWO THOUSAND NINETEEN MUSICAL INSTRUMENTS at a value of Eighty-five Thousand Dollars, including pianos valued at Fifty-three Thousand Dollars, have been bought by pupils under PWA instructors of Oklahoma, according to reports from Dean Richardson, State Director of the Federal Music Project.

FRANK HARDING, who made the neighborhood of 212 East Twenty-second Street the original "Tin Pan Alley" of New York, and who in the eighteen eighties and nineties was known as "The Grandee of the Popular Music Game," passed away on July sixteenth. Through the last decade of the last century, his Hibernian ditties and lachrymose ballads were sung, hummed and whistled from the Bowery to the Golden Gate.

THE BERMUDA CHORAL SOCIETY has given a performance of the "Requiem" of Brahms; the Bermuda Madrigal Society has given a program devoted to motets by Palestrina, Eccard, Farrant, Bach and Parry, and organ works of Bach, Rheinberger, Guilmant and Vierne.

AUGUSTE SEIDL-KRAUSE, widow of Anton Seidl to whom America is so much indebted for his pioneer work in introducing Wagner's art to this country, and who herself sang leading Wagnerian rôles at the Metropolitan of New York, died at her Kingston, New York, home on July 15th, aged eighty-five.

## How to Make Polyphonic Playing Interesting

(Continued from Page 637)

tuation in movement (changes in pace and pulsation).

### A Two Voiced Fugue

NOW LET US CONSIDER a two voiced fugue, the *Fugue in E minor*, Book I, No. 10 of Bach's "Well Tempered Clavichord." This is the only two voiced fugue in this volume. It is another fine example of musical discourse. But here there is more abundant liveliness and caprice (*Allegro capriccioso*).

Mark well the theme,

Ex.2 *Leggiero ma ben accentato*

appearing in the right hand part in the opening two measures, as also in measures 11-12, 22-23, 32-33, and in the left hand part in measures 3-4, 13-14, 20-21, 30-31. So much for the theme or first subject. The counter subject,

Ex.3

pops up in the right hand part in measures 3-4, 13-14, 24-25, 26-27 and in the left hand part in measures 5-6, 7-8, 11-12, 22-23 and 30-31.

### A Three Voiced Invention

ONE OF THE LOVELIEST inventions by Bach is No. 7, in *E minor*, of which the opening measures are

Ex.4

In this we find abundant opportunity for the expression of meditation and a quiet melancholy. To the "observing eye" and the "listening ear" these sounds are anything but mere "tonal mathematics." They are, in truth, tonal gems, giving expression to soulful states. In the hands of Bach, the supreme master, to whom this polyphonic idiom was second nature, everything he touched turned to "tonal gold." A veritable musical Midas.

### A Four Voiced Fugue

WHAT A RADICALLY DIFFERENT musical picture is presented by the fifth fugue of the "Well Tempered Clavichord." Here are resoluteness, dignity and impressiveness. How well would this composition sound if the individual voices were played by the members of a string quartet. It is well to imagine these things in fugue playing and to try to suggest them when they are presented in their pianistic garb. It is excellent practice to take any two of these parts and play them together. You will find in the main that they make perfect musical sense and are truly musical. By the way, there is an excellent edition in which twenty-four of Bach's fugues are given in score. This version is by Dr. Stadel and it is heartily recommended to all serious students. The fugue now under

consideration is included in this collection.

### Why Bach's Fugues Are Musical

THE GREAT MASS OF BACH'S FUGUES present themes and treatment cast in the vocal idiom. Before the piano, or any other keyboard instrument had been perfected, man had a perfect instrument at his disposal—his singing voice. Hence the very great amount of music written in the early years of musical instrument evolution that is but an adaptation of singing.

Human voices are suggested not only by instrumental fugues; but vocal fugues have been written by our great masters. Take, for example, the closing number of Handel's "Messiah." An imposing and impressive close to an imposing and impressive work is realized in this vocal fugue, in which all the singers join forces, hymning their respective parts to but one word, *Amen*.

With the modern piano, we have at our disposal not only an instrument or tool of precision, on which we can both whirl off the pyrotechnics of a Liszt and suggest the heavenly charm of vocal magic of the earlier composers. Never before did the world have so many varied resources in piano playing to give the fullest expression to so many different idioms in music making. To play the piano well is a fine thing. To use it as a medium for music making is a far better thing.

### Tempo Rubato

SHOULD TEMPO RUBATO BE USED in the presentation of polyphonic music? My answer is unhesitatingly, "Yes." *Tempo rubato*, that stumbling block in the path of many a serious minded pianist, is a misnomer, which, as Constantin von Sternberg so well points out, might better have been named *tempo libero* (free movement) or *tempo vacillando* (wavering movement). *Tempo rubato* is indispensable in all types of music; though it is true that a more restricted use of it is in place in the works of classic than in those of romantic composers. Let the young student remember that *tempo rubato* is not an invention of Chopin, though he made more extended use of it than his predecessors or contemporaries. *Tempo rubato* is older than Bach. It has always been present in all folk songs. Furthermore,

1. *Tempo rubato* requires:

- (a) A vivid sense of rhythm;
- (b) Musical discretion and taste;
- (c) Musical instinct and intuition.

2. *Tempo rubato* is simply a natural, free, straightforward presentation of various paces and pulsations. It is the antithesis of metric and mechanical playing.

3. *Tempo rubato* is implied by such markings as *ritardando*, *accelerando*, *crescendo*, and so on.

### Pedaling Polyphonic Music

A WORD ABOUT PEDAL usage. An old friend; who many years ago completed his musical studies at the Leipzig Conservatory, in the days when Carl Reinecke headed that much sought school, writes to me: "We were not allowed to use the pedal in the study of Bach, especially in the playing of the inventions and fugues." Forbidden! What an easy way out, for the teacher! In 1848 Ignaz Moscheles, one of the most eminent of virtuosi, assumed the directorship of the piano department of this institution. It seems that he had a special dread of the damper pedal. He said, "Good teachers use the pedal as little as possible." While this attitude had, perhaps, some justification in those days, there is no good reason for any modern educator to withhold from his students the superior information and experience gained from the example of the great virtuosi since Moscheles' time. Today, a practical knowledge of the uses of the pedals—all of which is teachable—is a necessary part in piano playing. Rubinstein

## Au Claire de Lune

(Debussy)  
By Mrs. M. J. Brace

Quite breathless stand the the trees and still;  
And no leaf stirs; one whippoorwill  
At last is done. Then comes in white

A moonbeam troop of misty light  
To walk the gardens of the night;  
And softly dreaming, hand in hand  
They dance a fairy sarabande.

## The Accompanist's Etiquette

By Gertrude Greenhalgh Walker

BETTY CAME into Miss Brown's studio looking radiantly happy.

"Oh, Betty, what is the good news I see smiling all over your face?" asked Miss Brown, her piano teacher.

Betty laughed as she answered, "I am happy, Miss Brown, because I have been chosen to play the accompaniments at the next school concert. We had an elimination contest and I was the successful one. I am to accompany the violinist and the soprano soloist."

"Congratulations, Betty. I hope you have brought the accompaniments with you. After we have smoothed them out we must work on what I call the accompanist's etiquette. Yes, yes, Betty," went on Miss Brown, as she saw bewilderment clouding Betty's face, "an accompanist has a few very important things to observe to give support to her soloist and to make a nice stage appearance."

Rule 1. Arrange all music in the sequence in which it is to be played.

Rule 2. The accompanist must follow the soloist onto the stage.

Rule 3. Do not hurry. Place the music on the rack; adjust the seat; find the pedals; and wait until the soloist gives you permission to begin.

Rule 4. Listen carefully to your soloist, neither hurrying, retarding, nor playing too loudly for him. Accompanying means TEAM WORK.

Rule 5. Remain seated after the program is finished, while the soloist is acknowledging his applause. Rise only when the soloist invites you to share the applause with him.

Rule 6. Step back after your courtsey, and let the soloist precede you to the wings. If the soloist is a gentleman, he will wait near the wings, but on the stage, and allow you to go off first.

"These are a few little rules that give the professional touch to amateurs."

"Oh thank you so much, Miss Brown. You know so much about all things pertaining to music and its presentation, and I shall be happy to follow your instructions."

Betty was so pleased that she had to tell all her young friends about these points in stage etiquette.

## Singing Cowboy

By Marjorie Knox

"WHOOPEE! git along, little dogies!" laughed Chuck and Jim as they dug spurs into their two snorting ponies and galloped out across the open plain. "Isn't it fun being real Texas cowboys with Uncle Ted for this vacation?"

"Boy! You said it!" They had risen several hours before sunrise, rigged themselves up in traditional cowboy style—plaid shirts, and breeches with wide silver-trimmed belts and gun holsters at their hips. Around their necks they knotted brightly colored kerchiefs, and put wide felt ten gallon hats on their heads. Of course they had on high leather riding boots and clinking spurs.

"I'm headin' for the last roundup," whistled Jim. Ahead was a great herd of bellowing cattle, which Uncle Ted and his men and Jim and Chuck were driving to a big roundup. "Let's hope it won't be 'the last' one," he shouted at Chuck, as he galloped by, twirling his lasso toward one of the animals. Already the roundup spot had been reached. Jim raced on and looped his lasso over a steer. When the steer was down, the men with the branding iron marked him and sent him bawling "up trail" to the famous Kansas market.

Jim and Chuck rode along with the cowboys, who now pointed their cattle up the famous old Chisholm Trail, first traveled by a half-breed Indian of that same name in the year 1865. The cowboys kept circling out around the herd to keep them together. Now they came to a river and the men rode ahead to lead the cattle into it. It was a difficult job for the cowboys to get the cattle across flood swollen streams such as this. "Sometimes," Uncle Ted said, "cattle become excited and drown." Luckily, nothing like that happened this time.

Out on the opposite bank a wide stretch of dry plain lay ahead, and riding over it the cowboys sang an old song that Jim and Chuck had just learned. It was called *The Old Chisholm Trail*.

Several hours later Chuck swerved his horse to one side, pulled off his hat, and waved it in a circle about his head. In cowboy

signal language this meant the night "bedding ground" had been reached, and the "chuck" wagon with its food supplies and cook, and the cattle, all would stop.

After supper, with one cowboy gone on his night watch over the cattle, the others sat about the blazing campfire. Each had an interesting story to tell, and when talking ceased singing began. Many old songs, familiar to us, such as *When You and I Were Young*, *Maggie*, *My Bonnie Lies Over the Ocean*, and others, were sung. Always someone played a harmonica, jew's harp, or an old fiddle which had been lugged along with the rest of the outfit. When they had exhausted the words of these songs, which are familiar to us, they put their own cowboy stories to the tunes. Here is one verse of *The Cowboy's Dream* that was sung to the tune of *My Bonnie Lies Over the Ocean*:

"Last night as I lay on the prairie,  
And looked at the stars in the sky,  
I wondered if ever a cowboy  
Would drift to that sweet by and by.  
Roll on, roll on;  
Roll on, little dogies, roll on, roll on."

"But," protested Jim as a campfire song died away, "doesn't all this singing scare the cattle?"

"O no!" laughed Chuck. "Cowboys sing to the cattle—and for a purpose: to keep the cattle calm and less afraid. Of course they sing to entertain themselves, but a cowboy, singing softly and slowly, helps to lull the animals. Singing is one way a cowboy has of hastening the end of a stampede, or lessening the possibilities of one starting.

"Well!" exclaimed Jim. "Ferdinand, the Bull, liked flowers, and here I discover that his cousins like music!" They rolled on the ground with mirth.

When the sun shone brightly over the distant blue mountains the next morning, the cowboys and their outfit were well on their way again; and our young cowboys, Jim and Chuck, were having the time of their lives.

Last night as I lay on the prairie  
And looked at the stars in the sky,  
I wondered if ever a cowboy  
Would drift to that sweet by and by.

## ??? Ask Another ???

1. What composition is called "From New World"?
2. Who was Stephen Foster?
3. Give an Italian musical term meaning suddenly softer.
4. How many half steps in a major triad?
5. If a major scale has six flats in its signature what are the letters of the supertonic triad?
6. What is meant by dynamics?
7. From what is this taken?

8. In what town was Mozart born?
9. Who wrote the *Last Rose of Summer*?
10. What composer was born in 1810 and died in 1856?

(Answers on next page)

## Letter to Schubert

By E. A. G.

DEAR FRANZ PETER SCHUBERT:

One of the first real composer pieces I ever learned was a waltz you wrote, and I guess you will not mind if I write you a letter. Then, once I played your *March Musical* in a recital. It was a boys' recital too; no girl could play in it, no matter how well she could play.

One day our Music Club gave a party to play about you and I was in it. I took the part of your friend, Franz von Schubert and Jimmy Snowden took the part of Schubert because he could play more pieces. I liked to memorize the lines in the poem. Helen Brown took the part of Caroline Esterhazy, and she sang a solo. We wore pretty costumes; I wore a dark purple coat and a big stovepipe hat. The poem had something in it about your "Unfinished Symphony." My! but it was a shame about that, and you being so poor, and everything, and being only thirty-one years old when you died in 1828. That was not much more than one third of how long Haydn lived, that is, the way I figure it out, but I need like fractions.

I do not like counting in music, either, but my teacher says I have a very good sense of rhythm. But I like rhythm, and my teacher says we can be good in rhythm and still not be good in arithmetic, because we have to think time and feel rhythm. I guess it is easier for me to feel than to think. I am sure they were both easy for you, because your compositions have such a wonderful lilt to them, and they all have such beautiful melodies. I don't see how you ever composed such melodies, but then I don't suppose you know, yourself.

Some of my favorites are *Hark, the Lark*, *Moment Musical*, all the "Unfinished Symphony"; and the "Impromptu" that I heard in a concert lately; in fact, like all your compositions I have heard except the *Erlking*. My teacher says I like it better next year, and I hope she is right—she generally is. And she says I will be a good musician if I keep it up, and I hope she is right about that too.

Well, I have to do my arithmetic now so I will close.

From JUNIOR

THE ETUDE

# JUNIOR ETUDE—(Continued)

## Susan's Memory Chart

By E. Evelyn Belsar

"MOTHER," sighed Susan, as she found her practicing, "I just can't seem to memorize that piece which Miss Brown asks me to play in her recital. No matter how much I practice it, something always goes wrong."

"Yes," replied her mother, "I could hear you playing it, and I noticed that it didn't go very smoothly. But you just played it over and over, instead of finding the places where you were troublesome. Perhaps we can improve it if we know just what the trouble is."

"I know, mother, but how can I remember just which measures bother me? It's a long piece, and it seems as if I get mixed up so many times, I forget where some of the measures are."

"I have an idea," said mother. "You know when daddy wants to know how his business is going, he keeps a chart, showing what happens in the different branches of the company. Then, when he looks at the chart, he knows which departments are doing well, and just where he must

Soon mother had the paper, a pencil and a red crayon. At the top of the paper she put Susan's name and the words "MEMORY CHART." A column about two inches wide was ruled at the left of the sheet, for the title of the piece. Then across the page a square was numbered for each measure in the music.

"Now," said mother, "We'll color the squares that correspond to the measures you are sure of. When we have done that, you will know just which parts of your piece need special practice. As you master one of the troublesome measures, you may color its square, and when you know the piece perfectly, all the squares will be filled in."

"Oh!" cried Susan, "that will be heaps of fun! I know it won't take me long to get it now. I think I'll tell Miss Brown about my memory chart, and perhaps I can make one for each of my pieces."

It was not long till Susan knew her

|           | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | etc. |
|-----------|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|----|------|
| FOLK SONG | X | X | X | X | X | X | X | X | X | X  | X  | X  | X  | X  | X  | X  | X    |
| MINUET    | X | X | X | X | X | X | X | X | X | X  | X  | X  | X  | X  | X  | X  | X    |
| GAVOTTE   | X | X | X | X | X | X | X | X | X | X  | X  | X  | X  | X  | X  | X  | X    |

improvements. You can do the same with your piece. I'll get some graph paper like daddy uses, and we'll make a memory chart."

piece perfectly; and when Miss Brown asked her how she did it, Susan responded, "We borrowed Daddy's office system, and it certainly worked!"

## Haydn Replies to Junior

By Rowland M. Blackstone

DEAR JUNIOR:

Probably you did not expect to hear from me; but I read your letter to me in Junior Etude for June, and enjoyed it much. I thought I would answer it.

I should explain why I am called the Father of the Symphony. You see, many composers had experimented with the symphony; but I was the one who brought it up to date in my time. I developed it to a greater extent, and I suppose I wrote more of them than anyone else. I had a good orchestra to write them for, and I did not mind being kept so busy. I liked to write just as you like to practice. I hope you will keep that up.

I am also glad to hear you like singing; as you know, it was one of my greatest pleasures as a boy.

Yes, Junior, wigs and knee breeches were the style in my day; radios and automobiles seem to be the style now—just a matter of style and fashion. You would find it funny with a wig, I would have looked very without one, because they were the style in my time.

My space is getting limited so I will have to close. I hope you will become acquainted with some more of my symphonies.

I beg to remain

Your cordial friend,

Josef Haydn.

## Answers to Instrument Circle Puzzle:

Trumpet; Piano; Violin; Cornet; Trombone; Harp; Organ; Oboe; Clarinet; Piccolo; Horn; Harmonica; Guitar.

## Prize Winners for May Instrumental Circle Puzzle

Class A, Florence Ellen Johnson (Age 14), Arkansas

Class B, Marjorie McDonald (Age 12), Pennsylvania

Class C, John Murray (Age 10), Indiana

Honorable Mention for May Instrumental Circle Puzzle:

Joan Beverly Ford, Yvonne Magnan, Helen Andrews, Beryl Roberts, Donald Etherson, Frances Miller, Berton Cox, Lucy Reardon, Louis Bonelli, Dorothy Etherson, Jimmie Lee Tallon, Roberta Riddle, Genevieve Smith, Mary Patterson, Hilson Ellers, Lillian Lisle, John Kieffer, Dorothy Page, Ann Palmer, Francis Camp, Vernon Carson, Marie Rose Wells, Caroline Huff, Emily Orson, Belle Elverson, Gertrude Cone, Sally Tracy, Ardelle Matthews, Marjorie Mason, Bill Bentson.

Dulcy Houston, Age 16 months  
Fredericksburg, Virginia

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "School Music."

Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by October Eighteenth. Names of prize winners and their contributions will appear in the January issue. The thirty next best contributors will receive honorable mention.

### RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not

have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

## National Music Week

(Prize Winner in Class C)

I think National Music Week is nice because it encourages people to know more about music. I think schools should celebrate Music Week with more music. I think people should make scrapbooks about music like I did.

My piano class has a recital every once in a while, and Music Week is a good time to have one and to learn more about composers and more about American music. I like our cowboy songs as well as classical kinds of music.

MARION SCHNEIDER (Age 10),  
Ohio.

## National Music Week

(Prize Winner in Class B)

National Music Week does more than anything else to create a love for good music among American boys and girls. Somehow it seems that people, as a whole, get more real worth from any study, recreation or event, when a special time is set apart for a nation wide celebration of it. For this reason, National Music Week means a great deal to us.

During this special week our thoughts at home and in public are centered on music. The result is joy and instruction in music culture and refinement which help to lift us to a nobler and sweeter life, which comes from a love and knowledge of music.

National Music Week has become so popular that we look forward to it each year with keen delight, because of its part in building up good music. Seven days each year spent in thinking, hearing and learning good music is time well spent.

ROBERTA C. MAJOR (Age 11),  
South Carolina.

## Composer Chain Puzzle

By Eugenie Gluckert

EACH dash represents a letter. Fill in the proper ones and you will have the names of ten famous composers. The last letter of each name is the beginning of the next. Number one starts with "G."

1. G - - - -
2. - - - - -
3. - - - - -
4. - - - - -
5. - - - - -
6. - - - - -
7. - - - - -

## Honorable Mention for May Essays:

George Bellinsky, Cornelia Coleman, Lillie Mae Regan, Jenny Paulin, Jo Ann McLain, Joan Beverly Ford, Jean Rose McDonald, Helen Fansmahr, Georgine Phelps, Agnes Williams, Hannah McBride, Mary Ellen Chew, Hilda Pepper, Alice McGeorge, Henrietta Coleman, Caroline Sweeney, Jack Henry Merritt, Elsa Whiting, Nelle Larson, Helen Jervia, Sydney Johns, Alda Menderson, James Walnut, Bobby Lowthorp, Ella Mae Anders, Lambert Wilson, Anna Gains, Belle Benson, Mary Emmitt, Jerry O'Kief, Robert Masters.

## National Music Week

(Prize Winner in Class A)

In the small town where I live Music Week means a great deal to the community, and a great deal to my family.

At my home we have a family orchestra, consisting of a piano, first violin, second violin, viola and violoncello. We have been playing for over four years as an orchestra, and we have given four concerts.

Because of our family ability, we have contributed greatly to Music Week in our town; but, besides our family orchestra, our town has other talent which is being brought out by the school orchestra and the school band, the latter having been recently organized. Both of these are making great progress, and we have been fortunate in having a good leader for these musical activities and one who has done much for the advancement of music in our community at all times, and especially in Music Week when our people become more conscious of the advantages of music.

KITTY McELWAIN (Age 14),  
Pennsylvania.

DEAR JUNIOR ETUDE:

I play in a violin quartet. We practice once a week. We have played together for three years. Two of us are eight years old and two are nine.

This spring we gave a Musicales for our families and friends. We played eight quartet pieces and each of us played three solos. I am enclosing our picture.

From your friend,  
SALLY CLIFTON (Age 9),  
Kansas.

## Answers to Ask Another

1. "Symphony No. 5, in E minor" by Dvořák. 2. American song writer whose compositions are considered of folk song type; such as *Old Folks at Home* (*Way down upon the Swanee River*), *My Old Kentucky Home* and *Old Black Joe*. He died in 1864.

3. *Subito piano*. 4. Sixteen. 5. A-flat, C-flat, E-flat. 6. The various degrees of loudness or softness with which tones are sounded. 7. *Wiegenlied* (*Lullaby*) by Brahms. 8. Salzburg, Austria.

9. Thomas Moore wrote the words, which he adapted to a traditional Irish air. Flotow introduced this as an incidental ("theme") song in his opera, "Martha," where it did much to popularize the title rôle with some of the greatest of soprano prima donnas, especially Adelina Patti. 10. Schumann.

# How to Make Polyphonic Playing Interesting

(Continued from Page 685)

said, "The more I play, the more I am convinced that the pedal is the soul of the piano. There are cases where the pedal is everything."

If Bach were with us in the flesh, would he avail himself of the pedals when presenting his compositions? Answer for yourself. Be that as it may, all modern pianists of rank do use the pedals in interpreting Bach's works, wherever the pedals can be effectively employed. Too prolonged usage in ill-advised portions, will most assuredly blur the voices and mar the musical texture of Bach's or any other composer's polyphonic music, just as nonpedal renders this type "dry as dust." When next you hear a great keyboard artist and master interpret polyphonic music, especially Bach's great organ preludes, fantasies and fugues, in the superb transcriptions of Liszt, Busoni, Tausig and d'Albert, note his use of the pedals. Furthermore, note the poetic values which are brought out and that the playing is not by any means a "highbrow" attitude of mind, heart and soul.

## Modern Polyphonic Pianism

GODOWSKY'S TRANSCRIPTIONS of well known musical gems, represent a truly marvelous union of the spirit of Bach and the pianistic intuitiveness of Chopin. Never before in the evolution of piano composition has any master glorified the instrument with such polyphonic wonders. What is of inestimable value to the student, Godowsky has minutely indicated the precise uses of pedals in all of his editions, to say nothing of purposeful fingerings and other invaluable markings. The following list of works is recommended: Rameau-Godowsky, *Tambourin*; Schubert-Godowsky, *Moment musical*; Schubert-Godowsky, *Ballet music from "Rosamunde"*; Schumann-Godowsky, *Du bist wie eine Blume (A flower thou seemst to me)*; Weber-Godowsky, *Perpetuum Mobile*; Albeniz-Godowsky, *Tango*; Bohm-Godowsky, *Still wie die Nacht (Still as the Night)*; Chopin-Godowsky, *Posthumous Waltz in D-flat*; Chopin-Godowsky, *Minute Waltz*.

For your further study of polyphonic music, these works by Bach are recommended: "Well Tempered Clavichord (Busoni Edition)"; "Well Tempered Clavichord (Steingraeber Edition)"; *Prelude from English Suite in A minor, No. 2*; *Gigue in E minor (Leschetizky Edition)*; *Colored Edition of "Three Voiced Sinfonias"* by Bernhard Boeckelmann.

Mozart: *Gigue in G (Leschetizky Edition)*.

Scarlatti: *Cat's Fugue*.  
Paderewski: *Caprice a la Scarlatti*.  
Henselt: *Repos d'amour, Op. 2, No. 4*.  
Glinka-Balakireff: *L'Alouette (The Lark)*.  
d'Albert: *Courant and Gigue, from Suite, Op. 1*.

## Moments of Musical Inspiration

"I realize that the symphony orchestras have to base their programs on the classics. That is right and desirable. But they should not fail to give due attention to unfamiliar compositions; and their audiences ought to do their part by receiving such works with patience and a proper gratitude, if not positively with joy."—Pitts Sanborn.

\*\*\*\*\*

"While it may be the Bostonian in me speaking, I want to say that the best in art is aristocratic, and that the talkies are democratic."—Geraldine Farrar.

# A Class Contest

By RUBY BASSETT

OFTEN A TEACHER FINDS the interest of her class lagging for no particular reason, and she is at a loss to rekindle enthusiasm among her pupils. Recently the writer tried a new method with remarkable success.

Two pieces were selected; one for students in the later first grade, and one for the easier third grade. We sold the two groups of pupils on these pieces by talking about their style, beauty and the composers of each piece. Each group was told that only those who reached a certain stage of proficiency could have the pieces.

At a set date the two selections, both of which were very easy and tuneful, but

sounded difficult, were given to all the children in each respective group. A prize was offered to the one who first learned each piece correctly.

The idea worked wonderfully, several of the pupils coming back wide eyed with enthusiasm and with the piece almost mastered in one week. The interest in practicing has kept up for several weeks and the mothers have been generous in their praise of the plan. It may not pay to try this too often, but certainly it may be attempted at intervals, whenever the class seems to be needing a stimulant to banish its lethargy.

## November's Radiant Etude

"THE ETUDE just shines with splendid features," writes one enthusiast. This vital period, when music is one of the great needs of the hour, imposes a direct responsibility not only upon the editors of our magazine, who have been especially fortunate in discovering rare features, but also upon its readers and friends who tell others about these.

NELSON EDDY

### Nelson Eddy

Nelson Eddy, recently voted the most popular of radio singers, gives THE ETUDE a constructive conference in which he tells vocalists how to succeed, and points out why many have failed. His article is just as engaging as his personality.

### Henrietta Schumann

The Pianist Who Plays Eighty Concertos From Memory

You have heard her scores of times on the Radio City Music Hall program on Sundays at twelve-thirty. This amazing young Russian-American, with a German and French background, has amazed musicians everywhere, not only by her enormous repertoire but also by her very beautiful artistic interpretations. "How I Mastered Eighty Piano Concertos" tells of the intense application she has utilized.

## Music of a Romantic Age

The most picturesque figure in European Music of today is Arnold Dolmetsch, whose English festivals of ancient music draw thousands of visitors. The secret of the charm of this aged man and his group is told by Elma Sherman.

### Jan Smeterlin

This Polish piano virtuoso, who has toured Europe with great success, as well as having played with many of our foremost American orchestras, tells musicians how to make a start in professional playing.

## Make Your Practice Periods Profitable

Hours are wasted at practice. How to cut down this senseless frittering away of time is told by Gloria F. Puxley in very immediate and appropriate paragraphs. This is an age when loss of effort is as important as loss of time and money.

Every issue of THE ETUDE is tied up with a delightful and entertaining musical section of twenty or more compositions, making it an educational herald which has led the way for hundreds of thousands as lovers and students of music.

## The Accordion Combined with Other Instruments

(Continued from Page 669)

while they enjoy themselves. Naturally all such rehearsals should be in addition to regular music lessons and the practice they require.

Many other benefits may be obtained. An interest in harmony and arrangements is usually stimulated. The competitive spirit enters in whereby each player wishes to excel and play better than his fellow players. A desire to increase the music repertoire is created. Last, but not least, the opportunities for playing in public provide valuable professional experience.

In closing, we urge all accordionists, who are orchestrally inclined, to outline their fall and winter campaign and start to work on it immediately, so that a year from now will find them as leaders of their own small orchestras. Remember that it is by doing things that we learn, not by merely dreaming about them or wishing for them.

## Accordion Questions Answered

Q. Why is it that I lose interest every day after I have practiced only two or three hours? I want to practice six or seven hours, as I wish to become an artist accordionist. I have a repertoire of thirty compositions.—H. K., Michigan.

A. There may be several explanations for your difficulty. Never practice more than one hour without resting, for after that the mind cannot concentrate at its best. If you wish to practice seven hours a day, considerable time should be devoted to outdoor exercise, to build a strong body. You have a wide repertoire but I wonder if you are careful to play all of these selections musically and with proper interpretation, or if you hurry through one so you can begin the next. If you are guilty of this fault, it helps to explain why you lose interest in practice. Listen to yourself play, and continually strive for finer interpretation; and I think your boredom will cease. Frequent lessons under a competent instructor usually help to keep a student enthusiastic about his practice.

Q. What would you suggest for a five piece orchestra with two accordions in it?—W., Canada.

A. The instrumentation of an orchestra depends somewhat upon the type of playing it is intended to do. A five piece dance orchestra could be formed of two accordions, violin, saxophone, and drums. A five piece dinner concert orchestra could comprise a violin, guitar, violoncello, and two accordions. A bass could be substituted for the violoncello.

# The Threshold of Music

(Continued from Page 638)

a musical pun because it is almost a perfect double for the diminished seventh at Still another example will be found *Everything I Have Is Yours* from "Dancing Lady" by Burton Lane.

Ex. 21

This quotation from *Everything I Have Is Yours*, from "Dancing Lady" by Burton Lane, is reproduced by permission of Robbins Music Corporation owners of its copyright.

This quotation brings us an example a chord that has cropped up in popular music within the last three or four years. It is a dominant ninth, borrowed for use in C major from the distant key of D-flat and used as an elaboration of the fall dominant seventh which purists spell with an F-sharp and song hit composers with a G-flat. If it had been a seventh chord we could call it simply a false dominant seventh. But since a fifth note (B-flat) has been added, there is no way of explaining the chord as an elaboration of altered chord whose root is F-sharp. There is nothing else to do but to call it a borrowed chord—the outgrowth of a case mistaken identity.

This same chord has been featured several other popular tunes of fairly recent vintage.

## When Mozart Was in London

By Clarence Lucas

MOZART was taken to London by his father in 1764. While they were there the elder Mozart became seriously ill and was ordered by the doctor to leave the crowded city and rest for a while in the quiet surroundings of the country. The Mozart father and son, went to live with a Dr. Randal who occupied a roomy old house which had been built in 1695 on the Ebury Manor farm.

The little boy, of eight refrained from practicing on any musical instrument so as not to disturb his father. When he was roaming about the farm and climbing the fruit trees, he amused himself in the true Mozartian fashion of composing a symphony.

Then the old farm house began to decay. The sprawling city gradually encroached on the surrounding country. The farms and orchards one by one disappeared. A road was made in front of the farm house, and the roadway eventually became Ebury Street. The farm was gradually swallowed up by the city. An East India merchant bought the old-fashioned house with its two doors. Later it was converted into shops. Then a high government official acquired it and made it a luxurious suburban home for himself. Lady Sackville, the next tenant, was followed by Sir Francis Peck.

| 13,691 SIX OLD FRENCH CHRISTMAS CAROLS. (First Set)                                  | .10 |

### SANTA'S SURPRISE

Christmas Operetta for Young People

Book by FLORENCE AITKEN Music by GERTRUDE McRAE

A playlet in two Acts, and five Scenes, for 12 participants and their audience. Complete dialogue, with suggestions for costumes and lighting in the vocal score. Time 15 minutes.

Price, 75 cents

### YE OLD CHRISTMAS MASQUE

With Carols, Dances, Jousts and Friscols

as performed in Merrie England in Ye Olden Dayes

Arranged by WILLIAM BAINES

Price, 40 cents

The best popular English carols, which may be sung in unison or in parts, together with old dance tunes, make this Masque a particularly jolly and desirable project for schools, choirs, or Church organizations.

### 14 FAMILIAR CHRISTMAS CAROLS

Arranged for String Ensemble and Piano  
By ELIZABETH FYFFE

For performance as violin solos, as duets or trios for violins (or string combinations), as string quartets; or with piano accompaniment. All string parts are in first position, except Violin Obligato. The text of each carol is given before the music as a guide to interpretation. These arrangements may be used as accompaniments for unison singing.

Violin I Violin II Violin Obligato  
Viola Cello Piano

Prices: Separate String Parts, 20c each

Separate Piano Part, 40c

Strings and Piano, Complete, \$1.50

# THE WORLD OF MUSIC

NICOLA  
PICCINNI

NICOLA PICCINNI, recorded in musical annals chiefly because of his famous operatic feud with Gluck, died in Paris in 1800 and was placed in a grave soon forgotten. This is now reported to have been discovered in the garden of an old house of suburban Passy; and the *Podesta* (Mayor) of Bari, Italy, birthplace of the composer, has instituted a movement to have his ashes transported to his native community.

QUEEN ELIZABETH of Belgium has sent a gift of six thousand francs to the fund for erection of a monument to Vincent d'Indy.

RULE BRITANNIA, the historic Naval Anthem of the British Empire, will celebrate its bicentenary next year. It was first heard in a masque by Dr. Thomas Arne, called "Alfred," performed August 1, 1740, at Cliveden on the Thames, before the Prince of Wales, later George III. It was first heard in America when this "Masque of Alfred" was presented in 1757 by the students of the College of Philadelphia, now University of Pennsylvania.

JOSEPH SZIGETI, widely known violinist, has received from the French Government the decoration of the Officer's Cross of the Legion of Honor, a distinction held also by Kreisler and Heifetz among violinists.

THE FIRST INTERNATIONAL CONGRESS of the American Musicological Society convened on September 11th, in New York City. Among eminent scholars from abroad were Knud Jepperson of Denmark, Edward J. Dent of England, Albert Smijers of Holland, Francisco Curt Lange of Uruguay, and Eduardo Sanchez de Fuentes of Cuba.

THE "BEETHOVEN CYCLE," with Fritz Reiner conducting, drew enthusiastic audiences to this summer's series in the Lewisohn Stadium. On August 7th, with Jascha Heifetz as soloist, there was an overflow throng of twenty-one thousand.

OS-KE-NON-TON, bari-tone and Mohawk chieftain, is returning to America after having spent twelve years in London, where he sang the rôle of Hiawatha over two hundred times at the Royal Albert Hall operatic performances of Coleridge-Taylor's famous cantata with its libretto from Longfellow's immortal Indian epic. Steeped early in the aboriginal lore and then broadly educated in both literature and music, Os-Ke-Non-Ton brings to his interpretations a rich treasure of authority and refinement.

OS-KE-NON-TON

HARVEY M. WATTS, widely known author, lecturer, patron and critic of music, and one time manager of the Philadelphia Orchestra, died on August 12th, aged seventy-five, at the home of Mrs. William Houston Greene, music patron, at Blue Hill, Maine.

A MUSIC TYPEWRITER, as reported to have been exhibited at the Leipzig (Germany) Fair, may become a boon to composers. There is a keyboard of one hundred thirty-five characters, including notes, letters, numbers and musical devices, and an attachment enables the composer to write the notes above or below the staff.

## Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

\* \* \* \*

KIRSTEN FLAGSTAD is reported to have "carried away all the honors" of the summer festival at Zurich.

THE SAN CARLO OPERA COMPANY with the redoubtable Fortune Gallo as manager and Carlo Peroni beginning his nineteenth season as musical director, opened its New York season with a performance on September twenty-eighth, after which series it started on its thirtieth transcontinental tour.

CORNELIUS DOPPER, composer, and second conductor of the famous Concertgebouw of Amsterdam, from 1908 to 1931, died on September 18th, aged sixty-nine. He toured America in 1907 as conductor of the Castle Square Opera Company.

THE NEW YORK PHILHARMONIC SYMPHONY SOCIETY, oldest of American orchestras and third oldest of the world, opened its present season with a broadcast on October 15th, under the baton of John Barbirolli. For the first time in ten years, it will visit a number of musical centers, as far west as Chicago, and including Toronto, Ottawa and Hamilton, Canada.

GILBERT AND SULLIVAN'S "MIKADO," in its original version, has been having a long run at the Greek Theater of Los Angeles. The enterprise is sponsored by the Los Angeles Junior Chamber of Commerce; and seats are quoted at twenty-five to forty cents, with prices of fifteen and twenty cents for children. Popular prices: popular opera.

## Competitions

GRAND OPERA PRIZE: A Public Performance of an Opera in English by an American Composer (native or naturalized) is offered by the Philadelphia Opera Company. Contest closes August 15, 1940; and the successful work will be performed in the 1940-41 season. Judges: Leopold Stokowski, Eugene Ormandy and Sylvan Levin. Full information from Philadelphia Opera Company, 707 Bankers Securities Building, Philadelphia, Pennsylvania.

A ONE THOUSAND DOLLAR PRIZE is offered by the St. Louis Symphony Orchestra, for a symphonic work of ten to thirty minutes in length. The composer must be American; the composition will be performed during the present season of this orchestra; the competition closes February 1, 1940; and full information may be had by addressing the Manager, St. Louis Symphony Orchestra, Municipal Auditorium, St. Louis, Missouri.

THE PADEREWSKI PRIZE COMPETITION offers \$1,000 for the best work for Chamber Orchestra, and a second \$1,000 for a concerto or other serious work for a solo instrument with symphonic orchestra. Works must not exceed fifteen to twenty minutes in length and must be received before February 1, 1940. Full information from Mrs. Elizabeth

C. Allen, Secretary Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

THE CHICAGO COUNCIL OF TEACHERS OF SINGING offers its annual prize of One Hundred Dollars for a song to words chosen from the Psalms, by the composer. The prize is endowed by the W. W. Kimball Company; the competition closes November Fifteenth; and complete information may be had from Walter Allen Stults, P. O. Box 694, Evanston, Illinois.

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

A PRIZE OF ONE THOUSAND DOLLARS, with a possible Six Hundred Dollars additional, is offered for a "Concerto for Violin with Orchestra" by a native American composer. The prize is furnished by an internationally known violinist, with the option of giving première performance of winning work. Competition closes April 30, 1940. Particulars from Violin Concerto Committee, % Carl Fischer, Inc., 56 Cooper Square, New York City.

ENCORES DURING OPERA PERFORMANCES are reported to have been prohibited in Italy, by order of the Minister of Fine Arts, as a result of a disorderly scene in one of the theaters when the audience persisted in yelling for an encore which the conductor refused to grant.

DR. HUGO RIESENFELD, successor to S. L. Rothafel ("Roxy") at the Rivoli, Rialto and Criterion, when these theaters of New York were in their heyday, died on September 11th, at the age of sixty, at Hollywood, where he had been for some years active in musical arrangements for moving pictures, to which he had contributed much advancement.

A GUGLIELMO MARCONI MEMORIAL is to be created by a transformation of the villa at Pontecchio, near Bologna, where the great inventor's first experiments in radio transmission were made. His heirs have presented the villa to the Guglielmo Marconi Foundation. A tomb will be erected at the front of the house, while inside will be preserved Marconi relics and documents as well as records of the immense technical and scientific progress that has been derived from his invention.

GUGLIELMO  
MARCONI

WHEN LILY PONS was soloist, with husband, André Kostelanetz, conducting orchestral concert of early August, at Grant Park, Chicago, they drew a throng of two hundred and fifty thousand people, perhaps the largest audience ever assembled for a musical event.

LAWRENCE  
GILMAN

LAWRENCE GILMAN, eminent music critic, who in 1923 succeeded the late Henry E. Krehbiel on the *New York Tribune*, died August 9, at Sugar Hill, New Hampshire, aged sixty-one. His wide and varied career covered practically all phases of journalism, but this field was abandoned when he joined the *New York Tribune*. His program notes for the New York Philharmonic Orchestra and the Philadelphia Orchestra were "a mixture of historical fact and interpretation" which held for him a large public. Of his many books, "Wagner's Opera" is generally rated as best.

THE HOUSE WHERE MOZART LIVED in 1784, during his first visit to London at the age of eight, has been identified Ebury Street.

PAUL LONGONE, impresario of Chicago City Opera Company, died on August 3rd, at Cannes, France. It was through his ability and perseverance that Chicago again has its own opera company in a regular season.

THE LONG BEACH (CALIFORNIA) MUNICIPAL BAND, with Herbert Clarke as conductor, gave on September its fourteen thousandth concert. It is said to be the only permanent civic organization in America, supported by a municipality and giving two concerts daily, except Sundays and Mondays, and all free to public.

FORGED FOSTER LETTERS AND MANUSCRIPTS are reported by Fletcher Hodges, curator of Foster Hall at the University of Pittsburgh, to be on the market and he warns collectors and music lovers not to be duped by the crooked dealers and agents offering them. Before purchasing such relics, readers of *THE ETUDE* should protect themselves by communicating with Mr. Hodges as to their authenticity.

WALDO SELDEN PRATT, one of the greatest of American musical scholars of his time, editor of "The New Encyclopedia of Music and Musicians," the "American Supplement to Grove's Dictionary," and other works of reference, passed away at his Hartford, Connecticut home on July 29, aged eighty-one.

THE BERKSHIRE SYMPHONIC FESTIVAL of the Boston Symphony Orchestra with Dr. Serge Koussevitsky conducting, made a triumphant exit, in spite of Jupiter Pluvius' prodigality of downpour and thunder on earlier occasions. An interesting announcement is the early realization of Dr. Koussevitsky's pet dream of an Academy as a part of this movement.

MAESTRO BERNARDINO MOLINA, conductor of the Orchestra of the Adriano Rome, has been made an honorary member of the Beethoven House and the Institute of Beethoven Studies and Memorabilia which recently celebrated its golden jubilee.

(Continued on Page 757)

# Heredity and Music

FOR YEARS we have been looking for the appearing of a popular book upon the all-absorbing subject of heredity, and at last we have found it in the recently published four hundred and thirty-four page "You and Heredity" by Amram Scheinfeld. In our early youth we chanced upon an account of Abbot Gregor Johann Mendel (1822-1884) the Austrian discoverer of the Mendelian law which shows how certain characteristics of one parent in garden peas would show up in the hybrid of the next generation. In these enlightened days, when biology has displaced the legend of the stork, the interest in the mysteries of genetics increases hourly. Scheinfeld's engaging story of "the mystery of you" is incessantly filled with interest to adults who can comprehend it; and any one with the equivalent of a high school training should find that easy. It makes plain how we inherit the color of our hair, our eyes, our skin; and how other physiological characteristics are contributed from one generation to another.

The book is elaborately illustrated with many convincing line drawings, color charts and half-tone plates. There are hundreds of things that the average reader has "always wondered about," that are discussed in this captivating volume. Why do certain people have snub noses, others concave noses, others Roman noses? Why is baldness inherited? How long am I likely to live? What is Albinism? How does it happen that two homely parents may have a handsome child? What is the mystery of personality with which some people seem to be born and which others seem never to acquire? If you have a curious "asking" mind you will want to read this book from cover to cover.

Scheinfeld has assigned forty-four pages of this noteworthy book to music. We hope that all readers of THE ETUDE may have a chance to delve into these chapters, although they will not find the statistics as determinative as in the earlier chapters, in which the laws of heredity seem inexorable. It is perhaps not very complimentary to think that we are all genes and chromosomes, marching at the end of a nebulous procession reaching back to an innocent protoplasm in the dawn of the spheres. Perhaps, however, it is reassuring to know that, with human beings at least, talent by no means calls inflexibly for talented parents. For instance, look for a moment at the chart of the Toscanini family. Arturo Toscanini is the only member of his family to be musical. His wife was mildly musical, but not talented. Of his three children, only one has shown any degree of musical talent. One married the very brilliant pianist, Vladimir Horowitz. Their daughter showed obvious talent at three and a half years. His other two grandchildren have shown no indications of this talent. Martinelli was

the only one of fourteen brothers and sisters who gave any manifestation whatsoever of musical talent. Both Alma Gluck and Efrem Zimbalist became world renowned artists. Neither of their children is musical. Neither of the parents of Yehudi Menuhin and his talented pianist sister is a musician, although they are rich in general culture.

How come, then, the tradition that musical talent is inherited? Scheinfeld gives some very striking figures. For instance, Johann Sebastian Bach, as almost everyone knows, had five distinguished musical sons and many other noted musical descendants. Few people know, however, that "Father Bach's" father had a brother, and that these two were identical twins "so markedly similar not only in the way they looked, but also in their speech, temperaments and physical characteristics (even their deaths came close together)." None of the offspring of the other Bach, brought up in the same household, sired any musicians in any way comparable with Johann Sebastian and his astonishing descendants.

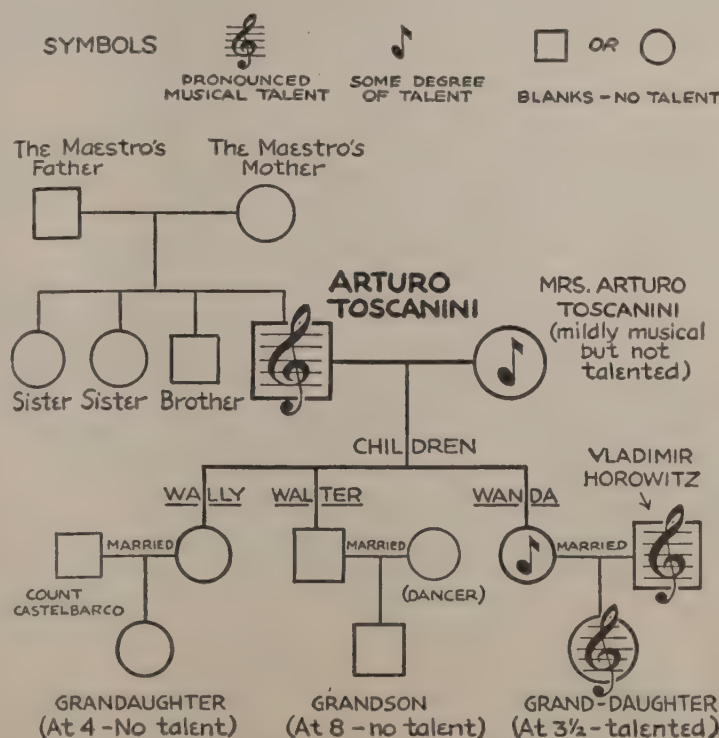

In order to get nearer to this, Scheinfeld hit upon the ingenious plan of analyzing three groups. In group number one are "thirty-six outstanding instrumental musicians of the world, that is, those universally conceded to be leading figures on our present day concert platform." In group number two, are "thirty-six principals of the Metropolitan Opera Company." In group number three, there are included fifty students of the Juilliard Graduate School of Music, comprising a highly selective group of younger musicians and singers, many of whom are already active in the professional field.

Scheinfeld's analysis of these problems is most interesting and should be read in detail. He finds however, that with one hundred and twenty-two entries, the average age at which talent is expressed is six and two-thirds years. Those who had talented mothers or mildly musical mothers represent

sixty-four per cent. Those with musical fathers or talented fathers represent sixty-eight per cent. Those with talented brothers and sisters represent fifty-two per cent. Those with talent in additional near kin, represent fifty-four per cent. From these figures it would seem that musical talent is more likely to be inherited from musical parents than from non-musical parents. The preponderance of this influence is not, however, as great as most people suppose. One cannot breed musical brains as one breeds Holsteins, Plymouth Rocks, Poland-Chinas, Pomeranians or Percherons.

Of course these are generalities. With Eugene Ormandy, the conductor of the Philadelphia Symphony Orchestra, talent was manifested at one and a half years. Arthur Rubinstein, one of the finest piano virtuosi of the era, was

## THE TOSCANINI FAMILY

Copyright 1939. Reprinted by permission of Frederick A. Stokes Co.

born in a poorhouse where no musical instrument existed or could be heard. As a baby he made up his own little songs to express his desires. He sang long before he could speak. With others such gifts do not manifest themselves until later (Artur Rodzinski was twenty).

MAESTRO AND SIGNORA TOSCANINI

*This picture shows two of the grandchildren of the great conductor (see previous page). Two of his grandchildren have manifested no musical talent whatever, while one granddaughter is very musical.*

You must, however, read Scheinfeld's remarkable book in order to gain a knowledge of what everyone in this day should know about the vast and stimulating subject of heredity.

### Sing Unto the Lord!

**T**HANKSGIVING Day is the oldest of American holidays. It is also the most American of all festivals. Even the gobbling turkey itself is a native, along with the sweet potato, which migrated from the tropics. The Thanksgiving Day celebration reaches back to our earliest period when our forefathers rejoiced and gave thanks for the possession of a few handfuls of corn and the absence of Indian arrows.

It makes no difference just which Thursday is chosen for its celebration. If we had our way we would have a Thanksgiving Day every Thursday, and even then that would not be enough for the blessing of living in America. Despite politics, floods, dust storms, droughts, grasshoppers, Japanese beetles, jitterbugs, the income tax, and hay fever, we have more benefits for which we should be thankful than the people of almost any other country in the world.

The Thanksgiving festival is just a grand idea for giving us a chance to stop for a moment and realize the good things that have come to us. It is a splendid respite in which to forget annoyances. The only fault we have ever had with the holiday is that it is too gastronomic. Surely we can find some more exalted way of celebrating it than at the table, with its aftermath of bicarbonate of soda.

Let us all be thankful for what we have. Last Thanksgiving we met a miner who had just come with his family from Wales. He said, "This is my first Thanksgiving in America, and the family has found out what it means. Everyone of us had a whole Hamburger, and we all gave thanks to the Lord."

Time was when churches everywhere were filled to the doors on Thanksgiving morning. The fruits of tree and field were symbolically piled in front of the altar, and the whole congregation joined in a song of gratitude to the Lord for his goodness and his mercy. Such a service brings a soul joy that cannot be duplicated on the golf course or in the automobile.

This year our Thanksgiving in America is clouded by the thought of the bitter sufferings of those in other lands. Our sympathies and our love go out to all who are afflicted. We who have been blessed realize more than ever that for

which we have to be thankful. When we meet in the home and the church on Thanksgiving Day, many a prayer will go up for those who are in deep grief.

We have often wondered why more fine music has not been written for Thanksgiving Day. Gratitude and joy are great sources of inspiration. The musician should not let this day pass without rejoicing in appropriate manner. If you cannot go to church, at least read the Ninety-eighth or the One Hundred and Eleventh Psalm. Then pick out from your repertory the brightest, happiest, and most exalted music you know, and feast your soul upon it.

*"Oh, praise the Lord, all ye nations; praise him all ye people, for his merciful kindness is great toward us and the truth of the Lord endureth forever. Praise ye the Lord."*

### A Standard Musical Pitch

**T**HERE is a great need for a world standard in musical pitch. The International Standards Association on musical acoustics, at its last meeting in London, recommended very strongly that the pitch of 440 cycles per second for the A in the second space of the treble staff be adopted.

Representatives of most of the continental countries attended this convention. This would apply as closely as possible to all kinds of music, particularly in orchestras, choirs, recorded music and radio broadcasts.

The 440 cycle pitch has been approved by the American Standards Association, and is therefore the standard pitch for America. Mr. Paul A. Billhuber, chairman of the ASA Subcommittee on Musical Terminology, and assistant factory manager of Steinway & Sons, said of this new pitch:

"Confusion more or less dangerous and damaging to musical performance has been the rule in the past rather than the exception.

"Now each manufacturer of a wind instrument can adapt his machines and methods to mechanical standards based upon the musical standard.

"In singing, the adoption of a universal standard is of decisive importance. If the pitch of an orchestra or piano to which a singer is to sing at a concert is different from the pitch of the instrument by which the part or song has been studied, the voice may be strained.

"In the case of the piano, an increase of five cycles per second in the frequency of the standard A, with a corresponding change throughout the entire scale, would throw an additional strain of something like half a ton on the framework of the instrument."

### A New Device to Help Sight Reading

**B**ERNARD L. BONNIWELL, Assistant Instructor of the Department of Psychology, at the University of Pennsylvania, has devised a Six Line Music Staff which he has had copyrighted (1938). The idea is simply to add one line above the conventional five line treble staff and one line below the conventional bass staff thus.

Conversion of five-line staff:

The common five-line music staff may be converted into the Sixline Music Staff by the addition of a single line placed above the treble clef and a single line placed below the bass clef, notes in both clefs then automatically assuming similar positions.

Under the existing five-line system similarly named notes appear on different lines in different clefs, causing the reader confusion.

Copyright 1938 Bernard L. Bonniwell

In this way, the letters read from the first space upwards exactly the same: f, a, c, e, g. He suggests that teachers, by adding these dotted lines as indicated in this example, can simplify first and second grade music and will note the results with small pupils. In the interest of science, he requests that teachers, who try this device shall report to him the results of their experiments. Laboratory tests have shown that many pupils "catch on" to the notation quicker by means of this simple device.

# Success in Voice Study

By

NELSON EDDY

Distinguished Concert, Radio and  
Sound Screen Star

With Warnings of  
Mistakes That  
Spell Disaster

An Interview Secured

new musical moving picture.

NELSON EDDY

ALTHOUGH FOREIGN TEACHERS express never ending astonishment at the great number of fine voices to be found among American students of singing, they profess an even greater surprise that, despite their natural endowments, so few succeed in making a worth while career.

Now the reasons for this discouraging condition are many, yet in the majority of cases the truth can be summed up in one simple statement: The average student fails largely because of his own wrong attitude, or approach, to his career.

From a fairly wide observation of students of singing, it would seem that their greatest handicap—assuming that the natural voice and talent are adequate—is a too optimistic attitude in regard to proper preparation. We Americans live at too brisk a tempo. To rush things has become a national characteristic. We imagine that the constant admonition to "hasten slowly" is old fashioned and not applicable to present day conditions. Unless a thing can be accomplished quickly, we prefer to abandon it for something which can be achieved in less time. Needless to say, when such a viewpoint is applied to music, or to any art enterprise, the student soon finds himself up against a stone wall. "Art is long."

## No Excellence Without Labor

THERE IS NO SUBSTITUTE FOR TRAINING, for that firm foundation and background that come of sound knowledge and a well schooled technic. Personal experience is the bulwark of everything to be said here; though it must be admitted that I am myself a shining example of what can be accomplished without this careful preparation of which I preach; and the knowledge distresses me entirely because of its possibly harmful effect upon others. Look at Nelson Eddy," cry the youngsters. "He didn't waste valuable time singing minor rôles in provincial opera houses. He didn't do this, and he didn't do that. He started at the top and stayed there; then why couldn't I?"

Like most half truths, such stories can do great harm.

I have repeatedly tried to correct these erroneous impressions, but with slight success. Too many persons prefer miracle stories rather than facts. For example, I recall once telling a writer that I had learned a number of songs from phonograph records. By this it was meant that merely the words and music, the phrasing and style of certain songs, had been learned by listening to an artist's recordings. Yet when the interview appeared in print I was stunned by finding that I had been made to say that I never had taken a lesson, but had learned all there was to know about singing merely by listening to the phonograph. One shudders to think of what the intelligent reader must have thought of such an absurd statement, though the lazy, would be singing students undoubtedly seized upon my words as an excellent excuse for their own lack of effort. It is natural, and usually pleasanter, to follow the line of least resistance, but it rarely leads to a high degree of accomplishment.

## And So We Began

MY PROFESSIONAL CAREER began, it is true, with the singing of a leading rôle, and it is equally true that I have sung leading rôles ever since. It is true also that I did so with a comparatively slight foundation; and it is this very fact which enables me to speak with authority

in decriing such procedure. My way was not the easy way, however much it may have seemed so to the casual observer: it was the hardest way of all. Instead of building both voice and repertoire simultaneously, during what should have been my student years, I had to do the greater part of it later, when there was less time. Meanwhile, I was expected to live up to a success which had not been actually earned, but which had merely happened. Consequently many precious hours had to be spent upon other matters which, instead, should have been devoted to language lessons, diction, stage deportment, and other essentials in the technic of a finished artist.

When the average young singer seeks advice, his leading question is almost invariably, "How long will it take me to make some real money with my voice?" not "How long will it take me to learn to sing well?" The old Italian masters respected the adage which says, "Time respects nothing which is made without his aid"; and we are not surprised to learn that the training they gave their pupils

required from five to ten years of intensive study. But this is not so discouraging as it sounds, when we discover that these years were not spent solely in the study of tone production. The correct use of the voice was only one branch of their training. Every pupil was also taught sight reading and a thorough knowledge of the rudiments of music. There was, in those days, no such thing as a singer who could not read music or count time. Furthermore, everyone was taught choral as well as solo work; and he learned the standard operatic repertoire, memorizing all of the rôles he was likely to sing, instead of just a few favorite arias. Naturally such training took years; but consider the results. As singers they became the world's greatest in the annals of music.

What modern teacher would dare to insist upon such thorough training? If he did so, most of his pupils would quickly desert him for some other teacher whose ideals were less exalted. Granted that many modern singers achieve considerable success with but a year or two of training, the fact remains that such careers are short lived, unless the singer takes off sufficient time to return repeatedly to the studio to pick up what he had left off. No one can skip the essentials and do only that which pleases himself. One has to decide, at the outset, whether he wants to sing for fun or for fame; and whether he

is going to study or just to "take lessons."

### Completeness a Necessity

ANOTHER WAY in which a too optimistic attitude hampers the student is that his ideas of the expense of a musical education are rarely correct. Music lessons, from good teachers, are not cheap; and careers are not made "on a shoestring." Even if a voice is so unusual that a teacher is willing to train it without immediate remuneration, there are many other expenses to be considered. For instance, there is the need of learning foreign languages. Language teachers do not work for the fun of it; neither do coaches, nor teachers of diction. Then, too, if the singer has not had piano lessons, he should not be satisfied until he can play freely such fairly difficult music as will enable him to perform the accompaniments of his most taxing songs, so that he may become entirely familiar with their musical structure. This should be true even of operatic rôles, if one is to make singing history. Jenny Lind is said to have been able to play from memory practically the complete scores of one hundred and fifty operas and oratorios; Patti could have made a success as a pianist; Galli-Curci began her career as a concert pianist; Sembrich began as a concert violinist before discovering her voice; and, stepping aside, Paderewski speaks fluently practically all important languages of Europe. Genius is never superficial. Singer, be proficient at the piano, and in everything that will make you a complete musician. Then cultivate your soul by the study of poetry and the best of all literature.

Another vitally important item in the vocal student's musical education is the hearing of much good music artistically performed. He should attend orchestral concerts and, of course, the opera, in order to become familiar with the different forms of composition by actually hearing these masterpieces. He should hear chamber music, song recitals, and oratorio performances, as many as possible, and not merely those works which he hopes one day to sing himself. All of these imply the use of money, and quite a lot of it; even if his living arrangements are as frugal as possible.

### On the Useless "Angel"

THIS, INCIDENTALLY, BRINGS up another point upon which I feel very strongly. This is: I am frequently approached by persons who say, "I am so interested in a boy who has a really lovely voice. Will you not suggest someone who would finance his training?" Apparently there is a widespread belief that the world is full of philanthropic persons only too willing to spend a small fortune to help a stranger achieve his ambitions. That such a person has no claim at all upon their generosity; that he may never amount to a row of pins; and that he may want to go to Paris solely because of the colorful tales he has heard about Montmartre; none of these conditions are taken into consideration. As he sees it, he needs a sponsor, so it is up to the rest of us to find one for him.

Why all this assumption? What is so remarkable about being able to sing a few songs acceptably that it should impel the rest of the world to give the singer the education that other people have to acquire as best they can? If a boy wants to learn chemistry or civil engineering, he does not expect strangers to finance him, does he? Yet when an embryonic young singer is told that I know no one willing to gamble his or her money in that fashion, he puts me down as an unfeeling wretch who is unwilling to help his fellow man.

The truth is that I do not know anyone anxious to help untrained young singers. In fact, there is room for serious doubt as to the truth of most of these stories of philanthropy, and especially nowadays. Certainly I have no personal knowledge of even one such case. Such stories became popular

many years ago, when music, particularly composition, was so poorly paid and so badly exploited that most musicians strove to obtain positions in the privately owned orchestras of the nobility.

### A Myth of My Youth

THERE WAS ONCE SUCH A STORY current about myself. A too imaginative writer informed the public that a nice lady had given me forty thousand dollars to finance my musical education. Under terms of the contract I was never to marry, and I believe there were perhaps two other restrictions, which are no longer recalled. Although there was not one word of truth in the story, it was printed and repeated so frequently that it finally became tiresome. A letter of protest was written to the editor, with a request that it be published. This was done; yet the very next

ever, no longer any need to go abroad for vocal training, since our own country now has plenty of fine teachers and excellent conservatories; but for the opportunity of learning tradition, and of absorbing "atmosphere," Europe offers advantages with which our own country can not as yet compete. Anyone, who is working with a good teacher, should continue with him, no matter where he may be, geographically speaking. He may go to Europe later, for coaching and practical experience—if he can get it.

While in Europe my studies in Paris and Dresden were with the same teacher and the same coach with whom I had been working here in America; and this was planned because they were going to be there at that time. They were the sole reason of my going—they, and for the absorption of "atmosphere."

PLUCK!

*This is a picture of Fiori Rizzo standing with Mrs. W. I. Thompson and Mr. J. Stoddell Stokes, President of the committee organized for the very successful "Musicians' Ball" of Philadelphia. The story of Mr. Rizzo is one marking the fine courage of musicians in meeting adversity. Recognized for years as one of the finest flutists of Philadelphia, he received an excellent income and supported his family of four in comfort. Then, through an accident which resulted in blood poisoning, his right arm was amputated. Of course this put an end to flute playing, which requires two hands. Instead of sitting down in despair or going on relief, he decided to capitalize his musical knowledge and learn some instrument which could be played with one arm. He took up the trumpet and studied it with great determination and is now again earning his living through music. Hats off to Fiori Rizzo!*

day he ran another story declaring that the original story had been true all the same.

The plain facts of the matter were as follows: I had borrowed some money—a bagatelle with which forty thousand would not be on speaking terms—from a banker. It was a straight business proposition, with no romantic clauses about marriage or any other personal matters. I wanted to go to Europe for additional coaching and repertoire; but this was after I already had achieved considerable success and had proven to the satisfaction of myself and everyone else that it would be money well spent and in no sense a gamble. The entire sum, it may be added, has been long ago repaid.

This brings us to the frequently asked question, "Should the young singer go to Europe?" Frankly, this question is one which cannot be answered with a sweeping "yes" or "no." Whether one studies here or abroad, the outcome depends almost wholly upon the individual, and upon highly variable conditions. There is, how-

### The Foreign Will-O'-the-Wisp

AMERICANS WHO CONTEMPLATE GOING to Europe for actual operatic experience should not forget that Europe has undergone tremendous changes within the past few years, and these changes have drastically affected the musical field. Many of the smaller opera houses, where beginners could hope to obtain at least a few guest appearances, have been closed. Many will probably not again reopen, and others will not do so for at least a long time. Since these conditions have thrown hundreds of native, well established artists out of work, we can well imagine how slight would be the opportunities for a foreign and untried beginner.

Students often ask if they should try to study while employed in some other kind of work. To this one can only reply, "Why not? Get musical work if possible; but, if this cannot be found, take any honorable work to be had." If one is made of the right stuff it will not make much difference

(Continued on Page 754)

# Radio Flashes

By PAUL GIRARD

STUDENT LISTENERS to Columbia network's "American School of the Air," which recently began its tenth year, are to learn about the origin of folk music of their own country in an unusual series of Tuesday radio classes (WABC-CBS, 9:15 to 9:45 A.M., EST) a new hour for these sessions. Rebroadcast to the West at 3:30 P.M., EST.

These programs will bring to the attention of America's foremost authorities on the subject, Alan Lomax, twenty-four year old assistant in charge of American folk song at the Library of Congress. He will discuss and sing, to his own guitar accompaniments, outstanding examples of our native art form as preserved on more than twenty-six hundred records made by him and his noted father, John A. Lomax, honorary curator of the library.

Young Lomax observes that children are taught that only the music of recognized masters is authentic, neglecting the songs that spring from the people and the songs of this country as being akin to jazz.

He intends to show that these melodies have a color and depth of character that are essentially and peculiarly American. They are simple songs, he explains, that an American finds easy to sing and at the same time educational and amusing. He sees them as "a part of human life."

Selections he will use on the program will encompass cowboy, lumberjack, folk, whaling and mountain songs, sea chanties, outlaw ballads, Negro work songs, spirituals and blues. Calling himself a "folk musician," he relates that with his father he has visited the most remote regions of the country, listening to the songs of the people, recording them on the spot. The records are in the Library of Congress.

A novel aspect of the programs is that thousands of school children throughout the nation will be asked to sing in unison with Lomax.

The latter half of each period will be devoted to orchestral presentations of the same subject under guidance of Bernard Herrmann, music advisor of School of the Air. Also, occasionally indigenous talent will appear with Lomax. Another novel feature will consist in asking children to submit their own songs on subjects drawn from their own environments or experiences.

Another noteworthy series of programs featuring American music is presented by the Dorian String Quartet, heard in chamber classics over CBS on Saturdays, 11:00 to 11:30 A.M., EST.

"The Church of the Air," Columbia network's Sunday forum for the free expression of religion by representatives of all major faiths, entered its ninth year of broadcasting when the 737th and 738th programs were given on September 16 (WABC-CBS, 10:00 to 10:30 A.M., EST, and 1:00 to 1:30 P.M., EDT).

Since its inception in 1931, according to Ruth J. Allen, director, clergymen from every part of the country have participated. Among these have been cardinals, bishops, rabbis and noted laymen. The time is served strictly from sale. Similarly, campaigns for funds are forbidden. No restrictions are imposed on the speaker who is a spiritual message to deliver, and his message remains unedited by CBS.

Letters from listeners stress the universality of this program's appeal. They rarely fail to state that the listener, regardless of his denomination, tunes in speakers of every faith.

RADIO PROGRAMS offer the piano teacher an opportunity to publicize himself in a dignified and efficient manner. Local talent is looked to when the community sponsors some civic event and heralds it over the radio. If the teacher is alert to his opportunities, he will usually have small difficulty in securing a place for himself on the program at no cost.

A State Music Association should be joined. When members meet from different communities, competition is forgotten and only friendly coöperation is borne in mind. These organizations provide the surest method of distributing fair play to everyone. Dues are required, of course, and certain professional requirements are stipulated. These may be learned by writing to the district president of the organization.

A small community association of music teachers may be undertaken. Friendly letters can be sent to other teachers in town, telling them of the views one has in mind; or the idea may be first discussed with some other enterprising teacher of the community. Perhaps the beginning teacher will not care to engineer such a project, in which case he may suggest it to one of the outstanding teachers of the community, asking him to call an open meeting for purposes of organization.

If such an association is formed, fees for lessons may be standardized, and plans for spring music festivals may be discussed. Parents may be asked to attend the meetings when out of town artists are being scheduled.

This is one of the best ways of gaining the friendship of other teachers; and each member of the association benefits by its activities. There are times when individual members may have to sacrifice small expenditures of time or money; but this is to be expected, in view of the benefits derived. Cutthroat methods of competition cannot possibly win friends, but coöperation will open opportunities for the teacher where none might have been expected.

### *Locating Ability*

MUSIC TESTS. At almost any time the teacher may be consulted concerning the musical aptitude of some child. To test piano aptitudes, tests may be procured for the purpose from leading music publishers. A standard test will do much toward moving the burden of censure from the teacher's shoulders in the event of a student failing. The subjects tested include rhythm, pitch, and melodic recognition.

The tests may likewise find application in the public schools; principals are often willing to allow the piano teacher to give musical tests to pupils, after school. As many schoolrooms have a piano available, the tests may be given with little difficulty. It may be suggested to the music director that if there are any pupils who need assistance in their daily music routine, you would be willing to undertake this instruction after school or on Saturdays. This is a gesture, again, which contributes to a spirit of good will.

One may even attempt a news item offering free musical tests to untrained children.

Similar tests are now provided on records, in a more intricate form; and for this reason they doubtless find less application in testing young children. They have their own field of application, and tests create, in general, curiosity on the part of parents and children, which adds interest to the entire subject of musical instruction. Written tests can be completed in twenty-five to thirty minutes.

### *The Teacher's Confederate*

MUSIC DEALERS ARE SOURCES of prospective pupils. Store proprietors frequently will make suggestions and also will keep the teacher's name in mind when asked for a recommended instructor. In such a case it is well to select the reliable firm and to patronize it consistently when material is required. In return one may expect assistance from the dealer in going through various musical editions, which will help in the selection of good teaching compositions.

After having acquired a few pupils, one may coöperate with the local dealer in selling pianos. A little effort on the teacher's part will often turn a sale for a new piano, and in return the dealer will certainly do all he can to send pupils to this teacher. Like everyone else, the dealer has a circle of friends with whom his recommendation carries weight. In most instances the dealer will also pay the teacher a commission for his efforts.

The same policy may be carried out in dealing with the local piano tuner; help him, and he will help you. One should make sure that he selects a good tuner. There

are quacks who visit a town merely to pick up a few dollars on a one way trip. They are the racketeers of the tuning profession, who do a hurried and incomplete job and occasionally damage the piano. One should select a good tuner, with credentials to recommend him, and then patronize him consistently.

A friendly dealer can be useful to the teacher in obtaining specific selections in a hurry, or in searching among various jobbers' stocks for music which is difficult to obtain. Friendship will often obtain what money cannot buy; or it will save a crucial situation by supplying what may be necessary in the line of special attention.

are and the best avenue of approach to secure them.

### *The Mutual Help Spirit*

MANY OF THE MUSIC TEACHERS in the community will teach some instrument other than the piano, and in the event a student is suited to another instrument, recommendation of these competing teachers will foster a spirit of coöperation within the profession. The piano teacher may reasonably expect to have some pupils sent to him in return.

After all, the teaching profession can be made as interesting for the teacher as for the student; and when the teacher does encounter misfit pupils, it is best that both be relieved of the situation. Not every child can become a master pianist, or even a good amateur. It may be that his interest lies with another instrument, or even in a field other than musical.

Music Clubs may be formed after one acquires a class of four or more pupils. The teacher may recommend to parents the advantages of a music appreciation hour for the pupils, which may be held on Saturday afternoon or some other time which is most convenient for the majority of the children to attend regularly. A class should be organized by charging each student a small fee to cover the cost of material used in the class and to reimburse the teacher for his time.

It will be found that such organizations make it easier to enlist support for community musical enterprises. Once the teacher starts such a project, he must not allow himself to become discouraged. Giving up in the middle of a promotional project is bad for the teacher's morale and does not help his reputation as a teacher in the community.

The group may be formally titled the Beethoven Club, the Music Study Club, or some other appropriate name. One can make up four or five titles and have the children to vote on their choice.

The lone teacher may approach the other instrumental instructors

concerning a joint music appreciation project, if he prefers. In any event, achievement in music appreciation must be bought with effort, both on the part of teacher and pupils. These classes should be always directed to give as much pleasure as possible to the pupils. The curious newcomer will very likely join the class when he sees what fun there is to be a member of the club.

The club has two reasons for existence: first, to acquire outside pupils who are not especially interested in a musical instrument but who like to listen to and understand good music. Secondly, the class provides a social hour of music for regular students which can do much to maintain and increase interest. Then the class will usually attract other children in the community who may be encouraged to undertake formal instruction.

### *The "Pupil's Home" Teacher*

TEACHING IN THE HOME offers opportunities of acquiring students. Parents may be reticent to have their children undergo studio instruction, because of the distance to be traveled, or perhaps for the reason that they prefer to keep in close contact with their children's activities. If this situation should develop during a conversation, the teacher may suggest giving lessons in the home at a slightly increased fee. While transportation, costs and lost time are disadvantages that the teacher must meet, there are also certain advantages. The seclusive type of student progresses more satisfactorily in familiar surroundings, is less likely to miss his lesson, and collection is usually easier. The teacher may gain some exercise, if he chooses to walk to these homes, which is usually a good thing, as his profession is a confining one. Also, he usually is able to make more acquaintances by meeting visitors at the child's home.

In districts where competition is severe, the beginning teacher should stress teaching in the home. Other teachers may be neglecting this opportunity entirely.

For promotional purposes, it is well for the teacher to know two or three flashy selections that he can play well. He may expect to play before visitors in the child's

# Practical Aids in Getting Pupils

The Second of a Series of Three  
Articles Upon "How to Make  
Money by Teaching the Piano"

By

WALTER ELLIOTT

Prominent Pedagog of the Far West

The teacher living in a rural district may write to some reliable firm, such as listed at the close of this series, requesting music lists of their most popular music editions. All reputable music houses will give prompt replies to help teachers with their needs and will supply them with the latest teaching material. With established credit, one may obtain necessary material on approval. This is known as the "approval technic."

Like any new business, returns are often slow in materializing. Any well equipped teacher will meet with average success in his profession, and with exceptional perseverance and patience he will be exceptionally successful. Teaching is not a bed of roses, but good pupils compensate for poor ones, and the teacher should regard his activities from a purely optimistic and altruistic point of view.

Short Talks to interested children afford opportunities of procuring students. These are best arranged two or three times a year through the local librarian, who will be glad to have the teacher tell some interesting stories of great musicians to her Story Hour Group. The teacher may discuss how they started taking lessons, and may relate some of the experiences of her childhood. These stories should be told simply and largely in terms of action. Humor is an important ingredient, as it is an approach to the child's active nature.

Social Introductions afford opportunities for solicitation of pupils, but here the discrimination of the teacher must determine the propriety of the occasion.

Competition should not dampen one's enthusiasm. It can be said that there will be other teachers in most communities who teach their own systems, but that there is always room for young, enthusiastic, and inspired newcomers. Upon occasion, the beginning teacher may outline his own ideas before a Parent Teacher Association and other child conscious groups. Short performances before these audiences are always welcome and will lead to numerous introductions. With few exceptions, every parent wishes his child to study music; and with proper enterprise, the teacher may determine who his prospects

home, and these selections should be brilliant and played faultlessly, from memory. Knowing these exhibition pieces very well allows the teacher to be relaxed and at ease, an important phase of showmanship.

Sometimes, the teacher will be asked to dinner with guests present. This is an opportunity for him to discuss his own subject and play a few numbers of his repertoire.

### The Useful Recital

RECITALS ARE IMPORTANT means of self-promotion. If the teacher has one or two advanced pupils, he can introduce the popular duo piano numbers at his public recitals. Recitals should have a variation of piano selections to make the whole program interesting. By introducing duo work with two pianos, a complete contrast will be provided. It may be possible for the teacher to play one or two numbers with his advanced pupils, or he can have two advanced pupils play a composition. Duo piano playing is very modern and the subject should not be neglected in the regular piano curriculum.

There is the necessity of having two pianos to practice on in the same room, but this difficulty can be met by having the students practice their parts at home and then play them once a week in a community hall or school auditorium, wherever two pianos may be available.

The two pianos on the platform are moved end to end, and before the public performance a tuner should be called in to give the instruments a precise unison.

After all preparations have been made for the public recital, it is well to arrange the concert stage, placing the piano in a suitable position so that the entire audience may observe the performance. Keep in mind that the grand piano is not being shown off, but instead, the students' abilities to perform. The piano keyboard should be facing diagonally before the audience.

If the recital is given in the spring, stage decorations may be made from bouquets of flowers which are in bloom during this season. Each pupil may be asked to bring a bouquet from home, or they may ask one of their neighbors for a few flowers for the occasion.

The students appearing on the program should dress neatly and modestly, though they need not dress uniformly.

It is well to have the pupils prepare their pieces to be played from memory. Duets, however, may be played from scores, and exceptions should be made in any case in which the teacher feels uncertain of the student's ability to perform from memory.

The program may be arranged in two sections, if desired; the younger students may appear in the first portion of the program, while the advanced pupils terminate the event. A program may be balanced by having each student to play one or two selections, usually two per pupil. The style of the compositions should be varied. The program may begin with a brilliant little selection, following it with one which is slower and more lyrical. The selections should also be graduated from the simple to the complex as the recital progresses.

### Formalities to Be Observed

PROGRAMS SHOULD NEVER EXCEED an hour and ten minutes at most. It is better to have the audience wishing for more than bored with an exhausting schedule. This is, of course, a factor to be observed in any public program.

If announcements are used, they should be sent only to out of town relatives and friends of the children participating. If the recital is a public affair and announcements are used in town, many people will hesitate to attend if they do not receive an invitation. Formal invitations are useful only when space is limited or when one desires special individuals to attend.

(Continued on Page 754)

## Composing for the Radio

IN THE OPINION of many experienced musicians, composing, or rather orchestrating, for the radio, requires a different technic or a different treatment than any other kind of music creating. The Columbia Broadcasting Company has commissioned a group of American composers to write special works for the radio. These include Walter Piston, Chairman of the Division of Music at Harvard; William Grant Still, Aaron Copland, Roy Harris; Dr. Howard Hanson, Director of the Eastman School of Music at Rochester, New York; and Louis Gruenberg. Mr. Davidson Taylor, head of the Program Department of the Columbia Broadcasting Company, was asked for a statement of the results; and we quote from his highly intelligent review of this material, which some months ago came to our office:

still supposed by some to be a muddy orchestrator, but he sounded clear as crystal on this occasion Piston was delighted, with the effectiveness of this number for radio. I told him the hardest piece I knew to broadcast was Ravel's *Alborado del Gracioso*.

"Each of the composers commissioned has taken a different approach. Piston has concentrated on clarity and effectiveness in an abstract work. William Grant Still (born in Mississippi, 1895) in his 'Lenox Avenue,' which was introduced in May, showed his radio arranging training in writing in announcements and detailed directions for miking, gaining, balancing and producing the piece. Every spot where a player stood up was marked. He feels the medium keenly, whatever one thinks about his music. We have had a large number

for radio, in which each movement will be dedicated to a force of modern civilization—Communication, Education, Publishing, and so forth. The first, second and fifth movements are finished. The plan will be something like this: first movement, fanfare for brass, one minute; second movement, chorale for strings, two minutes; third movement, march for full orchestra, three minutes, and so forth. There are to be about six movements of such graduated length, ending with a fugue for full orchestra. Harris says that there are too few good short American pieces for orchestra, so he is providing these, which can be played as a suite, or separately, to fill of radio concerts.

"Howard Hanson (born in Nebraska, 1896) is giving us two or three movements from his 'Third Symphony' for radio performance. Just how it will be particularly suited to radio remains to be seen. However, he assures us it will be particularly suitable.

"Louis Gruenberg (born in Russia, 1883) is finishing his radio opera on the book he wrote from Hudson's 'Green Mansions.' I have suggested to him all kinds of radio devices for the effects he has visualized, and he will use some of them. For the superhuman voice of the bird-girl *Rima*, he needed a musical sound which would be unidentifiable, yet would resemble a human voice when the girl starts singing words. I suggested a musical saw, and we have picked out a virtuoso to play it. By virtuoso I mean a musical saw player who can read music excellently and who has good intonation. There is a butterfly who sings; and for her it is easy to introduce a flutter into a high soprano voice by an electrical voice-breaker, producing a mathematical tremolo. For the snake, there will be a rustle of a whip dragged through grass, a hiss; and then a hard, high tenor will sing on a filter, the low frequencies being removed from his voice and only a sinister quality remaining. There will also be voices of running water, thunder, howling monkeys (a record), as well as human principals, Abel, the prospector, the chief, and his savages of the South American jungle."

## ASCAP's Giant Music Festival

ASCAP gave what its president, Gene Buck, described as "the most outstanding music festival ever held in the history of our nation", in Carnegie Hall, New York City, during the week beginning October first. Many of the city's leading orchestras, bands and artists were engaged for the event, including the New York Philharmonic Symphony Orchestra, the Edwin Franko Goldman Band, the "All-City Band", the Rudy Vallee Orchestra, the Paul Whiteman Orchestra, the Benny Goodman Orchestra and the Glenn Miller Orchestra.

On Tuesday evening Mayor Fiorello La Guardia appeared as a conductor. The Monday evening program was given over to the works of Negro members of ASCAP. This great "Cavalcade and Pageant of Music", certainly the most comprehensive and representative in our history, was given in honor of the twenty-first anniversary of the founding of the American Society of Authors, Composers and Publishers, which has done so much to protect the interests of America's creative musicians.

## Do You Know?

That, according to the Bureau of Census of the Department of Commerce at Washington, organs built in the United States during 1937 numbered six thousand eight hundred and forty, valued at four million, seven hundred eighty-one thousand and eighty-eight dollars?

## FIFTY YEARS AGO THIS MONTH

A. F. CHRISTIANI, eminent American teacher, authority on the treatment of problems in pianoforte technic, and author of "Principles of Expression in Pianoforte Playing," had this to say about "Pianistic Talent":

"Talent implies a peculiar aptitude for a special employment; hence pianistic talent implies a peculiar aptitude for that particular branch of musical art. Talent depends more on special

training and untiring diligence than on intuitive force; for intuitive force is genius. Musical talent may and may not imply pianistic talent; but, taken separately, the former is of a higher order than the latter.

"Talent, being a gift, is not to be acquired by any effort of mind, nor can the greatest perseverance compensate for the want of it. At the same time, without going so far as Buffon, and asserting that 'Patience is Genius,' it may be conceded that perseverance will lead further than talent, if talent be indolent. Talent either exists, or it does not; it rarely slumbers, and if it does not manifest itself when appealed to, it will never awaken."

"Possibly the following details of the results of the Columbia Composers Commission will be interesting to readers of THE ETUDE.

"Walter Piston's 'Concertino for Piano and Orchestra' was introduced on Everybody's Music, 3:00 to 4:00 P.M. EDST, Sunday, June 20, 1937, with the composer conducting and Jesus Maria Sanroma as soloist. Piston has conducted his own works with the Boston Symphony on several occasions. He was born in 1894, in Maine.

"It is extremely important for a composer to learn to write for the radio, Piston says. At first he doubted whether the project would intrigue him particularly, but all winter he has been studying scores, while their music was being broadcast, and has also visited us to make studio observations. He is now acutely interested in the question of what will and will not sound well on the air—the decisions of the composer on all the delicate matters of balance in dynamics and timbre have to be rethought in terms of the medium. He feels that a small orchestra is, in general, preferable for broadcasting, and consequently scored his piece for piccolo, flute, two oboes, two clarinets, two bassoons, two horns and strings.

"The piece started out to be in three connected movements, but the final form is A-B-C-A-B. It runs about fourteen minutes, and the composer intended that, unlike many concert scores, every note of it would sound just as he had visualized it when the piece was broadcast.

"Incidentally, Brahms' 'Variations on a Theme by Haydn' was one of the pieces Piston observed us broadcast. Brahms is

of letters praising the work. Still, himself, said, 'On only one other occasion in my life have I heard my music performed exactly as I wished it to be.'

"Aaron Copland (born in Brooklyn, 1900) takes still another tack. His piece started out to be a radio serenade, a sort of modern *Eine Kleine Nachtmusik* for the entire American nation. But, as he says, a piece does not always follow the direction the composer wants it to. His has turned into a single movement work; and he feels sure it has some kind of programmatic content, although just what that content is, he can't say. So he is calling it temporarily just "Music for Radio." (There is a little piece by Filip Lazar called *Musique pour Radio* which we have broadcast.) The radio audience will be invited to name the work, which will be introduced on the same show during July. The Commission and the composer will pick out the most suitable title from those submitted, and the winner will be given a copy of the original score, autographed by the composer. This number will be about ten minutes long. Copland is in Hollywood, as a direct result of our broadcasting his play-opera for children of high school age, 'The Second Hurricane.' The movie executives heard it, and he has been offered a picture score assignment. Later he is going to Mexico for Mrs. Coolidge's festival that Carlos Chavez is directing.

"Roy Harris (born in Oklahoma, 1898) has been ill and then his father was gravely ill, but his work will be in about the middle of July. He is thinking about radio as a social force and about the problem of radio timing. So he is writing a 'Time Suite'

# How I Mastered Eighty Piano Concertos

By HENRIETTA SCHUMANN

Noted Concert Pianist and Guest Artist at the Radio City Music Hall and on the "Music Hall of the Air"

HENRIETTA SCHUMANN

*Miss Henrietta Schumann, who is still in her twenties, has mastered one of the greatest repertoires for piano ever acquired by a concert pianist. She was born in Russia, of French and German extraction, and lived there, as a child, through the terrible days of the Revolution. Then she came to America with her father, Illya Schumann, her only piano teacher; and they settled in Syracuse, New York, where the elder Schumann became a teacher at the university—EDITOR'S NOTE.*

## A Conference Secured Expressly for The Etude Music Magazine

By

ROSE HEYLBUT

OF THE MANY QUALITIES that go into the making of a good pianist, one of the first essentials is that he or she shall learn how to study. A towering genius will assert himself, it is to be admitted; but superlative geniuses are few and poor models for the less endowed. For the contest between talent and hard work, however, earnest and persistent application may be trusted to bring better results. In my childhood days in Russia, a girl came to study with my father. She was one of the most untalented people I ever have heard play, with a harsh, unlovely tone and almost no inner sense for music. She loved music, however, and was determined to become a professional pianist despite the almost insurmountable handicaps she had to overcome. We watched and commented on her progress, which was really amazing. She had but one idea in mind, and to this she devoted herself, night and day. It would be impossible to imagine a harder, more faithful worker. All that she lacked naturally, she more than made up by concentrated effort. She sat for hours studying the records of eminent pianists, and spent years developing a finer tone. In time, she made herself a splendid pianist. My father arranged for her to play for a number of distinguished artists, and they all commented upon her tone and fine musicianship. Unfortunately, she died before she was twenty; otherwise the world would surely have heard of her. The case of this one girl proves, I think, the seeming miracles that can be achieved by sheer hard work.

If my observations are accurate, this particular kind of all-absorbing hard work is not so developed among American students as among Europeans. The average American piano student takes his advantages for granted; indeed, he seems to feel that he is obliging his parents or teachers by playing a good lesson. In Europe the student realizes that he is fortunate to have paid lessons at all, and sets out to derive the maximum of advantage from them. Instead of having to be coaxed to practice, he must be reminded to eat his meals; and if he has no lessons a week he is better prepared than the American student is for one, regardless of the fact that he has twice as much to learn and half the time in which to learn it. Just why this should be so, I cannot say, unless the greater affluence in America and the generally higher standard of living leads our children to believe that advantages are their taken for granted right. Because of this the best advice I can give to young musicians is to adjust their mental attitude to appreciate the advantages they have in taking lessons at all. A wholesome attitude towards work is the first step towards progress. Do not let the good things of life make you idle. Let your working motto be something as Mozart once said, "When a person has genius, he can discount his gift at one percent, which leaves ninety-nine percent of hard work; if a person has merely talent, he needs one hundred percent of work."

### A Plan of Attack

NOW, THEN, SHALL THE PIANIST set about working in the proper way? Most people go to work in the wrong way; that is to say, they do not practice what they need. Let us suppose that an advanced student is learning a concerto. As a general thing he will play the entire work

through, and then play it through again. If it is a half hour piece, two playings will occupy an hour of his time and leave the performer tired before he has had a chance to improve his interpretation to any appreciable degree. A much better way to attack such a problem is to read the concerto through once, in order to find out which parts of it lie easily under the fingers, as well as which offer difficulties, and then to take out the difficult parts and work on each alone. By following such a method, an hour of work will bring notable results. The easy parts will fall in line by themselves. Knowing the parts that need study is the first step in intelligent practice.

The second mistake the average pianist makes is to neglect sight reading. The tendency is to work exclusively upon what must be learned, leaving the important business of reading to take care of itself. It is astonishing how some of our most noted pianists get into difficulties when they are asked to read the second piano part of a concerto with which they are unfamiliar. Reading is not a special gift any more than reading print requires special talents. Indeed, the ability to read anything, music or sentences, is merely a matter of quick eye technic. Note reading can be acquired by assiduous

practice. Pick up all the new music you can, and read it through. The inside pages of THE ETUDE offer splendid opportunities for practice in reading. Try to read new music in its proper tempo. Naturally, many mistakes will be made at first, but the longer one keeps at it, the fewer mistakes there will be. Furthermore, notes should be read as one reads words. The child does not stop to read one letter at a time, once its seventh birthday is in the past. It reads complete words, and complete sentences. The trick of sight reading of music is to read complete measures and phrases at a time. Try to train your eyes to select the complete melodic phrase as you go along. There is no better practice for sight reading.

### Some Needful Tools

I HAVE OFTEN BEEN ASKED whether it is necessary to practice scales and exercises, or whether the selected difficult passages of a piece are sufficient technical drill. For the best results, scales and exercises are indispensable. The serious student will make a strict schedule of scales, arpeggios, and finger exercises, for every day of practice. There is nothing to equal work of this kind, for developing the fingers. Further, a familiarity with the relation of scales, and their corresponding arpeggios, greatly facilitates an understanding of music. The person, who has all his scales and arpeggios at his fingers' tips, will always make an accurate Mozart and Haydn player. No matter what his interpretative powers may be, he will be able to read these works with great fluency.

Perhaps the most difficult thing to teach is tone. I have a feeling that the pianist's tone is inborn, exactly like the violinist's vibrato. It is a reflection of the innate musical quality of the performer's nature. This sort of tone cannot be taught. But even the least gifted student can be shown how to improve his tone. It is not best to adhere too strictly to set finger positions, because no two pairs of hands are built exactly alike. According as a person's hands are larger or smaller, wider or narrower, he may hold his knuckles higher or lower; and such minute points of hand position are, after all, not so important. The main thing is that the arm shall lie in a natural and relaxed position, with the wrist in an even line with it, neither too high nor too low. After that has been achieved, individualities of knuckle posture may take care of themselves. A good singing tone may be induced by slightly raising the relaxed wrist just as the note is struck, and then gently lowering it again. Furthermore, as the student advances in his work he must master the valuable lesson of knowing when to relax his arm and when to stiffen it. Powerful chords and long octave passages often require a firm, stiff arm. But if this stiffness is carried over into different passages, the tone becomes harsh. And even where the stiff arm is required, the stiffness is one of conscious firming up, never the result of tension. The pianist, who plays with a correctly placed and correctly relaxed arm, never becomes tired. Tiredness from playing is the first and surest indication of faulty technic.

The pianist early needs to cultivate his memory. The memorizing of music should, after all, be a natural thing. There are really two kinds of memory. One is finger memory, which is mechanical, and not to be relied upon.

Little children are found learning to memorize in this way; they simply play their little pieces so often that the fingers learn to fall into their proper places. But, ask the child to tell you the note sequence away from the piano and he will be bewildered. That is why mechanical memory is not too helpful. The only desirable kind of memorizing is the mental or musical variety, whereby the performer knows what is to be played and can outline it, or even write it down away from the keyboard.

The secret of musical memorizing is music itself. The student who finds memorizing difficult should be given a course in theory and harmony, so that he may know what he is doing and why he is doing it. All know how easy it is to memorize a poem in our native language. We are not merely mouthing words, but are guided by sense and meaning. It would be twice as difficult to memorize a poem in ancient Greek, let us say, where the meaning would be closed and one would have nothing but sound to go by. Exactly the same is true about memorizing music. Once we know where there is a change of keys, and why they change, the sequence will be as easy to memorize as the words of a favorite poem.

One of the greatest demands upon the concert artist is that of repertoire. People often ask how all these eighty concertos have been acquired so that any one of them can be played at a few days' notice. There is no secret to it. Hard, regular work, and the willingness to sacrifice time and to devote labor make up my only method. As in the case of the actor, one's memory seems, with use, to become more inclusive.

### The Soul of Interpretation

IN OFFERING THESE HINTS ON piano mastery, I have been saving the most important for the last; that is, the projection of the music itself. Without this, the best playing remains nothing more than a series of notes, and notes alone are none too interesting to hear. Excellent playing means the controlled subordination of all musical and technical resources to the meaning of the music itself. The goal of all study is that degree of musicianship and penetration which enables the performer to search to the core of the composer's meaning, and to give this back to the world. The passages we practice are merely the means we have of making that supreme significance more clear. We must never for a moment lose sight of the music itself.

The first goal of music study should be an enrichment of human life. The student, who never follows a professional career, can nonetheless find in music a means of making his life fuller and more exalted. It is a sad mistake to think that study must lead to "something big." Finer and ampler living, surely, is big enough. In these days of keen competition, only the most gifted of musicians can hope for a career. Therefore career minded aspirants should convince themselves, beyond a shadow of doubt, that they possess the material from which a career can be fashioned.

My own work, as piano soloist of the great Radio City Music Hall, and of the "Music Hall of the Air," convinces me that the layman's interest in music, for its own sake, is steadily growing. A program of excellent music is an integral part of every Music Hall show; and so it comes about that people, who enter this Music Hall to see a motion picture, find themselves listening to symphonies, piano concertos, and operatic arias, as well. The important thing is that they appreciate them. The Music Hall seats six thousand two hundred people; there are four full performances each day; and the same program continues for one week, at least, and sometimes for two. Thus in a single week 173,600 persons may listen to any one of our musical programs. This is a far larger number than can be accommodated at any operatic or symphonic program. As for the

"Music Hall of the Air", its programs are broadcast throughout the United States and Canada, to Europe, and to South America. I understand that the University of Colombia, in Bogota, makes the Radio City "Music Hall of the Air" broadcasts a regular and required part of its musical curriculum. It is a wonderful sensation to reach such incalculable numbers of people and to feel that the music one gives them is something to which they look forward. And the very fact that programs of excellent music are sent out to so many proves that the people want them. Our experience has been that the average listener prefers good music to the bad or mediocre. People would rather be played "up to" than "down to."

My work is but a very small part of the Music Hall's complete musical schedule, and I have had to acquire a repertoire of seventy concertos, so far, with at least ten more in preparation. The saddest mistake

a beginner can make is to suppose that he must lower his musical standards in order to make himself popular. The more good music we give audiences, the more they will accept. Our fan mail reflects that the preference of the general Music Hall and radio listener inclines more to Beethoven than to Gershwin. This is significant when one reflects that the average listener who comes to the Music Hall is not necessarily a schooled music lover. It is not surprising that the people who go to a Toscanini concert go to hear and enjoy fine music. But when the average motion picture spectator writes in to say that he wants Beethoven, Schumann, and Brahms, we have the healthiest sort of indication that the taste of the nation is quite what it ought to be. When the musical history of our times comes to be written, it will not be at all surprising to find the great motion picture theaters listed among the foremost agencies that brought good music before the masses.

FIRST REGULAR SERIOUS MUSICAL PROGRAM TELECAST BY THE NATIONAL BROADCASTING COMPANY

Mme. Cecile Chaminade's eighty-second birthday was celebrated by a television concert in her honor at Radio City, New York. The pianist was Henrietta Schumann (left). The speaker was Dr. James Francis Cooke, Editor of THE ETUDE, whose tense expression is due to the great heat coming from the television lights. In the center is M. Charles-Roux, representing the French Government.

## Helpful Pedal Exercises

By JANET NICHOLS

WE SO OFTEN HEAR the player put down the pedal just before he strikes the chord of the new harmony, rather than after, and the effect is as if one were "gasping" for breath. If the performer could be trained to hear this defect, of course, he would not do it. The foot action must be just the opposite of that of the fingers, and the reason for this is readily understood when one realizes the action of the dampers upon the strings.

The Damper Pedal (often incorrectly called the loud pedal), when put down, lifts all of the dampers above the strings and when the keys are struck the strings are thereby left free to vibrate or to "sing." If the pedal is changed just before the new harmonic chord (rather than immediately after) the performer has permitted the dampers to let out the present harmony, thereby having absolutely nothing for a brief second, and it is this that gives the effect of "gasping."

The following exercises will be found helpful and may be practiced with the pedal, at the piano, or on the floor away from the piano. Use the metronome, set to ♩ = 60 to 100. O indicates pedal up; X indicates down; and —, pedal held.

## Who Wrote America?

THE TUNE to which America sung is of course, *God Save the King*, but no one seems to know positively who wrote it.

The British *Young Musician* has been endeavoring to get to the facts but without very much success as the following article indicates.

"The first printed copy of our National Anthem (British) was made about 1742. Here is the tune, not quite like the modern version. Which do you like better?"

"Who wrote it?" No one knows. Like Topsy, it seems as if it "just grewed." Learned men have searched in ancient records, dug out old manuscripts, compared odd scraps of tune and odd scraps of words but still no one can say definitely that such-and-such a time So-and-So wrote the tune which has become our National Anthem.

"Our first record of it comes from the time of the Stuart risings in Scotland, the famous year of 1745, when news of the battle of Prestonpans came to London. The National Anthem, arranged by Thomas Arne and by Charles Burney (a pupil of Arne's), was sung at the two big theaters Drury Lane and Covent Garden, for several nights. A year or so earlier the song had appeared in a book, with the tune which is here given—very like what we sing to-day, though not exactly the same."

"Burney discovered that old Mrs. Arne's master's mother, remembered hearing it sung in 1688, 'when the Prince of Orange was hovering over the coast.' But he could trace it no further.

### A Wild Claim

"No ONE ELSE seems to have been very much interested in its origins until a man called Carey, hoping to make some money out of it, claimed that his father, Henry Carey, a well-known musician who had died half a century before, had written both words and music. He said he had heard his father sing it at a dinner as one of his own songs, and he found a friend who also thought he remembered the occasion. But memories of dinner-parties are apt to grow dim after fifty years, and no one seriously considered Carey's claim."

### A Discovery—and a Disappointment

"SEVERAL YEARS LATER a very exciting discovery was made, but alas, it came to nothing. One, Richard Clark, bought a manuscript copy of some music by an Elizabethan composer, whose name, apt enough, was John Bull. One of the pieces was based on four notes actually labelled *God Save the King*, but it is quite unlike the tune we know. Then Mr. Clark found another piece in the book, which he said was surely the original of our Anthem. Certainly there is something very familiar about the melody which he allowed his friend to copy, but later on it was found that several alterations had been made."

(Continued on Page 760)

there is no stound or impediment in the  
but may be wrought out by fit studies."  
—BACON

IT IS QUITE POSSIBLE for a piano student to play for years with the muscular equivalent of a car in second gear, simply because he never has learned to make a third and last shift into *leggiere*. Fortunately, this touch, which is best adapted to lightness and velocity, and which chiefly relies on the fewest muscle groups, is the most difficult muscular combination that a pianist has to learn. Yet it may be infallibly promoted by using a certain practice discipline originated by Franz Liszt, famous virtuoso and favorite pupil of Franz Liszt. It was my great good fortune to find this short cut to *leggiere* and to a general mastery of all mechanical problems, in a modest little volume not readily available. This had been designed to accompany a manuscript which was willed by Tausig to his pupil, Heinrich Ehrlich. The latter here extended the method used by Tausig in training and maintaining his fabulous technique. The letter of the law, the Tausig manuscript, is perpetuated as the famous Tausig "Daily Exercises," but the spirit, revealed by Ehrlich in his booklet, "How to Practice on the Piano," has been out of print for some years.

The striking feature of the Tausig method is the stress laid on a certain position to be assumed by the elbow when practicing the "Daily Exercises." The extreme position adopted by the elbow, in practice, are essential to the golden mean of its proper behavior in performance. To find the truth, one must combine opposing viewpoints. Every partial truth casts the shadow of its antithesis. When taking up a matter of unexpected importance in the making or training of a pianist, we must consider two partial truths, namely, two conflicting ideas upon how to manage the elbow in practicing. The pianist who can reconcile in his own person these conflicting ideas will be on the royal road to technical mastery. The playing promoted by the Tausig ideas of practice definitely leans toward greatest lateral freedom of the hands and fingers; the elbows are "in,"

Ex. 1

upper arm being vertical as far as is possible.

This is, of course, a largely involuntary adjustment which follows certain habits learned in practicing after the Tausig method. The opposite extreme, or natural antithesis of the Tausig method, is less lateral movement of the fingers and hands with marked accommodation at the elbows and shoulders. This has its rightful place in piano playing and is advocated by Tausig himself, at the beginning of piano instruction. But, after about a year and a half, training of the pianist should be begun with the elbow held after the manner suggested in "How to Practice on the Piano."

De Pachmann, renowned interpreter of Chopin, having had behind him years of playing with the elbow held "in," suddenly decided at the end of his career that this was all wrong, and went back to holding the elbow after the fashion of a beginner.

Ex. 2

This is the wonderful discovery that I have never would have impressed him with results had he not had the discipline of his former way of playing. The whole truth is that both ways must be practiced, each at the proper time.

Let De Pachmann explain his method: "I never move the hand from side to side. The lateral movement occurs at the elbow and at the shoulder and not at the wrist. The hand is on a line with the arm."

"Great Men and Famous Musicians" James M. Cooke.

# Short Cuts In Piano Technic

Valuable Ideas Derived from a Study of the Keyboard Philosophy of Tausig, Deppe, and de Pachmann

By

ELIZABETH WENDELL BARRY

CARL TAUSIG

Amazing Liszt pupil, famed for his "flawless technic." He died at the age of thirty.

De Pachmann believed that a lateral motion of the hand in either direction promoted nervous strain and fatigue. He implied that the hand is equally strained, whether it be turned in toward the thumb or out toward the little finger. There is usually a far greater reach outward. He condemns both movements of the hand as being equally pernicious. Naturally, his idea necessitated elaborate re-fingering and rearrangement between the two hands. De Pachmann calmly dropped from his repertoire everything unplayable from his new viewpoint. But I warrant that when playing in concert, and despite his intentions, he lapsed into free lateral gestures of the hands. Judging from the efforts of students who struggle in vain for technical mastery, because they have only practiced with the free upper arm, I believe that the Tausig discipline solves certain mechanical problems that forever elude the fingers that are led astray by an oscillating elbow with all its evils.

By a strange irony of fate, it appears that Tausig did not bother to teach his own method. Like most artists, he did not

deign to teach technic; he expected each pupil to find his own. As incentive, the luckless student would be forced to listen to comments of a highly disparaging nature made for the benefit of his colleagues, as well as his own, while he was performing. "Ach, how terrible!" is a mild example of Tausig's encouragement. He was a perfectionist, who was merciless in exacting the best of both his pupils and of himself. An artist who could survive exposure to the Tausig elements had nothing to fear from the most critical audience. What Tausig knew concerning the prime importance of the rôle of the elbow seems to have been discussed with Ehrlich alone. It remained for the pupil to reveal the secrets of his master, after he had died of a brain fever in his early thirties.

Fortunately for some pianists of that day, there was another teacher, neither spectacular nor famous; but this kindly little man, whose name and work are not very well known among piano students of the present day, was nevertheless the wisest piano instructor of that time. Ludwig Deppe was the one who guided to eventual

success some pianists who had failed to obtain the help they needed from the most famous teachers in Europe. Of this number was an American girl by the name of Amy Fay, who studied with Tausig until he abandoned his conservatory shortly before his untimely death. She then went for a time to Theodor Kullak, whose "School of Octave Playing, Op. 48" is still deservedly famous. Of him, Amy Fay writes: "In my study with Kullak, when I had any special difficulties he only said, 'Practice always, Fräulein. Time will do it for you some day. Hold your hand any way that is easiest for you. You can do it *this way*—or in *this way*'—showing me different positions of the hand in playing the troublesome passage—or you can play it with the back of the hand if that will help you any!"\* It is this viewpoint that led him to remark to Amy Fay, when he had given her the "Concerto in E minor" of Chopin, to study and she was struggling over passages in it, "Ah yes, Fräulein, when I think of the time and labor I spent over that concerto in my youth, I could weep tears of blood." We cannot be surprised that Amy Fay left such a trial and error method. Alas that it should still be in use in these supposedly enlightened times. Then and now the pupil is inoculated with a virus composed of various technical irritants found in certain études and pieces, in hopes that somehow immunity against the several maladies of technic will be conferred.

After leaving Kullak, Amy Fay studied with Franz Liszt himself. She quotes him in a rare comment made on technic, which he never taught: "That is the way Liszt teaches you. He presents an idea to you, and it takes fast hold of your mind and sticks there. Music is such a real, visible thing to him that he always has a symbol, instantly, in the visible world to express his idea. One day, when I was playing, I made too much movement with my hand in a rotatory sort of passage where it was difficult to avoid it. 'Keep your hand still, Fräulein,' said Liszt: 'don't make omelette!'" Amy Fay could not help laughing, it was so much to the point. His remark also applies to many other pianists I have observed, including myself. Other piano chefs are those devotees of visible relaxation and those others of soulful mien who flaunt a rococo technic. These sometimes forget that "the aim of Art is to conceal Art." An oscillating elbow will invariably make omelette in playing the following extract from the "Magic Fire Spell" by Wagner (Brassin transcription).

Ex. 3

When she returned to Germany, after being with Liszt, Amy Fay found the man who gave her the practical help she needed with the mechanical problems of technic. We can readily share her excitement and delight over Ludwig Deppe, who at that time was hardly known outside of Berlin. She tells us, "Deppe never said, 'Oh, you'll get this after years of practice.' Instead, he showed us how to conquer the difficulty *now*. He took a piece, and while he played it with the most wonderful fineness of conception, he coldbloodedly dissected the mechanical elements of it, separated them, and told us how to use our hands so as to grasp them one after another. In short, he made the technic and the conception *identical*, as of course they ought to be; but I never had any other master who trained his pupils to attempt it."

Deppe required of all his pupils three years of slow and careful work on technic before he would allow them to make a public appearance. When the time came, this was a very modest affair. He said that,

\* "Music Study in Germany"—Amy Fay.

"If you want to climb mountains, you had best begin with small hills." When Amy Fay first played in concert as his pupil, it was simply as accompanist in a recital of chamber music. "I did not play any solos," she said, "after all. Deppe thought that the programme would be too long, and he was not quite sure of my courage. 'You'd be frightened, if you were a Herr Gott!'" was his remark. Yet under Kullak's tuition Amy Fay had expected to win her laurels as a concert pianist three years previously. By going instead to Deppe, she was undoubtedly spared a crushing failure at the very start of her career.

We American students are noted for the energy and enthusiasm that is characteristic of a young nation. If we could only add to this such patience as that exhibited by Amy Fay, our European teachers would find us ideal pupils. As it is, I am afraid that many of us do not like to face the fact that "Art is long." We feel that we must have immediate recognition of our peculiar talents, that only a debut made while we are as young as possible is worth while. Even as beginners we seem to have an innate fear of playing in public pieces that do not sound "hard" enough to please our vanity. It is a painful ordeal for even the musically unsophisticated to hear compositions neither technically digested nor musically comprehended. Pianists should be satisfied to play only what has been well mastered, even if it is not technically difficult. As it is, some of us get through compositions played in public only by some happy combination of adrenalin with the grace of God. Why suffer the tortures of feeling technically insecure? We should take the time to acquire a good technical reserve and store it in the bank, and should then take care not to overdraw the account. A pianist may well afford to await artistic maturity. The fleetness of time is often matched by the pianist's fingers. Clementi gave a very commendable recital at the age of eighty.

### A Balanced Art

AN IMPORTANT PROBLEM, every pianist must decide, is how best to maintain the equilibrium between mechanical technic and music proper. It would seem that the difficulties of the former should exceed those of the latter. Deppe gave as few etudes as possible, but those difficult; and he devoted most of the time to music that was to form a part of one's repertoire. This was such as could be played in public with complete technical assurance. Tausig also believed this to be the best plan. His "Daily Exercises" are short and of concentrated difficulty. These are to be practiced during the day, at widely separated intervals, for no more than five or at most ten minutes at a stretch, the entire time consumed being absolutely no more than twenty minutes. The famous "Gradus ad Parnassum" of Clementi he considered, also indispensable, as well as Kullak for octaves. Outside of these the rest was music that was always such as could be performed. This idea is based on very sound psychology. It insures an artistic self-respect and a reputation for reliable performance before the public.

In building an adequate technic, we cannot neglect the practice of scales. A sentence by Deppe reveals the vital secret of successful scale playing: "Gather your fingers into a nutshell." In 1936, Schultz explained exactly how the fingers may be thus crowded in slow practice. This is easily the best idea in his book. He did not seem to realize that the riddle of the pianist's finger may be best solved by the elbow. In order to play *leggiere* Deppe said, "Your elbow must be lead, your wrist, a feather." Tausig showed exactly how the elbow could be brought to such a condition. These two are ahead of supposedly the latest thought of today on the conscious control of the smaller hand muscles in playing *leggiere*.

In the playing of scales there is a diffi-

culty which has its origin in the sympathy which lies between the thumbs. This happens in accordance with the law of sympathy existing between corresponding fingers of the two hands, in this case, the thumbs. I had never been able to overcome this particular idiosyncrasy, even with the most persistent practice. The problem of passing the thumbs under the hand is usually emphasized. This may be paramount in scales played hands separately, but in parallel scales the difficulty lies rather in making a contrary motion: one thumb passes under (partially in a rapid scale) while the other must come out promptly from under the hand. If attention is concentrated on the thumb going under, the one on the other hand, which must make

the opposite movement of coming out from under the hand, neglects to act promptly. For an infinitesimal moment it also strives to pass under the hand, because the attention is concentrated on performing that action. If, instead, the attention be focused correctly upon performing the contrary motion of the thumbs, and not everlastingly upon the single one of passing the thumb under the hand that has a clear track (the right hand going toward the bass, or the left hand toward the treble), whilst this thumb is left to its own devices, then half of the parallel scale problem is solved.

### The Thumbs a Team

A LEGITIMATE AND ADMIRABLE USE is made of the law of sympathy between the thumbs

in a new fingering for parallel scales proposed by Alberto Jonás. This isolates and simplifies the problem of making correctly the contrary gesture of the thumb. The principle is that the thumbs always play simultaneously; this greatly simplifies the task of learning scale fingering. In spite of having used the old fingering for years, one may obtain a complete mastery of this new form in two weeks, with a improvement in smoothness and gain in velocity. Beginners master this in far less time than must be devoted to the classical form. It now remains only to discipline the hand so that of its own accord it elects to perform smoothly every motion involved in scale playing. Here Tausig comes to the (Continued on Page 751)

## Music for the Pre-School Child

By MABEL K. HOLTE

HOW MANY MOTHERS have said to the writer, "My child isn't musical." They want their children to be "musical"—to play an instrument, to be able to carry a tune—and yet they do nothing to develop a desire for music in those tender years before school, beyond deploring the fact that apparently their child has no interest in music.

I have a little boy who is four and a half. I want him to learn to play an instrument and to sing. Every afternoon from one until two we listen to the Iowa University broadcast of classical music. Oh, we don't sit before the radio in rapt attention. No. Oliver plays quietly with his blocks on the floor, and the music fills the room and occupies our thoughts. He is eager every day for one o'clock to come. Instead of napping, he plays quietly and listens to the "music stories." Before each composition is played I tell him the name, and a little of the story so that he can let his imagination have full rein during the playing. For instance, with the "Surprise Symphony," I tell him how Haydn purposely composed a quiet little piece of music with a sudden loud bang in it to keep the audience awake.

When a composition by Mozart is being played I tell him that Mozart began writing music when he was only four, and how he played for the king and queen. All music tells stories, and thus he grasps the idea

Majorca. While Chopin lay very ill in bed he heard from somewhere a steady dripping of water which brought on a sadness which he put in his music. Some days I do not tell him the names and stories. I just play, and then ask him what the music made him think of. He likes that. It is a game. Some days I ask him what he would like to hear me play, and he says, "Play about the moon," or "about birds singing," or, "water." And of course there is a wealth of lovely music to fit each thought—Debussy's *Clair de Lune*, Grieg's *Petit Oiseau*, or *By the Waters of Minnetonka* by Lieurance.

I tell Oliver that every piece of music has its little story. It doesn't talk—it sings. Some afternoons we play a different game. I ask him if he can sing me a song about a butterfly. And he sings in a most original, if sing-song manner,

*Oh, the pretty butterfly,  
Pretty, pretty butterfly.*

Then sometimes he is asked to play his little thought on the piano. And he thumps out some kind of a discord. It doesn't matter. He has the idea.

### Learning by Imitation

WHEN THERE is a recital of small boys and girls he is taken to hear them play. Children learn, we all know, by imitation, and exposing him to musical children is of great value. We went last month to a small child's recital sponsored by our local college, and the eight year old son of the professor of organ played an original little composition, *Christmas Bells*. It did not sound much like bells, but the children were spellbound while his little fingers skipped around among the keys, perfectly at home. I didn't say, afterwards, "Wouldn't you like to learn to play as well as Rockwell?" But, "Rockwell told us a little story on the piano. Isn't it fun to tell stories like that and to make people guess what you are saying?"

Sometimes we listen to the radio and I have him tell me what instruments sound the loudest. Sometimes it is the drum, sometimes the violin, and again the piano. He can distinguish the harp now.

We play singing games—*Looby Loo, Bow To Your Partner, Around the Mulberry Bush*. He can march in time to a definite beat.

Our leading music teacher says that four is a good age to begin. It is not that Oliver is to become a great artist, genius, or even a very good musician. It is not so much the music itself that I want to inculcate in him. But I do want him to have these things: An understanding heart, a sense of beauty, and the unequalled peace of mind which good music can instill.

And learning to play an instrument will develop in him alertness, awareness, and

initiative. Playing before the public will give him that sense of responsibility and

## Music for a Dance Recital

By HARVEY PEAKE

confidence so essential in coping with social relationships. Sitting at an instrument alone concentrating, expressing himself in a solitary manner, in a "music story," will help him to find himself.

\*\*\*\*\*

## Fatigue Hour

By

GERTRUDE GREENHALGH WALKER

IN TRYING to effect better sales service some of our large department store managers discovered that there was a definite mid-afternoon fatigue hour among their employees. To overcome this, each employee is given a fifteen minute relief period in which she is expected to go to the employee's lunch room for a stimulating drink—tea, coffee, milk, orange juice or any other beverage preferred, which is served gratis.

Those stores inaugurating this service have reported a substantial gain in business which is attributed to enthusiastic and efficient salesmanship.

The music teacher who desires to be alert at all times, may well emulate this system by keeping on hand small bottles of grape or other fruit juices. If preferred, the local druggist could deliver at a certain hour each day some nourishing drink.

The few minutes consumed in partaking of an invigorating beverage is many times repaid in renewed vitality, retained health and steady nerves. They in turn make for pleasing and satisfying lessons, the memory of which is retained by the pupil for many years.

## Music for a Skiing Party

By HARVEY PEAKE

that music should be listened to not just for the sake of hearing the sounds, but of receiving some lovely thoughts.

Some afternoons we play the piano for him. Before each piece is played, he is told the name and story—how Chopin's "Raindrop" Prelude was composed in a monastery on the Mediterranean island of

# Success for the Young Musician

By

JAN SMETERLIN

Eminent Interpreter of Chopin

*Jan Smeterlin was born in Bielsko, a small Polish town, some forty years ago. He is now a British subject and lives, when not on tour, in London during the winter and in Monte Carlo in the summer time. He is most unlike the traditional or romantic picture of the temperamental artist. He can cook most expertly (lobster par excellence); swims well; loves the sea; speaks English, French, German, Italian, Polish, Russian, Swedish, Spanish and some Dutch; and reads all the detective and mystery stories on the market. Critics of two continents recognize Smeterlin as perhaps the greatest of living Chopin interpreters and one of the most poetic of all virtuosi of today. He seems to make more friends and fewer enemies than any other artist.—Editorial Note.*

THOUSANDS OF NEW MUSICIANS spring up; and every year new names are added to the lists of "careers in the making." Some succeed, among a much greater number who fail; and therein lies perhaps one of the sternest conditions any music student can contemplate. A musical career is, of course, a somewhat mysterious thing. One cannot always discover just why some fail and others achieve recognition and renown; why one, who seems so slated for greatness, finally disappears; why another, with more persistence than genius, grows into musical celebrity. So many things are involved in the development of a musical career that it is difficult and dubious for one to give advice and believe that it will produce the results that are intended. Each person is confronted with problems that require specific treatment for his individual needs.

One may wonder then, what are the most essential prerequisites for a successful career. "Have I what is required?" and "What then is most important?" or, as you Americans say, "Have I what it takes?" These are questions that students always have asked, and that they will continue to propose. Some answers will ever remain the same, while others will vary to fit changing conditions. An infinite urge to prevail must dominate.

To begin with, art is an obsession. To become a success, one must be, in a sense, obsessed and overcome by the spirit of art so that expression is a necessity. This is the root from which all other developments must grow. Great artists are swept into art and are moved and controlled by it beyond any volition of their own. In them the urge of art is so tremendous that, of its own necessity, it has to find some means of expression. Some students are more intrigued by the idea of being artists than by art itself. Merely wanting to become an artist is not enough. In the case of those who would like to be great artists, and have talent, their desire can benefit them tremendously; but they must be aided and inspired so that they can find their way.

## The One Essential

THE MOST IMPORTANT POSSESSION of any student is a natural talent. Nothing can be accomplished without it; but, besides this natural endowment, there must be the opportunity to develop it. The whole process of achievement in music means much hard work. One dare not be

JAN SMETERLIN

An Interview Secured Especially for  
The Etude Music Magazine

By OLIVER DANIEL

lazy. Although I learn things easily and quickly, I have had to work very hard; and so must every other artist. One must practice. This I do nearly every day; although, when one is touring from country to country, it is often difficult. In regard to memorizing compositions, this seems for me one of the simplest matters to be considered. On concert tours it is often very annoying, when one wants to work and practice, to be continually disturbed with other matters. There are the managers, newspaper reporters, students, admirers and a hundred other things that absorb one's time and energy. Often it is necessary that these business matters shall be given attention before practice. Music as a career is really a business that is altogether removed from music as an art. Many students would be amazed at the big business organizations behind the managerial offices to be found in New York and London.

Music study and the subsequent launching of a musical career demand money. Many students receive considerable financial aid from patrons and various organizations; while many others, and sometimes the very finest, are strangely required to carve out their own difficult paths

unaided. At best the building of a musical career is both difficult and expensive. These conditions the student might as well know from the beginning and so save himself the shock of finding it out too late. The saying of this is not intended to be discouraging; but the road will not be flower strewn. The young musician may have to supply his own backing and still achieve his end. It can be done but it certainly will not be so rapid as under more favorable conditions.

## The Late Beginner Encouraged

ALTHOUGH MOST INSTRUMENTALISTS have begun their studies while still very young, this does not mean that success cannot be achieved by those who begin later. The first time I ever played a concerto with orchestra was at only eight years of age. It was in Poland, and I played the beautiful "Concerto in C major" of Mozart. At nine I played the Liszt Hungarian Fantasy with orchestra. People there expected me to turn into another child prodigy, but my father would have none of that. I entered the *Gymnasium* (high school) to study Greek, Latin, mathematics and all of the studies that were given there. I then studied music with a bandmaster. He was a very musical man, but I did not really learn a great deal about technic until years later when, at eighteen, I went to Godowsky in Vienna. One must, however, have the musical talent first; one must have it growing inside from the very beginning or he never will get it later. Godowsky was a wonderful little man and an excellent teacher. In Vienna I also studied law, and how different my life might have been had I turned out to be a lawyer.

Personally, I am not concerned and interested in fame. My own career has been slow and gradual. I had to teach continually, in order to give a concert, at first in Vienna, and later in other cities. Whenever there was enough money, there would be another recital. My first concert tour developed an engagement to play in Yugoslavia and later in Spain. Tours in Holland, France, England, Scandinavia, and throughout all of Europe, followed; then came America; and recently I visited Asia to play in the Dutch East Indies.

When very young it was fun to go on tours in the Balkans and in more exotic and far away places. Many of these countries are now too poor for concerts, and

my schedules in other parts of Europe and America are so pressing that there is no longer time to visit some of these interesting parts of the world. The last time I played in Poland all of the receipts were given to the native musicians. It is now quite some time since I have played in Poland. I used to go there often, and at such times would always stay with my dear friend Karol Szymanowski, who died a short time ago. Many of his compositions have been used on my programs in America, and I hope to give his concerto its first American performance. It is a remarkable piece of music. I cannot forget the thrill of hearing it for the first time. I had learned the piano part but had never heard the orchestral version until it was on my program in London some time ago. It is an immense and sweeping work. Both Toscanini and Koussevitzky have been very much interested in this concerto, and Stokowski desired to do it last year; but I was on the Conte di Savoia somewhere near the Azores when his cablegram was received, and, of course, could not come back with other concerts scheduled.

Sometimes one finds a wonderful talent with all the things required of a great musician: one endowed with natural musical instincts, sense of rhythm and form, great interpretative insight and the sensitive and intuitive spirit of a great artist, yet who does not have the technical abilities to bring out all that he knows and feels. Many of such people are blessed with everything but grace or the mechanical abilities to give form to their interpretations and ideas. Sometimes it is a matter of bad beginnings; but at any rate it would be better if they became conductors instead of trying vainly to accomplish what may be impossible. What is the use of having temperament if you have not the technique to exhibit it?

### Art Becomes Universal

ALTHOUGH THE VIEWPOINTS on art may differ in various parts of the world, there seems to be very little difference between those of the European and American. Nationality and religion have but little effect upon the artist. In the south of Europe the operatic instinct is more developed, and there are other minor divergences; but, even in Java, we recently found the appreciation and response very similar to those of other climes visited.

Students ask "What should I study? What should I play?" They should be more enterprising and look through all the great wealth of musical literature. They should practice only the great masterpieces. Life is too short to be wasted on separated exercises. There are so many problems in great music itself that it seems silly to concoct special exercises for practice. If one can do the *Paganini Variations* he need not do the "51 Studies" of Brahms, because everything to be found in the "Studies" is also in the *Variations*; and there is music besides. Everything one needs may be found in great music, so why waste time in learning exercises that will never be used.

So much has been neglected, not only among moderns but also among the standard composers. Schubert sonatas have been used often on my programs. There are the great "Sonata in B-flat," and the "Sonata in A minor, Op. 143," the latter of which is one of the most perfect of his works. It is a fine and intimate work, almost too intimate for the huge audiences and enormous concert halls of today. The same might be said about the *Fantasia in G major*. It is a marvelous work—one of the best in the world. One should be able to play movements alone, instead of playing the complete sonatas of Schubert: The "Sonata in D major, Op. 53," is a truly great work and one of Schubert's best. Although at times it seems too long, I find it a more real and even greater work than the "Sonata in B-flat," which, although

a beautiful work, requires a very musical audience to appreciate and understand it. Where is more charm than in the fascinating last movement of this sonata?

Mozart concertos have been long neglected. Only a few have been performed, while most pianists seem to forget there are so many more. The one in B-flat (K. V. 450), with its graceful opening melody in thirds and the gay bouncing final movement, is too seldom studied or played. There is also the more often heard "Concerto in A major," of which I am very fond; but pianists should look up the ones in E-flat, G major, and several others among these charming but rarely heard works.

Haydn, except among students, has been long absent from pianists' programs. There are also the Haydn sonatas for violin and piano, which should be played. They are fully as beautiful as Mozart's. At the present they interest me much more. It is amazing how near Beethoven is to Haydn—nearer even than Mozart.

When studying in Vienna I used to play

all he wrote. Conductors too often engage me to play his concertos; but, strangely enough, I play nearly as many of the works of other composers as of Chopin. Some kind souls seem to think that it is because of my Polish birth that I play his works so well. I am afraid, however, that this is no explanation, for there are plenty of Poles who cannot play Chopin at all. With the mazurkas it is a somewhat different matter. Unless one has had training in Poland, or has lived there and has seen the mazurka danced, he is apt to go wrong. A foreigner might live in Poland and easily get to understand this musical form. The term *mazurka* is really a collective name. It comes from the district that the Mazury occupy. There are vastly different types of accents and rhythms. Among the different kinds of mazurkas one finds the *oberek*, the *kuiawiak* and others. It is in a way the same as using jazz as a collective name, when it takes in *fox-trots*, *two-steps*, *blues*, *trunkin*, and so on. It is a coincidence, but at the moment I do not think of one pianist, who is not a Pole or a Russian,

NADIA BOULANGER, famous French pianist, composer, conductor, and teacher, conducting the Philadelphia Orchestra in rehearsal for a concert in which she was guest conductor.

more compositions of Brahms than of any other composer. My friends identified me with Brahms rather than Chopin. I often play the Paganini-Brahms *Variations*, and am also fond of the *Variations on an Original Theme, Op. 21, No. 1*, with which more students should become familiar.

### Neglected Heroes

AT THE PRESENT TIME LISZT, too, seems to have fallen into disfavor and neglect; and, in a sense, this is unjustified, considering the great place he has had in the development of piano literature. His "Etudes" certainly have a definite place beside those of Chopin. The same theme of Paganini that Brahms used for his *Variations*, and that Rachmaninoff has used in his *Capriccio for Piano and Orchestra*, was used by Liszt quite unusually in one of his "Etudes." It is the grandfather of both of the later sets of variations.

Audiences and managers like to attach labels to artists. One is a Beethoven specialist, another is a Chopin specialist, a Schumann specialist or a Mozart specialist. No student should make the mistake of trying to specialize, without first knowing and playing all of the great music he can. In many countries I have been tagged with the "Chopin specialist" label. It is true that a great deal of Chopin has appeared on my programs and that many of these have been all Chopin. With Chopin one cannot go wrong, and I play nearly

who plays mazurkas well. With other works of Chopin, this is not the case.

### The Eternal Program Question

IN PLANNING PROGRAMS one cannot always play just the works he likes best. The audience must be kept in mind, if one wishes to develop a concert following. Some managers were distressed when I decided to play the "Hammerclavier Sonata" of Beethoven on my programs this year. One Swedish manager said it would be possible only because I had such a following that wanted to hear me play other things. Even in America the same thing occurred. Yet it is a glorious work, and I really think it is better to play only a part of it than the whole sonata, even though some musicians consider it scandalous and radical to do so. It pleased me that one critic mentioned that when I played the *Adagio and Fugue*, this was certainly justified, enabling one to hear some of Beethoven's profoundest music without being mentally fatigued by having to listen first to two other very long movements.

Magnificent best describes the "Hammerclavier Sonata." It is terribly difficult, as it demands the greatest amount of concentration. If there is the slightest disturbance or nervousness it is ruined. When playing the whole sonata, I have felt that by the time the *Adagio* was reached people might be tired because of its length. If the

## Encouragement Versus Criticism

By

GERTRUDE H. FRAZER

HOW MANY TIMES have we teachers been faced with the problem of the discouraged pupil? To be sure, a child may recognize his lack of perfection of some particular difficulty which can be overcome only by persistence and diligence, and may appear discouraged for a lesson or two over such a difficulty; but what of the child who comes for his lesson week after week with a listless, "don't care," uninterested attitude, with a wall of diffidence about him which it seems impossible to penetrate?

In a large percentage of such cases, the blame may be placed upon the shoulders of the parents, who, day after day, at the most inopportune times (to the child), call out—"Is your practicing done?" Or, "I haven't heard any practicing to-day." Oh, hateful, fateful, warning! What inspiration (?) in its tuncful words! Surely it must become as distasteful to the parent, as so often to the boy or girl, who may have a secret desire to become at least somewhat proficient, but who literally hates that daily "call to practice."

Not long ago my class included a boy pupil who worked exceedingly well during his lesson period, careful, thoughtful, patient, and whom we thought would some day become a splendid pianist. He really seemed to enjoy his lessons, and enjoyed hearing good music as well. But gradually his enthusiasm dwindled definitely, week by week, even though his lesson periods appeared to fascinate him after he got started and he became engrossed in the problem at hand. On asking him what had happened that he seemed so listless and uninterested when he came for his weekly lessons, his reply was prompt, and right to the point. "Aw-gee!" he complained, "You'd get discouraged, too, if every time you played anything your mother hollered out to you that you had made some mistake—whether you had or not!" Which found a sympathetic echo in my heart.

And, come to find out, the boy was being continually criticised, whether he "played" pieces for which he had received a star for accomplishment, or whether he just "practiced" a piece, or scales, or exercises, which might have been comparatively new to him.

Oh, mothers and fathers, do you not see how easily you may defeat your best and most earnest desires for your children, by continually tearing down, instead of reinforcing the foundation? What matter a few mistakes, if a gentle remark like "That was a little better; do you suppose you could try again without making that funny little slip in the third measure?"—urges the child on to more intelligent and better work. Or—"Mary, while I'm getting supper on the table do you suppose you could play over that new little piece you had this week? It is so pretty and I'd love to have a little music while I finish up supper."

Children react to a spirit of helpfulness so readily; but how will they react to constant criticism? Why should they try, if they find that the very effort draws forth continual nagging?

Oh, that we teachers might have classes in psychology for parents, if need be, to help bring about a changed attitude on the part of parents, as well as the child, toward the so-called hated practice period!

\* \* \* \* \*

"There still is more joy among clear-visioned musicians and music-lovers over one composer who writes a real melody than over ninety and nine modernistic tone jugglers who cover pages with forests of mere notes."—The Musical Courier.

NO BE SURE, the lazy are always with us. There is nothing to be done about that. But if you have an ounce of pride in not being one of them and your lessons fail to show enough of improvement, it will be well to cast an analytical eye on your practice method. For therein lies a taproot of all successes and failures.

Practice probably means one of two things to you. Either it is a cherished hour of self-expression and great accomplishment to which you look eagerly forward with an insatiable desire of conquest; or it is a which you despise with every fiber of your being. You may see in it the dividing line between you and success, or

# Make Your Practice Period Profitable

By

GLORIA F. PUGLEY

LESSON RECORD

an hour of drudgery through which you plod with the indifference of a feeble automaton, because your teacher is waiting to hear the sad result at the inevitable end of the week.

The first of these coincides with your attitude toward practicing, rest assured that the first and most important step for enabling you to become a proficient pianist is in your possession. It is intense interest in the end you wish to attain and the will to attain it. If not, perhaps the following suggestions will help you to see your practice period in a new and more interesting light. At the rate, give them just a month's trial and you will wager no one will have to tell you of the remarkable improvement in your playing.

## What is Practice?

NO ONE KNOWS THAT "practice makes perfect." However, a famous master of the art said at one time that to "learn" is like parrot-fashion, that is, by continual

repetition until the fingers automatically become accustomed to it through force of habit, is, in reality, not learning at all. For the music so learned is soon forgotten, once it is aside. Whereas music learned through understanding, through analysis and a slow, sure manner of progression, until the music has been reached where any portion of it can be taken out and played skillfully, or, when played in its entirety, sound as if it had just been improvised—that music will never be forgotten. It may seem to have slipped the mind, but, after the first few measures will all come back to you.

Perhaps then, "Practice," as Funk and Small's puts it, "The voluntary and persistent attempt to make skill a habit," really means more hitting thought to keep in mind. The average lesson of to-day consists of one or less of one or two scales, review of new exercises, possibly a piece from memory, and one from sight. Occasionally there may be musical history, harmony, or other written material to be done

on the side. But, to begin with, every good workman should have tools. The pianist certainly is no exception, and there are four of these which are absolutely essential. They are:

1. A notebook in which to record the lessons.

This will rarely be used by yourself except in the case of recording the amount of time practiced on

each day, if your teacher desires it.

2. A dictionary of musical terms.

A lesson will seldom pass without it being used several times.

3. Another notebook to record your impressions as they occur to you from day to day.

This will turn out to become a sort of diary concerning your musical life. In it will go tricks of learning which you have discovered; how you improved certain faults; and so on. In short, where you stumbled and how you remedied the situation. This book will later on become an invaluable asset, as it will contain the facts of practical experience.

4. A manuscript notebook.

5. The addition of a metronome to the above is optional, depending on whether or not the teacher advises it.

Now then, once you are seated at the piano, stay there till that period of practice is finished. It is imperative that everyone in the house be told beforehand that you are about to begin practicing and must not be disturbed for anything whatsoever. In fact, this should be a fixed understanding in the household. Disturbance breaks the train of thought, and consequently upsets the whole lesson.

## Practice That Is Practice

NEXT, DO NOT DASH THROUGH the lesson any old way, hit or miss, with one eye on the clock. Be systematic. Plan intelligently so that each section will come in its rightful order. Keep the mind centered on what you are doing, and you will find that the hands of the clock go around all too rapidly.

The scales, of course, are to be taken first, in order to give the fingers flexibility and to put the mind in the correct think-

ing mood. Practice them slowly, increasing the velocity very gradually as perfection is achieved.

It is not sufficient to know vaguely how a scale goes, even when it is found that it can be played once or twice correctly. The third time may just be your downfall. Generally speaking, two dozen times is not too many to run over a fairly well learned scale. However, new and difficult ones will naturally take a little longer to master.

Think what you are playing. Play scales forward, backward, middle to beginning, middle to end, fifth to beginning, third to end. Play them in every conceivable way, until you have an accurate mental picture of every note in that scale.

When you have done as well as you can on the scales, begin on the review studies. This is perhaps the most important part of the whole lesson, for it represents perfection in its final stage. The pieces and studies have been already learned; your teacher has heard you play them and has given suggestions as to where they may be improved. And now it is your job to polish them off.

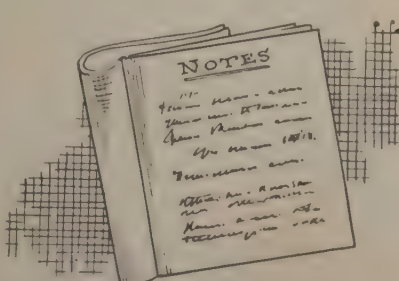

The weak points may have been marked out with remarks such as, "keep fingers curved," or "lift fingers high," "count carefully here," or "watch the fingering." Sometimes a note may be encased with red pencil like this,

Ex. 1

which undoubtedly means that one is to be sure the third finger is put over, or under, as the case may be.

The next time a perplexing passage appears, say one of those ascending-descending passages that has to be squeezed in, try doing this. In your manuscript notebook write down the passage in large notes as illustrated in Fig. 2, which is the next

to final measure of the *Valse in D-flat* by Chopin.

Ex. 2

Then decide what chord is the basis of this passage and write it down on the staff above.

Ex. 3

On the same staff, after it, write the scale of the same name.

Now, if there are sharps or flats in the chord and scale, they are bound to repeat themselves in the passage, provided they have not been altered by a natural, a double sharp, or double flat. If there are many of these, write them in beside the corresponding notes, as in Ex. 4.

Ex. 4

Where there are double sharps or double flats, rewrite the passage, altering the notes

to read temporarily as they are played. In the twenty-fourth measure of Liszt's *Hungarian Rhapsody, No. 2* is this *cadenza*.

Ex. 5

As with the Chopin *cadenza*, just studied, write first the tonic chord of the key of the passage, and then its scale.

Ex. 6

Then rewrite the complete *cadenza* as directed at the beginning of this paragraph, and you will have this to study temporarily.

Ex. 7

Temporarily is used here because it is not to be understood that it is permissible to go through all your music practice in

this manner. It should be resorted to only when the passage is very difficult and learning it any other way seems impossible.

No doubt great music masters will dispute this procedure as not being the best method in the world to be used; but it is a workable one and cannot do any harm if followed as outlined, but will do lots of good for those who are a shade on this side of the phenomenally ingenious. All of this rewriting must be done on a sheet of manuscript music paper and the printed page not touched.

When these three things have been done, compare them. First play the chord, then the scale, then the passage as you have written it. Then play from the original, then from yours again. First one and then the other, until you can play it with perfect ease from the original. All this takes a little more time, but the rewards in the end will repay the trouble a thousandfold.

From here on the routine is the same throughout the new exercises and pieces. Remember to take everything slowly at first, each hand, then both. Stop to learn how, where, when and why you must do things. Be certain of the key before you begin—also, of the time and of the expression marks. Count aloud when practicing, as it establishes the rhythm firmly in mind; and, if you are slow to get the swing of new music, ask your teacher to write in the counts of a few measures at the beginning, or wherever it is especially difficult, tie the "and" notes of the bass with those of the treble.

A vocal teacher in the public schools once told me to take a breath whenever I came to a comma in songs. The same principal may be applied to learning to play new pieces, and especially when memorizing. Whenever the phrasing indicates a hesitation, stop and learn that phrase, then proceed on to the next phrase, and so on, till the entire piece is mastered.

When memorizing do the same, except that after a passage has been learned by sight, try doing it without the music.

Always leave the memory work till last, though, as it is very tiring and will, if tackled earlier in the lesson, leave you with little enthusiasm for anything else.

An excellent stimulant, for putting one in the right mood for any piece, is to run over the scale associated with that particular piece, say half a dozen times.

Of course there is nothing high and technical about the above suggestions. There was not meant to be. If there was, you probably would not have read this far. But they were helpful to myself, and I always say, "What's sauce for the goose" . . . . . and so on.

Seriously though, your teacher—fine person that he, or she, may be—cannot learn your lessons for you. He can merely show you how to learn them yourself. Just as a cleric symbolizes Divinity, so does your music teacher symbolize all that is excellence in music study. Believe in him implicitly and coöperate with him to the very best of your ability.

Let us close with one last bit of encouragement, or perhaps it might be discouragement; but let me say only this: "If you will you can; but, if you won't—that, my friend, is indeed a different story. It is the "I will!" that wins.

\* \* \* \* \*

"In music the Artisan is the good, practical, executive workman: he is a craftsman—the performer in bands, the church organist, the choir-trainer, and the average teacher. The Artist, strictly speaking, is the composer or performer of talent 'who detects and applies the law from observation of the works of genius'; he is instructed in the art of composition and interpretation, and he makes music according to established rules, speaking the language that has been prepared for him by the entire race of creators."—Eva Mary Grew in The British Musician.

# Music of Worth in the Movies

By VERNA ARVEY

EVERY SUMMER, when Werner Janssen (noted American composer and conductor) returns to Hollywood from his duties in the East, he is given a film assignment. His latest original musical score is that for Walter Wanger's "Winter Carnival", starring Ann Sheridan and Richard Carlson. The score is unusually long, as Mr. Janssen is said to have composed sixty-two minutes of music. He also made his own orchestrations and conducted. Rumor has it that all the work of creation was done in ten days, and that the scoring was completed in five—truly a remarkable achievement, and one that must have left the young composer exhausted at its conclusion.

When Mr. Janssen was once asked his opinions on film music, he replied, "There isn't very much that I can say for my music, other than what I endeavor to project in my work; therefore I can only beg to be excused from confusing with words what I feel I state more clearly in my own medium, the music itself." Indeed, his film

America, was engaged to compose original music for Warner Brothers' film starring Bette Davis and Errol Flynn. This picture was first titled "Elizabeth and Essex". It was subsequently renamed several times, and now is known as "The Lady and the Knight"; but even this title may be changed ere the present article appears in print.

At Metro-Goldwyn-Mayer Studios, the film "Balalaika" is in production at the time of writing. Ilona Massey and Nelson Eddy sing in it and Feodor Chaliapin, Jr., son of the famous Russian singer, is said to be making his screen début in it. Dalies Frantz, rapidly becoming known as one of America's foremost native concert pianists, also appears in it, both as actor and performer. He plays the piano in a cafe scene. For this picture, Herbert Stothart has made an opera sequence out of Rimsky-Korsakoff's "Scheherazade" music, simplifying it and adding lyrics. Just how effective this will be can be determined only upon seeing and hearing the finished

"PSSST—WHAT'S THE SCORE?"

music is graphic and does speak for itself. It is admirably suited to the subject, whatever that subject may be, in each different picture. It will be recalled that his most notable screen score was that for "The General Died at Dawn", several years ago, when his colorful, suggestively oriental tone poem set a remarkable background for the drama, and this despite the fact that Mr. Janssen is reported not to have been entirely pleased with the cutting and final presentation of the music in contrast to his original conception of it.

A recent Russian film, "Alexander Nevsky", starring Nikolai Cherkassov, has enlisted the services of one of the world's foremost contemporary composers, Serge Prokofieff. Almost every field of musical creation has found this musician an eager participant; almost every great musical organization in the world has performed his serious compositions; so it follows that his original musical scores for films are musically significant.

Another composer, Erich Wolfgang Korngold, famous in Europe as well as in

product!

The new film of Paramount Studios, "Man About Town", made use of an electric metronome invented by James Morrison after many years of labor. This has a controlled buzzer system to mark any tempo with absolute precision. Action on the set was timed with the buzzer, and the device was later used to facilitate scoring and cutting. It was calculated to have saved the studio much time and money in this musical production and to have improved the quality and smoothness of the music, especially in such scenes as the eccentric dance sequence done by Rochester (Eddie Anderson). Mr. Morrison's invention was shown to a group of musicians several years ago and was found to be able to indicate several different rhythms, or time values, at the same time. It was seen, however, to be not so intricate as Henry Cowell's Rhymicon, invented a great many years ago, in which an infinitely greater number of simultaneous rhythms could be heard, each one indicated clearly by the machine.

# Use and Misuse of the Metronome

By W. F. GATES

TO SAY "METRONOME" to many pianists means simply a figure at the beginning of a piece, and then a mad scramble over the keys trying to keep with the relentless clockwork. The figure tells them how fast some one else can play it. But the machine generally beats them to the end.

The speed indication was Maelzel's original intention; but the metronome developed unexpected pedagogical possibilities and became a pianistic educational factor of valued possibilities—but too little recognized as such by the pianistic public.

Some teachers fear that the use of the metronome will instill into the pupil a mechanical rigidity inimical to the expression of sentiment. This fear is groundless, for "playing in time" is the foundation of all musical art.

Before the artistically inaccurate—the *ritardando* the *accelerando*, the *rubato*, the hold—must come the artistically accurate strict time. Most persons need an aid to accomplish this, and hence the metronome. Many know of it, but few make the best use of it.

## The Governed Gait

PLAYING IN EXACT TIME may be designated as the musical straight line; and *rubato*, accelerated or ritarded speed, be called a line, curved according to a preconceived idea or design.

Without a basic precision of time, one plays with an indefinite wobble, "a crooked man going down a crooked lane." Without rhythmic precision as a basis, one's attempts at *rubato* are variations from a crooked line, not from a straight one.

It may solace both teacher and pupil to know that none of the great pianists was more addicted to the use of the metronome than was Chopin, the master of *rubato* in composition and performance.

As an index of the desired speed of a composition, the metronome mark has its one purpose; but an equally important function of the metronome is the development of reliability in the performer. Set to slow tempo, it establishes control and restraint. The indication gradually increased, it carries the accuracy into speedier realms, or shows the player that he is not ready for speed.

## Hasten Slowly

WHEN THE PUPIL is given to keyboard "stammering," it is well to set the indicator to a moderate speed and then to demand that there be no stopping for mistakes, no hesitations, but an intent progression with the metronome, "let the chips fall where they may." Such practice to be used "only when prescribed by the doctor."

The metronome may be a great aid to systematic progress. For days or weeks one may practice a passage with a definite index of gain.

Humanity is subject to variations in temperament and hence in skill. Unevenness may be due to physical condition, to worry, to laziness, to lassitude—or to good spirits; but the metronome will hold rigid on all of them equalizing the ups of to-day with the downs of yesterday. An unquestioned equalizer. The time machine also makes for lack of worry and mental uncertainty. One does not have to guess he is doing as well as yesterday; he may know he is or is not. He does not have to guess at this week's progress, he may know it.

(Continued on Page 757)

# Music As An Anaesthetic

By

EDWARD PODOLSKY, M. D.

*The opinions given in this article are those selected by its author, and they have not been subjected to further scientific corroboration by THE ETUDE. For many centuries many thinkers have considered music desirable as an anaesthetic.—Editor's Note.*

FOR YEARS doctors have been exploring the wonderful possibilities of music, and they have found that it exerts a most favorable influence on a great many bodily conditions. It aids the seamed mind to assume a normal state; stimulates a waning heart and circulatory system; it whips nerves and muscles into activity. But, perhaps the most astonishing of all, music is the enemy of pain. Many years ago Dr. Hunter noted the diminution of pain as an effect of music, in his experiments on a group of patients at Holensburg Hospital. Not long thereafter, Dr. Mays obtained a notable reduction of pain in a patient suffering from arthritis, when music in minor moods was played. Miss Harriet Seymour found that when patients were entering or emerging from the anaesthetic state, in war hospitals, the hearing of music had good results.

**MUSIC AS AN ANTIDOTE**  
*Tarantella, a Mediterranean dance of a rapid, whirling character, was believed a cure for the supposedly poisonous sting of the tarantula spider, from which it derived this name.*

**SINGING BRINGS PEACE TO A SICK MIND**

*Music as a psychiatric aid is clearly illustrated here in "The Madness of Hugo van der Goes", a painting by Emile Wauters. Van der Goes was a famous pupil of Van Eyck, who lost his reason in disappointment over a tragic love affair.*

In more recent years Drs. Buck and Neil, of Kane Hospital, at Kane, Pennsylvania, performed surgical operations to the accompaniment of music, maintaining cheerful music on the phonograph, selected to suit the patient's nationality, interest and tastes, reduced suffering and improved the attitude of the patient.

Recently a young man chose the strains that he played on his favorite harmonica, instead of having the usual anaesthetic, while surgeons probed for a bullet in his thigh. He was able to go through this ordeal without appreciable pain.

Many years ago an Indian doctor, who made a specialty of extracting teeth, made

his appearance in Dublin, Ireland. He used to troop around the city with a band of musicians, offering to extract teeth without pain. When a patient appeared for a tooth extraction, the band struck up a lively air, which was kept up during the operation. The patient usually testified that no pain was felt during the extraction.

## **Tooth Out, Turn Off the Music!**

WITHIN THE FEW YEARS PASSED, dentists in this country have come to realize that there might be something in this Indian doctor's practice. Dr. Elmer S. Best, of Minneapolis, has devised a dental chair which provides music as an anaesthetic while dental operations are in progress. A

**OFFICE HOURS WITH MUSICAL ACCOMPANIMENT**  
*A Quack, on a public market, pulling teeth "to music."*

**DAVID PLAYS AND SINGS FOR THE TROUBLED KING**

*Here, in a famous Biblical scene, the germ of musical therapy can already be observed. King Saul was an ailing and probably neurotic person to whom David's gentle songs were a mental balm.*

reproducing and amplifying system, built into his operating chair, is used to maintain auditory contact with the patient's mastoid bone while the dentist is drilling.

Music, by traveling through the bones, drowns the grinding noises and lessens the wincing. It is done by a novel use of the latest bone conduction instruments developed originally for the deaf. Tipped back, the patient's head comes in contact with two plates fixed in the headrest. They are the new sound-bone conduction plates and are attached to a phonograph by wires leading into another room. No sound is audible to the ears; but when the head touches the plates they transmit the music perfectly through the bones, and the pain occasioned by the dental operation is considerably diminished.

In the course of a description of the exact details of using percaian as a spinal anaesthetic, together with an analysis of the results, Rusca, of Locarno, makes this interesting suggestion of using music to soothe a patient during an operation. As soon as the patient is placed on the table he is given a pair of headphones, through which he hears nothing but music broadcast by means of a radio-gramophone apparatus. Care must be taken, states this authority, to choose music suitable to the condition of the patient. Not only do the headphones effectively isolate the patient from the sounds of the operating theater, but the stimulus is also a useful counteraction to the painful stimulus provided by the surgical proceedings. Patients afforded this comforting addition to spinal anaesthesia have remarked on how quickly the time of the operation seemed to pass.

How does music fight pain? Psychologists have a ready answer. Dr. Diserens, who has devoted a great deal of thought to this particular problem, says: "Music, as experiments amply demonstrate, evokes, or tends to evoke motor reactions. In any case incipient motor reactions probably result even where imagery is alone detected. These in turn arouse a large number of proprioceptive sensations, which may possibly be very faint but, when added to the intense auditory sensations, greatly increase the total sensations and tend to be lost or crowded into a marginal position.

Whatever the explanation, music is a real enemy of pain, pain of both body and mind. In the latter condition it is being used with great success in mental hospitals. In the former it is proving an interesting competitor with ether and chloroform.

# The Threshold of Music

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

## Foreign Notes—And “Chords” That Are Not Chords

### Part I

This article is the fifteenth  
in a series on

“The Doorstep of Harmony.”

The first appeared in The Etude  
for January, 1938.

SO FAR WE HAVE ASSUMED that every note in music is part of a chord, and that every melody moves in perfect teamwork with the shifting harmony beneath it. This is not always true. Sometimes a melody will scamper up and down the scales over a single sustained chord. Sometimes a melody will keep getting ahead of its harmony, or lagging behind it, resulting in a conflict of unrelated tones. Sometimes we will hear a chord with one note definitely out of its proper place; then a moment later the misplaced note will find its true location, and what was a distinctly unsatisfactory situation will become once more serene. Sometimes a bass note will stubbornly keep hammering away at a monotone regardless of the changing chords above it.

Such examples of lack of teamwork add greatly to the excitement and suspense in a piece of music. A love story in which all goes smoothly is not half so interesting as one in which the lovers are kept apart—perhaps by a wicked uncle or a letter gone astray—and are united only in the final paragraph. So with a piece of music, when the melody strays from the harmony our attention is aroused, and we do not relax again until the two are reunited.

In music this little drama may repeat itself as often as four or five times in the course of a single measure. Whenever it does, we find notes that do not belong to any chord—notes which are hoboes, intruders and outlaws.

How shall we explain these foreign notes? Such notes are called *inharmonic* or *non-harmonic*. They do not belong to the harmony, they cannot be explained by any theories of chord structures; but they are important and effective devices in the language of music.

When a note appears which does not belong to the chord accompanying it, and then dissolves into one which does, we receive a delayed feeling of satisfaction which is doubly pleasant to the ear when heard. It is like the extra enjoyment we get from pleasure when it follows pain—or like the satisfaction which comes from seeing a wrong righted, or something askew straightened. It is an effect heightened by contrast. When we hear an out of place note, our ears tell us that it does not belong there. The chord sounds incomplete. Our anticipation becomes aroused. We want the music to do something about this unsatisfactory situation. And—lo, and behold!—something is done. When the note slips into its proper berth we heave a sigh of relief. This, of course, is an exaggerated account of the musical effect of pleasure we receive when a stray tonal lamb returns to the fold. Actually, nobody cares quite that acutely about a musical device which is common enough to be found in flocks and droves on almost any page of music. But, to a small degree, everyone who listens to music experiences these feelings.

Incidentally, do not allow this hair raising description of the effect of foreign notes to delude you into thinking that these intruders are to be found only in discordant modern music, or that they invariably lead to ear splitting cacophony. Quite the reverse. Foreign notes are orthodox members of the musical family and for centuries have been recognized as such. The pages of Bach are filled with them, and even the gentler Mendelssohn and Schubert have scattered them freely through their music.

There are several ways in which a foreign note may appear. It may be a suspension, an *appoggiatura*, an anticipation, a passing note or a pedal point.

### Suspensions

WHEN ONE CHORD SUCCEEDS ANOTHER, it sometimes happens that one of the notes of the first chord stubbornly refuses to move until a beat or two later in the measure. Its delay produces a discordant effect which continues until the note remedies matters by moving. During this interval of delay

it is a foreign note. We call it a *suspension*.

In the following example, it will be noticed that the right hand notes which have their tails turned down lag behind the rest of the music. Instead of moving on the first beat of each measure, they hang on for an extra quarter note, moving on the second beat of the measure. These delays produce biting, dissonant seconds, which resolve each time into serene thirds. Each of these holdovers is a suspension. The quotation is from the *Fourth Movement* of the “Symphony No. 6, “*Pathétique*”, by Peter I. Tschaikowsky.

It does not matter whether the delayed note belongs to the principal melody or not. In the passage just quoted from Tschaikowsky the suspensions occur in a subordinate melody. In the brief quotation from Wagner's *Liebsteid* in chapter thirteen will be found an example in which the suspensions occur in the principal melody, in the third note and again in the next to the last note of the illustration.

### Unprepared Suspensions

SOMETIMES A MELODY IS NOT CONTENT merely to hold on to a note until it becomes foreign, but deliberately and boldly moves to a foreign note. This foreign note, being dissonant, then obeys the Motion and Rest Law and the Melody Law—exactly as a suspension does—by moving to the nearest note which belongs to the harmony.

This process is somewhat akin to what a golfer goes through on the putting green when his first putt either overshoots the mark or stops short of the cup, and a second putt is required to correct the faulty first one. A melody, in its enthusiasm, may overshoot its mark and require a corrective move one step the other way. Or it may fall short and require a second try before achieving its proper destination.

In either case the phenomenon is called an *appoggiatura*, or unprepared suspension. After all, the principal suspension involved is the mental one, as we listeners wait for the discord to resolve itself into concord. The old popular ditty about the *Perils of Poor Pauline* phrased the thought with disarming frankness: “I wonder what the end will be; the suspense is awful.” Both brands of musical suspensions—the true suspension and the *appoggiatura*—have the same purpose: to create dramatic effect and to heighten our interest and curiosity. In both cases the effect is that of a wrong note followed by the right one.

Here is an example of the second brand—the *appoggiatura*, which appears in *Smiles*, a song by Lee S. Roberts.

This quotation is reproduced by the courtesy of the Music Publishers Holding Corporation, owners of its copyright.

On the word “smiles” the tune makes a faulty landing on E-flat and has to correct itself by a move to D-flat in order to blend with the second floor triad that harmonizes it. Again, on the word “give” it overshoots its downward leap, landing on F, a note which has no connection with the dominant seventh chord beneath it. Our ear immediately urges the melody to retrace its steps upward to G—a note which belongs to the harmony.

A more pronounced case of *appoggiaturas*, culled from the classics, is found in the *First Movement* of the “Piano Concerto in B-flat minor” by Tschaikowsky.

The older Rudolph Friml tunes are filled with the same kind of *appoggiaturas*, introduced with the same sort of syncopated accents that are found in this Tschaikowsky example. In fact, the *appoggiatura* used to be a marked characteristic of the operetta composer's style fifteen to twenty years ago. Examine, for instance, Friml's *Sometime*,

or Victor Herbert's *A Kiss in the Dark*.

We usually find that, when this brand of foreign note corrects the error of its way, it does so by moving back towards the starting point of its previous leap—like a pendulum which has swung too far and must swing the other way. It will be noticed that both the melodies quoted above move in pendulum like swings.

### Anticipations

ANOTHER BRAND OF FOREIGN NOTE which sometimes occurs is the direct opposite of the suspension. It is called an *anticipation*. When it occurs the melody, far from remaining rooted to the spot until after the chord has changed, nimbly moves to the next chord note before the chord has had chance to change—like the October issue of your favorite magazine which arrives while September is still in full swing.

This particular type of foreign note was a favorite among Elizabethan composers, early English madrigalists, and such seventeenth century musicians as Lully, Couperin and Purcell. Here is an example from *No. 15, The Month of Maying*, by Thomas Morley.

In the next to the last measure, the melody is so anxious to have us know we are arriving back at the tonic triad that it cannot wait for the next measure to begin; it lets the cat out of the bag an eighth note ahead of time by moving to G.

### Passing Notes

CASUAL MENTION HAS BEEN already made of the fact that some melodies move up or down the scale above a single sustained chord. Obviously, when several successive notes of a scale are harmonized by a single chord, some of the notes must be foreign to that chord. They are; and, when so used, they are called *passing notes*. That is, they are notes which occur in the melody while it is passing from one harmonic note to another.

Passing notes are like the inner links of a chain; they help to make a melody a continuous, interconnected whole. They are highly useful, for without them a melody would either have to insist on the harmony changing with every note—which often would be a clumsy procedure—or else limit itself to the notes of the chord beneath it as bugle calls do. Thanks to their existence, however, melodies are free to be their own natural selves. They need not progress by awkward or naive jumps from one member-note of a chord to another, but can move in leisurely fashion or run smoothly along any part of the scale.

Passing notes are unassuming creatures (Continued on Page 760)

## The Voice of the Oboe

By

**CHARLES GILBERT**

*Charles Gilbert was a pupil of Marcel Tabuteau, First Oboist of the Philadelphia Orchestra. He has been a member of the Curtis Institute Orchestra, Philadelphia; of the Philadelphia Opera Orchestra; of the Italo-American Philharmonic Orchestra; and of the Trenton Symphony Orchestra. He also has been Instructor of Oboe in the University of Michigan Summer Sessions; and Director of Woodwind ensemble groups in the University of Michigan Summer High School clinics.*

CHARLES GILBERT

### The Oboe Reeds

THE OBOE TAKES THE POSITION of the beginner's oboe. His problem, his aim is to produce an artistic voice to a beautiful instrument, and he first must become acquainted with its appearance, the arrangement of the position in which it is to be held. He learns that the oboe employs a double reed and finds that, if ever he is to play in a musicianly manner, he must master the intricacies and mechanicisms involved in these reeds.

It is patent that no two things are the same, and the oboe player of experience will vouch for differences in reeds. Preparing of oboe reeds becomes an art, and which is developed through study and practice. Oboists use many styles of reeds, simply because no two players have the same lips, teeth, or mouth formation. Even their instruments, though they are of the same manufacture, are different in response, timbre or texture. Therefore the reed must be adapted to all the conditioning factors. The beginner first has to have a conception of what sort of perfection he wishes to reach, and then strive to reach it through careful experimentation with and preparation of reeds which, when manipulated with correct embouchure, will result in a beautiful tone. Generally, however, a reed with a short lay will produce tones of a thin, nasal quality. The "heart" of the reed must be protected and the lay worked back in such a way as to gain a quality which results in the fundamental tone so much desired.

The care of reeds should be taught the oboist or beginner, since so much of his performance will depend on his

using good reeds adapted to the characteristics of both instrument and player.

### Embouchure

THE DIFFERENCES IN PHYSICAL CHARACTERISTICS already mentioned, must be understood as applying also to embouchure. What may be appropriate for one would hardly fit another. There are, however, several fundamental embouchure principles which can be applied to all oboists. First, the chin must be pointed downward, or the chin and lower jaw muscles must be drawn down. Second, the corners of the mouth should be pulled forward in order to allow for flexibility of the lips. Beginning players should avoid a stretched embouchure resulting from pulling the corners of the mouth back too far, of which the result is a small, pinched tone which is out of control and lacking in color. Third, the beginner should learn to regulate his mental attitude toward the embouchure. The embouchure itself is horizontal in nature, but if one thinks in terms of "vertical," the resulting embouchure will be better and more correct.

The novice must fight against a "stretched" embouchure or one that is pinched. Practice in placing the reed, and in the correct position of chin, lips, mouth and head, should come first, with the reeds entirely separate from the instrument. A

competent instructor can do much with the beginner before he has commenced to handle the instrument itself. By mastering embouchure the road to excellent oboe performance is well begun.

### Oboe Position

ALTHOUGH A CLOSE RELATIVE of the clarinet, the oboe is smaller in bore and its mechanism is consequently more compact and somewhat differently built. For this very reason the fingers of the oboist should have a greater curve in handling this instrument than is true with the clarinet. Maintaining the correct position of fingers is difficult for the beginner and the most difficult finger to manage is the third finger of each hand. But there is always a lazy soldier or two in the regiment, and he must be disciplined accordingly. More attention and practice in correct position must be given the third finger, but good technique is the award for such attention.

The oboe, of course, should be held in the most natural position; that is, in such a way that no additional difficulties arise in the embouchure. If the player is in a strained or unnatural position, his performance will suffer accordingly.

### Tone

WE HAVE MADE preparations for producing a tone on the oboe by learning about

reeds, embouchure, and position. Our next step is a mental one—we must form a concept of the tone to be produced. The effect of mental action on performance cannot be calculated, but it is none the less necessary. Just as one must be interested in the instrument, one must also form a mental picture of desirable tone.

For this purpose we might take our imagination to a silent, glassy pond whose surface is still and quiet. A smooth, round pebble drops into the placid water, and where it breaks through the surface there is a round and concave impression, from which circles of perfect symmetry radiate in increasingly large form, till they slowly die. The original break is the analogous representative of the original tone; the ensuing ripples are the resulting overtones which give the quality to each tone. Thus the same note played on various instruments sounds different simply because there are differences in the overtones. Each instrument has its own set of overtones, distinctive and individual. Overtones decide the voice of the instrument being played. The beginner must hear the oboe voice, as it should be, mentally. It is a valuable concept, for it guides him to the production of the tone which his mind hears.

### Secrets of Oboe Tone

THE BEGINNER CAN BE SHOWN that lip pressure sets the oboe reeds into vibration. In turn the column of air inside the oboe is set into motion by the action of the reeds. The action of this vibrating air is controlled by the movement of keys on the instrument which lengthen or shorten the column or affect it by a system of holes in the oboe. But the primary key to the tone is not the action of fingers upon the air column, it is the original action of the vibrating reeds. We thus get back to embouchure and reeds, and their importance can hardly be overemphasized.

For the production of the tone, then, we have formed the proper concept and have come to an understanding of the physical principles which govern tone production. The beginner should now place the reed's tip on the edge of the lower lip. The lips are then rolled inward to form a cushion for both the upper and lower reeds. With proper attention being given to position of chin and pulling of muscles, he is ready for the playing of a tone.

In arriving at his tone concept, it is necessary for the beginner to gauge the point at which the tone is most pleasant. To be so, it must have a rich fullness. It must be deep and velvety smooth. If below the pleasant point it will tend to be dull; if above, it will be on the bright side. Like the performer on other instruments, he must get an adequate realization of the necessities of correct intonation.

Lack of color in a tone is most often due to errors in embouchure or reeds, but much of it comes through failure to get the tone concept. The different factors we have discussed in performing or producing a tone on the oboe may be confusing, but it is not expected that the beginner will master all immediately. The greatest advance toward excellence of performance, however, is made when the beginner thoroughly understands the principles underlying each of those factors.

One of the fundamentals of correct

# THE ETUDE MUSIC LOVER'S BOOKSHELF

By B. MEREDITH CADMAN

## Making Music Yourself

**T**WELVE YEARS AGO appeared a book known as "Creative Music in The Home" by Satis N. Coleman, a new edition of which has just come from the press. The book itself was a creation in that it was made upon very different lines from that of any other book in its field. It sought to interest the child at the outstart with stories of the very primitive music of the American Indians; then, if the child wanted to follow these elemental instincts to play upon drums, gourds, and rattles, it showed him how he could make his own instruments. Next it took up the rhythm of the drum and explained rhythm values.

Tone was introduced by inducing the child to tap upon things which gave forth a tone; a silver spoon, a hoe, a flowerpot, or a glass. Then he was shown how he might tune glasses by pouring into them different quantities of water. This led to playing simple tunes on the scale of glasses. From this, the child's attention was called to keys of the piano keyboard.

The next step was to direct his attention to the songs of the birds. This must have been difficult for children in big cities where there are no songbirds.

The following step is that of making and playing marimbas. Then, with chapter twelve, the study of notation is begun. Chapter thirteen begins form and composition. Chapter fourteen returns again to tone, this time in the shape of bells, and chapter fifteen turns to pitch pipes. In similar manner all of the orchestral instruments are approached, and the child is given a very excellent elementary background to the art.

The author is to be commended for doing something entirely different and entirely new. It is in no sense a textbook in the ordinary meaning, but rather a story book introduction to music along original and creative lines which we recommend highly for those pupils whose parents have the means to permit them to have the instruction and time to establish an interest in music at the very beginning which may influence a whole life. The book is elaborately illustrated with drawings by a number of artists, particularly Margaret Kilpatrick Baumeister.

## "A British Survey of Music"

A scholarly review is presented in Gerald Abraham's recently published "A Hundred Years of Music." The work is divided into four main sections: I. After Beethoven; II. Wagner and the Opera; III. After Wagner; IV. The Music of Yesterday and To-day. The writer has a fine critical sense and has balanced his material excellently. His discussion of the "Reaction against romanticism" is one of the most adequate and adroit we have seen, as is his treatment of the impressionists.

The book is certain to find its way into the permanent literature of the musical art. Unfortunately, the writer gives very scant attention to American composers, less than

one page in a three hundred seventy-five page volume. He states frankly, "The majority of American composers, like so many English ones, have been eclectic in the worst sense, colorless imitators of European masters." The writer is entitled to his opinions and convictions; and we, of course, do not propose to debate with him. Other mature writers think very differently.

## How Loud Is a Noise?

Physicists are sometimes admirable musicians. Dr. W. F. G. Swann of the Bartol Research Foundation is a violoncellist and an orchestral conductor. Dr. Vladimir Karapetoff, formerly of Cornell University, is likewise a fine violoncellist and a pianist. With most of them, however, their interest in sound is limited to the phenomena of the laboratory. Your physicist is concerned in pitch, harmonics, decibels and phons. Ah, there you have it, "Decibels and Phons." These are the terms by which volume of sound is measured. In these days when an amplifying system may make the beat of the human heart sound like a cannon shot, sound volume is attracting more and more attention.

L. S. Lloyd, a Welsh physicist, who is "Principal Assistant Secretary to the De-

partment of Scientific and Industrial Research", has written a booklet called "Decibels and Phons." In this he gives a scale for measuring sound volume. If you desire more scientific information upon this subject, we recommend this pamphlet.

## The Last of the Troubadours

Hendrik Willem van Loon and Grace Castagnetta have done a very unusual book in "The Last of the Troubadours." The illustrations are by van Loon, with all of the distinctive style and fanciful genius of this wholly unique Dutch historian, geographer, college professor, critic, lecturer, journalist, musician and radio commentator. It is all about Carl Michael Bellman.

The musician's first question is, "Who in the world is Bellman?" Well, he was a Swede, born in Stockholm, on February 4, 1740. He was one of a copious Swedish family of twenty-one. The father was a scrivener in the state employ, with a very modest salary. Van Loon points out that, "with the help of God and the cemetery the family somehow managed, and enough money was found to send the boy, at the age of nineteen, to the University of Uppsala, where his grandfather was a greatly honored professor."

At the university, Bellman wrote edies and accumulated an assorted collection of debts. After graduation he used his knowledge and culture to a little the counting house of a bank; but gradually we find him climbing out of his led Now he is an actor, now a musician, a poet. He was fond of playing upon Italian guitar, or lute and, when he well plied with *aqua vitae*, he would come rhapsodic and improvise songs the folk song style. Van Loon points that the pious Swedes were inclined to be ashamed of their old minnesinger and dismiss him as another Francois Villon, disreputable drunkard with perhaps a certain ability (if you cared for that so ability), but a man who had made a unfortunate use of those talents which Lord in His mercy had so graciously trusted to his care. Today we are able to see him in a somewhat different light, lived in an age not unlike our own, during which one form of civilization was rapidly coming to an end without as yet having been replaced by something better. The result was an inner conflict, which most people tried to solve by means of alcohol. This was undoubtedly most regrettable but also quite human."

Very little of Bellman is known outside of Scandinavia. The new book presents twenty of Bellman's best known songs arranged for the piano by Grace Castagnetta. Since Bellman helped himself liberally to fragments of melodies of various origin, the music is not particularly original. There is, however, a kind of inimitable picturesqueness which is enhanced by van Loon's masterly sketches. Bellman died on the 11th of February 1795, but the biographical collection makes a permanent record of his admirable work.

## "Musical Appreciation Again"

Aaron Copland's name upon the cover of the recently published "What to Listen For in Music" will be misleading to many as this composer's activities are somewhat identified in the public mind with radical modernism. On the other hand, the book itself is a very practical and readable volume, quite as orthodox in parts as the it might have been written by the reviewer. Dr. Percy Goetschius. Save for an occasional mention of Debussy, Stravinsky, Schönberg, Hindemith, Mahler and Scriabin, the work is so orthodox that it might date thirty years ago; and to our mind makes it all the more valuable. All of modernists, even the most extreme ones whom we have conversed, stress the need for just this kind of fundamental training before voyaging out to the nebulous unknown. The book is really a most excellent one for its purpose. His chapters on "Rhythm," "Harmony" and "Tone Color" are especially informative.

Books of this kind are worthless to those who have already secured considerable musical training. Then they help to straighten out muddled minds. Even when such subjects are conscientiously illustrated in lectures, with extracts played at the piano, it is impossible to convey

# THE TEACHERS' ROUND TABLE

Conducted Monthly by GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

## Maternal Diplomacy

One of my eleven year old pupils did not practice and progressed only because of the combination practice and lesson hour, which I gave her every Saturday. I spoke to the mother several times, and suggested as tactfully as I could that a little more practice would help E's lesson so much. The mother told me that the child did practice, even more than her two older daughters. The two older girls prepared their music lessons well, and working with them was really a pleasure.

Finally the little girl came to her lesson so unprepared that she did not even know where the lesson was, or what it was all about, although I had carefully written out all instructions in her note book. (I've had her for a year because her mother insisted on her learning to play the piano.)

I spoke to the mother more firmly this time and told her that if E did not practice I should have to discontinue trying to teach her. The mother told me that if I did not continue with E, I could not have the other two either. I tried to be helpful in telling her and was so surprised by her statement about the two older girls, that I would like to know what your opinion would be in this mother problem.—Mrs. C. E., Missouri.

do not see that there is anything else I can do except to "string" the child along as painlessly as possible. Give her simple, attractive pieces, and be as patient as possible while she learns them, but insist that she learn them well. I am sure, from what I write, that the mother fully realizes the child's musical backwardness, but, like most mothers, will not admit it even to herself. Therefore, your only solution is to make a kind of pianistic parrot out of the child. It would obviously be foolish for you to lose all three of the girls, especially since you enjoy working with two of them. Dear, oh gosh! If only we didn't have these obstreperous mothers gumming up the works!

## Assignments for Children

1. Should a child of eleven years have definite assignments of work to be prepared for the next lesson? She has studied four years. 2. Should a piece be attacked as a whole and then worked out in detail, or should it be taken in sections and each section learned and then the whole piece taken together for final work in interpretation? 3. Is it better to have a child work over a period of time, two months or so, on technique at lessons, then pieces, and so on, or to prepare some technique, part of a study and part of a piece for each lesson—occasionally introducing slight reading pieces to be played at the next lesson? 4. How old should a child be to undertake her practicing by herself? 5. If it is advisable for a parent with knowledge of music to sit with the child, in cooperation with the teacher, how long should this be continued?

6. Is it preferable to keep up the child's interest with variety of pieces, even if all are not learned as perfectly as the child is capable of learning them, to working on a few all year and trying to manage those so that they are perfectly mastered? The child in question is quite bright but is inclined to be careless, likes to take music lessons, but wears out of technique lesson after lesson, even though given by a very thorough, well-educated teacher.

Have been a subscriber to The Teachers' Round Table each time as the magazine comes in.—M. H., Canada.

Letters like yours are coming to be the order of this page—intelligent, thoughtful, provocative. I'll wager you are an excellent teacher of children!

Every child, even the very youngest, should have lesson assignments to prepare at home. The ideal set-up, of course, is to turn the youngster over to a practice

teacher, or a musical parent, to work with him several times a week. When this is impossible, I know successful teachers who make it compulsory for students to take a short practice period with an assistant, at the end of the regular lesson periods. In this way, the assignment is impressed on the child's mind, practice routine established and good habits formed.

2. "Attacked"! Grrr-rr!! By this time, Round Table readers know how completely "berserk" I go whenever that horrible word appears. So, please change to "studied" or "approached"—if only to save me from a padded cell! For serious study, every piece must be worked out measure by measure, phrase by phrase, until all the parts can be fitted together. To be sure it must first be read over to get a general notion of what it's all about. If the pupil is not a good reader, I often help him by reading one hand while he plays the other; or, after he has read a line or two of the piece I read the next few lines while he follows the music—alternating thus until the end.

3. I hardly know what to say to this one; for it depends entirely on the pupil. One flourishes on a balanced diet of technique and pieces, another is happier with technique and sight playing for a few weeks, followed by intensive work on pieces, new and review. This brings me to question 6 which is allied to it. Yes, I make decided demarcation between pieces which are learned more or less casually, to develop musical and technical facility, and those from which every drop of juice is to be extracted. Most children are happiest when permitted to practice several pieces "just for the fun of it," and at least one "to get perfect." On the other hand, I cannot see eye to eye with you on that "wearisome" technique matter. Such a condition is entirely the fault of those who teach it so mechanically, so tiresomely. I have yet to see a pupil of mine, young or old, with greater or less talent, who is not completely absorbed in technique. Even the "dumb" ones love it!

4. Practice should, if possible, be supervised until adolescence, or until a child reaches about twelve years of age. And this goes for the very talented students as well as others. When this is impossible, two lessons weekly should be the rule.

5. As long as possible. Only be certain that the parent is really capable of carrying out your directions to the letter. For you know, as well as I, that many of the fond mammas who are willing to haul Johnnie or Susie to the piano chair (not stool or bench, please!), to give their time daily and conscientiously, are often overly enthusiastic or ambitious, and must be curbed with a heavy hand. Their misplaced zeal often works irreparable harm to a child's musical development.

## Very Small Hands

In small children, whose hands are undeveloped, is it better to teach them gradually to hold their wrists up and keep the first joint at the nail from falling in, or to be very strict about a perfect hand position from the start? I have had pupils who could not play with their hand held in correct position until the end of the second year.—B. T., Kentucky.

If you teach the "up" approach, often described on this page, you never need worry about hand position in young children or older beginners. As you illustrate short melodies, intervals and chords for them, they unconsciously mimic your

"looks," and they hear how much better the tone sounds if the first joint is firm. That is only one reason why teachers should strive to make their playing appearance as perfect a model as possible. And by perfect, I mean graceful arms with floating elbow tips, quick, relaxed preparation, key contact, and well gradationed, full musical tone.

## Breaks Down in Public

I am a young man with a good musical background and a well developed pianistic technique which I have not stopped building upon. My particular disease, however, is my inability to play before any audience except at our regular student class meetings. It may be a problem for a psychologist, and I do intend to consult one; but I believe it should be discussed with a musical authority as well. I do not suffer from an inferiority complex, since I know my superior training and good accomplishments and I have the respect of my associates.

The best way to describe it is to tell that I begin my performance (and often the same feeling comes over me in my practicing) with the sincere intention of recreating a beautiful piece of music to the best of my ability, only to discover that soon after I have begun, my mind is no longer on the music, but has wandered. The tones immediately become ugly and I am possessed with a fear of not being able to go through with it, and this is followed by a complete disgust for the performance, both of which result in a horrible and incomplete rendition.

In order to do the work I wish to do in the field of music, it is most essential that I overcome this. I would greatly appreciate your expert analysis and I shall try to use any suggestion that you may have to offer. Allow me to add that this malady is as recent as three years and growing ever stronger because of the lack of a proper solution. In my younger years I was better able to exhibit though I had very much less to say.—M. C., New York.

I studied piano for several years, graduating from a reputable school of music in 1925. Then circumstances arose which prevented me from continuing, and interest was dropped almost entirely until two years ago. I am now a married woman facing middle age with the desire to bring this music interest back again. My objective naturally is quite different from what it was. Now I can wish only to play well enough for the enjoyment of friends and members of my household and myself. This last is difficult to please. I began to pick up the threads by using former finger developing exercises, scales, arpeggios—Bach inventions and fugues with preludes, Chopin etudes, followed by a program of pieces by which I hoped to start a little repertoire. I seem to be getting nowhere. My time for practice is so limited that the amount I can allot to each is very inadequate. I used to practice six hours a day in the olden times and learned many progressive compositions as well as three concertos, Schumann's, one Beethoven and one Mozart. Then I was able to perform with ease wherever asked. Now, no matter how well I believe a piece to be learned, I fear to play for anyone. I am almost certain to falter somewhere and find it difficult to go on. I have tried to learn in this recent effort, Chopin's *Impromptu in C-sharp minor*; two waltzes, two etudes, *Le Concerto by Darguin*, *Sparks* by Moskowski, *Capriccio Violoncello* by Kreisler, *Minuet by Paderewski*, *To Spring* by Grieg and *Arabesque* by Debussy.

I am bringing my problem to you hoping that in the little I have been able to tell you a suggestion may be offered whereby I can effect a definite progress—not necessarily rapid.—Mrs. E. V. E., Illinois.

Both these letters, printed in full, are samples of many received from adults who are worried because they "cannot do justice to the music" when playing for others. May I say, at once, for their comfort, that all artists suffer from the same malady. Even the greatest performers are acutely unhappy

until they have played a composition hundreds of times in public, for only then can they begin to project the music with approximately the beautiful effect for which they strive. And, sadly enough, the older an artist grows, the more wretched he feels! I once knew a very famous violinist so overcome with nervousness that in the entire first movement of the Mendelssohn "Concerto" (which he had played often with all the orchestras of the world), he could not manage to use his entire bow, but consistently employed only up to half a bow; and how that bow arm shook! And a great pianist told me that during a performance of the Schumann "Concerto" he was so paralyzed with fright that he could not even turn his head to look at the conductor for tricky entrances—his neck simply wouldn't articulate! Yes, you say, but that is cold comfort. All right, then, let us be practical. Remember first that most children memorize music by the "good old" repetition method. When these young people reach adolescence, their incompetent or lazy teachers do not show them how to change their method; that is, to learn the music by means of almost pure mental processes helped along, of course by harmonic phrase analysis and other "props." With maturity comes self-consciousness, and along with it all reliance on childish processes is lost. Such a complicated act as piano playing now requires intelligent direction of the mind, if the physical and emotional coordinations are to be controlled. The music must be learned so thoroughly that the student can actually play each hand singly and hands together by memory away from the piano (on a table or chair arm), and on demand and without hesitation, can start at any measure or part of a measure anywhere in the piece. He must know the composition as infallibly as is humanly possible; and if he conscientiously reviews this process every few days after the piece is thoroughly learned, he will soon "know his stuff" so well that in spite of nervous terror, numb fingers, and that kick in the stomach feeling, he will be able to give a satisfactory performance. He gets through it by sheer mental control, and with each succeeding performance improves on it. This is, so far as I know, the only way to acquire confidence and authority. False notes, faulty rhythm, all sorts of imperfections are bound to persist. Deep satisfaction can come only after years of playing the piece to others; and to that end I advise playing as often as possible to all the "victims" you can corral—at homes, singly or in small groups; in studios, in schools, in halls. What are your friends good for if not to listen to you play upon every possible occasion? And if you play short, beautiful compositions (with all "repeats" omitted), they will listen to the same piece dozens of times, and, like yourself, love it more with each repetition.

And now look back at the quotation in the first sentence of this article. Note that this does not say "cannot do justice to myself"—aye! there's the rub! To most players it is not the music that counts but their own personal "interpretation" of it. All this is false, and is sure to beget fear. If, on the other hand, you strive every second to recreate what the composer is struggling to say, in order to share his thrilling message with anyone who will listen, all the uncertainty, the faltering, and pessimism, will drop away, leaving only the pure, shining beauty of the music.

# Romantic Music of Other Days

## A Visit to the Dolmetsch Family

By

ELNA SHERMAN

*Arnold Dolmetsch, world famous for his pioneer research work in Renaissance and other early music and instruments, has recently celebrated his eighty-first birthday. Born at Le Mans, France, he was trained by his father and grandfather in instrument building; also, he studied the violin under Vieuxtemps, and composition at the Royal College of Music in London. During the first decade of the 1900's he lived in the United States, and built clavichords and other early types of keyboard instruments for Chickering & Sons of Boston. He is well known in America through occasional recital tours of members of his gifted family. His book, "The Interpretation of the Music of the 17th and 18th Centuries," is a monument of patient and illumined research, without which no musician's library is complete. Fifteen years ago Mr. Dolmetsch founded the Haslemere Festival of early chamber music, which is held annually during the second fortnight of July, in Haslemere, Surrey, in the South of England, where he has lived since the World War. The following article describes an informal visit to his home.*

IN THE MIDST OF THE TUMULT and the shouting, the wars and rumors of wars of this topsy-turvy world, it is heartening to come, now and then, upon an oasis of serene and tranquil existence. Come with us to Haslemere, Surrey, that quaint and charming town of old England, famous for its music festivals and its surroundings of natural beauty, and you will find refreshment for the mind and spirit. Something happens inside one even before having left the compartment in the train which has brought us down from London. The taut nerves relax; the breath comes more freely. The gently rolling hills and broad sweeps of unspoiled moor, viewed from the train window, have soothed the eye with their gracious rhythm; and, on alighting at the station, the myriad odors of forest and downs are presented by the breeze which has gathered them, a sort of bouquet of welcome.

Here in lovely Surrey, in or near Haslemere, some forty miles from London, many famous musicians, artists and writers have made their homes. Tennyson lived in a retreat in the woods near Hindhead; George Eliot lived not far distant. The violinist, Joachim, chose Haslemere for his home; and his family still live here.

The town itself seems, at first sight, almost too quaint to be real. "Why, I thought such houses were only seen nowadays in picture-books!" Someone exclaims, as we pass a fifteenth century inn, and a tile-roofed cottage with overhanging upper storey, almost completely covered with an ancient wistaria vine.

Here we turn and take the way leading to the railroad bridge. We catch a glimpse, through the trees, of the old parish church with its charming lych gate, and bearing right at the bridge we pass into a little street of cottages, each with its own riotous garden. This leads us to the Haslemere Hall where, every summer, the Dolmetsch Festivals are held. From here we wind around into the main street. At the bottom stands the old Guildhall, facing the market place; a steep wooded hill dotted by the red tile roofs of cottages rises behind it.

### A Charmed Spot

BUT LET US NOT FORGET we are on our way to "Jesses", the home of Arnold Dolmetsch and his family. After glimpsing an enchanting lane or two leading from the square, we turn up the main street in the opposite direction, passing several delightful old inns which bespeak solid English hospitality, and soon find ourselves traversing a country road arched with magnificent trees and flanked by the well kept lawns and gardens of beautiful country estates.

And now here is "Jesses", a rambling sixteenth century farmhouse, set back from the road behind a hedge and a picket fence. The gate is hospitably ajar, and we enter the garden and walk up the doorpath between neat rows of flowers and vegetables, some of the latter growing under curious inverted glass domes. The house spreads itself long and low, hugging the ground with the air of having grown out of it, along with the great trees which give it shelter. Its gabled roof with rows of chimney pots and overhanging eaves seems to brood protectingly over the house whose

*Dolmetsch playing the ancient "crwth" or "crowd" an obsolete six stringed, lyre-shaped instrument once popular in Wales.*

casement windows with tiny leaded panes blink with an expression of homely content.

### We Meet a Gracious Hostess

WE CATCH A FURTIVE GLIMPSE of a face at one of the front windows. The next moment the door opens and Mrs. Dolmetsch stands there to greet us, for we are expected and we are made to feel welcome at once. Mr. Dolmetsch, she explains, is taking his daily nap, but will join us later for tea. Quiet, but warm and friendly in manner, our hostess takes our wraps and offers seats. We have entered directly into a large sitting room, with windows giving on to both front and back gardens and connected with the other rooms on either side by doors and passages. A long table is at the center; at the front, before the windows, are a work table and a desk piled with paint, brushes, papers and letters. A fireplace at one corner of the room shelters a huge stove which is the only source of winter warmth. Near this, on one side, is Mr. Dolmetsch's reclining chair; on the opposite side, a harpsichord.

Mrs. Dolmetsch shows us this beautiful instrument with pride, and tells us that it was made in 1896, the first one her husband built. The inscription on the lid, composed by Selwyn Image, and the signature—

ARNOLD DOLMETSCH LONDINI FECIT, A MDCCCXCVI were lettered by Herbert Horne. The case was decorated by Helen Fry.

"These people were all great friends of Mr. Dolmetsch explains our hostess. "Herbert Horne's revival of the old Roman letter type made famous by Bell & Co. whom he worked, has revolutionized the art of printing and lettering. His sister Beatrice who played tenor in our first consort of viols in the nineties, was an enthusiastic collaborator in the early days of discovery of the old viol manuscripts in the British Museum and spent hours there in research and in copying of scores. Poor girl, she died in the 'flu' epidemic during the War!" And Mrs. Dolmetsch sighed wistfully, she looked back upon the early days of struggle in her husband's career, when he counted among his friends many famous artists, writers and musicians who have long since gone to join the 'choir invisible.' Sir George Grove, Fuller-Maitland, Joachim, Piatti, all were his staunch friends, as were also William Morris, W. G. Yeats, Arthur Symonds, Robert Hichens and Burne Jones. George Bernard Shaw is almost the only one of the group still living."

### And Treasures Greet

BUT NOW WE CATCH SIGHT of a Celtic harp whose graceful curves and varicolored strings intrigue us. Mr. Dolmetsch, who plays it with much charm, explains its simple mechanism, and deftly illustrates the various

timbres which may be produced by means of different ways of plucking the strings. She explains the tuning according to the ancient Bardic scales set forth in the famous Penllyn manuscript, now in the British Museum. The ancient Welsh Bardic music contained in this manuscript has a unique fascination; there is something akin to the oriental in it, Celtic though it may be in origin.

Soon we turn to the charming old virginals, a fine specimen of John Player's (London, 1664) which Mr. Dolmetsch has put in order, and we find its tone as delightful as its decorated case. And here is a Dolmetsch spinet, of lovely design, simply decorated, and grateful to the touch and to the ear. Its two pedals, similar in action to certain harpsichord pedals, enable the performer to secure a variety of tonal effects.

Now we spy the viols gently glowing in their corner and marvel at the finish which seems like that of a few very old and highly prized violins. Their rich mellow bodies, flat at the back but curving at all points elsewhere seem to vibrate, even when (Continued on Page 752)

\*The Early Welsh Music Society has issued Mr. Dolmetsch's transcriptions, accompanied by records of Mrs. Dolmetsch's performance of several of the early Welsh Bardic Harp pieces contained in the Penllyn manuscript. Information regarding this may be had by addressing Mr. D. A. Wynn Williams, Honorary Secretary, Early Welsh Music Society, Glynteg, Llangeuf, Wales, or Mrs. Arnold Dolmetsch, "Jesses", Haslemere, Surrey, England.

# INDIAN SUMMER

There is always a human demand for a broad, sonorous piece of this type. In playing the chords, the full relaxed arm, from the shoulder to the finger tips, is important. The chords should ring out and should not be hammered out. Care should be taken that all of the chords not marked as arpeggios should be struck "plaqué," as the French say. That is, every note should be sounded exactly together. "Ragged" chords will quickly ruin this piece. This composition also affords fine opportunities for taste in the employment of *rubato*. Grade 5.

MYRA ADLER

Andante ben sostenuto M.M. ♩ = 52

The musical score for "Indian Summer" is written for piano and consists of several systems of music. The tempo begins as "Andante ben sostenuto" with a metronome marking of ♩ = 52. The score includes various musical notations such as chords, arpeggios, and dynamic markings like *f*, *mp*, *p*, *mf*, and *pp*. The tempo changes to "a tempo" and then to "Più mosso ed agitato". The score also includes a "Coda" section and a "D.S." (Da Segno) marking. The music is characterized by a mix of broad, sonorous chords and more rhythmic passages.

Key markings and sections include:

- Andante ben sostenuto* M.M. ♩ = 52
- ten.* (tension)
- rit.* (ritardando)
- mp molto espressivo e rubato*
- dim. e rit.* (diminuendo and ritardando)

# SERENADE BY MOONLIGHT (IN SICILY)

Roxana Paridon shows true Italian blood in this sensuous melody, which, although written in America, might have been done on the classic slopes of Taormina. The composition suggests a serenade accompanied by guitar. The nearer you can bring your fingers to sing the melody, just as a singer would sing it, and to make the accompaniment sound like a guitar, the more effective will be the performance. Measure ten presents a fine emotional climax. Grade 4.

This page of musical notation consists of six systems, each with a treble and bass staff. The key signature is B-flat major (two flats). The notation includes various musical symbols such as notes, rests, and dynamic markings. The dynamics used are *f* (forte), *ff* (fortissimo), *p* (piano), *mf* (mezzo-forte), and *a tempo*. The piece concludes with a final chord marked *f*.

System 1: Treble staff has a melodic line with eighth and sixteenth notes. Bass staff has a harmonic accompaniment of chords. Dynamic: *p*.

System 2: Treble staff continues the melodic line. Bass staff has a harmonic accompaniment. Dynamic: *f*.

System 3: Treble staff continues the melodic line. Bass staff has a harmonic accompaniment. Dynamic: *ff*.

System 4: Treble staff continues the melodic line. Bass staff has a harmonic accompaniment. Dynamic: *mf*.

System 5: Treble staff continues the melodic line. Bass staff has a harmonic accompaniment. Dynamic: *f*.

System 6: Treble staff continues the melodic line. Bass staff has a harmonic accompaniment. Dynamic: *mf*.

System 7: Treble staff continues the melodic line. Bass staff has a harmonic accompaniment. Dynamic: *a tempo*.

System 8: Treble staff continues the melodic line. Bass staff has a harmonic accompaniment. Dynamic: *f*.

# VIENNESE DREAMS

Dr. Kern, in this very fluent composition, has introduced a style not unlike that of Schütt, Godard, Chaminade, or Poldini. It will pay to practice this piece very slowly and carefully at first, later introducing the abandon and ease which it demands at the proper tempo. The middle theme affords a brilliant contrast to the first theme. The Viennese spirit, suggestive of the gay days at the Prater, that unforgettable summer part of old Vienna, is evident in nearly every measure.

Grade 5.

Tempo di Valse Lente M.M.  $\text{♩} = 100$

CARL WILHELM KERN, Op. 706

The musical score is written for piano in 3/4 time, featuring a waltz-like melody. The key signature has two flats (B-flat and E-flat). The score is divided into several systems, each with a treble and bass staff. Dynamics include *mp* (mezzo-piano), *cresc.* (crescendo), *f* (forte), *dim.* (diminuendo), *mf* (mezzo-forte), *più mosso* (faster), *Fine*, *rit.* (ritardando), and *D.C.* (Da Capo). Fingerings are indicated by numbers 1-5. There are also markings for *simile* and *r.h.* (right hand). The score concludes with a *rit.* and *D.C.* marking.

# THE HUNT

Allegro M.M. ♩. = 126

R. DETTLOFF VICKERS

Grade  $3\frac{1}{2}$ .

This page contains the musical score for the second system of the piece. It features two systems of staves, each with a treble and bass staff. The music is in 6/8 time and B-flat major. The first system includes dynamics such as *f*, *mp*, and *cresc.*, and ends with the word *Fine*. The second system includes dynamics such as *p*, *mf*, and *cresc.*, and ends with the word *D.C.* (Da Capo). The score is heavily annotated with fingerings, slurs, and articulation marks.

# TOM THUMB

Grade 2. Fast M.M. ♩ = 132

CLARA ELLFELDT KANTZLER

Musical score for "Tom Thumb" in 6/8 time. The piece is marked "Fast" with a tempo of 132 M.M. It begins with a mezzo-piano (*mp*) dynamic and includes a crescendo (*cresc.*). The score is written for piano with treble and bass staves. Fingerings and articulations are indicated throughout. The piece concludes with a final chord marked with a "5" in a box.

# THE HAIL KING AND THE SNOW QUEEN

Grade 2½. Allegro vivace M.M. ♩ = 168

MYRA ADLER

Musical score for "The Hail King and The Snow Queen" in 4/4 time. The piece is marked "Allegro vivace" with a tempo of 168 M.M. It begins with a mezzo-forte (*mf*) dynamic. The score includes descriptive text: "Hail stones come pelting down." and "Snowflakes come tumbling down." The piece features various dynamics including *cresc.*, *accel.*, *ff*, *rit.*, *a tempo*, *mp*, *p*, and *pp*. It also includes tempo markings like "Più lento leggiero" and "slower". The score is written for piano with treble and bass staves, including right-hand (*r.h.*) and left-hand (*l.h.*) parts. The piece concludes with a "Fine" marking and a "D.C." (Da Capo) instruction.

non-musical reader what can be secured by regular, fundamental, elementary training. The author is thoroughly conversant of this and expresses the situation definitely in the introductory chapter. We recommend enthusiastically this book to those who have had such training. "What to Listen for in Music" by Aaron Copland. Pages: 281. Price: \$2.50. Publisher: Whittlesey House.

## Ease in Perceiving Music

Research of all kinds in these days consists of breaking off little bits of a subject and examining them under a scholastic microscope. Lorin F. Wheelwright of Columbia University gave himself the task of finding out what it was about some of music printing that made it easy to read, whereas the same notes printed another way were found difficult. Of course this subject is one which has been for many years under close investigation by publishers of books and newspapers as well as by type manufacturers. In fact the printing of type has become an art widely recognized throughout the world. The history of its development from the monastic manuscripts of Niccolò Niccoli in the fifteenth century, when the "neo-caroline" type of letter was designed in contrast to so-called "Gothic," down to the present, has been a romance of importance to mankind as early as 1495, Aldus Manutius of Venice was making type designs which compare very favorably with the best of today. Among the famous types in the art are Garamond, Cardinal, Baskerville, Jensen, Arrighi, Estienne, Van Nostrand, Grandjean, Caslon, Didot, Bulmer, and many others who devoted their lifetime to the subject in order that the printed page might be more beautiful and more readily and comfortably perceived by the eye.

Johann Sebastian Bach took a great interest in music printing, and a few other composers have concerned themselves with the art. Modern music printing is vastly superior to that which generally existed many years ago. Its general objectives are clarity, clearness and logical presentation. In this, however, the part of the editor of the manuscript is notable. It is he who indicates how the stems of the notes are to be turned and how the work can be made clearer. Then it becomes the work of the highly trained artisan to lay out the measures, always with the consideration of the practical needs of the player's hands. The musicplate engraver laboriously works out the spacing so that clearness in every measure becomes possible. The eye of the reader must be trained to read music by focal adjustment. That is the reason why larger notes are used in editions of every easy sheet music designed for children.

Dr. Wheelwright's book is important because he has approached his work scientifically, and has contributed a work which publishers and music printers cannot fail to find advantageous in establishing standards of significance to the industry. We have one suggestion in connection with it. While it is hardly likely that many composers will give this work the consideration that it deserves, it should be carefully read by all who have to do with the printing of musical manuscripts. There was a time when composers seemed to take a pride in making their manuscripts as bewildering as possible. The writer has seen many, some by very great masters, which are so indefinite and so obscure that any of a dozen interpretations might be put upon them. This the composers excuse

by their haste to get the notes upon paper. In recent times, however, composers are realizing the importance of good clear, clean manuscripts, which make engraving mistakes unnecessary and reduce plate-making costs. Sometimes corrections cost almost as much as the original plates and cut down the profits surprisingly.

Among the conclusions that were reached through a very interesting symposium of professionals are:

Paper, ink and size of type are important.

Children prefer to play and sing from books where the print is large.

Too large type is not good as it tends to separate or make the parts seem unrelated.

Crowding of notes, even for a highly professional orchestra, is undesirable.

Bad placement of the notes on the page interferes with rhythmic flow.

At the beginning small singers can concentrate best on a single melodic line without notes. Later the accompaniment should be added.

When words and music are printed together in children's books, the type of the text should not be less than twelve or fourteen point.

Pictures, particularly colored ones, are desirable, but they should appear on separate pages and not be mixed in the score.

The Presser pedal marking, as evolved by Theodore Presser, is highly favored for clearness.

Editorial comments are considered very important.

The author's final conclusion on spacing is that "Patterns of notes are perceived with greater accuracy when spaced in ratio to represented time values, with the bar-line relatively inconspicuous, than when traditionally printed."

Highly technical as the book is, it fills a most important place in scholarly research, and we sincerely trust that it will be widely circulated.

## How Musical Instruments Are Made

The small boy's curiosity, which impels him to take the family clock to pieces, just to see "what makes it go," is probably the reason for the new English manual, "The Making of Musical Instruments." There are many special treatises upon making particular instruments. This, however, is the first book of a popular type which aims to tell briefly how most of the best known instruments are made. The piano, the violin and the violin family, the brass instruments, the wood wind instruments, and the organ are included in the work. The author describes in detail many of the processes in the manufacture. He devotes over ten pages to the molding and casting of the iron frame of the piano. His description of the manufacture of the piano action is very interesting. All this information will gratify the curious, but we never have been able to see that this makes better musicians.

Such a book, however, does enable the player to have a higher respect for his instrument and possibly may enable him to learn how to take better care of it.

1712 Chestnut St., Philadelphia, Pa.

## FOR LITTLE TOY PIANO PLAYERS

"Pianos are built for adults. Jenkins Aids rebuild them for children"

## JENKINS EXTENSION PIANO PEDAL AND FOOT REST

Any child (as young as 5 years) with this aid can operate the pedals, and a platform is provided on which to rest his feet obviating dangling of his little legs.

## JENKINS ADJUSTABLE PIANO MUSIC RACK

• Brings music forward and down to proper distance so a child can read his music with ease. Prevents eye strain and nervousness. Invaluable for adults who have difficulty in reading music at a distance or who wear bifocal glasses.

PRICE \$250

• These aids to child piano players are used and recommended by the following well known pedagogues in their classes: John Thompson, John Williams, Bernard Wagner, Robin MacLachlan and many others.

Can be adjusted to any piano—grand or upright—in an instant.

No screws or gadgets to mar piano. Examine these aids at our expense and after doing so, if you are not highly pleased, return to us at our expense. We will pay all transportation charges.

By

ALBERT E. RUFF

Wherein a Famous Teacher of Noted Singers Explains the Vocal Muscular System and Its Use

### Part I

Albert E. Ruff was born in Glasgow, Scotland, on January 9, 1854. He entered upon musical study in Mannheim, Germany, at the age of eleven, devoting his earliest effort to the violin. At sixteen he joined the orchestra of the Theatre Royal in Glasgow and played there for two years. He then went to the Leipzig Conservatory to complete his musical education, remaining there for four years and graduating with honors. While there he studied the anatomy and physiology of the throat under the eminent teacher and author, Dr. Ludwig Merkel of the Leipzig University, thus laying the foundation for his success as a voice specialist.

On coming to America he became the teacher of many famous vocalists, among them, Christie MacDonald, Eugene Cowles and George McFarland. His most famous pupil, however, was Geraldine Farrar, who after a broken-down engaged Mr. Ruff to travel with her for two years, giving her daily lessons.—EDITOR'S NOTE.

Vocal Cords in Repose

Vocal Cords in Phonation

years. We should understand, therefore, that this is the reason why extensive voice culture should not be undertaken during that period.

In the past sixty years, many wonderful boy sopranos have been brought before the public, enthraling their audiences with wonder and admiration. Very few of these child prodigies continued, however, to have voices of artistic value after the adolescent period.

The reason that the voice is made worthless for artistic singing, if it had been extensively cultivated before the change, is that the fibers of the Thyro-Arytenoid Muscles of the young singer had been bunched and hardened by strenuous singing, which prevented them from changing with the rest of the body, as nature intended they should do, with the consequent

result of deranged fibers of the Thyro-Arytenoid Muscles, which in some instances require several years for the regaining of their normal condition.

From long years of teaching, I have, through research and observations, come to the conclusion that it is dangerous to cultivate a girl's voice before she is sixteen, or a boy's voice before he is eighteen years

for real voice building, namely, a Knowledge of the

### Vocal Muscular System.

THIS SYSTEM consists of two actions. One is voluntary, which can be developed by will power. The other is involuntary, as it can only be brought into action by the

Internal or Involuntary

External or Voluntary Muscles

breath pressure. The voluntary are situated outside and the involuntary inside the larynx.

It is principally with the inner muscles that the voice teacher is to be concerned. To be able to teach with authority, one must be thoroughly acquainted with the functions of the various muscles of the vocal instrument.

The primary, or inner muscles are composed of three cartilages: Thyroid (shield shaped); Cricoid (ring-shaped, the top of the windpipe); Arytenoid (ladle-shaped with the vocal cords attached to the handles).

On these cartilages are joined muscles which receive their names from the following combinations: *Thyro-Arytenoid*, connecting the Thyroid with the Arytenoid; *Crico-Arytenoid*, connecting the top of the windpipe with the Arytenoid; *Lateral-Crico-Arytenoid*, connecting the side of the upper ring with the Arytenoid.

These are the involuntary or primary muscles, which can be regulated only by the breath pressure, governed by the mind and ear.

The correct functions of these muscles are varied and intricate, and they are lit

Vocal Cords in place when singing PPP or Falsetto

- |                      |                    |
|----------------------|--------------------|
| 1. Vocal Cords       | 3. Ventricles      |
| 2. False Vocal Cords | 4. Thyro-Arytenoid |

understood by most singing teachers. Many more assisting muscles are used in singing and speaking, but for all practical purposes a knowledge of the above is sufficient.

The *Thyro-Arytenoid Muscles* are the most important and, for their size, perhaps the strongest muscles in the body. They are the *Keystone* of voice production, and as such are capable of making or unmaking

singer. If these muscles are correctly developed, they will last and still be useful old age. If they are not, it will be only a question of time before one or more faults appear; among the worst of which: loss of upper tones, scratchiness, hoarseness, partial paralysis, flattening, and the vicious tremolo.

The *Thyro-Arytenoid Muscles* are the most used, as they are brought into action from the moment the child utters its first cry until his death, every time a sound is made from the throat, whether by singing, crying, or any other throat sound. The *Crico-Arytenoid Muscles* join the larynx with the Arytenoids, at the back. They are principally brought into play in a soft (*ppp*) singing. These muscles are constructed that they pull on the Arytenoids when the cords are in repose, pulling them apart to allow the breath to pass freely in and out of the lungs.

The Lateral-Crico-Arytenoid Muscles are the least known by singers, though they are the connecting links between the *Thyro-Arytenoids* and *Crico-Arytenoids*.

The *Thyro-Arytenoid Muscles* are composed of innumerable fibers lying mostly parallel with the vocal cords, though also extensively criss-crossed, thus making them capable of great flexibility and strength as well as of wonderful endurance.

The fibrous continuation of these muscles extends into the vocal cords proper and, for both high and low tones, must be correctly set, if the proper pitch is to be produced. If they are thus adjusted, the high tones can be reached as easily as the low.

If the fibers are not correctly set, the high tones can be reached only by force, which eventually causes a conglomeration. More of this when describing the *Nodula*. (Continued in *THE ETUDE* for December)

## Covered Tones

By SIDNEY BUSHELL

REFERRING TO COVERED or darkened tones in the baritone voice, the late Oscar Saenger advised the student to sing *ah* but to think *o* or *oo* when endeavoring to establish this quality in the upper voice.

In an article, "A New Key to the Head Voice," by Homer Henley (*The Etude*, May, 1930), reference is made to the unvarying *aa* sound in the upper tones of all aged female voices. And speaking of this *aa* (the use of *aa*, as in the word *tap*) to establish good quality in the upper tones to these pupils, he testified as to its "unfailing efficacy . . . mystifying, perhaps, but incontrovertible."

It is equally apparent to the listening ear that in all good male voices, baritone voices, particularly, the sound of *o* or *oo* colors the tone in the upper voice, irrespective of the fundamental vowel being sung. This is admittedly mystifying as the *aa* sound of the female voice, but quite as inconceivable. A good example of this may be found on the record, *Just for Today*, as sung by John Charles Thomas, on the words "And if today my tide of life should away."

### Those Tricky Upper Tones

EVERY BARITONE STUDENT knows quite well that something has to be done to his tones, from about middle C up, if he is going to avoid just plain shouting; and, since carrying the open quality is injurious to the voice, as well as likely to degenerate into simple yelling, there is no alternative but shading of the tone and vowel.

In an episode of the writer's early days of vocal practice may serve as an example. He was doing some experimenting with the tones from middle C to E, endeavoring to produce a sustained tone upon each in turn. For this purpose he had retired to an upper room, known to the family as the studio. The carpenter was making some structural alterations on the ground floor; and shortly the lady of the house was startled by the sudden appearance of the carpenter's face in the kitchen doorway, and by his voice, rife with concern, inquiring, "My G—, um, 'oos that 'ollerin'?" After which it required considerable tact on her part to discover the fact that it was only her husband at his vocal practice.

It is not easy to sing *ah* and think *o* or

*oo*; and the following exercises have proved of value in establishing the *oo* quality mentioned.

#### Ex. 1

The initial aspirate serves to open the throat for a free *ah*; the change to *le* on the third step induces upper resonance, especially if the *l* is well handled, and may be emphasized quite strongly. It thus forms a sort of vocal springboard to the upper *lu*, which must be sung freely and frankly, with a flexible jaw, and with the sensation of the tone filling the pharynx and resonating above the hard palate, more at the spot immediately over the back teeth than in the masque.

Do not be surprised if at first these tones feel small. They are smaller than the so-called chest tones, but are infinitely more concentrated with respect to their high resonance. When correctly produced there is a sensation of elasticity, buoyancy and power, with low control and no throat or chest sensation whatsoever.

In the foregoing exercise, the *oo* sound should be maintained throughout the downward scale, to develop a smooth carry over into the lower tones.

Here is another exercise for the discovery and freeing of the upper tones.

#### Ex. 2

The tone immediately preceding the highest is to be emphasized as before, and the *oo* sound to be carried downward past the dividing line.

Later, prefix each vowel with *l*, singing, *lah ley lee loh loo leh lee ley lah*.

When these exercises can be done successfully every time, carrying the voice up to F or F-sharp, try other combinations of consonants and vowels; then proceed to short phrases of words that fit; but remember always to think *oo* into the upper tones, whatever the vowel.

\* \* \* \* \*

"It is of supreme importance that the voice be properly tuned in the beginning, and great care should be taken to accomplish this. I find that nearly every singer of my acquaintance has some special instrument for this purpose, one of them using the violin. My own choice is a make of piano, which I have used twelve years. It has a wonderful 'singing quality,' and wherever I go I insist upon having one sent for, if it is not waiting for me. I am having one shipped to France for my Paris engagement. Geradine Farrar.

# VOICE QUESTIONS *Answered*

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## Beware of Tenseness

Q.—I am eighteen and I have a high soprano voice. All through school my teachers have told me that I have a lovely voice; but I have neither enough volume nor enough expression to put a song across. Something seems to hold my voice inside me. In practicing from G-sharp upwards to High C, my throat seems tight and tense; although I am able to reach the notes. What would cause my tongue to interfere with the tone?

2. Is eighteen too late to begin the serious study of the voice, or does it depend upon the individual? Are the vocal cords fully developed at eighteen?—S. R.

A.—Few singers have complete control of the voice or an expressive manner of singing at eighteen. Do not be so impatient and expect to conquer your vocal difficulties in a short time. It takes years to develop a good technique upon any instrument, and the voice is no exception to the rule. Keep working hard, and get a good teacher to explain to you just how each difficulty is to be overcome. Above all do not strain your voice by trying for too much volume of tone. Quality of tone is what counts, especially nowadays when so often one sings over a microphone.

2. The vocal cords should be developed at eighteen, and your throat doctor can tell you definitely by examining them with the aid of the laryngoscope. Tenseness of the external or the internal muscles and of the tongue often comes from a slovenly manner of speaking. Does your speaking voice issue from your mouth easily? Is it pleasant and is your enunciation clear and distinct without being harsh? Look at yourself in the mirror, and see if the external muscles of the throat contract. Does your tongue hump up in the back when you sing? You must teach it to be loose. Most of the radio and opera singers speak as well as they sing. Miss MacDonald, Miss Moore and Miss Swarthout have speaking voices as lovely as their singing voices. Take them for examples. Read Clara Kathleen Rogers' book, "English Diction, Vol. 1," and Alexander Graham Bell's book about "Vowel and Consonant sounds."

## Gold Fillings in the Teeth—Phlegm

Q. 1. Should any difficulty be present if the singer happens to have quite a number of gold fillings in her mouth? If this is true can anything be done about it? Could the gold be replaced by porcelain or any other substitute so that the singer's voice should not sound metallic or tinny?

2. Please discuss "Phlegm" with which so many singers are troubled, and suggest a cure for it. If you have discussed this subject already please tell me in what issue of THE ETUDE it appears.—F. M. H.

A. 1. It is rather difficult to imagine a singer's teeth so full of gold fillings that they would have an influence upon the tone quality of the voice, as you suggest. A metallic plate of gold, or any other metal, might produce an audible change of vocal quality because it is so large; and any spaces caused by having certain teeth removed surely have an influence upon the voice and especially upon the formation of some of the consonants. Consult your dentist for further advice.

2. I have discussed mucus in the head, throat, nose and larynx in almost every issue of THE ETUDE since I have been the editor of Voice Questions Answered. Please read these answers. It is a condition which calls for advice and treatment from the physician rather than the singing teacher.

## He Has No Sense of Pitch

Q. I am a bass, twenty-two years old, and I have been studying for two years. I recently discovered that I could not distinguish a high note from a low note, a sharp from a natural, or a flat from a sharp, when I sing. When I hear a song for the first time I have no idea on what note it begins or how to play it on the piano. Can you tell me how to learn to play the piano by ear? Are there any books that deal with my case? What do you think of Solfeggio? What is the difference between a college school of music and a conservatory of music?—A. T.

A. Do you mean that you sing out of tune? Or do you mean that when a note is played upon the piano or sung you have no idea what note it is? If you sing out of tune, careful practice with a singing teacher should remedy it, unless you have a defective ear. Your teacher should advise you. The ability to determine accurately what note is struck or sung, without looking at the music or seeing the piano, is called a sense of absolute pitch. It is a rare and valuable gift, and I doubt if it can be learned. Solfeggio singing ought to help your voice, your reading and your sense of pitch. Perhaps the study of keyboard harmony as taught in Wedge's book, "Keyboard Harmony," or Haywood's "Universal Song," might help you. You need to become a better musician. A Conservatory is an institution in which all branches of music are taught up to their higher forms. A college school of music is one in which music is taught in addition to the usual literary and professional courses of such an institution.

## Exercises for the Coloratura Voice

Q. I have a coloratura voice, and I have been sent the book, "Thirty-six Eight Measure Vocalises for Mezzo Soprano." Would it be harmful to use them? I have Connell's "Master Exercises." My first and only teacher had me learn Mozart's Batti, Batti, in my first month. Is not that rushing things? They say the best singing teacher in this neighborhood is too commercial. Would this keep her from being a good teacher? Is there a way to find out? Are there many known coloratura voices? Who are lyric Sopranos?—V. V.

A. The exercise books you mention are excellent, but personally I should prefer more rapid exercises for a coloratura voice. Look at Marchesi's "Ecole du Chant" and Abt's "Practical Singing Tutor, Volume 2," or any other set of exercises designed to develop speed and lightness. It is all a matter of opinion, however. Batti, Batti is an exquisite song, which must be sung very well to be effective. Perhaps your teacher gave it to you to help you develop the lightness and fleetness of which I spoke.

In answer to the second part of your question I would say that a good singing teacher is a good singing teacher, whether she is commercial or idealistic. She must earn her living, just like any other working woman; and the best way to find out whether or not she is a good teacher is to take a few lessons from her.

There are many coloratura sopranos and many lyric sopranos. The name Lily Pons comes to my mind as a type of the first and Grace Moore as a type of the second.

## What Type of Voice Has she?

Q. 1. What type of voice have I?

2. Are the songs I have learned all right; and, if so, what others do you recommend?

3. I am twenty and I sing in full voice from E on the first line to G the first space above the treble staff, though I can sing higher and lower. My voice is of the lyric soprano type, with the range of a mezzo-soprano. I have consulted a good teacher and he said I have a sweet voice and vocal lessons would bring my voice to a clear B-flat or even a high C. He stated definitely not to sing too low as this would strain my voice. I have had two years of piano, besides glee club work and I sing in French, Latin and English. I have done everything to increase my musical knowledge, including reading the biographies of famous composers and singers. I learned my French in Paris, while staying there four years.

I sing Brahms' Lullaby; the Berceuse from "Jocelyn"; the Habanera from "Carmen"; Schubert's Ave Maria; and other songs of these types. I have read that Gladys Swarthout reaches high C and she is a mezzo-soprano.—D. J. P.

A. Quality of tone determines the type of voice, even more than range. If you will look at the operatic rôles assigned to the mezzo voice, you will see that they go quite high. In other words the range of the mezzosoprano or the mezzocontralto must be long and the voice must have a full, round sound, and considerable volume. It is quite impossible for me to decide for you whether or not you have this type of voice, without hearing you. From your description it would seem as if you have, but you must consult the most famous singing teacher you can find, to help you make a decision. Miss Swarthout has a lovely tone quality, a beautiful stage presence and much charm of manner. I have heard her sing many high notes but never the high C. The songs you sing are all beautiful, though they are not of one type as your letter suggests. Until you have decided what type of voice you possess I would hesitate to recommend others. Your knowledge of French should help you if you have a really good voice.

## A Voice with a Twang

Q. A pupil of mine has a pronounced "twang" in her voice and, try as I may, after two years of training with judicious exercises, I could not remedy this vocal ailment. I feel it is innate. How would you eliminate it, and can it be entirely eradicated? Thanking you in anticipation.—M. S. F.

A. I fancy that you mean by the word twang a pronounced nasal sound, and this answer is written with that understanding. The person who sings with a nasal twang usually speaks with the same peculiar intonation. It is often a family failing, and he speaks that way because he has heard that sort of speech in his own home, since childhood, and he knows no other. It is hard to change him. He must be made to understand that he is tightening (stiffening) his jaw, tongue and throat and perhaps raising the uvula so high that it is closing the passage that leads to the nose. Speak to him in a full, round voice and see that he breathes deeply instead of superficially, and see if he can tell the difference. It is a difficult thing to make a man give up a very bad habit of speech, but it can be done with patience and in time. There is another sort of nasal voice which comes either as the result of a nasal malformation or catarrh. This is a case for the physician, not for the singing teacher.

# THE ACCORDION DEPARTMENT

## Accordion Repairs

By PIETRO DEIRO

As told to Elvera Collins

OUR ADVICE to accordionists always has been to seek the services of expert repair men when their instruments are out of order. Considerable harm can result from amateur repair work. New accordions are sold with a guarantee and while this is in effect, the manufacturers would prefer to make any and all repairs and adjustments. They are not responsible for damage to the instrument if the player attempts to make adjustments.

We repeat this advice now; but recently we have been confronted with numerous inquiries about accordion repairing from those who are situated in locations where repair men are not available. Some of our readers are in isolated sections and must either repair their instruments themselves or be deprived of the use of them. We refer, of course, to minor repairs, as instruments always can be shipped to accordion factories for important repairs.

Piano keys which stick are one of the most common causes for accordion repairs. Sometimes this condition can be remedied quite easily. When an instrument has been kept in a damp atmosphere the wood in the piano keyboard often swells. To correct this the accordion should be placed in its case in a dry room and left for a day or two so that all moisture can work out of the wood.

Sometimes dust and bits of paper, such as corners of music sheets, get between the keys. These can be easily blown out.

If the sticking keys do not yield to the above treatments it may be necessary to take the piano keyboard apart. This task is not an easy one and should not be attempted by youthful players as it requires skill and a certain amount of physical strength. The necessary tools are a small screw driver and a pair of pliers. A chamois skin and piece of fine sandpaper also are needed.

## To See the Wheels Go Round

THE FIRST STEP is to remove the gallery, or top, of the accordion so there will be a complete view of the piano keyboard mechanism. The ends of the gallery are held in place by either small screws or pins. These should be removed carefully so the tools do not scratch the instrument. The indicator on the gallery is rather delicate and should be treated accordingly so that it is not bent.

In studying the mechanism it will be noticed that each piano key is attached to a rod with a valve at the opposite end. When a key is depressed, the rod lifts the valve off from the plate, thus permitting the tones from the reeds to sound if there is air in the bellows.

The sticking may be caused by any of these conditions:

- One key rubbing against another;
- One valve rubbing against another;
- Dust between the keys;
- A broken spring under a piano key;
- Tension of a spring may be lacking;
- The wire rod which holds the keys may be out of place;
- The key may be rubbing against the guide which holds the rod;
- The hole may be too small for the rod.

Before the keyboard is taken apart it would be well to mark the keys which stick and then number all the keys so that they can be returned in their correct rotation if they become mixed. These marks can be

pencilled on so they can be easily removed. A wire rod goes through the keys to hold them in position. The end of this protrudes through one end of the keyboard and is sometimes concealed by a removable cap. The accordion should be braced firmly against something and placed lengthwise in front of you so the rod can be pulled toward you. It would be well to have an assistant hold the piano keys while the rod is being pulled, otherwise each individual key will spring out the moment the rod releases it. If you attempt this repair work alone, be careful of this point, otherwise you will have to go about the room with a basket to gather the scattered piano keys. The care with which the rod is pulled out spells the success or failure of this feat.

If the rod is bent, twisted or nicked, it will be necessary to replace it with a new one.

Place a chamois skin over the rod so the pliers will not dent it and then grasp it firmly and pull it out in a straight line, very gently. Shift the position of the pliers so they always grasp the rod at the part nearest to where it emerges from the keyboard. As the keys which stick have been already marked, you need only pull the rod until those particular keys are released, and the rest can remain in position. As the keys are removed, place them in the same rotation that they were on the keyboard. You will notice that each key rests upon a wooden guide and has a tiny spring under it.

## Seeking the Remedy

THE VARIOUS CAUSES for keys sticking have been enumerated so let us assume that the trouble is caused by one key rubbing against another. This can be remedied by rubbing the wooden edges of the keys which stick, with a fine piece of sandpaper. The edge of the adjoining keys also should be rubbed, as well as the wooden guide which holds the keys in place. It is also advisable to pass the sandpaper up and down the wire rod.

It is possible that the top of the piano keys may stick. This can be corrected by slipping a piece of sandpaper between the keys which rub. Care must be taken so that you will not scratch the keys which do not rub.

The replacing of the rod is considerably more difficult than pulling it out. Be sure that all keys are in their proper rotation before starting and that the springs under them are in position as each key is put in. Each key should be in a perfectly straight line with the preceding key as the rod passes through it. The valves should also be in a straight line. The slightest deviation in the position of the keys will obstruct the passage of the rod. The rod must again be grasped with pliers at the point nearest the box, so that it will not twist. Do not force the rod through any roughness but investigate the trouble if it does not enter freely. If you are unfortunate enough to break the rod you will be relieved to know it can be replaced. When ordering a new one, be sure to get one of the same thickness as the old. The broken rod can be forced out by the new rod. Special care must again be given to the indicator as the gallery is put back in position. In fact, care spells success in all repair work.

## RECENT RECORD RELEASES

By PETER HUGH REED

**W**AGNERITES have been clamoring for a complete recording of "Die Walküre," ever since the act, enlisting Lotte Lehmann, Lauritz Melchior and Bruno Walter, was issued. So the recent issue of the second act (Victor set M-582) must have gladdened many hearts. Some will undoubtedly regret that cuts were sanctioned in the long scene between Brünnhilde and Wotan, but the fact that there are two and a half times as much of this music made available as could previously be had on records is cause for some thanks.

Many of the singers will be new to American record buyers; but, once they

tion of the "Second Symphony" has long made it one of our favorites.

One of Beethoven's lesser known overtures is the *Consecration of the House, Op. 124*, a work that has been called "the end and crown" of the composer's overtures. Although ranking with the "Cortolanus" and "Egmont" overtures, this composition is curiously neglected in the concert hall. Weingartner's reliable and poised performance of this music, along with an expressive excerpt from the incidental music to "Egmont" (*Death of Clärchen*), are excellently recorded on Columbia, X-140.

At long last MacDowell's "Suite No. 2" ("Indian") has been recorded in its entirety. Of all the famous American composer's scores, perhaps none is more original or more nobly conceived. Based on authentic Indian melodies, it is one of America's foremost nationalistic scores. Of its five movements—*Legend, In War-Time, Love-Song, Dirge, and Village Festival*—the first, second and fourth are inspirationally of a very high order. Particularly is this true of the *Dirge*, based on a lament of a mother for her son; poignant and heart-rending in its emotional expression. Howard Barlow and the Columbia Symphony Orchestra play this work with dignity and precision (Columbia set M-373).

Of all Elgar's larger works the most widely known is his "Enigma Variations." Its rich polyphony and friendly emotion have long made it a favorite with concert hall audiences. The work is not program music, although in it the composer confessed that he sketched the idiosyncrasies of his friends. A new recording of this work enlists the capable services of Sir Adrian Boult and the British Broadcasting Symphony Orchestra (Victor set M-475). George Bernard Shaw once said he never expected anything of an English composer, but after he heard this work he knew that England "had got it at last."

Respighi's "Fountains of Rome" is the best of the three scores in which he set forth the glories of Rome. It is a virtuosic work, which marks its composer as one of the most brilliant orchestrators of his time. A modern recording of this symphonic tone-poem was badly needed; hence the set made by Barbirolli and the New York Philharmonic-Symphony Orchestra (Victor M-576) is most welcome. As a recording, this is a magnificently colorful and brilliantly alive demonstration of modern reproduced music.

Of the six quartets that Mozart dedicated to Haydn, the first in G major, K. 387, is distinguished by melodic brilliance and warmth, its overflowing vitality and its imposing proportions. Since a modern recording of this work has been long needed, the Roth String Quartet's performance in Columbia set M-374 should find a wide welcome. Although the Roths play with technical finish and comprehending expression, a wider range of dynamics would have contributed much to the ultimate value of their performance. When the Kreiner Quartet approached Mozart's "Quartet No. 1 in G major," K. 80 (Victor set M-393), these players had before them a rather thankless task; for the music is immature and for this reason far more difficult to play than the more finished quartet above. Hence their tentative playing in the recording is comprehensible. The work is valuable from the historical standpoint, and for this reason is welcome on records.

A rarely heard work of Handel is offered in his "Concerto No. 3 in G minor," for oboe and strings (Columbia record 69660-D). It ranks with the better known concerti grossi, and is well played in the

## Should Staccato Be Used On the Organ?

By

HENRY S. FRY, Mus. Doc.

THE ANSWER TO THE QUESTION propounded in the theme of this writing involves several points, such as acoustics, tempo, tone color and interpretation of the word itself. Notes may be detached to a greater degree in a resonant room, and the tempo may be perhaps a little slower. A slower tempo, however, under normal conditions includes a proportionate lengthening of the detached note. When incisive tone color is being used, notes should not be detached so much as when Gedeckts or some similar tone is used. If the word *staccato* is interpreted by the use of a very short chord or note, followed by a longer rest (*staccatissimo*), the use should be very limited, as the tendency would be toward a trivial effect, especially if applied to dignified chordal progressions. This interpretation of the word, not being correct, should be avoided. Although the *staccatissimo* touch should be rarely used on the organ, there are other detached effects that should be not only encouraged but recommended. In the following excerpt from a *Passacaglia* by John E. West, the effect of the *staccato* chords is very fine, though the passage would seem trivial if played with *staccatissimo* treatment.

It might be also noted how the composer has taken care of the matter of not bringing up the hands and feet at the same time—the pedal phrasing, as carried out from the original appearance of the theme, is

This indicates a slight break at the end of the measure, while the last chord (hands) is held its full value (being followed by a rest); and the composer by marking the chord — has tried to assure its being held. With the pedal part making the phrase break and the chord continuing until the rest, we secure an excellent effect of balance.

An example of *staccato* for single notes appears in the arrangement of *The Fifers* (d'Andrieu) by Garth Edmundson

In this arrangement we recommend not only the detaching of the eighth notes, as indicated, but also a slight detaching of the sixteenth notes included within the  $\cup$  mark, this touch giving a "sparkle" that is missing if the notes are played *legato*. This is an illustration of the value of the detached touch.

*Legato* is, of course, the basis of organ playing, but monotony may be avoided by an occasional use of the detached touch.

As an illustration of the value of contrasted touches there is an example of a different character in the *Menuet Gothique* by Boellmann

In this instance, although the words *non legato* appear, it is best not to use that touch continuously, but to play *legato* the notes within the  $\cup$  mark, giving a fine sense of contrast. In the second section, where the pedal enters, there is added interest with the pedal part *legato* and the hand parts done with *non legato* touch. In the section

the first count chords in the left hand, and also the pedal notes, may be slightly longer (indicated by us —) in the measures where the hand parts are included in the  $\cup$  mark, than where the notes are indicated in the hand parts as detached. This number is a fine example of contrasts in touch.

Another instance where the detached touch is effective is found in the well known *Toccata and Fugue in D minor*, by Bach.

Here the contrast with the sustained "build up" of the diminished chords on a tonic pedal produces an excellent effect. Another instance in the same composition is the *Prestissimo* passage ending in the *Maestoso* just before the entrance of the fugue subject. Because of the tempo the detachment

of the notes is very slight—a finger *non legato*, which makes the passage more "sparkling" than if the *legato* touch were maintained.

The *marcato* touch (indicated by  $\cdot \cdot$ ) implies just enough break to emphasize or accentuate the notes by clear playing—marking the passage. Its use is indicated in the following excerpts, the first,

from the "Sonata III" of Guilmant, and the second

from the *Passacaglia* of West.

In these illustrations the notes indicated by the *marcato* marks are slightly detached to mark the passage.

Another phase of organ playing that deserves attention is the treatment of repeated notes and the consequent effect. As a rule, repeated notes should be "restruck" in the playing of organ numbers. Too many players ignore these repeated notes, simply binding one note over to the other following one. The example we quote, from *Humoresque Gracieuse* by Garth Edmundson, shows how the melody is brought out by the proper treatment of the repeated notes.

The effect of the detached notes in the upper part is here so apparent that only the very careless or most indifferent player would fail to observe them. The result of proper treatment brings to the foreground the melody in the alto, and the detached notes in the upper part should exactly

equal in length the pedal notes and left hand parts alternately.

The Widor-Schweitzer Edition of *Organ Works* suggests the following treatment for repeated notes, so that a passage written as

will be played and will sound as if written

This suggestion, however, is not to be applied in all instances. For illustration the *Prelude and Fugue in C minor* by Bach, is found this passage,

and if we should carry out the idea of value for repeated notes our melody would become

with the alto "C" giving the effect of a melody note because of the disappearance of the real melody note. This effect is avoided by holding the top note until the alto "C" has sounded, and making the repeated note come quite near the preceding note by shortening the rest; that is, the interval between the first note and the repeated note is shorter than the suggested one-half. Care should be taken that, if possible, the distortion of any melody or part be avoided.

An illustration of the probable ignorance of the repeated note occurs in the part at the close of the *Andante Cantabile* from Widor's "Fourth Symphony",

where the careless player probably ties the repeated note between the last count of the next to last measure and the count of the last measure. We have in one edition of this *Andante Cantabile*, published separately, with these notes tied. We feel that Widor intended the note to be repeated (it is so indicated) and the careless player or editor perhaps overlooks contents of the hand parts. In the right hand we have

answered in the left hand by

and our interpretation is that, since the first note of the right hand part is detached and the left hand answer is *legato*, the detached note of the right hand is suggested against the left hand *legato* by the repeated pedal note.

An example of "sparkle" on a large stop is found in *Noël with Variations* by Bedell, in the passage for the Tuba

## Tuneful Twaddle

\* \* \* \* \*

## Well Trained Parrot

Bill: "I've got a parrot at my house that's so well trained she is almost human."  
Phil: "What do you mean, human?"  
Bill: "Well, when anyone begins to sing or play, she immediately starts to talk."

\* \* \* \* \*

## Musical Diplomacy

As the philosophic old bandmaster remarked: "I don't particularly want to hear you alto players, but I shall miss you awfully if you leave out a note."

\* \* \* \* \*

## Quite Alone

Molly: "She considers herself a most elusive person."  
Polly: "Yes, my dear, she even sings duets alone!"

\* \* \* \* \*

## On to Parnassus

Applicant: "Do you have to have talent to make a living writing articles for the music magazines?"  
Editor: "No, all you need is a steady income from some other source."

\* \* \* \* \*

## Genius à la Tin Pan Alley

Jim: "What is a popular composer?"  
Tim: "A pilferer who can take a classical melody and improve on it in such a way that the crowd can whistle it."

(Solo Organ registration). In this same passage the use of the *marcato* touch on the notes with the — indication will be found to be effective, and the same is true in the third variation where the chords are marked —

An illustration of treatment according to tempo occurs in Bach's great *Fugue in G minor*. If played at a moderate tempo the following marking (part of the theme) is suggested.

Ex. 17

If played at a rapid tempo the following marking may be better.

Ex. 18

The "sparkling" touch will be found to be effective in the harplike section of Whitney's arrangement of Handel's *Largo*, the slight detaching of the arpeggio notes producing an effect missing when the passage is played *legato*. This "sparkling" touch will be found effective in *Toccatas* and compositions of similar type; and the device of detached notes is an important factor in punctuating the themes of the compositions of Bach, and in other classic works; but care should be taken not to use *staccatissimo* too frequently, and that repeated notes are not ignored. When notes

appear in different parts, in consecutive chords, it is suggested that, in general use, they be tied over; otherwise, a repetition of the note may cause a break in a *legato* voice. For example, in

Ex. 19

if the "E" appearing in the first chord in the alto part is raised to be restruck as a soprano note in the second chord, the tones of the alto part will become too much separated instead of the "E" of the first chord being linked to the "C" of the second one; so it is suggested that the passage be played as if written

Ex. 20

Then, as a closing admonition, it is intimated that the limitations of our system of notation make it often impossible for the creative musician to give exact representation of the æsthetic impulse of the moment. So upon the executant falls the problem of searching the technical and emotional portraiture of the composer and, without ever introducing the bizarre or inconsistent, instilling into his own reproduction of the printed page any such personal qualities as his serious and repeated study will enable him, as nearly as is humanly possible, to recreate the idea which was in the mind of the one with which the work originated.

## Playing for Funerals

A New Field for Organists

By H. M. BUTTERFIELD

IF EACH GENERATION finds new problems facing it, it also discovers new opportunities, and the position of staff organist in the mortuary of to-day is a very real opportunity to the young organist. The overly sensitive one may shrink from a position which involves such constant contact with death; but upon investigation he will find that such a position may be held without becoming either morbidly sentimental or indifferently calloused. The progressive mortuary of to-day is very far from the "undertaking establishment" of bygone years, and public sentiment is veering from the old funeral oration and the outward display of grief.

The qualifications for holding such a position are similar to those for holding a church position—a good foundation, a knowledge of hymn playing and of accompanying, a fair acquaintance with organ literature, and that sixth sense which tells what can and what cannot be used appropriately under certain conditions.

Granted the foundation and the ability to accompany, a few hints concerning the other qualifications may be of interest to the inexperienced organist and prevent him from giving offense through ignorance.

The usual program for a Protestant funeral service (the Hebrew service rarely uses music and most Catholic funerals are held from churches) includes besides vocal accompaniments a prelude, a postlude, and occasionally an instrumental solo, all comparatively short. These numbers should be quiet and meditative; often they are in minor key though this is not necessary. Anything with too pronounced a melody or too lilting a rhythm should be avoided. Young organists frequently select Schumann's *Traumerei* or the *Largo* from Dvořák's "The New World Symphony." Though not inappropriate, these yet are so well known that they may have other associations to their hearers, or their playing at some future occasion may bring saddening recollections. There is a growing sentiment, particularly among the more conservative people, for restraint at funerals, and, in line with this, unfamiliar music is often preferred. Organ literature furnishes

any amount of suitable numbers—largos, andantes, adagios, meditations—which are not too well known.

Needless to say the wishes of the family or requests left by the deceased are always respected, even if—as at one funeral—*La Marseillaise* be given. Sometimes a doleful hymn is preferred, occasionally a triumphantly happy one. The funeral organist must have a sympathetic understanding of the religious beliefs and of the musical backgrounds of various congregations, and of different classes of people; and, if *Take It to the Lord in Prayer* will bring more comfort than an *Adagio* from a sonata, then he must play it. His art is subjective, his service holds potential possibilities for comforting and blessing. The wise organist never thoughtlessly falls into a cut and dried routine but is alive to the demands of each particular occasion.

The best known hymns of many churches should be a part of the young organist's repertoire, both words and music memorized. At first he may be able to play them only as written, but with experience and acquired assurance he can extemporize, use them as a basis for improvisation. Such hymns as *No Night There, Come Ye Disciples, Abide With Me, and What a Friend We Have in Jesus*, each voicing a different aspect of the Christian faith, are suitable and comforting, played softly as relatives or friends file past the coffin. The hymn selected should carry out the thought contained in the minister's talk.

Aside from the actual playing of funerals, additional opportunities may arise. Enterprising funeral directors frequently use their organs in radio programs, as a tactful means of bringing their business before the public. Occasionally a funeral director will permit his organist to teach on the organ, or to give recitals.

The salary generally depends on the number of funerals played. Compared with church salaries, the funeral home generally brings in more per month for the actual work and preparation involved. This field is a comparatively new department of organ activity and offers a challenge to the organist to make of it what he will.

**A SUPERB PIPE ORGAN**  
Priced from \$950

Built to fit YOUR needs

A WICKS organ will bring you complete satisfaction and many many years of musical joy. This statement is substantiated by hundreds of WICKS owners throughout the 48 states. A demonstration will gladly be arranged—without obligation.

✧ You may use Wicks' deferred payment plan, if you wish ✧

# WICKS ORGANS

WICKS ORGAN COMPANY  
HIGHLAND • ILLINOIS • Dept. ET

## New--PIPE ORGANS--Used

Builders of pipe organs for church and studio. Efficient, up-to-date used instruments on hand at all times, priced very reasonably. We also rebuild and modernize tracker and tubular organs, additions of stops, couplers and chimes installed. Yearly care of organs. We solicit inquiries.

**Delosh Brothers -- Organ Experts**  
3508 105th Street Corona, L. I., N. Y. City

## GUILMANT ORGAN SCHOOL

FORTIETH YEAR  
Write 12 WEST 12th STREET, NEW YORK

**KILL THE HAIR ROOT**

Remove superfluous hair permanently. Following directions with ordinary cream and soap. Method positively prevents hair from growing again by killing the hair root. Brings happiness, freedom of mind and greater self-reliance.

Send 6c in stamps TODAY for Booklet, "Beauty."

**D. J. MAHLER CO., Inc.** Dept. 10N, Providence, R. I.

## ORGAN VOLUNTARIES

FOR CHURCH USE

"Rosche's Organ Voluntaries" for reed organ, pipe organ, or piano. 95 useful selections; easy to moderate. \$2.00, postpaid.

"Falk's Pipe Organ Voluntaries." Contains selections of moderate to difficult grade. \$1.25, postpaid.

Our FREE catalog describes complete line of church music, including anthem books.

**GEO. K. ROSCHE & CO.**  
337 W. Madison St. Chicago, Ill.

At any Public Appearance . . .  
Unwanted hair is an annoying blemish.

**REMOVE SUPERFLUOUS HAIR**

**THE NEW CLEAR ODORLESS WAY**

FOR HAIR ON CHIN, CHEEKS, UPPER LIP, ARMS, LEGS

**LECHLER'S VELVET-STOHN**

A smooth pad that removes a heavy growth on the legs as easily as hairs on upper lip. Leaves no stubble.

As easy to use as a powder puff. No odor or mess. Nothing to heat, dry, mix or adjust.

**NOT A DEPILATORY**

In stunning, handy bakelite compact. Economical too—lasts for months.

Only our laboratories can supply it to you direct by mail. Sent postpaid in sealed wrapper with plain label for \$1.

**LECHLER LABORATORIES**  
560 Broadway Dept. F-2 New York, N. Y.

# WHERE SHALL I GO TO STUDY?

# ORGAN AND CHOIR QUESTIONS

*Answered*

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Will you please advise me the tempi of Brahms' "Elegen Choral Preludes" and his organ fugues? May I ask also on what dynamic level each begins?—C. M. R.

A. The tempi of the Brahms' Choral Preludes and organ fugues vary, of course. The edition of the "Choral Preludes" published by Novello supplies the various tempi by means of terms (not metronome), and the Breitkopf Edition of the Fugues also indicates the tempi by similar terms. The dynamic levels are also suggested in these editions by terms such as "f," "mf" and so forth; and the Novello edition of the "Choral Preludes" suggests the different manuals that may be used.

Q. Our church is interested in buying a pipe organ. The auditorium has a seating capacity of three hundred. Can you suggest specifications which will adequately meet our needs?—A. C. B.

A. Since your auditorium is not a large one and you probably will not wish to purchase a large organ, we will include some duplexing and unification in the specification suggested, as follows:

| GREAT ORGAN            |    |
|------------------------|----|
| Open Diapason          | 8' |
| Dulciana               | 8' |
| Melodia                | 8' |
| Dulciana               | 4' |
| Flute                  | 4' |
| (from Stopped Flute)   | 4' |
| (from Geigen Diapason) | 8' |
| Cornopean              | 8' |
| (from Swell)           | 4' |
| (from Swell)           | 4' |

| SWELL ORGAN          |        |
|----------------------|--------|
| Geigen Diapason      | 8'     |
| Salicional           | 8'     |
| Vox Celeste          | 8'     |
| Stopped Flute        | 8'     |
| Dulciana             | 4'     |
| Salicional           | 4'     |
| Flute                | 4'     |
| Nazard Flute         | 2 1/2' |
| Flageolet            | 2'     |
| Cornopean            | 8'     |
| (Bright-small scale) | Notes  |

| PEDAL ORGAN                              |       |
|--|-------|
| Bourdon                                  | 16'   |
| Lieblich Gedeckt                         | 16'   |
| (Extension Swell Stopped Flute)          | Notes |
| Flute                                    | 8'    |
| Stopped Flute                            | 8'    |
| (from Swell)                             | 8'    |
| Dulciana                                 | 8'    |
| Cornopean                                | 8'    |
| Clarion                                  | 4'    |
| Full number of couplers usually included | Notes |

The Vox Celeste suggested may be omitted, but we would have it included if possible.

Q. Will you send me names of companies who sell reeds for one manual reed organ. I have such an instrument built by the Co. Do not send their address as I have it.—S. J. B.

A. Since the builders of your organ are perhaps most familiar with the instrument, we suggest your securing the necessary reeds from them.

Q. Enclosed is the specification of the organ in the church of which I am assistant organist. Do you consider this a well balanced instrument? What additions would you suggest? On an organ of this size what range of chimes is most effective? We are considering moving the console from its present location to a balcony in the rear of the church, where there will be more room for the choir. If this is done we purpose adding a sort of Echo Organ at the rear of the church, so it will be easier for the choir to keep on pitch. What stops would you suggest for such addition? The Diapason tone, in general, seems to be hard—plenty of volume but lacking in sonority. Is there any remedy for this? Also the Vox Humana has a very undesirable tonal quality, when played with the swell pedal at all open. Would it be possible to substitute an — Vox Humana for this one?—J. W. H.

A. The specification lacks bright toned stops and we suggest the following stops as additions, if such additions are possible and practical:

Great Organ—Octave 4', Twelfth, Fifteenth Mixtures  
Swell Organ—Geigen Diapason, Octave, Mixture, Clarion  
Choir Organ—Dulciana, Piccolo  
Pedal Organ—Violone 16', Cello, Trombone 16', Tromba 8', Clarion 4'.  
It probably will be advisable to change some

of your present stops to match properly voiced new ones suggested. Personally, we prefer chimes of 25 notes. For the organ in the choir loft, we suggest Geigen Diapason 8', Dulciana 8', Flute 8', Flute 4', Octave 4', with Pedal Dulciana 16' and Bourdon 16'. The ordinary Echo Organ might not include stops suitable for choir accompaniment, and our suggestion is for a small organ to be used as an accompanying instrument. Of course it can be made to include more stops, if desired. The lack of sonority in your present organ may be due to large scale pipes, heavy wind pressure, and lack of bright toned stops. If changes are made, smaller scale pipes might be used, voiced for more sonority, less volume, and on smaller wind pressure. We presume the Vox Humana made by the builder you mention could be substituted for your present one; but your objection to the one now being used should be stated to the builder of the new one.

Q. Can you give me any help in locating a used two manual and pedal organ at a reasonable price? Do you know anything about the Electric Organ? I have tried to contact the makers but they seem to be rather secretive about the product? What is the difference between a "Liszt" organ and the common two manual reed organ? Do you know of any other makers of two manual reed organs beside the Co. As I experiment with reed organs quite a bit, I would be glad to help any of your correspondents who might be having trouble with that kind of instrument.—R. L. F.

A. We are sending you information about reed organs by mail. The writer has heard the electric instrument you mention, but believes it is not yet placed on the market for sale. We understand the "Liszt" organ to be a more brilliant instrument than the average reed organ. Thank you for your offer to help any reed organ correspondents in trouble with their instruments.

Q. What rate of humidity and temperature is advisable for the keeping up of a pipe organ? Which type of electronic organ is generally preferred; the type where the sound is made by reeds and amplified, or the type where the sounds are made by electric vibrations? What three stops do you think could be most profitably added to the enclosed specification of a duplicated and unified organ? Space is limited. I had thought of adding one set of Celeste pipes to use with the Violins, a small Cornopean, and a 16' stop for the Pedals. Do you think that a Manual to Pedal coupler would be worth the expense of installation? I want to install pistons in a one manual reed organ to operate the stops, if possible. What do you think of the rough sketch enclosed? Will the suction be sufficient to operate the stops separately? I intend to have a piston for each stop. The piston is intended to draw the stop only, not to cancel. Approximately, what do you think the actual expense would be to construct a two manual pipe organ with three sets of pipes, using direct electric action? What is the name and address of a firm selling second hand organ parts, including pipes? Is there any fund in America to aid financially underprivileged churches in the purchase of an organ? What is the cost of the book "How to build a Chamber Organ"?—J. S. D.

A. Humidity for an organ is usually taken as it comes. It should not be too high, as dampness is not advisable. We suggest a temperature of sixty-eight degrees. As noted at the head of this department, we cannot express an opinion as to any particular type of instrument. If additions to your instrument are practical, your suggestions seem suitable. We suggest that the Cornopean be bright in character. The type of 16' stop to be added to the pedal will depend on your present 16 stop. If it is very soft, we suggest adding a larger one to balance "full organ." If your present stop is heavy enough for such balancing, we suggest the new one be of a softer type. A Manual to pedal coupler would be useful. As your organ is now arranged, the "full organ" is available on the Swell organ. We question the advisability of the addition of pistons to the one manual reed organ, the only advantage being possible accessibility over the stops. We are advised that pressure will be sufficient if small piano-player pneumatics are used. Draw knobs would have to be slotted, so as not to put stop off when piston is released. We cannot give you the approximate cost of the construction of a three stop instrument. It will depend on the cost of the materials. We are sending you the name and address of a party from whom you might secure secondhand parts. There is no fund to assist churches in the purchase of an organ, to our knowledge. The price of the book, "How to build a Chamber Organ" (Milne), is three dollars.

**BANDS AND ORCHESTRAS**

**The Voice of the Oboe**

(Continued from Page 709)

wind instrument playing is the coördination of muscles and lips so as to balance lip pressure properly against wind pressure. This statement may be explained by stating that wind pressure varies inversely with lip pressure. Thus the greater the lip pressure, the less strong is the wind pressure, and with the lessening of lip pressure, wind pressure becomes greater. The following diagram may serve as concrete illustration of this natural physical as well as playing principle.

In this diagram the dark, heavy portion represents lip pressure, and the whorl, wind pressure. In application, if we start a tone on a low dynamic level, or at *pianissimo*, we swell or drive the wind from a low velocity to a high and back by a *release* of lip pressure, not an increase. Lip pressure is greatest when the tone is begun, and as the tone is increased the embouchure opens, reaching its greatest opening (with least pressure) when the tone reaches its highest dynamic level.

It is almost natural for the beginner on the oboe to want to increase lip pressure when he wishes to increase wind pressure. Therefore the careful teacher must show him otherwise, and in addition to his understanding this principle he must practice it steadily.

**Oboe Technic**

TECHNIC IS THE FACILITY of performing with a minimum of effort a simple two note slur to the most fluid of passages. In order to achieve this technic, and a smooth, agile finger action, it is necessary to work slowly on the development of the changes where more than one finger is used.

The break or 'hump' occurs between C, third space, and D, fourth line, and includ-

ing E, fourth space. If the following study (a) is presented in the beginning, played at a slow *tempo* and gradually increased, smoothness will soon be acquired.

Study (b) is a chromatic elaboration applying the same principle, in which each rhythmic impulse involves a definite alteration of finger position.

Relaxation is definitely a mental problem. Concentrate on relaxation of the muscles from the tips of fingers to the shoulders. A few minutes devoted daily to this type of study will do much to accomplish the desired end.

**Summary**

THE VOICE of the oboe, beautiful and artistic as it may be projected, involves years of study and endless little details of adjustment in order to arrive at an ideal quality of performance. We might emphasize the importance of the reed to be capable of producing a dark velvety quality, in order that it can blend its voice with the other instruments of the orchestra. The embouchure must be strengthened, and control must be developed to give flexibility of lip and fine color gradation. Care must be taken not to put too much lip over the teeth or a choked tone will result. If too little is over the teeth the tone will be colorless and uncontrolled. The curved position of fingers is important. The left thumb should never leave the instrument. The octave key is used by a simple rolling motion of the thumb at its tip. Conception and cultivation of tone are vital to develop the voice of the oboe to one of rich fullness. Range of tone can be developed by continual practice of the basic fundamental of wind and lip coördination. Technical facility should never precede a fine tone and good taste in musical interpretation.

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

For Teachers, Students and Players of All String Instruments

## That Important "Little" Finger

By GUY McCOY

IT IS CALLED the "little" finger, but in playing the violin its usefulness makes it so important that to call it the little finger seems like a gross misnomer. It is technically designated as the fourth finger of the violinist's left hand; and, because it is so useful and therefore important, it is very necessary that steps be taken early in the student's career to strengthen this finger which normally is the weakest member of the hand.

Young violinists, especially, have difficulty in stretching the little finger sufficiently to play with ease the fourth finger A on the D string or the fourth finger D on the G string. If the little finger is abnormally short, as it is in some cases, the trouble is magnified.

The exercise here shown has been found excellent training for developing not only strength but also flexibility in the fourth finger.

Ex. 1

This should be practiced a number of times, but not beyond the point when the finger and hand begin to become fatigued. Perhaps at first it will be possible to play it only two or three times without tiring. At the first sign of fatigue a few minutes rest should be taken and the hand relaxed by allowing the arm to hang limply at the side with the fingers loosely separated.

The exercise may then be practiced on the A string.

Ex. 2

The student should be most careful to see that the little finger plays its note each time exactly in tune. It might be well at first to play the exercise rather slowly, thinking of each as a quarter note; and later, when strength and agility are acquired, the exercise may be gradually taken faster.

Continuing the Example on the D string,

Ex. 3

it will be noted that a little more stretching of the finger is required in order to maintain accuracy of pitch. Also the hand will probably tire more quickly, requiring more frequent rest periods.

When ease of fingering has been established on the D string, the exercise is practiced on the G string.

Ex. 4

On this string the greatest stretch is required; but if the exercises on the other three strings have been thoroughly mastered, the hand should be in such condition that it will be entirely prepared for the stretch required on the G string.

After the examples have been thoroughly practiced on the separate strings, they may be joined in one continuous exercise, thus:

Ex. 5

In order to get the "feel" of the complete exercise, and as an aid in developing

smoothness in the measures connecting the different strings, it is suggested that the exercise be played through a number of times without any repetition of the sections on each string. Then the student may begin to lengthen the exercise by repeating each section before proceeding to the connecting measure. In order to avoid over straining the muscles of the hand and arm, it would be well, however, at first to play each section just twice and then proceed to the measure leading to the next string. No matter how well the individual sections have been practiced, it will be found that in playing the complete example, with each section played over but twice, there will be fatigue. It will be some time before it will be possible to play with absolute ease, the complete exercise, with each section repeated say, four or five times. It is easy to see that this exercise may be lengthened to suit the ability and endurance of the player, simply by increasing the number of repetitions of each section.

The usefulness of this exercise may be extended by using it as a bowing exercise to coördinate the working of the bow and fingers in rapid passages. Five or ten minutes on these measures, as a "warm up", will do wonders in putting the fingers in condition for playing. Young students, playing their first recitals, and more experienced ones, too, may use this exercise to advantage in those long, seemingly endless, minutes just before making their entrance on the stage. Playing it through several times will be most effective in relieving that disturbing nervous tension which so often plays havoc with even the best of artists.

## Improving Your Bowing

By

ALDEN V. CROUNSE

MANY STUDENTS AND TEACHERS strive for technical perfection with the left hand, giving insufficient attention to the bow, which is just as important. The most profound left hand technic amounts to nothing, if combined with bow strokes that are strained, short, inelastic, and that produce a small, wheezy tone. To acquire a full, round tone with strokes that are well connected, does not necessarily require the tedious practice of volumes of bow exercises.

For the student who has started Kreutzer, one of the best bowing exercises ever written is the No. 2. Before practicing the bowings given, it is more helpful to use another method.

Lower the wrist on the down stroke and, when nearly to the end, whip the wrist back and upward, pulling the bow up with the wrist. Then just before striking the down stroke, lower the wrist and pull the bow down. Think of the bow as a heavy object being drawn up and down by the wrist. When doing the exercise the frog, the wrist must be held high; the hand hangs underneath, or so the bow seems suspended from the wrist. It is lifted extra high on the up stroke, when nearing the frog. To develop smooth changing of the bow, practice the exercise three times first at the point, then at the middle, and last at the frog. Use very short strokes and do it slowly. It must be memorized so all attention can be directed to the bow hand, using plenty of wrist motion.

The wrist must make a definite change of position at both ends of the stroke. If it is always held in the same level position there will be a break in the tones and the bow will not be smoothly connected. It is important to note that when the bow nears the end of the stroke, the wrist starts back the opposite way an instant before the bow does. The fingers must not slide over the bow, but the joints must bend to allow the bow to travel straight.

The fourth step is to practice it by using a whole bow for each note, drawing the bow rather rapidly. This can be done only after the right wrist motion has been acquired from the preceding method of practice, so the bow will not slide back and forth between the bridge and fingerboard but will stay on the same spot when drawn rapidly. It is best to do this slowly first before a mirror, to watch if the bow is going straight.

A most common fault among students is that they allow the bow to curve around in front of them when nearing the point. The arm must be extended to keep the bow straight to the very point. In the case of small children, whose arms are not quite long enough, they must not be allowed to change the direction of the bow in order to get to the end. They must be satisfied to go seven-eighths of the way and be

A  
DOUBLE  
BASS  
(1679)  
by  
Francesco  
Ruggeri  
A  
Famous  
Cremona  
Maker

and keep the bow straight across the string. The next thing to work for, when freedom has been accomplished, is a full, loud tone. This is done by adding pressure from the side of the first finger only, keeping the wrist very loose, and not holding the bow high but allowing it to hang limp on the side. Bow nearer the bridge as more pressure is added. In this way, a surprisingly robust tone can be produced while maintaining the same smooth, well connected tones.

If any arm weight rests on the bow, or the wrist stiffens, in trying to play louder,

there is sure to be a scratchy, uneven tone. Also every time the bow changes there will be the familiar "chug" noise. In using long bows, it must be remembered that as the bow nears the tip, there is less weight to the bow. Consequently, pressure must be gradually added from the side of the first finger. Likewise, when nearing the frog, the excess weight there must be removed by lifting upward with the wrist. When listening to a fine violinist, it will be noticed that it is difficult to tell when the bow is changed, so connected and smooth are the strokes.

## The "Millerboy"

By OTTO RINDLISBACHER

Mollargutten.  
(Torgeir Audunsson)

A Violinist and Nature Lover who became the "Paganini of Norway"

TORGEIR AUDUNSSON, son of a miller, was born in 1801, in Nesherad, Norway. In early life he became passionately fond of music and would listen for hours to the song of his father's mill wheel.

At times he would leave home for several days with his beloved Hardanger violin, to be near the waterfalls, or to listen to the music of the mythical fairies and little dwarfs which, supposedly, dwelt in the high mountains.

All of Nature's sounds he would interpret on the violin, as no one before him ever had done. His fantastic and descriptive execution soon became known as an endowment from the devil.

According to Norwegian legends, many wild and sometimes fatal brawls ensued wherever his weird strains resounded at peasant weddings. When he was heard at such an event in Hallingdal, where he was not known personally, a spellbound listener remarked that this must be either "the devil or else Mollargutten." Thereafter the fame of Mollargutten (Millerboy) reached the far corners of his land.

Torgeir Audunsson died in 1872 and rests in Rauland churchyard.

## Modern Violin Technic

By FRANK W. HILL

THE TECHNIC of playing the violin, even to the manner of holding the instrument, has necessarily undergone radical changes in keeping with the demands by modern music interpretation.

The sentimental, flowery type of music, so much in vogue a few years ago, is seldom heard or desired in this day. Composers are writing music of a more solid, sturdy character. The interpretations given of the Bach and Beethoven days demand a bigger tone and more rugged, satisfying quality. In order to produce such tone certain changes in the fundamentals of violin playing were found to be necessary. These changes are evident both in the playing technic and in the manipulation of the left hand.

The bow, for example, is held more firmly, not like a teacup between the thumb and one or two fingers, but with all fingers resting on the stick, exerting a firm but flexible grip, with the side of the forefinger acting as a powerful lever. The wrist is set, to insure strength and an even control—not poised in a swanlike curve above the hand. The change of bow stroke, especially the frog, is executed more with the forearm, less with the wrist and fingers. Finally, the bow hair is held more flat on the strings and not tipped so much on the outer side. This has a two-fold effect of utilizing the weight of the bow and arm to produce a bigger tone and permitting a better quality through the constant contact of all the bow hairs with the string. All this does not imply that relaxation of the arm is not the essential factor in legato playing.

The use of the left hand evidences considerable change, owing to the force of finger action and even quality of *vibrato* essential to the bow technic. In the higher positions, the hand assumes as nearly as possible the same relationship to the neck of the violin as in the first position. This means that instead of being moved out from under the finger board, as one enters the fifth or seventh position, the thumb remains at the left of the finger board, the neck of the violin resting more in the crotch between the thumb and first finger, not on the ball of the thumb as formerly. *Vibrato*, at one time thought to be a flowery effect to be used with great discretion, is now a *sine qua non*, and is of a steady, rather rapid type, rather than a slow, pulsing throb.

The art of fingering has broken away from the stereotyped methodical shifting once thought necessary. Both upward and downward extensions of all fingers are used when convenient, and all positions are employed with equal facility. The fourth finger, once used only when absolutely necessary, is now regarded as capable of producing as fine tone quality as any other.

The violin itself is held in a more horizontal position, to allow the bow to play on the strings and not against them, as well as to give more freedom and resonance to the vibrations.

Wise violin teachers regard as their authorities in matters of violin playing such artists as Kreisler, Elman, and Heifetz, whose style of technic conforms to the type of performance and tone which to-day is demanded by the musical public, largely through their influence.

# HARMONY

## Is Your Next Step Towards Pre-eminence in Music

A practical knowledge of Harmony—the Grammar of Music—will immeasurably widen your musical horizon. It will open up many new and bigger opportunities to you—a higher standing and recognition, and greatly increased financial returns from your work.

Musical authorities and representative musical publications emphasize the necessity of a knowledge of Harmony in an adequate musical education.

## Qualify for Higher Positions in Music

If you feel that you have gone as far as your present musical training will take you; if you are ambitious to make further progress, enjoy greater recognition, and increasing financial returns, then you owe it to yourself to find out what this great Musical Organization has to offer you.

## MUSIC IN INDUSTRY

"A marvelous new factor is entering into our industrial processes. Mass production and ever-enlarging output have an irresistible ally in the speeding up of their creative functions. This element is music, and is today a great force which makes its appeal alike to the factory and mill worker, the man of affairs and the leaders in commerce, finance, literature and art. The millionaire and the day laborer are alike within the reach of music's influence."—Hon. James J. Davis.

# Getting the Most Out of My Etudes

By IRENE BADE

A teacher of music in the "Woolly-Wild-West"

WHENEVER I pick up an ETUDE (new or old) there are two music files and a pen ready to catalog whatever I hope to refer to again. As soon as an item is catalogued it is marked "C," lest coming upon it later, I might forget that it is already stored in file.

Now let us see how such filing makes the vast store of music knowledge placed in THE ETUDES available: By filing each selection according to its title as well as under the composer's name, we are able to learn at once if a certain piece is contained in our own store of THE ETUDE and also whether there is a selection by a certain composer.

The printed articles are filed under several headings, as, for instance, the article in the May, 1938, issue on page 287: one card could be placed under the heading of "Memory" with this note attached, "The Paris Way"; another headed "Toscanini" with note, "memory of—picture of"; another headed "fingering" with note, "aid to memory (column four, first paragraph)". This helps us to get from THE ETUDE information on almost any phase of music, and from just the angle from which we wish to be enlightened at a certain time.

Also for history of music my files tell where in my ETUDE Library may be found pictures of each composer and a sketch of his life, music, and works, as well as expressions of his. (Of course, each card must bear the year and month of THE ETUDE issue, plus the page, so it may be readily found.)

Through filing, the ETUDES help amazingly in teaching. First of all, since the aim is to file away at least one item each day, this presupposes that at least one article a day is read which in turn, besides adding value to the files, stores the mind with fresh knowledge and new ideas. Hence teaching never becomes "stale," for the problems and lessons in music always

can be handled from some new angle and in some new method which has not heretofore been used on that certain pupil. Thanks to THE ETUDE one need never become one sided if one will but continue to read and reread its vast store of musical articles, suggestions and even games. Secondly, THE ETUDE permits me to show to pupils "black on white" what others say and do. This makes a better and more lasting impression on the pupils.

Through filing THE ETUDE, I, myself am educated wonderfully in the school of music; for that is what THE ETUDE has become for me, "A School of Music" in the true sense. One cannot come in contact with the many wonderful writers in THE ETUDE without learning from them. And how I do need exactly that material which my dear ETUDE offers!

When I see the enthusiasm with which every music pupil here in the "Woolly-Wild-West" (permit me to say, that since I moved into this community last year I really have begun to wonder whether this "Woolly-Wild-West" were truly here) grasps every possible opportunity to lay hold on and improve the wonderful God given gift of music, it in turn fires up new ambitions to offer everything in my power in order to satisfy, at least in part, their thirst and craving. What a satisfaction one gets from the smile of appreciation and awe with which our pupils greet us here!

Now if you wish to have THE ETUDE to serve you, try this filing. Do not think it is too late to begin, just because there are quite a few copies on hand, but begin with the latest issue and file as they are read. You will, in time, get the old copies in file also, providing you will set your aim to "one item a day." When you begin to reap results, as I have, you will never begrudge the time spent with THE ETUDE.

\* \* \* \* \*

## The Greeks Had a Word for It

Aristotle in his "Politics" reports on the effects of certain melodies upon a form of religious ecstasy termed by the Greeks "enthusiasm." The treatment prescribed for them was based on the principle of "like cures like." Movement was applied to cure movement, and wild, restless music to soothe the internal troubles of the mind.

This form of treatment was given the name of katharsis. The type of music employed was expressly distinguished by Aristotle from the music whose ends are moral, educational, relaxing or hedonistic.

But this knowledge of the therapeutic powers of music is not all with the

ancients. In one modern institution—the spa or watering place—it is a prominent feature.

There, notably in the European spas, the orchestra concert ranks in importance with the waters proper, with massage, exercise and other therapeutic procedure.

There are few thoroughly controlled experiments that prove just to what degree music is good medicine. But then, perhaps this agent is an immeasurable, though as important and potent, as is the personality of the attending physician and nurse.

—New York Academy of Medicine.

## The Period

By IZANE PECK

JUST AS ANY written composition is made up of different sentences, just so every piece of music consists of different musical sentences which are called periods. Each period represents a complete thought and is more or less regular in construction. The most used sentence in music is the simple sentence. It is composed of four phrases which may rhyme in various ways:

1. Phrases one, two, three and four all may rhyme.
2. Phrases one and two may rhyme with each other; and three and four may rhyme.
3. Phrases one and three and two and four may rhyme.
4. Only phrases one and four or two and

four may thus rhyme.

5. Phrases one, two and three may rhyme; while four is free.

Good material for period illustration may be obtained from any good school song book; or hymn book; or from many piano or song collections, or from THE ETUDE.

Period form searches may prove a most entertaining and pleasant way of spending leisure time. They become particularly valuable in proportion to the time spent. Exciting treasure hunts, these!

A simple illustration is the tune: *Maryland, My Maryland*, where phrases one, two, and four rhyme; while phrase three is free.

Let the search proceed!

# VIOLIN QUESTIONS Answered

By ROBERT BRAINE

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

\* \* \* \* \*

### Planning a Career

W. P. W.—I receive so many letters similar to yours, and they trouble me greatly, because it is impossible to answer them to the satisfaction of the writers. In the first place, I have never been in the towns in Texas, you mention; nor do I know any of the violin teachers in these towns, or their capabilities. In the second place, I cannot hazard a guess as to the talent of your son, without hearing him play. Your first duty is to take the boy and have him play for a really great violinist and teacher, such as you would find in New York, Chicago or Boston. Violin teachers of high rank are scarce, even in the large cities of the United States. A first class education on the violin is also very expensive, anywhere in the world. Quite a number of years ago, I had a very gifted violin student, five years of age. I taught him for four years; then he went to Europe to study for a number of years. He graduated at the age of fifteen, after which followed world tours, as a concert artist.

Talking with his mother one day, she said: "My boy has done well, but it has been very expensive. We counted up the cost the other day, and found that the expense of his studies in this country and Europe amounted to twenty-five thousand dollars."

If you wish your son to be a famous violinist, the first thing you should do is to find out if he has the talent for it. Take him to some such institution as the Juilliard School in New York, or the Curtis Institute of Music in Philadelphia, and have him examined. They will tell you if the boy has enough talent for an artist, or if it is better to have him play the violin as an accomplishment. This is the safest thing to do.

### Harmonic or Open String?

C. S. B.—The first note in the composition, "Thine Own," by Lange, is played on the open D string; the (c) written below it, is not considered to indicate a harmonic.

### The Hand in Third Position

M. A. S.—Eugene Gruenberg, a prominent authority, and author of "Violin Teaching and Violin Study," says of the attitude of arm, elbow, hand, wrist, and fingers in the different positions.

"In the third position, the hand is brought into contact with the violin's front rib, the lowest edge of which must be close to the wrist, the neck remaining between thumb and forefinger, as in the case in the first position, the thumb approaching the violin's body."

### For a Tender Skin

E. B.—I would suggest that you apply to a first rate physician, a specialist in skin diseases. Your skin is evidently extremely tender and chafes easily. Your case calls for a personal examination, and, having two thousand miles distant, and never having seen you, I cannot suggest any treatment. It would be best to go to New York, Chicago, or Philadelphia for an examination and treatment.

### Locating Stradivarius Violins

L. T. M.—I do not know where you could obtain a complete list of the owners, or whereabouts of the known Stradivarius violins, or even a list of these instruments. Probably the greater number are known to violin dealers. You might write to Lyon and Healy, Wabash Avenue at Jackson Boulevard, Chicago, Illinois; or the Wurlitzer Company, 120 West Forty-second Street, New York City. These firms have handled a large number of Strads. The firm of W. E. Hill and Sons, Sole Violin Makers to His Majesty the King, London, England, have handled a great number of Stradivari and other Cremona violins. They are among the greatest authorities on rare violins in the world. This firm no doubt has lists of the owners of the principal strads, but whether they would be willing to furnish them to you is a different matter.

### Scholarships

L. M.—You can find out the rules for applying for a violin scholarship, by writing to any of the prominent schools or conservatories of music in the large cities of the United States. Write to the large schools and colleges of music whose names may be found in music magazines. Many of these colleges award free scholarships, but have different rules for obtaining them. Many distinguished artists have made their start by obtaining free scholarships. The noted European music schools give free scholarships to deserving pupils of genius, as well as the American.

### Violins by D. Salazar

G. H. G.—I do not know where you could obtain full information concerning D. Salazar other than that he was a violin maker of considerable note. For some strange reason the historians have practically passed this maker by. You might consult the works on violin making in your public library.

### The Concert Violinist

H. A. M.—1. The qualifications of concert violinists are many and varied. Among them are the following: (a) A very fine natural talent for the violin; (b) The gift of relative or absolute pitch, or both, is valuable to the concert violinist; (c) A talent for memorizing stands the concert violinist in good stead as all solo violin work should be done from memory; (d) A good natural physique, well adapted to the violin, flexible fingers, arms and so on; (e) The gift of composition, especially of works for the violin; (f) A natural talent for fine tone production, on all strings in all positions, and in all gradations of power; (g) The gift of supreme expression calculated to bring out all the meaning of the composition. You will find many suggestions on this subject in the book, "How to Produce a Beautiful Tone on the Violin," by Helen Timmerman. This lady studied extensively in Europe, with some of the greatest masters, and teachers of the violin. There are many other qualifications for the concert violinist to surmount.

2. As a rule a violinist wins a free scholarship for master instruction, by competition. A selected group of talented violin pupils play for a number of judges, taken from the ranks of the teachers of the school which offers the scholarship. As a rule the applicants play the same composition, although this is not always the case. After the competition is over the judges retire to another room, and decide which pupils are entitled to scholarships, according to the best points shown by each. Almost all large schools and conservatories offer free scholarships, in this manner; and many of the greatest artists of the world won their start through such scholarships.

### Solos by Leonard

J. Lo S. Jr.—You say you have just mastered the more advanced violin solos by H. Leonard and wish to know what to take up next by the same composer. Without knowing the names of the pieces you have mastered it would be somewhat difficult to recommend other pieces by this same composer. All of his works may be considered advanced. Write to the publishers of THE ETUDE for a list of Leonard's works.

### Violins by August Glass

L. D. G.—1. The title of the book on violin making you inquire about, is "The Violin, and How to Make it," by a master of the instrument. The author of the work when first published was not given, but I think he was an English writer on musical topics. The work was first published in England. 2. The current values of the Friedrich and August Glass violins are from fifty to one hundred fifty dollars, according to quality. These violins are well known, but not of great value.

\* \* \* \* \*

## Music "in the Right Spirit"

"There are certain people who have the idea that you should go to a concert as you go to church, in reverence and humility; or that you should sit as still as a Scotsman in a Nonconformist house on a Scot's Sunday.

"But I do not believe music is like that. If I would not talk at a concert, that is not because I should insult the music, but because I should interfere with the comfort of my next-door neighbor. But, for some of us who work extremely hard, music is the perfect anodyne; and it is just the people who will not admit this fact who are always coming forward with such theories as that music must be listened to 'in the right spirit,' as though 'right' were an absolute thing, and not a degree of comparison."—Ursula Greville, in The Sackbut.

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## False Teeth Interfere With Playing Wind Instrument?

1. I am considering training for a position of Public School Music director. My teeth are in rather poor condition and I may have to get complete upper and lower dentures. Would this interfere too much in my playing of voice or in the playing of wind instruments?

When duets are being played on a piano, are any rule as to which player should use the sustaining pedal? Is it permissible for the person playing the higher register to use his left foot for the sustaining pedal?—R. S.

1. This is such an individual matter I am loath to give a general reply. It depends on whether you have acquired a good posture and firm musculature before acquiring the false teeth—at least this is true as playing an instrument is concerned. You have learned to play before the change of teeth, and if the new teeth are a perfect fit your playing will probably not be interfered with. In the case of singing this would not be important; but in either case you must be able to get teeth that are exactly right. However, I believe the only way to find out for certain is to try it out.

## Slurs, and Clefs

1. a. I have been studying Mendelssohn's Rondo Capriccioso which was printed in THE ETUDE of December, 1913, and am confused about tied and slurred notes. At the beginning of the first subject are the E's; if so, should they be struck again? I always understood that the second of tied notes should not be struck, but in this and other pieces it does not seem feasible to me not to strike the second note.

Between the two E's there is a D-sharp figure 3 above it. Does that figure mean a triplet or simply to use the third finger? Similar three notes occur in many places throughout the piece; are they all tied alike?

What is the difference between a tie and a slur?

In Silver Mists by Charles Huerter in THE ETUDE of March, 1936, there appear the F clef grace notes tied to half notes of the same line. Are both or only one of the notes to be struck?

In THE ETUDE of December, 1935, there is an article by José Iturbi in which he mentions seven clefs. I know only the G, F, and C clefs. Will you explain the other four?

May one ask questions of your department more than once?—Mrs. R. G. B.

1. a. I have been unable to secure a copy of THE ETUDE for December, 1913. You enclosed a copy of the part of the position to which you refer. I could have been sure of giving you a correct answer. However, I believe the following is the passage you have in mind:

Two E's are slurred, not tied. Therefore the second E should be struck. One could not tie the two E's when a D-sharp comes between them.

The figure 3 means to use the third finger. This pattern would be played the way each time it occurs in the piece. A tie is a curved line connecting the heads of two or more successive notes repeating the same pitch. A slur is also a curved line, but it connects the heads of two or more notes all of which do not repeat the same pitch. In the case of a tie, the second note is not struck; in the case of a slur, each note is struck.

Fortunately I have a copy of THE ETUDE for March, 1936. The following is the passage which you refer to:

The note is struck only once and then is sustained for two beats. In this particular piece the grace note would come slightly before the beat and the eighth note of the melody line in the left hand would come on the beat.

4. Mr. Iturbi refers to the G (treble), the F (bass), and the five C clefs. The C clef may appear on any line of the staff, and that line will represent middle C. Of the five C clefs, only the alto and tenor are used extensively, to-day. The following chart should make the seven clefs clear:

## Who May Teach Piano?

Q. I have studied the piano for five years. What are the qualifications, if any, for becoming a professional piano teacher? Is there anything I must do? Or do I just hang out my shingle?—H. M. J.

A. There are no fixed qualifications. Some states have a plan for certifying music teachers, and you will find information concerning this matter in the 1938 Proceedings of the Music Teachers National Association; or write to the Secretary of the State Board of Education at your state capital. In most states anyone who thinks he can teach the piano may "hang out his shingle." My own idea is that a piano teacher ought to have studied piano for a good many years, so that he is a skillful pianist; and that in addition he should know harmony, counterpoint, form, history of music, and so on, so that he may teach with authority.

## What is "Equal Tuning?"

Q. 1. What does "well tempered" in the title "The Well Tempered Clavichord" mean?

2. What is "equal tuning" and what is "pure unequal tuning?"

3. Please explain the following: "whereas Scriabine found his chord on the pure temperament, his music is played and heard through the equal tuning."

4. What is meant by instruments of unfixed tone?

5. How are atonal and duodecuple pronounced? Would you suggest some books dealing with these subjects?—S. de B.

A. 1 & 2. The terms "equal temperament" and "equal tuning" refer to the present method of tuning instruments by making all half steps of equal size. In "pure tuning" all half steps are not of equal size. When an instrument is tuned to the pure (or untempered scale) it is possible to play in only about three different keys on that instrument. To overcome this difficulty the scale was altered or "tempered"; that is, the half steps were all made of equal size by sharpening some and flattening others. By thus tuning an instrument "out of tune" it is possible to play in all keys on any instrument. Tuning by equal temperament was just beginning to gain recognition in the days of Bach, who wrote his "Forty-eight Preludes and Fugues" of the "Well Tempered Clavichord" to show that on the same instrument pieces could be played in all of the twenty-four different major and minor keys.

3. Since you did not give the source of your quotation, it is impossible for me to get the full context of it. It probably means that when Scriabine first conceived his chord (the "mystic" chord) he heard it in his inner ear as based on the pure scale; but since all instruments are now tuned to the tempered scale, the chord is actually heard with slightly different pitches than those with which Scriabine first imagined it.

4. Instruments of unfixed tone are those whose pitches can be changed after the instrument has been tuned. Members of the string family and the slide trombone are classed as of unfixed tone. The piano is an instrument of fixed tone. By changes of embouchure the tones of all wind instruments can actually be altered slightly by the player after the instrument has been tuned; wind instruments, however, (except the slide trombone) are usually classed as of fixed tone.

5. In the latest unabridged edition of the Webster's New International Dictionary these words are pronounced a · tōn · āl and dū · dek · ā · p · l.

I think you will find that the following books deal well with atonality and duodecuple scales: "Twentieth Century Music" by Marlon Bauer; "Modern Harmony" by A. E. Hull; "New Harmonic Devices" by H. A. Miller. Any of these may be procured through the publisher of THE ETUDE.

## UNDERWOOD Leads AGAIN

THE CHAMPION

Offers all of the UNDERWOOD Typewriter features, such as Champion Keyboard, Sealed Action Frame, and Dual Touch Tuning plus an Inbuilt Tabulator as standard equipment. Everything you have a right to expect from THE TYPEWRITER LEADER OF THE WORLD.

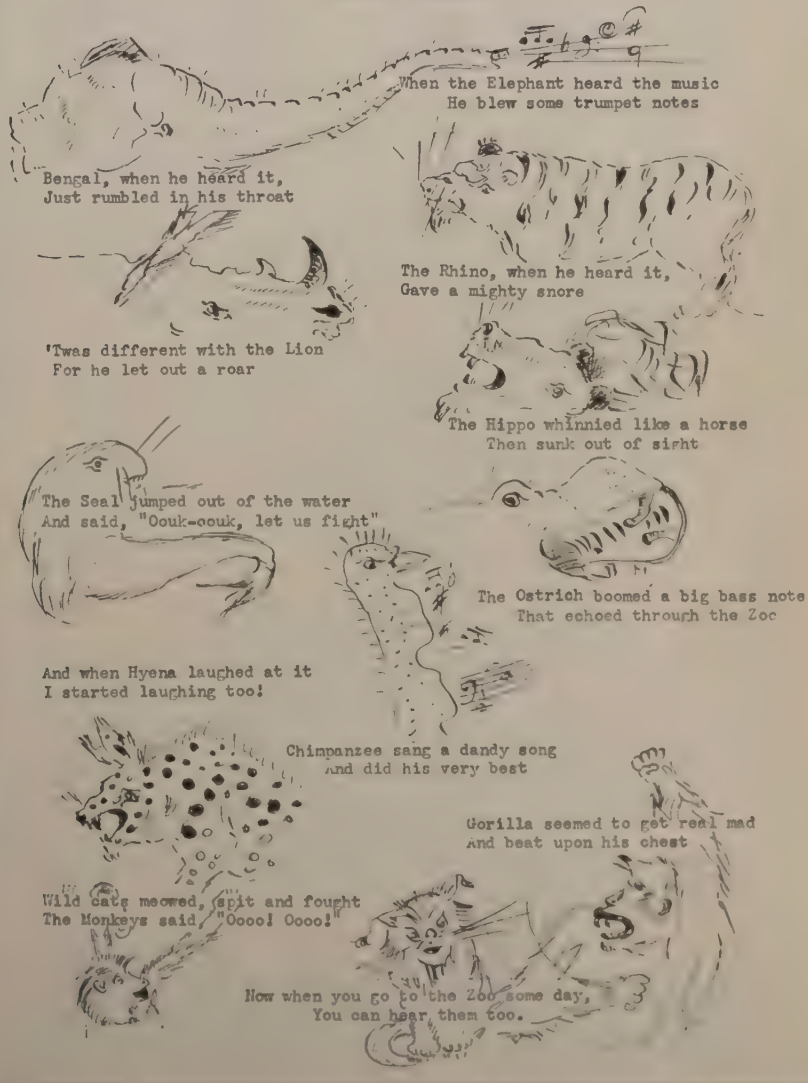

ENTIRE UNIT FOLDS INTO THIS COMPARTMENT

New UNDERWOOD Typing Stand Carrying Case. Requires no desk space. Carries its own type wherever you want. . . wherever you are. • It can be extended to three different typing heights. Available with Champion or Universal Portable at additional cost of only \$7.50 . . . cannot be purchased separately.

FOUNDATION  
MATERIAL  
for  
PIANO STUDY

TECHNIC plus MUSICIANSHIP

## THE PREPARATORY BOOK

Presents the most modern pedagogic approach to music reading. It's new, logical and practical procedure should gain accurate fluent reading at the first lesson. A most helpful preliminary book to any piano course or method and especially valuable for use with very young students.

PRICE, 50 CENTS

## BOOK ONE

This book contains the most complete presentation of reading cards covering three octaves, exceptional rhythmic drills, perfect treatment of keyboard harmony fundamentals, ear training and technic, combined with interesting musical pieces to play.

PRICE, \$1.00

## BOOK TWO

Reading material covering five octaves is introduced, there are thorough drills on the tetrachord, melodic and harmonic intervals, the scales, the tonic, subdominant, and dominant chords. Presents clever rhythmic drills and ear training correlating with the previous keyboard harmonic developments.

PRICE, \$1.00

## BOOK THREE

Materials selected from Foster and other popular writers of folklore songs, combined with the classics, selected etudes, and original compositions, make this a most interesting book for the student of this grade. Presents all major and tonic minor scales and revolutionary methods of chord analysis. Copious illustrations of pianistic problems involving the arm, hand and fingers.

PRICE, \$1.00

TEACHER'S MANUALS for each book may be obtained FREE. Ask for them.

## FRETTED INSTRUMENTS DEPARTMENT

# William Foden

By GEORGE C. KRICK

**D**URING THE PAST FEW YEARS the guitar world has been dazzled by the playing of Andres Segovia, Martinez Oyanguren, Sainz de la Maza and other Spanish virtuosos of the instrument. A great portion of the younger generation of players is unaware of the fact that we still have amongst us an American born guitarist and composer who ranks with the best of them, the great master William Foden.

Born in St. Louis, Missouri, March 23rd, 1860, young Foden, at the age of seven, began his musical studies on the violin, and at sixteen he organized his own orchestra, which became quite a favorite in his native city. Having by this time acquired a thorough knowledge of harmony and composition he used mostly his own arrangements of music of the higher type.

About this time he became acquainted with the guitar in the hands of one of his friends, and at once he felt that this was the instrument of his choice. Foden is practically self-taught, although he had some instruction from one Jeremiah McGrath and again with William O. Bateman, the latter being a highly cultured gentleman and a fervent lover of the guitar. The writer still has in his possession a volume of compositions and arrangements by Bateman containing also a unique treatise on harmony in connection with the guitar. Close application to and concentration on the best guitar literature by Ferdinand Sor, J. K. Mertz, Luigi Legnani, Zani di Ferranti and Mauro Giuliani resulted in rapid progress, and, while still a young man Foden was hailed as the foremost guitar virtuoso this country had produced. While at this time the instrument did not enjoy its present universal popularity the concerts and recitals in which Mr. Foden appeared astonished the critics and delighted his audiences. The concert given under the auspices of the American Guild, in Philadelphia in the spring of 1911, in which Foden appeared as guitar soloist, proved a turning point in his career. With Giuseppe Pettine, mandolinist, and Fred Bacon, banjoist, Foden formed a trio which toured the entire country with great success, and after the conclusion of this concert tour he settled in New York, where until a short while ago he has been active teaching and writing for guitar and the other fretted instruments.

### Marvelous Technic

AS IT OFTEN HAPPENS in the lives of artists, there comes a time when they feel the urge to return to the place of their early triumphs, and William Foden recently returned to his native St. Louis, where he expects to continue his successful career. His numerous friends and pupils in the East wish him many years of successful activity.

The writer who, since his boyhood, has been intimately acquainted with Mr. Foden and, who, for a number of years, received instruction from him on mandolin and later on the guitar, recalls his first impression of the marvelous technic displayed by this artist on the guitar. Perfection is the only word to describe his rendition of the "Grande Sonata," by Ferdinand Sor or an operatic "Fantasie" by J. K. Mertz. A right and left hand that seem to have been especially made for the guitar, enabling him to overcome the greatest difficulties with an

ease and nonchalance, and these combined with instinctive musical insight and untiring memory, have helped him to reach the top rung of the ladder to fame as virtuoso. His favorite classic composers have been Sor, Mertz, Legnani and Ferranti; and we have yet to meet a guitarist to surpass him in playing some of the difficult "Fantasies" of J. K. Mertz.

Foden's early compositions and arrangements for guitar show somewhat the influence of Mertz; in them we find frequent use of arpeggio movements and florid cadenzas of which the *Fantasie on themes from "Der Freischütz"* and the *Sextet from "Lucia"* are good examples. Many of his original compositions for guitar came from the pen of this prolific writer and arise from the numerous small pieces for teaching purposes there are quite a few that should be included in the repertoire of every player. *Ballerina Valse* (solo duet), *Esperanza Mexican Dance*, *Grand Valse Caprice*, *Gavotte*, *Chevalier Marche* and *Minuet in F* are of medium difficulty, quite melodious and thoroughly guitaristic. The most popular of Foden's works are perhaps his transcriptions of the old songs such as *Alice*, *Where Art Thou?*, *Ann Laurie*, *Old Black Joe*, *My Old Kentucky Home*, and others. The list of these comprises several dozen and they are of similar construction—Introduction, theme, a number of variations and finale. In these transcriptions Foden shows great inventiveness; and they require an accomplished technic for their performance. Julio Martinez Oyanguren has included some of these in his recent radio broadcasts and letters on their reception have been highly complimentary.

Foden was one of the first guitarists to include in his programs his own arrangements of some of the lighter classics which show his thorough musical knowledge and also his intimate acquaintance with all the resources of the instrument. Of these the *Spring Song* by Mendelssohn, *The Minuet* by Boccherini, *Pizzicati from "Sylvia"* by Delibes and the *Serenade* by Moszkowski were published by the composer and have been for many years popular with guitarists.

In the Foden transcriptions we find that he makes frequent use of the right hand tremolo, reiterating the melody note with first, second and third finger in groups of thirty-second notes, the thumb playing the accompaniment simultaneously; and in the performance of this style of composition Foden even today has few equals.

### A Valuable Work

HIS MOST IMPORTANT WORK for guitar is the "Foden Method" published in two volumes. These books of more than two hundred pages contain the most scholarly and complete treatise on the technic of the instrument, leading the student from the beginning, step by step, to the advanced art of guitar playing. Not since the advent of the celebrated "Method" of Carcassi, more than one hundred years ago, have we had such an exhaustive and thorough method and it has been hailed with delight by guitar teachers and students. Mr. Foden may be said to have the distinction of being also one of the American pioneers of the mandolin, on which he became quite proficient upon its introduction into this country in the latter part of the nineteenth

ry; and the Foden Mandolin Quintette a novelty during those days of mandolin popularity, had for many years a successful career.

de from his compositions and transcriptions for guitar, Mr. Foden has been contributing original music to the literature of mandolin, mandolin orchestra, tenor and Hawaiian guitar, and his name known throughout the fretted instrument world. During a recent conversation we

had with this many sided artist he told us that he had completed a book on harmony in connection with the guitar, also there were more than one hundred transcriptions for guitar in manuscript, waiting for some enterprising publisher to put them in reach of guitarists. In spite of all the honors that have come to him during his long and industrious life as virtuoso and composer, Mr. Foden has at all times maintained a most unassuming and modest disposition.

## Short Cuts in Piano Technic

(Continued from Page 702)

with a method of scale practice absolutely simple and yet the most effective ever has been seen. It seems, at the most psychological moment, to cut the sympathy between the thumbs so the difficult contrary movement between them is smoothly performed. This, accustomed to use with the Jonas fingering as explained.

Tausig promises that "He who has for weeks practiced the scales in the recommended, *very slowly*, and with the fixed position of the upper arm and hand, will be able to play them in any way, according to any other direction, with greater rapidity and certainty; as the gymnast, who from having been accustomed to lift the heavy dumb-bells with right and left, not suddenly, but gradually, is able later to lift much heavier weights when accompanying the action with the swinging of the arm; and whoever practices the scales slowly, tolerably *legato* and evenly, with the upper arm in the preferred position, will be able to play them with free arms in the most rapid tempo, with perfect correctness, and this after half the time given to practice which would have been requisite had he not used this method." Five minutes of such practice is worth forty-five of the former.

but not least, is the problem of fingering music. During the years devoted to playing with an oscillating elbow, the student may find the fingering, suggested by the best editors, impracticable, nay, deliberately perverse. Yet the trouble is simply that therein is expressed an economical gesture to which he does not possess the key. The principle of fingering, as taught by Tausig, will put him on the most logical terms with the editors and furnish him with an infallible guide for finding the best for himself when none has been suggested. Editors' fingering that seemed reasonable will now appear to be not only impracticable but inevitable. According to Tausig's system the fingering will be used that is when the elbow is glued to a position which jams it well against the ribs, on the side, but in front of the body. This position is gradually modified as one reaches the extremes of the keyboard. The fingering will prove to be both the most logical and the most secure. It is well known that Tausig had a marked preference for a stretched out position of the hand. In the Joseffy edition of the Chopin "Preludes" is given a good example of Tausig's choice of fingering. This is added in a footnote to *Prelude, Op. 28, No. 3*.

Fingering above the notes is by Mikuli; below the notes is by Tausig and may be used consistently throughout the difference. It is interesting to reason from the possible formation of Tausig's fingering. Why did he prefer such a spread of the hand? For some years the writer had used this particular prelude with the Mikuli fingering, without ever quite master-

ing the bass figure throughout the changes of keys. After it had been practiced according to Tausig's system, his fingering was used, with a marked improvement. Just what does this position accomplish? Why was one that seemed harder at first really the easier? His hand is said to have been small, with fingers of iron. Undoubtedly he must have had more than a normal span between the fingers. The position he recommends necessitates developing finger strength in order to minimize finger lift. It is obvious that this will be automatically cut to a minimum, with a stretched out position of the fingers. Another advantage is that the greatest possible number of notes are prepared before sounding them, which facilitates both a mental and a physical grasp of the figure. By this plan the fingering of many other passages is improved.

Mechanical difficulties can be usually solved in the main by that generally competent servant, the second brain; a correct method of practice should so condition the muscular apparatus that mechanical problems will not claim more than a minimum of both time and thought. The education of the second brain is faithfully completed by the Tausig system as expounded by Ehrlich, his pupil, from Tausig's own manuscript. It claims to render "every incorrect position of the fingers, especially of the wrist, and every objectionable movement of the arms, impossible from the beginning. It is adapted for beginners—of course with great caution and moderation; but with more advanced pupils, who have had one and a half or two years of instruction, it may be carried out strictly, with perfect confidence. Always, however, even in the case of very advanced pupils, due moderation must be strictly observed and prescribed to the pupil for practice by himself." Special emphasis is laid upon the point that "It is not, by any means, our aim to set up a new method of piano playing in general, or to supersede or oppose any method already established; but on the contrary, to form a *Supplement to all Methods*, and to call attention of unprejudiced experts to a manner of practicing, and *not of executing*, which hitherto has not been attempted, and from which the author has obtained the best results.

"For the indolent or weakly students of music this method is, of course, not adapted. Perseverance and a certain amount of strength are nowadays necessary to everyone who desires to carry piano playing beyond mediocrity. Nevertheless, that perseverance and earnest striving accomplish more than strength alone, has been proven by the great artists Bülow and Tausig, who, with slight bodily frame and small hands, have done such wonderful things."

They were driven to "overcompensating" for a feeling of inferiority in the prose of Western psychology. The more poetic and more ancient wisdom of the East would see the thirst for knowledge and desire to perpetuate the beautiful which transcended any physical limitations. There seems to be a spirit of warm cooperation upon the part of an unknown force which is extended in the first moment we cease to feel sorry for ourselves and start to work. A fierce concentration of all the mental and physical resources upon achieving a single object is the true supplement to all methods.

## PEABODY CONSERVATORY BALTIMORE, MD.

OTTO ORTMANN, Director

One of the Oldest and Most Noted Music Schools in America.

### THEY MADE THEIR OWN ROBES

When you have a choir of two hundred and forty singers to costume, the expense is considerable. Here are the ladies of the Zion Lutheran Church of Fort Wayne, Indiana, busy making the gowns for this immense church choir. Members of the five church choirs rehearse from one to three times weekly; and the progressive director, George Gehard Arkebauer, conducts nine rehearsals a week. The choirs are robed in maroon cassocks, with eggshell surplices, and present a most impressive appearance at the church services. Larger works, such as the Bach "St. Matthew Passion," are scheduled years ahead for performance and are kept in rehearsal for one, two or three twelvemonths. Great attention is given to the tonal quality of the choirs and to the serious religious significance of the music.

## Romantic Music of Other Days

(Continued from Page 712)

at rest, with the inherent warmth of their tone.

Bernard Shaw once described the tone of the viola, (which followed the viole d'amour at a certain concert) as "a mouthful of margarine after a mouthful of honey." The viols' may be said to have a tone rich as butter; which would mingle much better with honey. But the characteristic "buttery" tone of the viols is vulgarized by indiscriminate vibrato; it is like adding cream to butter.

### As Treasures Multiply

"THE VIOLS," explains Mrs. Dolmetsch, "must not be confused with the viole d'amour, which, like the lyra da braccio, is held like the violin. The viols are made to be held between the knees, no matter what their size—from bass to treble. In trying to hold the smaller ones like violins, as some do, their tone and style are spoiled, as one must use violin bowing in this position. The viols have a different type of bow which until fairly recently was generally used for the double bass, which is a member of the viol family, and not a large sized violoncello." Mrs. Dolmetsch then goes on to explain the tuning of the viols, in fourths and thirds, and not in fifths like the violin family. "The viols have from five to seven strings, and these lie at a more obtuse angle to one another and on a flatter bridge than on the violin. Hence the bowing must be different from violin bowing, in order to insure clean and sonorous playing, and the very delicate phrasing and nuance required for the contrapuntal viol fantasies."

"What is meant by a consort of viols?" someone asks.

To which Mrs. Dolmetsch replies, "It may mean either one of two things; the group of players forming a consort, or the set of instruments used, which, for a full consort, usually meant six. But the Elizabethan and Jacobean composers often wrote for five, four, three and even, occasionally, for two viols."

"What sizes would be included in a full consort?" inquires another.

"The treble, alto or tenor and bass, two of each," beams Mrs. Dolmetsch.

"And what of the viole d'amour—is it a true viol?" asks a third.

"Of a sort," patiently responds our hostess, "but its origin is somewhat different. It derives from the lyra viol and the viola da braccio (arm viol, precursor of the violin). The viole d'amour has six or seven playing strings tuned to the chord of D major, and an equal number of 'sympathetic' strings tuned to vibrate with the bowed ones. Hence its haunting quality. But it has a very limited literature."

### With Queer Exotics Added

NOW OUR EYES, ACCUSTOMED to the gentle light, have rested on several other instruments about the room, on the walls and on the shelves—instruments which appear strangely exotic.

"Those must be oriental?" by one wafting a hand towards a group of curious instruments.

"Yes, but these are from Morocco, and here are some from India. This shawm is from Arabia; it has a very piercing tone. And here is an instrument—the serpent—invented in the seventeenth century by a French priest, which was widely used in Church music and military bands until early in the nineteenth century, and even, to an extent, by the classical composers. But the French devised a set of keys to facilitate fingering, as the stretches between the holes are very wide, as you see. The English continued to use the keyless type in village bands and country churches, until fairly recent times," and Mrs. Dol-

metsch lifted the curious black tube with its serpentine curves from its peg on the wall.

"Why, its mouthpiece is like that of a trombone," observes a young student.

"Yes," explains Mrs. Dolmetsch, "the keyed type developed into the ophicleide which superseded it in the orchestra; now we would generally use a bass tuba for these parts."

### Then Enters Dreamer, See

SUDDENLY THE SIDE DOOR OPENS and host, Arnold Dolmetsch, appears, his black eyes gleaming, as he smiles a welcome. He walks with a cane; his flowing beard and hair are almost white; his manner is cordial and animated. Greetings are exchanged and we are invited to ourselves with the family around the table for tea. Cecile, Mrs. Ward, who come in almost unnoticed and had been quietly working at a job of lettering, and puts away her brushes. Natalie, Mr. Carley, helps to bring in the tea things, thin slices of brown bread and butter, homemade cakes and jam. Three years ago Marie-Louise, her little daughter, about the room, dancing with marvelous unconscious grace and humming little tunes. Soon twelve year old Christopher Dolmetsch Ward comes in, and after being presented to the guests, pops down at the spinet and plays an old English dance for his fair cousin. He is followed in a few moments by his younger brother, Arnold, his grandfather's namesake. Sons, Carl and Rudolph Dolmetsch, their wives live at some distance from "Jesses" and consequently are not present so often at tea as Cecile and Natalie, their families, who live nearby. And Grandfather loves to have the children about, for course they receive much valuable instruction from him in incidental, informal way until they are old enough for regular lessons. Christopher has already made excellent beginning on the virginals spinet, and Arnold on the recorder.

### We Feast and Reminisce

AT LAST EVERYONE IS SEATED round big table, and Mrs. Dolmetsch lifts the cosy from the teapot and pours. The fragrant steam puts all at ease and conversation flows. Little Marie-Louise prattles everyone in childish French; the boys speak politely in excellent English. Mrs. Dolmetsch and I speak now in one, now in the other language. Mr. Dolmetsch speaks to us in English.

"So you are Americans?" smiles our host. "We were so happy in America, Mrs. Dolmetsch and I. Rudolph and Cecile were little ones then."

"Yes," affirms Mrs. Dolmetsch, "Americans are a very fine people—friendly, so hospitable, so quick to recognize merit—in everything."

And between them they go on with reminiscences of friends in or about Boston; summers at Byrdcliffe, near Woodstock, New York, at the famous Arts and Crafts colony founded by Ralph Waldo Emerson, American follower of William Morris; work for Chickering & Sons, whom Mr. Dolmetsch, between 1905 and 1911, built clavichords, virginals and harpsichords, and a few pianos of the Beethoven period type.

When they learn that we have studied with Madame Helen Hopekirk, in Brookline, Massachusetts, they nearly embrace us.

"Ah!" exclaims Mr. Dolmetsch, "this is a wonderful woman and a rare musician!"

"One of our very best friends in America," puts in Mrs. Dolmetsch. They are delighted to hear that we left Mme. Ho-

rk quite well and very busy with teaching and coaching.

"Alwin Schroeder, the violoncellist, was another warm friend in Boston," and Mr. and Mrs. Dolmetsch relate to us over the tape how he and Mme. Hopekirk had played Mr. Dolmetsch's "Ten Pieces For Violoncello and Piano," reading them at night at Mme. Hopekirk's house one Sunday evening.

"It was at Mme. Hopekirk's that I first made the acquaintance of one of your clavichords," I venture.

"Yes? She was very appreciative of my instruments and I loaned her one."

Mr. Dolmetsch's face glows with enthusiasm. "She liked to play 'Das Wohltemperirte Clavier' on the clavichord."

"And she made me play on that little clavichord several times when, as a girl of my teens, I studied the piano with her. I was often very nervous at lessons and would play badly, but playing the clavichord for a few minutes seemed to cure me of 'nerves.' It steadied and refined my touch. Every piano teacher should have a clavichord or a spinet in the studio." And at this all laugh heartily, young Arnold nearly spilling his tea.

The piles of bread and butter and the heaps of cakes have disappeared; and, tea being over, we are invited to the studio to hear a recorder practice, and afterwards to view a private "documentary" color film which was made by London friends of the Dolmetsch's at last summer's festival—"just for the fun." We are conducted through a long passage past the kitchen and scullery and their various mysterious precincts, eloquent of centuries of English farm housekeeping, and then, over a sort of bridge, we pass into the studio, which closely adjoins the sprawling farmhouse. Here are dozens of instruments of all kinds. There is a raised platform at one end of the room for the performers at rehearsals and private recitals.

### The Charm in Preparation

RECORDER REHEARSAL is in progress, conducted by Carl Dolmetsch, who, after greetings, urges us to be seated and listen. There are four players in this consort, each with a different size of recorder—descant, treble, tenor and bass. How sweetly the tones blend—it sounds truly angelic! They are doing some Bach *Chorales* which Carl has arranged for four recorders. We lose all track of time as we listen. Mr. Dolmetsch now and then gives the players a suggestion, frowning and shaking his head if it is not done to his satisfaction; smiling if it is broad, beaming smile if the passage pleases him. Phrasing, articulation, the proper execution of graces, balance and quality of tone—all these things he keeps constantly before the players' minds.

### When Past and Present Meet

ALMOST BEFORE WE KNOW IT, it is six o'clock and the friends with the color film have arrived from London. Chairs are placed in rows, a screen is improvised on the platform; neighbors troop in and soon the studio is filled with an expectant audience. Little Marie-Louise sits on her grandmother's lap and chatters excitedly in French. Christopher and young Arnold come in with their father, Mr. Ward; and Mr. Carley, father of Marie Louise, soon joins them. They have just finished work in the instrument-building shop nearby. Now the lights are turned out and the show is on.

First we see a garden party of festival guests at the Georgian Inn. The flowers are gorgeous in the bright sunshine of a perfect July afternoon. All is gaiety and animation at the tea tables set out under the trees; but in a remote spot behind the garden a group of recorder enthusiasts is getting together for an out of door concert. A touch of humor is added when someone, for a joke, throws pennies to the players, who have been taking them-

selves very seriously. They at once stop playing and run pell-mell after the pennies, laughing hilariously.

Now comes a scene in the back garden at "Jesses"; an out of door rehearsal of the Dolmetsch family is in progress. Mr. Dolmetsch, in a richly embroidered robe and cap, is seated at the clavichord and plays for little Marie-Louise to dance. Young Arnold does a turn on the recorder. Various other members of the family are shown, and the film ends with *Grandmère* standing near the clavichord with the little girl in her arms, and *Grandpère* smiling up at them from his seat before the instrument, as his fingers pass deftly over the keys. We can almost hear the tones as we watch.

After the film is over Christopher goes, quite impromptu, to the spinet at the back of the room, and plays the tune his grandfather had been playing in the film—a lively dance called the "Scotch Brawl."

### Last, Lingering Moments

WE NOW MUST LEAVE our kind hosts and their friends, and arrange to come again to visit the shop and see some of the instruments being made. We also want to ask more detailed questions about the recorders and other types of instruments—the rebecs, lutes, and vihuelas intrigue us particularly, and we would like to know their relation to the viols and virginals, and to the instruments of today.

Descending the path, we retrace our steps to the town where dinner awaits at our inn. The soft, sweet air, the brooding quiet of the surrounding hills, the exhilaration of the afternoon's experience, these have put us into a rare mood.

"That man and his good wife and family—they are doing more for human happiness than politicians and armies," one is moved to exclaim. "But what honor do they receive?"

"Ah!" interposes another. "I am glad to tell you that Mr. Dolmetsch has recently received the degree of Doctor of Music from Durham University. Besides he has been granted a civil pension by the British Government in recognition of his services to English music; and France has awarded him *Le Croix de la Legion d'Honneur*. This was presented to him at his eightieth birthday celebration concert in London, February 24th, 1938."

"So that was what I saw gleaming on his coat lapel?" asks the student.

"Yes," we assure him, "he is very proud of it. Do you blame him?"

"No; it is very natural," one replies.

"He has had a tremendous struggle, against ignorance, prejudice, narrowness of outlook and jealousy on the part of some who might have been expected to take a different attitude," we continue. "Such seems to be the fate of the man of originality, the breaker of new paths—even when they lead back to the old."

"But it is to new beauties," we assure her; "new to us, because they had been forgotten and out of fashion."

"And yet, how much the Renaissance music has to tell us today. It seems to speak with the same voice as that of our best modern composers."

We are at the inn door—and soon are partaking of a real English country meal. The comfort and dignity of this hospitable inn warms our hearts and induces serene reflection on the afternoon's notable experience, as we sit after dinner by a crackling fire. We feel that we have entered a world of real living, and indestructible values.

Presently the grandfather clock on the stair landing chimes ten, and we retire to our quaint but comfortable bedchambers, soon to fall into a sound, sweet sleep; and if we dream at all it will be of the gentle viol, "of flutes and soft recorders"—and of the dulcet clavichord upon whose lid Arnold Dolmetsch has had inscribed:

"PLUS FAIT DOUCEUR QUE VIOLENCE."

1867—Seventy-Third Year—1939

# CHICAGO MUSICAL COLLEGE

RUDOLPH GANZ, President

Member of the North Central Association of Colleges and Secondary Schools; Institutional member of the National Association of Schools of Music.

A Professional school of music conferring accredited Bachelor and Master of Music Degrees with major in Piano, Voice, Violin, 'Cello, Organ, Orchestral Instruments, Musicology, or Composition.

Faculty of internationally and nationally famous artist teachers.

Student aid available to a number of deserving students.

Answering Etude Advertisements always pays and delights the reader.

"No musician can any longer hold himself as one of a race apart; he must act in close cooperation with other men, bound together with them 'by a connecting tissue of mutual ministrations.' And, the musicians of our own time must show that they are men of reading, men of thought, if for no other reason than that in their work they will be thrown increasingly into contact with those of other professions and occupations."—Stewart Macpherson.

## Practical Aids in Getting Pupils

(Continued from Page 698)

At the conclusion of the recital, it is well for the teacher to say a few words of praise for the young performers and of pleasure in the attendance of the guests of the evening. Whenever the occasion arises, one should take advantage of the opportunity to say a few words which will appeal to one's audience.

Joint recitals may be given. In these days of competition, every means has to be used to create friendliness among the various teachers of the community. Gestures of broadmindedness and friendliness on the part of the young teacher will not fail to enlist the support of other teachers of the community; and, if they are willing to undertake a joint recital, so much the better. In such an event, each teacher may have his most advanced pupils appear to

deliver a few interpretations. Their names may be announced at the time, or be printed on formal programs.

Diplomacy should be observed in general conversation. When asked about the advancement of students in his class, the teacher should endeavor to give an answer which when repeated may return to the student and his parents in an encouraging form. These remarks usually are repeated in family conversation.

A few indirect words of encouragement will increase the teacher's own popularity and will encourage the student to do better. It has been observed that dull students often surpass their previous efforts in an attempt to live up to their teacher's opinion of them.

(To be continued next month)

## Success in Voice Study

(Continued from Page 696)

whether he sells neckties, fire insurance, or sings in a radio chorus. He can study after hours, Saturday afternoons, and all day Sunday.

As soon as possible, a student should find opportunities of singing in public. Let him sing anywhere and everywhere. The value of singing as frequently as possible, and to as many different kinds of audience as possible, cannot be overestimated. Such appearances will teach him poise, assurance, stage presence, and all the myriad little details which he cannot get in his teacher's studio. It is priceless experience and will soon give his work that much desired "professional" stamp. Church work is excellent training for the student, and for this purpose two churches are better than one. Let him sing in a synagogue on Saturday and some other church on Sunday. Too many students lament the lack of opportunity, yet are unable to grasp such opportunity when it does present itself, solely because they lack the assurance which a series of minor appearances would have given.

### The Fateful Audition

My FIRST PROFESSIONAL ENGAGEMENT came as a result of just such preparation. With about a hundred other young hopefuls, I attended an audition for what was supposed to be chorus work. After we sang, those who were presumably better than the others were asked to stand at one side and wait. When the rest had been dismissed the remaining few sang again. After my number the judges said, "Very well, you will sing *Strephon*, the lead in Gilbert and Sullivan's *Iolanthe*." That was with the venerable Savoy Opera Company, in Philadelphia, which has supplied opportunity to many an aspiring young professional. There were plenty of fine voices there that day, but their owners got panicky and went to pieces. Had they accustomed themselves to singing to strangers, in unfamiliar surroundings, they, too, would have wound up with a contract instead of a curt "thank you."

Another self-imposed handicap is the desire to specialize. A singer with operatic ambitions objects to acquiring a repertoire of concert songs, and *vice versa*. One announces, "I am going to be a *lieder* singer"; another, "I shall be a Debussy exponent"; or, "I shall do nothing but Negro spirituals." A student should not specialize in anything. Instead, he should acquire a good working knowledge of all styles, all schools; and later he may be justified in concentrating upon the one thing which experience has proven he does best.

The one thing, which everyone should realize and bear in mind through all his student years, is that talent alone is not

enough. To succeed in music, one needs a strong artistic sense, a good business sense and an uncommon amount of common sense. Not only must one develop himself to the nth degree, but also he must be always mentally alert and quick to recognize and to seize opportunities. One needs to develop tact and the ability to get along with people, and to be constantly aware of his own shortcomings.

My own worst fault was laziness. I would always rather "just sit." But I did have the sense to realize this and to do something about it. I realized that, if I were to be a singer, it must be a good one. That meant drudgery; but I forced myself to it. This was harder for me than for most persons, for I was not naturally musical. As a child I had had piano lessons and had hated them bitterly. But, when I finally changed my mind about music, I did so completely. I indulged in no "arty" theorizing or temperamental posturing; and I approached the matter as sanely as possible and worked harder than ever in my life.

The American student's greatest asset is his extraordinary enthusiasm, his sincere belief that he can do anything possible to anyone else. It is true that in an earlier paragraph a too optimistic outlook has been decryd; but, fundamentally, these two statements do not contradict each other. It is the optimism that induces the smug, cocksure attitude that is there denounced, but there is a wide difference between that and the faith that creates intelligent self-confidence.

### The Yankee "I Will"

AS SAID BEFORE, TALENT is not enough. The world is full of singers who have plenty of talent, but who are not getting anywhere. To succeed in music, one must have either a tremendous love of it, or be motivated by a driving power so great that it will surmount all the obstacles, all the dull grind, all the disappointments and heartaches that intervene between the tyro stage and the finished artist. Sometimes this great drive is prompted by other than exalted motives. Frequently it originates in vanity, a desire to outshine some other artist, or to make an impression in certain quarters; and perhaps this spirit of competition is responsible for more successful careers than any almost other single factor. On the other hand, more singers fail because of defects of judgment and temperament than through any lack of ability.

All of which should be encouraging to the young student; for, with all that has been herein said, is the honest conviction that there is nothing wrong with him—other—which a little common sense would not speedily correct.

# Publisher's Notes

A MONTHLY BULLETIN OF INTEREST TO ALL MUSIC LOVERS

## Advance of Publication Offers

—November 1939—

All of the books in this list are in preparation for publication. The low Advance Offer Cash Prices apply only to orders placed Now. Delivery (postpaid) will be made when the books are published. Paragraphs describing each publication follow on these pages.

|  |        |
|--|--------|
| CLASSIC BAND BOOK—LEIDZÉN                                |        |
| Parts, Each  | \$0.15 |
| 5 or More Parts, Each                                    | .10    |

## HOLIDAY GIFTS FOR MUSIC FOLK

With the approach of the Christmas Season, the thoughts of many are upon the form of their annual remembrance to loved ones will be. Those who number among relatives, friends and acquaintances folk who are musically inclined, naturally feel that something of a musical nature, or suggesting music, would be appropriate.

There are so many fine volumes of music of all classifications, and books on musical subjects, that selection of a pleasing gift is no trouble. Maybe a piece of musical jewelry would please some young student of piano or other instrument. There are available miniatures of the piano, violin, cornet, trombone, saxophone, etc., at 30 cents to 60 cents. Other musical decorations in jewelry, from 15 cents to \$2.00 in gold, sterling silver, gold filled, gold and silver dipped. A complete catalog of musical jewelry will be sent free on request.

Then there is the ever-popular musical calendar, used both as a Christmas and New Year's remembrance by thousands of music lovers. These usually sell at 10 cents, \$1.00 dozen. About Thanksgiving Day the publishers will issue *Presser's Annual Holiday Booklet* containing many interesting suggestions in music gifts for music folk. The 1940 Calendar will be described in this publication as will many volumes of music books on the subject. If interested, be sure to send for your copy of the booklet early, as the supply is limited.

## THE COVER FOR THIS MONTH—

Since there is in this issue of *THE ETUDE* a very interesting article on the Dolmetsch family, this paragraph will be confined to a few brief facts for those who want scrapbook information to tie-up with the design used for *THE ETUDE* cover.

The name Dolmetsch is associated, by informed music folk throughout the entire world, with music and musical instruments of the 17th and 18th centuries. Arnold Dolmetsch was born at Le Mans, Maine, France, February 24, 1858, the son of a maker of pianos. He studied piano playing and violin playing, and showed so much talent with the violin that his father gave him the opportunity to go to Brussels and study under the famous master teacher Vieuxtemps.

Later, he became a teacher of violin at Dulwich College, but eventually gave up teaching as the study of antique musical instruments and music of the 1600's and 1700's led him to give lectures and recitals on ancient music and ancient instruments. With his wife and a pupil, Kathleen Salmon, he formed the Dolmetsch Trio. This Trio used the viola d'amore, the viol da gamba, and other members of the violin family as well as the virginal, spinet, harpsichord, and clavichord. In later years his daughter, sons, and grandchildren augmented the Dolmetsch playing group so that to-day reference usually is made to the "Dolmetsch family." The Dolmetsch family long has been in London, but in the period from 1902 to 1909 Dolmetsch resided in Boston, touring the United States, and lecturing at Harvard.

There are several societies of ancient instruments in this country, one of the most noted being the Society of Ancient Instruments founded by Mr. Ben Stad in Philadelphia.

## SIDE BY SIDE, A Piano Duet Book for

*Young Players*, by Ella Ketterer—The frequent use made by practical teachers of the piano duet in the first and second year of the young pupil's piano lessons creates a lively demand for economically-priced collections of such numbers. The author of this book, a most successful teacher and composer, knows the value of piano duets. She realizes that if they are to teach rhythm, they also must present an interesting variety, not only of rhythms, but of melodies and harmonies. Both duet parts should be well within the playing capabilities of the performers and wherever possible both parts should be of equal interest.

For variety Miss Ketterer has included in this collection of ten short duets a descriptive piece with bell imitation, a Spanish dance, a May Day dance, two marches, an elephant title with *secondo* melody, a grand procession, a 6/8 time number, a staccato piece and a lullaby. Variety in tonality has been achieved by use of the Keys of C, G, F, B-flat, D, A Minor and G Minor. The parts are within the five-finger position, with a few optional octaves indicated for pupils with large hands.

The special advance of publication cash price is 30 cents, postpaid.

**CHRISTMAS MUSIC**—Already many choirmasters have selected the music numbers for their Christmas Programs and it is time for all others, who for some reason or other have not been able to give thought to their Christmas plans before this date, to take immediate action.

We have two first steps to suggest. One is to write the Theodore Presser Co. immediately asking that a selection of whatever classes of Christmas Music are desired—anthems, cantatas, solos, organ numbers, etc.—be sent. Just mention some of the numbers you have been using to give some guidance as to the type of Christmas Music you would like "On Approval"; tell something of the ability of your choir, and whether any certain solo voices must *not* be a requisite to the rendition of any anthems submitted. The other first step is to send a postal request for our folders on Christmas Music, so that from these lists you may select numbers that you would like to have sent "On Approval".

It is most natural that the Theodore Presser Co. would like to have the opportunity of serving choirmasters on their Christmas Music needs, but more important than this is the friendly reminder to choirmasters, no matter from what source their Christmas Music is to be obtained, that there be no delay in taking steps to choose music now.

**AT THE CONSOLE, A Collection of Pieces for Home and Church Arranged from the Masters with Special Registration for the Hammond and other Standard Organs**, by William M. Felton—This work,

now in the course of preparation, will prove to be a most interesting and practical volume for the performer on the Hammond and other electric organs, as well as for the organist at the console of the standard instrument.

Each number in this volume has been carefully selected from the great storehouse of melodies which the masters have bequeathed to music lovers and many of them, originally written for instruments other than the organ, or for the voice, will be found to be strikingly effective in the organ transcription.

The contents will include arrangements of medium difficulty from the works of Bach, Handel, Mozart, Beethoven, Liszt, Bizet, Grieg, Tchaikowsky, Pierné, Chaminade, and Durand, with the addition of several well known folk tunes.

The music will be engraved on three staves with a limited and practical range for the pedal parts. In addition to the Hammond registration for the pre-set and harmonic drawbar combinations, the approximate tone color for the standard organ will be suggested by the corresponding stop.

Single copies of this new book may be ordered now at our special advance of publication price of 75 cents, postpaid. Copyright restrictions compel us to confine the sale of this book to the U. S. A. and Its Possessions.

## POEMS FOR PETER, by Lysbeth Boyd

*Borie, Set to Music by Ada Richter (A Book of Rote Songs)*—When children enthrall over poetry sufficiently to create a demand for it, it goes without saying that it possesses human interest. The book, *Poems for Peter*, by Mrs. Borie, and its successor, *More Poems for Peter*, were written for her young son, each subject having been suggested by actual happenings and sayings, which is why they ring so true to real life and why they appeal so strongly to both old and young. After a perusal of the contents one is struck by the marvelous variety of interesting things there are about common objects and ordinary happenings if one only has the faculty of noticing them.

Mrs. Richter, with her acute sense of simple melody and her large experience in writing music children like, has given charming musical settings to a number of these little poems. They will prove valuable as material in early school grades as well as in the home and general recreation activities.

Some of the titles chosen: *Who Do You Suppose?*, *Too Expensive*, *Too Salty*, *Peter Family Tree*, and *Only Just Me*.

Those wishing to obtain single copies of this book at the advance of publication cash price of 50 cents, postpaid, may remit now and receive copies as soon as the book is published.

**OUT OF THE SEA, An Operetta for Children. In One Act. Book and Lyrics by Ethel Watts Mumford, Music by Lily Strickland**—Juvenile operettas are ever in demand and the response to the announcement of the forthcoming publication of this playlet has been most encouraging to author, composer and publishers. Youngsters take a keen delight in "play-acting," and parents, friends and relatives enjoy their performances. Assured of large and enthusiastic audiences grade school teachers willingly undertake an operetta presentation when an appropriate vehicle can be obtained.

The mere plot of this juvenile operetta is fascinating, and teachers may rest assured that both author and composer have made the most of it—the former in a witty telling of the story, the latter in the tuneful music she has composed for the lyrics. Imagine a couple of little "earth children" meeting Neptune, Undina and other sea inhabitants and having an aviator "from a real airplane" come to their rescue. Of course, the staging is not difficult, or nearly as expensive as the story sounds, but it and the costuming can be made quite attractive. The music contains several beautiful melodies and the choruses are arranged for unison singing, with some two-part work indicated if the group is capable of doing it.

The Vocal Score of *Out of the Sea* includes the entire text and music, together with full directions for staging and costumes and for the dancing numbers that will do so much to enliven the performance. In advance of publication a copy of this score may be ordered at the special cash price, 35 cents postpaid.

## SYMPHONIC SKELETON SCORES, A Listener's Guide for Radio and Concert, by Violet Katzner—

- No. 1 Symphony No. 5 in C Minor Beethoven
- No. 2 Symphony No. 6 in B Minor Tchaikowsky
- No. 3 Symphony in D Minor Franck
- No. 4 Symphony No. 1 in C Minor Brahms

For those who delight in listening with understanding to the playing of the masterpieces of symphonic literature this new series should prove a great help. First of all, each explains, verbally and graphically, symphonic forms in general; then the form of the symphony covered. The work is then presented in an unbroken melody line, no matter to which instrument the melody is assigned in the playing of the composition. Of course, the entrance and the progress of the various instruments are indicated. This form of presentation makes for quick coordination of eye and ear and makes possible intelligent comprehension of the work as it is being played.

Folk who have not had the advantage of a thorough music education readily can follow these scores; even trained musicians will find them interesting. Many leading music clubs and teachers' associations have given their approval of these books and predict the widespread use of them. With radio broadcasting programs and phonograph recordings these skeleton scores should prove most helpful.

Each symphony mentioned will be published in a separate book and copies of each of the four may be ordered now at the special advance of publication cash price, 25 cents postpaid. An order for the set of four may be placed for 90 cents postpaid.

## CHILD'S OWN BOOK OF GREAT MUSICIANS—DVOŘÁK, by Thomas Tapper—

Of all the great masters, Dvořák probably is closest to the American music loving public, not merely because he lived and taught here, or because his *Symphony from the New World* contains themes based on American airs. His pupils, even today, are noted in the educational field and his compositions, such as *Humoresque*, the *Slavonic Dances*, *Songs My Mother Taught Me*, and *Goin' Home*, from the "Largo" of the above symphony, are played and sung everywhere.

American children who later will be taught this composer's works in chorus, band and orchestra, and who today enjoy them in music appreciation classes through phonograph records, or in radio broadcasts, should know something of the man, his life and musical

(Continued on Page 756)

experiences. And Dvořák's life story is an inspiration to young students. His genius, his early struggles, his devotion to the musical advancement of his native Bohemia, all are fine things for young folk to know.

As with the sixteen previously published booklets in this series the child first reads the story, then pastes in specified places the "cut-out" pictures that accompany the book, after which he writes the story in his own words, and then binds the book with the cover, silk cord and needle provided with each copy.

The regular price of each of the sixteen previously published booklets in this series is 20 cents. (Descriptive folder sent FREE on request.) While this Dvořák booklet is in preparation single copies may be ordered at the special advance of publication cash price, 10 cents postpaid.

**JACK AND THE BEANSTALK, A Story with Music for the Piano, by Ada Richter**—The author, with a background of success as a teacher of classes of very young children, has developed in recent years a flair for composing the most delightful little pieces and songs for them to play and sing. She also has displayed remarkable talent for making easy arrangements of familiar melodies that bring these tunes within the playing ability of tiny tots just getting a start in music. *My First Song Book* (75c) and *Play and Sing* (75c) are examples of her clever arrangements. In the field of original composition she has given youngsters something most appealing in the clever *Cinderella, A Story with Music* (75c).

*Jack and the Beanstalk* is another such offering, based on a well known tale of childhood. In the first place it is a story to be told with music accompaniment in kindergarten and primary grade classes; it may be used as a collection of easy-to-play piano pieces; the illustrations, on every page, may provide "busy work" in coloring while the teacher is momentarily engaged with other pupils; finally, the story and music may be presented as a little play for presentation at recitals or on school visitation programs.

The book will be published in the convenient oblong size, 12 x 9 inches, and while it is in preparation orders for single copies may be placed at the special cash price, 25 cents postpaid.

**THE THRESHOLD OF MUSIC, A Layman's Guide to the Fascinating Language of Music, by Lawrence Abbott**—Why should any intelligent individual have limited his enjoyment of music when it is possible, through the reading of a book like this, to learn things that will enlarge the enjoyment of the good music heard over the radio and at concerts? The author of this book, in his position on the National Broadcasting Company staff, has assisted in the Dr. Walter Damrosch programs, and through the fan mail on this famous program, as well as upon other programs, he discovered that many were being hampered in getting the most out of the programs they enjoyed.

What most of these individuals need is just the information that is put forth in this book. The author does not attempt to make composers or train the reader to write harmony, but he does give an insight into harmony and other things that bring the listener into a closer relationship with the great musical compositions that delight the ear.

Regular readers of *THE ETUDE* had the opportunity to read the material presented in this book in the series of five articles by Mr. Abbott that ran in the magazine over a number of months. Undoubtedly, many readers will welcome the chance to have this wealth of enlightening musical information in book form and most certainly lovers of good music, who do not have the technical knowledge of those who have studied music seriously for professional reasons, will get much through obtaining and reading a copy of this book.

The broad scope of the book can be appreciated in the quotations and examples used from the works of the master composers, from the writings of composers of light opera and salon music, and from the modern popular efforts of such composers as George Gershwin and others. The advance of publication cash price is \$1.25 postpaid.

**MELODIES EVERYONE LOVES, A Collection of Piano Pieces for the Grown-Up Music Lover, Compiled and Arranged by Wm. M. Felton**—It is always a satisfaction to find a collection of piano music in which the selections are varied, melodious, and so interesting that we have no sense of finger-fatigue from the effort of learning them. Such a book is the one above mentioned. It should appeal equally to good players seeking occasional recreation from the strict routine of technical study, and to those who in their youth may have had only time and opportunity enough to learn to play medium grade piano pieces.

In *Melodies Everyone Loves* will be found compositions by such classic writers as Tchaikowsky, Rossini, Moszkowski, Gounod, Weber, etc., and such writers of lighter music as Strauss, Waldteufel, Chaminade, Drigo, Delibes, Nicolai, Gabriel Marie, Gillet, Massenet, etc. In difficulty none of these selections exceeds the fourth grade, and some are easier.

From the wealth of material in *Melodies Everyone Loves* we can please every taste. There is music from the classic, modern, and romantic schools, from grand and light operas, from the standard symphonies, and miscellaneous material of all kinds from all sources.

Each selection has been edited and fingered with great care, due attention being paid to phrasing, dynamic marks and pedaling. The notation is clear and readable throughout, causing little or no strain on the eyes.

The low cash advance of publication offer for *Melodies Everyone Loves* is 40 cents, postpaid, copies to be forwarded upon publication. Copyright restrictions make it necessary for us to confine its sale to the U. S. A. and Its Possessions.

**TWELVE MASTER ETUDES IN MINOR KEYS, Op. 29. For Piano, by Franciszek Zachara**—Announcement of this forthcoming addition to the *Music Mastery Series* has created considerable interest among teachers and advanced students of the piano.

Realizing that the works of modern and contemporary composers require a special technique, they feel that modern etudes, written by an outstanding contemporary authority, himself a concert pianist of repute, should prove especially effective in producing the desired facility. While the works of Bach, Chopin, Moscheles, Cramer, etc., ever will be in demand for students from grade 6 up, the use of more modern works can be made with profit to the student, if for no other reason than to furnish a bit of variety.

The composer of this work for years has made successful appearances in concert in addition to his college teaching. He knows the needs of advanced piano students and his *Opus 29* not only supplies valuable study material but gives playable etudes that reveal his inventive and melodic gifts, set off by fine musicianship. They provide the student with work in octave and chord playing, scale passages, intricate rhythm designs and other problems.

In advance of publication a copy of this work may be ordered at the special cash price, 20 cents postpaid.

**ALL-CLASSIC BAND BOOK, For Young Bands, Arranged by Eric W. G. Leidzén**—One of the most frequently used publications in the Theodore Presser Co. Catalog of Orchestra Music is *Little Classics Orchestra Folio*, a collection of miniature gems from the great masters presented in arrangements playable by young people's orchestras of limited experience. The list of contests, selected from some familiar works and others of merit, but not so well known, has been enthusiastically acclaimed by many leading educators.

Using practically the same thematic material, Mr. Leidzén has made, for this book, band arrangements that will provide excellent program and study pieces for first year bands.

The instrumentation will take care of all of the instruments in the modern school band: C Flute and Piccolo, D-flat Piccolo, E-flat Clarinet, 4 B-flat Clarinets, E-flat Alto Clarinet and B-flat Bass Clarinet, Oboe, Bassoon, 2 E-flat Alto Saxophone parts, B-flat Tenor Saxophone, E-flat Baritone Saxophone, 3 B-flat Cornet parts (one of which may be used for B-flat Soprano Saxophone), 2 Horns in F, 2 E-flat Alto Horns, 3 Trombone parts

(Bass Clef), 3 Trombone parts (Treble Clef), Baritone Euphonium (Bass Clef), Baritone Horn (Treble Clef), Bass Horn, Tympani, Drums, Conductor's Score (Piano).

Band leaders, especially school music educators in junior and early senior high grades, may take advantage of the special offer now being made and order any desired parts of *All-Classic Band Book* at the pre-publication cash price, 15 cents postpaid, Conductor's Score (Piano) 25 cents. If 25 or more parts are ordered at one time the price is 10 cents a copy. Delivery will be made when the work is published.

**EIGHTEEN SHORT STUDIES FOR TECHNIC AND STYLE, For the Piano by Cedric W. Lemont**—Progressive teachers of the piano realize that variety is a most valuable element when choosing necessary study material for the student's advancement in technical proficiency and musicianship.

"Plenty of practice" is still the formula for success. Youngsters in the first and second grades are given little pieces, sometimes with verses for singing, to stimulate interest and encourage practice. More advanced and older students also will be beguiled by practice material that is melodious.

The author of these studies is known for his many delightful compositions for the piano, for his charming piano suites, and for his valuable contribution to study material for pupils in the earlier grades, *Facile Fingers* (60c). In this new book he presents tuneful third and fourth grade study material covering problems such as: legato and staccato playing, the execution of triplets, octaves, chords, arpeggios, running passages, phrasing, pedaling, left hand melody, finger control, double thirds, double sixths, etc. Written in frequently-used keys the studies are intended for the equal development of the right and left hands.

In advance of publication copies of *Eighteen Short Studies for Technic and Style* may be ordered at the special cash price, 20 cents postpaid. This book will be added to the *Music Mastery Series* of piano studies, priced at 60 cents each.

**WHEN THE MOON RISES, A Musical Comedy in Two Acts, Books and Lyrics by Juanita Austin, Music by Clarence Kohlmann**—If you don't know the meaning among the gypsies of the expression "when the moon rises" we're not going to spoil for you and other folk the thrill of the mystery that is one of the most intriguing things in the plot of this musical. Of course, there's romance, too. What would a musical comedy be without it? To justify the title "comedy," there also are many witty lines and funny situations. But, above all, there is a musical score that while not difficult, should rival some works written for professional performance in the number of song "hits" it contains. The choruses, too, have plenty to sing and, aside from the traditionally-garbed gypsies, they are given opportunity to wear some "stunning" sports costumes, as the locale is a popular Summer Resort hotel. The cast calls for four girls and five men who can sing and three more men for comedy parts.

High school, college and church groups as well as community choruses, will find much enjoyment in arranging a presentation of this modern, up-to-date musical comedy. But one stage setting is required and properties and costumes should entail little expense.

The music is never difficult to sing, and no unusual character parts confront the participants. A Stage Manager's Guide and Orchestration will be available on a rental basis.

In advance of publication a single copy of the vocal score of *When the Moon Rises* may be ordered at the special cash price, 40 cents postpaid.

**THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES**—This interesting and educational ETUDE feature continues this month with 44 portraits and "thumb-nail" biographies of noted contributors to the art of music whose family names begin with the letter "W." A few more months and the entire alphabetical list will be completed.

Starting in the February 1932 issue, this series has continued, with but one or two interruptions, to present monthly a page of

invaluable reference material for everyone interested in music. Many readers have saved every copy, intending to have the complete series bound for ready reference. Fortunately the publishers have taken the precaution have printed additional copies of each page that has appeared, and thus everyone is assured of a complete set even if a copy two of the magazine may have been lost. Copies of any of the previously published pages may be had at 5 cents each.

While musicians whose memories give them many happy recollections of musical joy treasure their copies of this series, students of today, likewise, might give some thought to accumulating a complete set for the reference library they now are building, and some day may prove of inestimable value.

#### THE PUBLISHER'S PRINTING ORDERS

—It would take pages to list each month all of the established music publications which new editions are ordered to replenish depleted stocks. Therefore, space is not given here to the works that have taken more than several seasons to sell out the last edition nor is space used to include many non-copyright publications, such as the works of the master composers, with which every well-informed musician is acquainted. In the limited space here available we have selected the following items from the Publisher's Printing Orders for the last month.

#### SHEET MUSIC—PIANO SOLOS

| Cat. No. | Title                         | Gr. | P. |

**ETUDE PREMIUMS ARE SPLENDID CHRISTMAS GIFTS**—Many of our musical friends let THE ETUDE do their Christmas shopping for them, shopping without any cash outlay. If you have not tried this method before, start now. Many attractive articles, appropriate gifts, are offered for one, two or more subscriptions to THE ETUDE. Just canvass your musical friends who are not subscribers and ask them for a year's subscription. Collect \$2.00, the annual subscription price, and forward it to THE ETUDE with your request for the premium desired. The following is a selected list of the premiums offered in exchange for subscriptions to THE ETUDE:

**Carving Knife:** Here is a knife that has an "blade of high quality, extra heavy, Carbon Vanadium Steel, making it especially suitable for carving meats. The handle is nicely polished full tang rosewood. Awarded for securing one subscription, not your own.

**Knife & Fork Set:** A fine set of six stainless steel Knives and Forks, with genuine Marblin non-burn handles—your choice of green, red or onyx. A very practical gift and award. Awarded for securing two subscriptions.

**Pen and Pencil Set:** This Wahl Eversharp Pen and Pencil Set makes a sure-to-please gift. Both Pen and Pencil are finished in black, with gold trimmings, and the set comes in an attractive box. Your reward for securing five subscriptions.

**Electric Alarm Clock:** The Grenader—for desk or dressing table. Sparkling chrome-plated easel type case, with black stripe on base. Two-tone dial. Black numerals and hands. Awarded for securing six subscriptions.

**Pure Aluminum Hot Biscuit Server:** Spun-ay finish outside; vent in cover for regulating and moderating heat. To crisp or freshen biscuits, crackers or muffins. Keeps them piping hot at the table. Awarded for securing two subscriptions.

**Camera:** The new Bullett Camera is novel, attractive, compact. It is a genuine Eastman Camera which means photographic value at its best. Size of Camera closed 4 1/2" x 3 3/4". Awarded for three subscriptions. Send post card for complete premium list.

**CHANGES OF ADDRESS**—When changing your address, notify us at least four weeks in advance, if possible. Give both old and new addresses when notifying us of a change.

**BWARE OF SWINDLERS!**—Again we wish to warn all music lovers of magazine subscription swindlers. Beware of the man who offers cut rates. Do not accept ordinary stationery store receipts. The authorized subscription magazine agency's representative carries credentials. Sign no contract and pay no money until you have read the receipt or contract offered you. Agents are not authorized to change terms. Pay no money unless you are convinced of the responsibility of the agent calling on you. Direct representatives of THE ETUDE carry the official receipt of the Theodore Presser Co., publishers. We cannot be responsible for the work of swindlers.

**A SUBSCRIPTION TO THE ETUDE IS A FINE CHRISTMAS GIFT**—Every music lover welcomes the monthly visit of THE ETUDE. A Christmas Gift subscription is a lasting reminder throughout the whole year of the thoughtfulness of the one who sent it. Besides, the giver is saved all of the inconveniences of Christmas shopping. Simply forward to us the name and address of the music lover whom you wish to favor with a subscription to THE ETUDE, together with remittance of \$2.00. If you wish to make two gift subscriptions, the price is \$3.00. Each additional gift subscription sent at the same time costs only \$1.50. If requested, an attractive Christmas Gift Card, bearing your name as the donor, will be sent to each recipient, to arrive, as nearly as possible, with other Christmas remembrances. Place your order early to prevent the last minute rush, with possible disappointment.

Many persons criticise in order not to seem ignorant; they do not know that indulgence is a mark of the highest culture.—Carmen Sylva.

## Use and Misuse of the Metronome

(Continued from Page 706)

It is essential to divide a work into sections, sentences, phrases, working up each separate phrase as though it were a separate composition.

### The Sense of Security

ONE FORM of "insurance" against nervousness or excitement in public performance is the consciousness that one has played each musical sentence at a higher metronome mark than that to be used in the finished product. If you know you can play a thing at 140 it will cause you no fear to attempt it at 120.

After the slow practice has given certainty and one attempts a quicker speed, it occasionally is well to demand of one's playing apparatus that it perform at that speed in spite of mistakes. But note where

the mistakes were and rectify them, or obliterate them, with a return to slow practice.

The appreciation of the passage of time, with the almost unconscious calculation of its subdivisions, is an essential to any artistic playing or singing. A test of the simplest form of time calculation can be given without an instrument, using a weighted cord, oscillated behind the back of the student.

With the swing of the weight, the teacher counts two measures of three-four or four-four time; then the pupil takes it up (of course not seeing the swinging weight) and counts mentally up to measure seven.

At "7" he speaks the number. When the weight arrives at "7" the teacher calls the number—the difference between the two "7's" showing the pupil how he has gained or lost over the silent metronome.

With this as a basis and with a little practice, accuracy of mind movement can be attained.

## The World of Music

(Continued from Page 692)

DAME ETHEL SMYTH'S opera, "The Wreckers," recently made its bow to the music loving audience of the famous low priced Sadler's Wells Opera House of London. It had its world première at Leipzig, Germany, November 11, 1906; its British première at Her Majesty's Theater on June 22, 1909, under Sir Thomas Beecham; and was heard at Covent Garden on March 1, 1910.

A NEW ORGAN, containing one hundred and eighty stops and fifteen thousand two hundred pipes, has been presented to the Cathedral of Milan, Italy, by wealthy families of Cremona. A large instrument for southern Europe.

CAROLINE B. NICHOLS, nationally known musician and conductor passed away on August 16, at Boston, aged seventy-five. She was conductor of the famous "Fadettes," a woman's orchestra founded in 1888, which gave over seven hundred concerts on tours of the United States and Canada, to which were added two thousand programs at summer resorts and public parks.

THE GREGORIAN ASSOCIATION of London held its sixty-ninth anniversary festival on June 22nd, at St. Paul's Cathedral, with a chorus of six hundred voices contributed by some fifty London choirs.

FOR THE TRANSLATION INTO SPANISH of the librettos of "Il Matrimonio Segreto" by Cimarosa, "Le Nozze di Figaro" by Mozart, "Tannhäuser" by Wagner, and "Der Rosenkavalier" by Strauss, the National Council of Theaters and Concerts of Madrid is conducting a competition.

THE PRIX ALBERT ROUSSEL had its first award at a recent competition in Paris, with the composer's "Concerto for Piano and Orchestra" as the contested number. The prize of ten thousand francs went to Lelia Gousseau.

HAIRS OF STAINLESS STEEL, for violin bows, are reported to have been invented by Joseph Primavera, widely known violin maker and repairer of Philadelphia. Approximately five hundred of these, instead of the usual one hundred and ten horse hairs, are used for filling a bow, with only about one-third the weight of the latter.

THE SECOND LUCERNE (SWITZERLAND) FESTIVAL opened on August third with Arturo Toscanini conducting, in the Villa Triebtschen of hallowed Wagner memories. He led also two interpretations of the "Manzoni Requiem" of Verdi, and a second orchestral program with his son-in-law, Vladimir Horowitz, as soloist.

THE ANNUAL FESTIVAL OF CHURCH MUSIC was given on June 9th, 10th and 11th, in St. George's Chapel of Windsor Castle. There were the usual five programs, with the choirs of St. George's Chapel and of Eton College Chapel, the St. George's Special Choir, the St. Michael's Singers, and the Leighton String Quartet coöperating under the general direction of Dr. W. H. Harris.

THE SOCIETY OF MOZARTIAN STUDIES of Paris has brought to a public hearing one hundred and twenty-five of the works of the Salzburg master.

## Success for the Young Musician

(Continued from Page 704)

audience develops a feeling of restlessness, it disturbs the whole performance. A satisfying interpretation then seems impossible, for I must sense that the audience is "with" me in order to do my best. Although the sonata has been orchestrated, the fugue particularly (which is terrifically difficult, complex and quite ugly in parts), is too pianistic to stand orchestral treatment and sounds only more involved.

I seldom play anything by the old pre-Bach masters. They seem to be what might be called "kitchen music." Works, that are richer and more "meaty," seem to make a stronger appeal. I play most of the piano works of Debussy and also of Albeniz, and among other modern composers I find much of interest in works of Szymanowski and Tcherépine. The romances and bagatelles of the latter are well worth while, for those interested in contemporary piano music. Another of his pieces which many people have enjoyed is called *Homage à la Chine*, which was composed and published in China, and therefore might be difficult to obtain now in America. The *Burlesca* of Richard Strauss is another composition for more American pianists to consider. When I played it with the Philadelphia Orchestra last season, many people mentioned that they never had heard it before, although it is played frequently in Europe. Its whole spirit is that of a waltz and, although some pianists prefer to treat it in a more showy manner, it would seem to have more of the dance quality, and I try to play it in that manner. There are compositions of Mompou that should be found interesting, and some of Turina. Prokofieff is very clever. Every music student should build up a musical library and know the great music of all ages.

### And Study We Must

IN STUDYING COMPOSITIONS one must take them apart; they must be dissected and analyzed; each part must be studied separately. Then one arrives at the greatest difficulty, that of putting them together again. The work must be held together from the beginning to the end. The sense of unity that music possesses must be in the mind of the performer. Anyone can analyze. One must be able to sing the music inside of himself, to hear it, and above all to listen. One must listen to every detail, to make the music real and living.

Careers are filled with understatement and overstatement. Artists are called the greatest here and the greatest there, the worst here and the most terrible there. Perhaps it is a good thing. If some people did not think that a particular favorite of theirs was the greatest in the world, they might not bother to attend his concerts at all, nor perhaps would many others. These curious exaggerations are found in the case of both the successes and the failures.

Among artists one finds remarkable people. The greater the artist is, the finer and more decent he is as a human being. Perhaps no one understands human reactions more sympathetically and better than do these very artists; for a person without such characteristics could never achieve greatness in the realm of Art.

\*\*\*\*\*

SCHUMANN said: "Always play as if a master heard you."

LISZT said: "Genius is the power of revealing God to the human soul."

BACH said: "The fingers of thy hand are as good as the fingers of my hand. I was obliged to be industrious; whosoever is equally industrious will succeed as well."

PLATO said: "Music is to the mind what air is to the body."

## Letter to Schumann

By E. A. G.

DEAR SCHUMANN:

Or should I say Robert Schumann, or Mr. Schumann? Anyway, you must have liked us kids because you wrote so many pieces for us, so I guess you will not object to what I call you.

You know, lots of great composers never thought much about us and wrote music too hard for us to play. Of course you wrote that kind too, only you wrote lots of simple things for us; in fact, some of them are so easy our teachers give them to us when we have had only a few lessons.

Once we had a Schumann contest and one of the pieces we had to play was your *Soldiers' March*, and you'd be surprised! Nearly everybody played it fine until the last four measures and then, wow! they got off their rhythm. That's how I won the contest, because my teacher told me

about not doing that and I didn't, and so I won. We had to play *Knight Rupert*, too, and everybody played the second part—you know where I mean, the F major part—not as well as the first part. You put some tricky measures in that part, do you know it? Hard to memorize and play fast enough, and that's how I won that, too, because my teacher told me to practice those measures extra and I did, and I won first place. The other pieces and scales were easy. We had to remember your dates, too, but that was easy too, because I have a good memory for dates and, somehow, 1810-1856 seems easy. I like contests and tournaments because it makes you learn your things well, and all you have to do is to play better than the other fellows and you're bound to win. Bob Jones plays fine at his lessons and everybody picks him for a winner until the time comes, then he just forgets to pay attention to what he's doing.

Another thing I like about your music is the names you gave the pieces; pictorial, my teacher calls them, like *Happy Farmer*, *Sailor's Song*, *Child Falling Asleep*, and things like that.

My book says you hurt your finger practicing with a queer gadget. Imagine anybody practicing that much! Well, my teacher says that's one thing will never

happen to me. But I like to practice, though; really I do, because it's nice to learn to play, and I think practicing is rather interesting. Jo Long works twice as hard on his swimming as I do on music, and everybody in the pool can beat him. He makes me tired and he does not have half as good a time as I do with my piano.

My teacher says you wrote lots of articles about music too, and I'm going to get them out of the library some time and read them. But I had better not make this any longer, or you will not read it.

From JUNIOR.

## Trees in Music

By ALETHA M. BONNER

IN THE REALM of music woodland influence has permeated the opera, the orchestra, and the solo forms, with tuneful beauty. Tonal tree stories are told, too, in the folk songs of the nations. One of the favorite lyrics of England in early day was, *O Willow, Willow!* and several versions of this old ballad, bearing the date of 1583, are to be found in the British Museum, in London.

From Wales comes the ancient *Ash Grove*, with the first stanza reading, "The ash grove how graceful, how plainly 'tis speaking. The harp through it playing has language for me."

The *Song of the Fig-tree Orchard* is still another traditional lyric, this from Portugal; while Russia possesses a group of quaint old folk songs featuring leafy friends; as, *Ah, See the Old Pear Tree*, from the province of Saratov, and this song, by the way, is an interesting example of five-four time.

*Come and Twine the Slim Boughs* is a song from the old district of Orloff; but probably the best known of these Russian folk forms is *'Neath the Shadow of a Tree*, from the region of Moscow. The native composer, Tschaikowsky, familiarized the world with the last named tune in his *Serenade for Strings, Opus 48*, where the theme is the principal subject in the last movement of this beautiful number.

Added to the wealth of tree songs are Denmark's *I Wander Through Woodlands*; Germany's beloved *O Faithful Pine*; and Japan's dainty *Cherry Bloom*, with its "frail white mist wreaths floating by!"

Canada, our neighbor to the north, voices her admiration of a handsome native tree, by singing *The Maple Leaf Forever*—this being its national hymn.

Opera composers have followed along the woodland trail of the folk song and popular song writers (one hears many tree themes, too numerous to mention here, at a pop concert), and many tributes have been paid to trees in musical drama, with forest settings furnishing the background of countless scenes.

The rollicking "Robin Hood," by America's own Reginald DeKoven, deals largely with carefree life in the historic *Forest of Sherwood*, in Merrie Old England; while two of the outstanding songs of the opera are *Hcy, for the Merry Greenwood*; and *Come Along to the Woods*.

Act Three of the opera "Lakmé" by Delibes, shows a tropical forest scene, and, here in this leafy retreat, *Gerald*, the Brit-

ish officer, sings effectively *In Forest Depths* to his Brahman love, the faithful *Lakmé*. Again the magic spell of the woods rests upon a young forester, *Max*, who, in Weber's "Der Freischütz," sings his dramatic song, *Through the Forest*. *Murmurs* is the name given to a very beautiful part of the opera "Siegfried" by Wagner.

Edward MacDowell gave to the world graphic mid forest pictures in his "Woodland Sketches": here we have *To a Wild Rose*, and also a *Deserted Farm*, and an *Old Trysting Place*, while other pleasing sylvan scenes are shown.

Felix Mendelssohn wrote a noble *Farewell To The Forest*, a plaintive song without words; and many other composers have given impressive musical settings to certain immortal tree poems, as George P. Morris' *Woodman, Spare That Tree!* Joyce Kilmer's *Trees*, with music by Rasbach; and Bjornson's *The Tree*.

Richard Nordraak, Norwegian composer, and cousin of Bjornson, created an especially harmonious musical setting to the last-named verse. The plot of the song makes wide appeal—a tree refused his blossoms to the wind, but when a little girl asked for his fruit he bent down his branches and gave her his wealth.

One of our well known Christmas carols is *Deck the Halls with boughs of Holly*, which came to us from England; and the

"I think that I shall never see  
A poem lovely as a tree"  
Joyce Kilmer

French composer Massenet has a beautiful song called *Under the Linden Tree*.

How many other musical compositions can you recall which honor one of nature's works of art, the TREE?

## Music Dreams

By MONICA TYLER BROWN

My music is a friend most dear,  
I'm never lonely when she's near;  
She comforts me when I feel sad,  
Rejoices with me when I'm glad.

And when I practice, everything  
I see about me seems to sing—  
The ivy on the window pane,  
The distant hills and grassy lane.

The clock ticks in a friendly tone;  
I quite enjoy to be alone—  
With Puppy in a fluffy heap  
Curled up beside me, fast asleep.

I drift along in melody  
And think of things I hope to see  
When I grow up, and mean to do.  
If only all my dreams COME TRUE!

## Scales-Blocks Game

By W. E. WOODMAN

SCALE BLOCKS game is lots of fun. First, a carpenter to make some blocks of wood about an inch each way. On each face of the block mark a letter of the musical alphabet. Any number may play game.

Each player must have a piece of staff

paper and select his own keynote. The players in turn throw two of the blocks and as his keynote and the other letters in his scale appear on the up-turned surface of the blocks the player writes them on his staff paper. Each player has only one throw at a time and can not build his scale until his selected keynote turns up. If none of the letters, turned up in his throw, belong to his scale, he passes the blocks on and hopes for better luck on the next round.

The first player to complete his scale counts eight points, the other players counting as many points as they have letters arranged in their scale.

## No More Musical Stuttering

By GLADYS HUTCHINSON

IF YOU are very careful in your pronunciation of words so that you may be perfectly understood when you speak; and how many of you play as clearly so that your listener may receive the correct musical impression?

You would annoy a pupil very, very much if his teacher stuttered while explaining or outlining the lesson; and yet it is really as wearing on the teacher if a pupil stutters in his playing, that is, if the pupil covers the keys clumsily and corrects mistakes in the middle of the phrase. For those who listen to you practice and play, stumbling over notes is "musical stuttering," and sounds equally as bad as stuttering in speech.

Good playing as well as good playing is a habit. If everything we do is more or less a habit, isn't it much more intelligent to have those habits good ones? It takes no longer to form a good habit than it does a bad habit; and good habits get us somewhere, but bad habits sooner or later lead to discouragement, because everyone begins to find fault with the way we do things. So, for the sake of all concerned, including yourself, let's start right now in forming some good habits.

There are a few helpful hints that may be used to accomplish this. First of all you must know the key signature of the piece. Then you are about to play, and the measure of the measure. Then you should study the first measure; and when you start to play that first phrase do so with caution, just as cautiously as if you were learning to drive an automobile and were out on the open road where the life of others in addition to your own life were at stake. Look ahead carefully and go along at a very slow tempo (speed) and consider an error of this sort equal to an accident while driving a car. If you do not get through the phrase

without error, you should go no farther; but you should make yourself go over that phrase four successive times perfectly.

Proceed in the same manner throughout the piece, and do this in your exercises and in everything you attempt to play. Soon correct practice and careful playing will become a habit, a good habit; and in one year you will accomplish more than twice as much as you would if you continue to practice carelessly; because ten wrongs do not make a right, now do they?

After all, isn't it silly to waste time at the piano, playing incorrectly, when in the end you will be obliged to do it right?

Remember now, no more musical stuttering.

DEAR JUNIOR ETUDE:  
I belong to the Melody Music Club. We meet every two weeks and have a business meeting and then a program when every member plays a solo or a part in a duet. We also play games. Then we have refreshments; and once we had our pictures taken.  
I love music and love to practice. I should think everybody would like to practice.  
From your friend,  
ELIZABETH ANNE BARNES (Age 10),  
Florida.

### Honorable Mention for June Puzzles:

Henry Etta Walker; Lucy Marie Pickett; Rachel MacDonald; Claire Shapuro; Betty Landis; Roderick Pearson; Esther Grody; Evelyn Craighead; Esther Adeline Thompson; Lorraine Deboe; Lois Mallcoat; Marian Yunk; Bettyrose Musler; Claire Boulard; Joe Van Beek; Joann B. Ford; Hannah Freyer; Erna Irene Peifer; Mary Frances Magoon; Unako Matsunaka; Darlene Christian; Gertrude Cote; Catherine Eugene; George Pluck; Sammy Lou Ridling; Laura E. R. Chentham; Reeve Kelly; Joyce Cooper; Inez C. Sult; Arnold Richard Thompson; Phyllis A. Glickerson; Arlene W. Peifer; Lorraine Guys; Betty Madigan; Gloria McDermott.

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "Why I study music." Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by November 18th. Names of prize winners and their contributions will appear in the February issue. The thirty next best contributors will receive honorable mention.

### RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not

have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

### My Favorite Instrument

(Prize winner, Class A)

THE DEEP MELLOW TONES of a saxophone floated across the fields, lingered and then clearly echoed back.

The tones were mine, the instrument from which they had come—that was mine!

As I pondered over this I recalled, fully four years ago, that I had planted one of the most important seeds in the garden of my life—my instrument—and cultivated it by daily practicing. Truly, it had grown and I have gained.

It has blossomed forth and ornamented me with three great sparkling jeweled flowers; first, my instrument has helped me immensely to express and appreciate music; second, it has enabled me to get a better outlook on life; third, it has given me an opportunity to play solos and to participate in bands and orchestras.

It has been the hope, the joy and inspiration of my life. Greater buds and flowers shall blossom forth and it shall not die. It shall live forever.

FERN FUGMAN (Age 15),  
Aurora, Ohio.

### My Favorite Instrument

(Prize winner, Class B)

ALTHOUGH UNFAMILIAR with the mechanical operation and technic of performance of the organ, I like it because of its varied and numerous tones. I have heard organs played so softly and sweetly it reminded me of light breezes singing in the trees, and then again so loud, full and rich it reminded me of great thunder rumbling over a summer sky.

Surely the organ reveals all that music means to convey in amplified tone, and it dramatizes before my inner eye and ear great dramas of life, past, present and future.

I hope some day to become accomplished enough to play this king of instruments. In spite of the fact that I am limiting my practice to my little pianette. I know the road is long but it will be filled with pleasure as well as hard work.

Don't you think I am right?

JOAN R. FORD (Age 11),  
Washington, D. C.

### My Favorite Instrument

(Prize winner, Class C)

MY FAVORITE INSTRUMENT is the piano. When I am lonesome and unhappy I go to it for comfort and it makes me happy. When I was little I longed to take lessons on the piano and would beg my sister to teach me; then when my chance came I was overjoyed.

Sometimes I get discouraged, though I still love my lessons; and when I get older I hope to play so that people will enjoy my playing.

I am glad that God has given me the chance to play the piano and some day maybe I can show my appreciation through the piano.

MARJORIE LANGSTON GOLDFINCH,  
(Age 10), Conway, South Carolina.

### Honorable Mention for June Essays:

June Neilson; Evelyn Raser; Theda Mayo Pearson; Pauline Donat; Bill Ransbottom; Eleanor Mensch; Elsie Marie Wright; Lorraine Guys; Lola Shirley; Mary O'Neill; Anna M. Funney; Patricia Kennett; Jeanette Sigman; Mary Elizabeth Willard; Eileen Lynch; Helena Searson; Consuello E. Lee; M. Jerome Stolnitz; Eunice Elser; Felice Takakjan; Helen Judin; Yvonne Perrin; Emily Ann Bromwell; Bertha Lee Allison; Margaret Kelly; Shirley Southard; Anna Mae Radcliff; Jimmie Lee Tallon; Mary D. Lilley; Harriet Stanley; Constance Amy Levin; Martha Anderson; Mary Louise Penchi; Wilma Elthian; John Beverly Ford; Jim Leeman.

### Junior Etudian's Creed

By Gertrude Greenhalgh Walker

I BELIEVE:

1. That when I study properly I am my own best teacher.
2. That, like the builders, I need a plan.
3. That, like the spider, I must persevere step by step.
4. That my attention must not wander until my task is done.
5. That concentrated repetition fixes knowledge.
6. That regular practice is necessary for systematic advancement.
7. That undisturbed practice must be insisted upon.
8. That I will gain my objective by adhering to my creed faithfully.

Junior Musicians  
Blackfeet Indian Reservation

### Answers to June Two-in-One Puzzle

C-orinet  
A-ccordion  
B-assooin  
H-arps

Composer's name: BACH

### Prize Winners for June Puzzle:

Class A, Irene Kershner (Age 14), Philadelphia, Pennsylvania.  
Class B, Paul Krieter (Age 13), St. Louis, Missouri.  
Class C, Douglas Pryce (Age 10), Penet, Canada.

## The Threshold of Music

(Continued from Page 708)

They never play stellar rôles, as do suspensions. They are almost always found on the unaccented parts of a measure.

Usually a passing note connects two harmonic notes which are separated from each other; but sometimes it appears simply as an embellishment of a single harmonic note, moving a step away from it and then returning. This type of passing note is used purely for rhythmic variety or melodic ornamentation. A football fan would call its excursion an "incompleted pass." To illustrate both varieties, in Ex. 5a and Ex. 5b the notes marked with an x illustrate the two kinds of passing notes which have been described.

It would be hard to find a piece of music that is devoid of passing notes. In the old Elizabethan air, *The Three Ravens*, they are sprinkled about freely.

The x's mark the passing notes. Observe the third x particularly. At this point, when the melody moves to a foreign note and then back again, the two other notes of the chord follow suit. Thus we have a triple passing note effect, sometimes called a *passing chord*. We will shortly learn more about double and triple foreign notes.

In the following melody from the *Andante Cantabile* of the "Symphony No. 5, in E minor" by Tchaikowsky are found three varieties of foreign notes.

The x's are holdovers (suspensions), the y's are jumps that have overshot the mark (*appoggiaturas*), and the z's are the mild little connecting links that make the melody a continuous chain (passing notes).

Do not think for a minute that foreign notes occur only in the tunes or top notes of pieces of music. The inner parts and bass parts of all kinds of compositions, from dance tunes to symphonies, have melody, and so they, too, contain passing notes and suspensions. The first of the two x's in the Tchaikowsky melody just quoted points out a suspension in an inner part, D resolving to C-sharp.

We have already hinted at the fact that foreign notes may appear not only singly but also in pairs, or groups of three or four. Here is an example in which a pair of notes are held in suspension for three-

fourths of a measure before being allowed to move up to their proper berths. It occurs in the *Prelude to Act III* of "Tristan and Isolde" by Richard Wagner.

At each spot marked by an x the harmony is clearly the triad of F minor. Yet

## Who Wrote America?

(Continued from Page 700)

the manuscript by Clark himself, and after his death the book was not allowed to be seen at all. So we are no nearer the end of our search, after all.

"There seems to have been a popular song called *God Save the King* known in England in the seventeenth century, for in one of Purcell's catches he uses a phrase with these words written above the notes, as if they were a quotation which everyone would recognize. But we cannot tell whether that had any connection with the National Anthem sung in London during the Jacobite Rebellion, and ever since (with many variations of words and few in the tune) in all parts of the world."

## Recent Record Release

(Continued from Page 741)

recording by Mitchell Miller and the Columbia Broadcasting Symphony Orchestra. On Columbia disc 69655-D, we have a recording of a work by Giovanni Platti, Venetian composer of the eighteenth century. It is a "Sonata" (or suite) reminiscent of Vivaldi, as played by Ossy Renard with Walter Robert at the piano.

Students and admirers of piano music will find Gieseking's performance of Ravel's "Gaspard de la Nuit" (Columbia set X-14) a testimonial to his uncanny feeling of subtlety of line and mood. The work contains three fascinating pieces—miniature tone-poems—*Ondine* (a water-nymph), *Gibet* (the gallows), and *Scarbo* (a grotesque dwarf).

One of the best contributions Arnold Schnabel has made to the phonograph is his performance of Schubert's posthumous "Sonata in A major" (Victor set M-58). A long and inspirationally uneven work, Schnabel succeeds in sustaining and even intensifying the listener's interest. And Alexander Brailowsky, in his performances of Beethoven's *Rondo a capriccio in G major*, Op. 129 (*The Rage over a Lost Penny*) and the Tausig arrangement of Scarlatti's well known "Pastorale and Caprice" (Victor disc 15407), succeeds in being wholly persuasive in his performances of these works.

### Welcome, Ghost!

Alice: "Oh, ma, I do love Mendelssohn!"  
Mrs. Wonspore: "All right, my dear. Invite the young man to our next party."  
*Irish Independent.*

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACTS OF CONGRESS OF AUGUST 24, 1912, AND MARCH 3, 1933

OF THE ETUDE, published Monthly at Philadelphia, Pennsylvania, for October 1, 1939.  
State of Pennsylvania }  
County of Philadelphia } SS.  
Before me, a Notary Public in and for State and county aforesaid, personally appeared David W. Banks, who, having been duly sworn according to law, deposes and says that he is the President of the Theodore Presser Company, publishers of THE ETUDE; and that the following is, to the best of his knowledge and belief, a true statement of ownership, management, etc., of the aforesaid publication for the date shown in above caption, required by the Act of August 24, 1912, as amended by the Act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:  
Publisher Theodore Presser Company, Philadelphia, Pennsylvania.  
Editor James Francis Cooke, Philadelphia, Pennsylvania.  
Managing Editor None.  
Business Manager None.

2. That the owners are:  
Theodore Presser Company, Philadelphia, Pennsylvania.  
The Presser Foundation, Philadelphia, Pennsylvania.  
Estate of Theodore Presser, Philadelphia, Pennsylvania.

James Francis Cooke, Philadelphia, Pennsylvania.  
Edwin B. Garrigue, Germantown, Philadelphia, Pennsylvania.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: None.

4. That the two paragraphs next above giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting is given; also that the said two paragraphs contain statements embracing affiant's knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has reason to believe that any other person, partnership, or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

(Signed) DAVID W. BANKS, President.  
Sworn to and subscribed before me this 7th day of September, 1939.

SEAL JOHN E. THOMAS, Notary Public.  
(My commission expires March 7, 1940.)

## Next Month

THE ETUDE FOR DECEMBER 1939—OUR ANNUAL CHRISTMAS SURPRISE

Thousands of our Etude friends renew their subscriptions at Christmas, and thousands likewise, give The Etude to others as the richest musical value they can make as a Christmas gift. Naturally we put our best foot forward in December.

### The Story of Major Bowes and His Amateur Hour

A. S. Branson tells the story of the genial Major who has appealed to so many millions of people with his individual Amateur Hour, long one of the favorite features of radio.

MAJOR BOWES

### What the World War Did to Music in Europe

Sir Granville Bantock, best known of living English composers, in an exclusive conference based upon a lifetime of experience, indicates the destructive influence of war on music.

### "Music Is My Hobby"

You, who have found joy in playing and singing, certainly have heard the "Music Is My Hobby" hour conducted by Walter E. Koons over NBC. Scores of prominent people make music a hobby, and many of them rise to virtuoso heights. This article by Rose Heylbut tells how they have done it.

### Liszt's Tremendous "Erl King"

Mark Hambourg, in one of the greatest Master Lessons he has yet done for The Etude, has prepared, elucidated and annotated the immortal Schubert-Liszt "Erl King" which dramatizes Goethe's tragic poem presenting the struggle of a father and son against the unrelenting pursuit of the Erl King. This lesson is particularly clear in detail, and any fairly advanced pianist will find it very close indeed to a lesson in person from a great artist.

### Music, the Tongue Loosener

MUSIC IS OFTEN MISUSED in a theater. Sir Barry Jackson tells an amusing story of how, to save himself the expense of a quartet to whose entr'actes the Birmingham Repertory Theater audience would not listen, and to spare the players this discourtesy, he abolished musical interludes from plays which required no music in their text. Immediately this same audience became tongue-tied and sat in frigid silence not only when the curtain was up but also when it was down, and he was forced to call in music once more for the surgical purpose of loosening tongues in the intervals between acts. But on the whole the happiest relations prevail between composers and dramatic authors; both arts show a profit on their mutual collaboration.

(From "The Philosophy of Music," as told in the book, "A Key to the Art of Music," by Frank Howes, published by the Thomas Y. Crowell Co.)

the two uppermost notes, B-flat and G, are foreign to this chord. After a moment of suspense these outsiders move upward to C and A-flat, and thus become member-notes of the F minor triad. Incidentally, these opening measures of the magnificent final act of "Tristan and Isolde" are well worth studying. Notice how Wagner has used the plagal cadence (the "Amen" chords, Fa followed by Do) in the minor, and in doing so has transformed it from being a messenger of "peace on earth, good will towards men" to becoming a symbol of endless waiting, desolate monotony, and utter hopelessness.

(Continued in THE ETUDE for December)

"Music resembles poetry of smooth and perfect rhythm, noise resembles harsh and rumbling prose. But as the words of the prose might, by proper arrangement, be reduced to poetry, so also by rendering its elements periodic the uproar of the streets might be converted into the music of the orchestra."—Colin McAlpin.

## IDEAL GIFTS

Plan to give your musical friends or pupils and to purchase for your own use one or more of the delightful volumes in the "Whole World" and "Master Composer" Series.

COMPLETE  
LIST BELOW

Each volume consists of 256 to 448 pages of the best music, (the four individual composer volumes, 160 pages) beautifully printed, sturdily bound and attractively covered. For the opera lover there are several fine collections containing the stories and the choicest music from the most famous operas. These books will add to your enjoyment of the radio presentations. For the home vocalist, a splendid selection of songs that will live forever. For the pianist, violinist, organist, etc., a representative selection of music covering all grades of difficulty. Each crystallizes the best of music in substantial volumes of varying character that have become, both through musical merit and economic value, necessities for the fullest enjoyment of the musical hour. Send for our free 40 page catalogue which illustrates, describes and gives the complete contents of each book—a postcard brings it. (The catalog is not sent to Canada or European countries.) A complete list of the books will be found below.

What Do You Know About Music?  
(Cloth, \$3.00; Boards.....1.50

This outstanding volume in our "Whole World" Series is "new" from cover to cover. It is of particular interest in view of the growing demand for music of the modern school of composition, not alone in concert programs but also in the home and studio repertory of the average pianist. Includes a large group of selections of recent origin, as well as a select number of favorite classics, many of which do not appear in any other collection. There are compositions by Stravinsky, Prokofiev, Scriabin, Rimsky-Korsakow, MacDowell, Dohnanyi, Tchaikowsky, Schumann, Beethoven, Brahms, Chopin and many others. Newly engraved, large page size with large notes.

For Sale at all Music Stores (Except in Canada and European countries) or sent direct on receipt of marked prices.

(\*) Asterisk indicates books sold only in U.S.A.

#### Books of Music That Delight Child Pianists

##### (\*) MY FIRST SONG BOOK

Familiar Songs in Very  
Easy Arrangements

By Ada Richter  
(Price, 75c)

HOLIDAY CASH PRICE  
50c, Postpaid

40 songs that everybody knows, arranged so simply that almost anybody can play them on the piano, even youngsters who have had but few lessons. Complete texts

are given to enable Mom and Pop to join in the fun.

##### MELODY JOYS for GIRLS and BOYS

First Grade Piano Solos

(Price, 75c)

HOLIDAY CASH PRICE, 50c, Postpaid

This is an ideal type of piano album for a Christmas gift to a pupil in the first year of study because it just seems to fit into the happy play spirit of young boys and girls at Christmas-time. It contains 29 easy-to-play pieces which present a nice variety of tunes and rhythms.

##### PRISCILLA'S WEEK

Seven Little Characteristic Piano Pieces

By Mathilde Bilbro

(Price, 75c)

HOLIDAY CASH PRICE, 50c, Postpaid

These interesting first grade pieces in text, music, and quaint illustrations, follow busy little Priscilla through her week of domestic responsibilities.

##### SINGING MELODIES

An Album of Piano Solos with Words

(Price, 50c)

HOLIDAY CASH PRICE, 35c, Postpaid

These are not merely piano solos with texts selected at random as a stimulant for the imagination; they are real songs that youngsters can both play and sing. All are safely within the range of the average child voice.

##### CINDERELLA

A Story with Music  
for the Piano

By Ada Richter

(Price, 60c)

HOLIDAY CASH PRICE,  
40c, Postpaid

A telling of the fascinating childhood story illustrated with descriptive piano pieces about grade 2. Can be given as a playlet. Plentifully interspersed with line drawing pictures that may be colored.

##### (\*) PLAY AND SING

Favorite Songs in Easy Arrangements

By Ada Richter

(Price, 75c)

HOLIDAY CASH PRICE, 50c, Postpaid

School songs, songs of other lands, songs of my country, songs from operas, and songs my grandparents sang long ago, are the group titles of the 40 popular favorites that are presented in this collection of arrangements piano pupils in their second year of study can play.

#### Attractive Albums for Advancing Pianists

##### (\*) PLAY WITH PLEASURE

For the Grown-Up Piano Student  
Compiled and Arr. by Wm. M. Felton

(Price, \$1.00)

HOLIDAY CASH PRICE, 60c, Postpaid

Almost a half hundred melodies, known to music lovers as radio program "signatures" and motion picture "theme music", are given here in easy piano arrangements. Younger students in grade 3 will enjoy them, too.

##### (\*) SOUVENIRS OF THE MASTERS—For Piano

By George L. Spaulding

(Price, \$1.00)

HOLIDAY CASH PRICE, 60c, Postpaid

These 27 simplified arrangements (in second grade) of some of the world's famous music gems, bring young pianists to an enthusiastic appreciation for music of lasting worth. Title page with photographs of the masters represented.

##### (\*) FRAGMENTS FROM FAMOUS SYMPHONIES

For the Piano

By William Baines

(Price, 75c)

HOLIDAY CASH PRICE, 50c, Postpaid

Modern facilities for listening to the finest music—the radio and the phonograph—have made the great symphonic masterpieces familiar to all. Here, some favorite themes are presented in piano arrangements of grades 2 and 3.

(Price, 50c)

##### AMONG THE BIRDS

HOLIDAY CASH PRICE, 35c, Postpaid

The calls of our feathered songsters have been the inspiration of many composers. The early grade pieces in this book make attractive recreation or recital material.

##### (\*) YOUNG FOLKS OPERA GEMS

(Price, 75c)

HOLIDAY CASH PRICE, 50c, Postpaid

The greatest opera airs arranged for playing by second and third grade piano pupils.

#### Volumes of Permanent Worth for Capable Pianists

##### (\*) CELEBRATED COMPOSITIONS BY FAMOUS COMPOSERS

(Price, \$1.00)

HOLIDAY CASH PRICE,  
60c, Postpaid

This volume, with its 34 immortal piano solo selections, becomes the favorite of each and every good pianist or fairly advanced student into whose hands it goes. The numbers appeal to musicians and lovers of music, and an acquaintance with them is practically essential.

##### EVENING MOODS—An Album of Piano Solos

(Price, 75c)

HOLIDAY CASH PRICE, 50c, Postpaid

This album contains piano compositions which carry one into the meditative mood, perhaps to become somewhat at peace with the world or to let the mind romance fancy-free. These 21 selections also are of a type suitable for church or Sunday school service that will appeal to pianists able to play fourth and fifth grade music.

##### SOUSA ALBUM—For Piano Solo

Favorite Marches by John Philip Sousa

(Price, \$1.25)

HOLIDAY CASH PRICE, 85c, Postpaid

Sousa

Some of the very best of Sousa's stirring marches are given in this album which includes Stars and Stripes Forever, El Capitan, Bride Elect, Harmonica Wizard, The Royal Welch Fusiliers, and others.

##### NUTCRACKER SUITE

For the Piano (Price, \$1.25)

By P. I. Tchaikowsky

HOLIDAY CASH PRICE,  
75c, Postpaid

The piano solo arrangement of this popular orchestral suite is an outstanding volume in the Presser Collection.

##### SCHUBERT ALBUM

For the Piano (Price, \$1.00)

HOLIDAY CASH PRICE,

60c, Postpaid

24 beautiful melodies of Franz Schubert are here presented for rendition as piano solos.

##### CHOPIN WALTZES

For the Piano (Price, \$1.00)

HOLIDAY CASH PRICE,  
60c, Postpaid

The Presser Collection edition of this favorite volume of the great Polish master's works is a fine gift for the competent pianist.

##### (\*) STANDARD OPERA ALBUM

For Piano Solo (Price, 75c)

HOLIDAY CASH PRICE,

50c, Postpaid

Makes possible the rendition of 15 operatic melodies as piano solos. About grades 3 and 4.

##### A DAY IN VENICE—Suite for Piano

(Price, \$1.50)

By Ethelbert Nevin

HOLIDAY CASH PRICE, \$1.10, Postpaid

The tremendous popularity of the 4 numbers in this suite—Dawn, Gondoliers, Venetian Love Song and Good Night—makes the artistically bound volume a fine gift book at this bargain price. A Day in Venice also is obtainable for Vocal Solo, Violin and Piano, Pipe Organ at the above price and for Trio—Violin, Cello and Piano at \$1.50 during this month.

##### (\*) BOOK OF FAMOUS COMPOSITIONS

For the Piano (Price, \$1.00) HOLIDAY CASH PRICE, 60c, Postpaid

There are 27 highly favored compositions in this compilation selected from master composers of the past and present.

##### (\*) RACHMANINOFF ALBUM

For the Piano

(Price, 75c)

HOLIDAY CASH PRICE, 45c, Postpaid

The advanced student is well repaid for the effort expended in mastering the compositions of this great Russian pianist-composer so indispensable in the repertoire of the concert artist. There are 9 pieces in this superb collection.

## Albums for the Church Pianist

### (\*) PIANO VOLUNTARIES

Music for Religious Services

(Price, \$1.00)

HOLIDAY CASH PRICE,

60c, Postpaid

Pianists seeking selections for church services or Sunday school will find their needs met in this most useful album of 26 pieces. Many have copies of this book in the home for those occasions when music of a quiet character is preferred.

### (\*) SUNDAY PIANO MUSIC

An Album for Church or Home

HOLIDAY CASH PRICE, 60c, Postpaid

A richness of sacred dignity and spiritual feeling pervades the 5 piano solo compositions in this volume. There is nothing the average pianist cannot master, most of the pieces being in the third and fourth grade.

### SACRED MUSIC FOR PIANO SOLO

Price, \$1.00

HOLIDAY CASH PRICE, 60c, Postpaid

The 26 medium grade piano solos in this volume have made for a host of friends, not only among church pianists, but among those who enjoy music of a quiet type in the home.

(See Also EVENING MOODS on Opposite Page)

## Piano Duet Albums—Easy

### CHRISTMAS CAROLS

In Very Easy Arrangements

FOR PIANO DUET

By Ada Richter

(Price, 75c)

HOLIDAY CASH PRICE, 50c

Postpaid

The gaily-decorated cover in the Christmas colors, red and green, adds to the attractiveness of this fine collection of carols as a gift

book for young pianists. The texts are printed between the staves of each part and the arrangements may be used to accompany the singing.

### (\*) VERY FIRST DUET BOOK—Four Hands

Price, 75c

HOLIDAY CASH PRICE, 50c, Postpaid

These 27 first and second grade duets, with enjoyable melodies and interesting rhythms, are for first piano duet efforts, each part being easy to play. Not only a gift book that will be appreciated at, at this price, a wise investment by the teacher.

### PLAYING TOGETHER—Four Hands

Price, 75c

HOLIDAY CASH PRICE, 50c, Postpaid

20 first and second grade four-hand pieces which are delightful and helpful to young pianists. Both parts are for playing by pupils.

### JUST WE TWO—Four Hands

By George L. Spaulding

Price, 75c

HOLIDAY CASH PRICE, 50c, Postpaid

13 easy first grade duets which have charmed many young piano players. Verses are given with each piece and these are printed between the staves of both the *Primo* and *Secondo*.

## Piano Duet Albums for Players of Average Ability

### RECREATIONAL ALBUM

For Piano Duet Players

(Price, \$1.00)

HOLIDAY CASH PRICE, 60c, Postpaid

Numbers of a lighter type for recital use, or keyboard diversion, by players of moderate ability. *Swaying Daffodils* (Overlaid), *Dark Eyes*, *Sweet Jasmine* (Vedova), and *Hawaiian Nights* (Grey) give some idea of the interesting contents.

### SOUSA ALBUM FOR FOUR HANDS

By John Philip Sousa

(Price, \$1.50)

HOLIDAY CASH PRICE, 95c, Postpaid

The most popular marches of the "March King" make splendid piano duets, particularly since they retain much of the ornamentation used in the original band compositions.

### (\*) CONCERT DUETS

(Price, \$1.25)

HOLIDAY CASH PRICE, 75c, Postpaid

It is doubtful if any collection of substantial piano duets anywhere near approaches this compilation in popularity. There is quite a variety. Players in grades three and four may handle most of them although several are a little more difficult.

(\*) Asterisk indicates books sold only in U.S.A.

## Fascinating Books on Musical Subjects

### YOUNG FOLKS' PICTURE HISTORY OF MUSIC

By James Francis Cooke

(Price, \$1.00)

HOLIDAY CASH PRICE, 70c, Postpaid

Gives the child student an acquaintance with important things concerning the earliest known music, and the development of music through the eras of all the great masters. Over 100 cut-out pictures are supplied to be pasted in the book.

### STANDARD HISTORY OF MUSIC

Latest, Revised Edition

By James Francis Cooke

(Cloth Bound—Price, \$1.50)

HOLIDAY CASH PRICE, \$1.10, Postpaid

This, the "best seller" in musical literature for more than a quarter of a century, leaps to new heights in its latest, revised edition. Added matter, to bring the original text up-to-date, has enlarged it to 321 pages. Here is a thoroughly enjoyable story of the romance and lore of music. Over 200 illustrations. Nearly 900 names and well over 100 subjects are indexed.

### PIANO PLAYING WITH PIANO QUESTIONS ANSWERED

By Josef Hofmann

(Cloth Bnd.—Pr., \$2.00) HOLIDAY CASH PRICE, \$1.45, Postpaid

One of the most highly esteemed and most extensively used sources of information upon vital points in piano playing. Besides being a guide to modern pianoforte playing it gives authoritative answers to two hundred specific questions on the subject.

### MUSICAL TRAVELOGUES

By James Francis Cooke

(Cloth Bnd.—Pr., \$3.00) HOLIDAY CASH PRICE, \$2.20, Postpaid

If you have been abroad, this book will enhance memories and supplement your own observations; if you have not, it gives you delightful and instructive "armchair" traveling. Everyone will enjoy reading about these visits to European shrines and with famous musical personages.

## For the Organist

### THE CHAPEL ORGANIST

Compiled by Rob Roy Peery

(Cloth Bnd.—Pr., \$1.50) HOLIDAY CASH PRICE, \$1.00, Postpaid

This is a good supply of easy preludes and postludes and acceptable melodious offertories. None of the 28 pieces in this book makes registration demands beyond the equipment of the average 2-manual organ with pedals.

### Presser's TWO-STAFF ORGAN BOOK

Compiled and Arranged

By William M. Felton

Registration for Small Organ

By William S. Nagle

(Price, \$1.00)

HOLIDAY CASH PRICE, 60c, Postpaid

A veritable treasure chest for pianists taking up the study of the instrument. The pedal part is printed on the staff with the left hand.

### (\*) ORGAN MISCELLANY

HOLIDAY CASH PRICE, 50c, Postpaid

**John Finley Williamson**—Canton, O., June 23, 1841. Choral cond., educator, F. cond., Westminster Ch. Dayston, O. Educ. pres. W. minister Chur. Colle Princeton, N. J.

# THE WORLD OF MUSIC

KING  
LEOPOLD

**KING LEOPOLD OF BELGIUM** always arrives at the concert, opera or theater five minutes before the rise of the curtain: all members of the Royal Fam-

and of social families of distinction in the Belgian capital do the same, of course. At the rise of the program the King remains seated five minutes, whilst the audience applauds and artists make their acknowledgments of his courtesy. The National Anthem is then played, and the King departs. Perhaps, after all, it might be a good thing for America to have such a King for a while, just to show our social leaders good "theater manners."

**THE EIGHTEENTH CENTURY MUSIC** was presented in two series of concerts in the ballroom of the Governor's Palace of Williamsburg, Virginia (restored), the four programs occurring each evening from October 15th to 21st and from the 26th to 29th. Ralph Kirkpatrick, harpsichordist, and four visiting artists interpreted the programs.

**THE LARGEST ORGAN** in the Iberian Peninsula, built by Tamburini of Cremona, Italy, for the new Church of St. Juliao of Lisbon, Portugal, was recently dedicated.

**ANTONIO PUCCINI**, son of the composer, has instituted a scholarship at Rome for young Italian opera composers.

**SIEGFRIED WAGNER'S** humorous light opera, "*An allem ist Hütchen schuld (Everything is Blamed on Hütchen)*", has had its world première at the Stadttheater of Leipzig, with Count Gilbert Gravinga, grandson of Richard Wagner, conducting, and with settings designed by Siegfried's son Wieland.

**ALFRED CORTOT** has been appointed director of the Ecole Normale de Musique in Paris. Born of French parents in Switzerland, and educated at the Paris Conservatoire under Decombes, pupil of Chopin and Debussy, he, as a student, was keenly interested in modern music, especially in the work of Wagner, whose works he frequently played for private audiences. At thirty he had won recognition which led to his choice as the successor of Debussy at the Paris Conservatoire.

ALFRED  
CORTOT

**CAIRO, EGYPT**, MUSICIANS have organized a branch of the International Society of Contemporary Music, with its two sections devoted respectively to Oriental music and to that of European composers.

**SIR HENRY WOOD** has presented his immense musical library of twenty-eight hundred scores and nineteen hundred twenty complete orchestrations to the Royal Academy of Music, London. The collection contains many works not now obtainable, and Sir Henry will continue to have use of it during his lifetime.

**THE ORCHESTRE FEMININ** of Paris has given two concerts in Lisbon with the programs devoted to Couperin, Marais and others of the old French composers, with the Everard conducting.

**THE SCHUBERT SOCIETY** of Vienna celebrated its seventy-fifth anniversary with the performance of Orazio Vecchi's "Amphipar-

## Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

\* \* \* \* \*

**THE WORCESTER (MASSACHUSETTS) MUSIC FESTIVAL** celebrated this year its eightieth anniversary, from October second to seventh, with Albert Stoessel conducting the Festival Chorus of four hundred voices assisted by full orchestra and Metropolitan Opera soloists.

**DO NAMES ATTRACT?** Ask the New York Stadium or Hollywood Bowl management. With Heifetz, Hofmann, Pons or Tibbett announced, there will be an audience of some twenty thousand; without some such magnet, one-half to one-fourth this number.

**NELSON EDDY** won first place for popularity in the recent "Stars of Stars" election of the *Radio Guide* magazine in which seven hundred and twenty-nine votes were cast. He won also first place as a singer of classical songs, with Richard Crooks and Lawrence Tibbett as second and third runners up. In the women's division for singers of Classical songs, Margaret Speaks, Jessica Dragonette and Gladys Swarthout won first, second and third place respectively.

**HANDEL'S MUSIC** was used for a recent performance of Racine's "Athalie" at the Comédie-Française of Paris.

## Competitions

**GRAND OPERA PRIZE:** A Public Performance of an Opera in English by an American Composer (native or naturalized) is offered by the Philadelphia Opera Company. Contest closes August 15, 1940; and the successful work will be performed in the 1940-41 season. Judges: Leopold Stokowski, Eugene Ormandy and Sylvan Levin. Full information from Philadelphia Opera Company, 707 Bankers Securities Building, Philadelphia, Pennsylvania.

**A ONE THOUSAND DOLLAR PRIZE** is offered by the St. Louis Symphony Orchestra, for a symphonic work of ten to thirty minutes in length. The composer must be American; the composition will be performed during the present season of this orchestra; the competition closes February 1, 1940; and full information may be had by addressing the Manager, St. Louis Symphony Orchestra, Municipal Auditorium, St. Louis, Missouri.

**THE PADEREWSKI PRIZE COMPETITION** offers \$1,000 for the best work for Chamber Orchestra, and a second \$1,000 for a concerto or other serious

work for a solo instrument with symphonic orchestra. Works must not exceed fifteen to twenty minutes in length and must be received before February 1, 1940.

Full information from Mrs. Elizabeth C. Allen, Secretary Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

**PRIZE (AMOUNT NOT YET ANNOUNCED)** offered for a composition for mixed chorus and orchestra, of twenty-five to forty-five minutes duration. Competition closes June 30, 1940. Particulars from Oxford University Press, Amen House, Warwick Square, E. C. 4, London, England.

**A PRIZE OF ONE THOUSAND DOLLARS**, with a possible Six Hundred Dollars additional, is offered for a "Concerto for Violin with Orchestra" by a native American composer. The prize is furnished by an internationally known violinist, with the option of giving première performance of winning work. Competition closes April 30, 1940. Particulars from Violin Concerto Committee, % Carl Fischer, Inc., 56 Cooper Square, New York City.

**HAYDN'S "CREATION"** was recently performed in an English parish church (name withheld), when an eleven year old boy sang *With Verdure Clad*; a twelve year old lad gave *On Mighty Pens*; and two boys joined in *The Marvelous Work*. Just what an enthusiastic English choir would do!

**ELIZABETHVILLE, BELGIAN CONGO, Africa**, has a native choir of over a hundred voices, founded and trained by Father Lamoral. It recently gave a program including works by Palestrina, Vittoria, Bach, Handel, Haydn, Mozart, Martini, Rameau, and Schubert.

**BENNY GOODMAN** became something of a storm center when he recently engaged two Negro musicians—Charlie Christian, guitar soloist, and Fletcher Henderson, pianist-arranger, for his band. Latest reports have skies clearing, with professional musicians rather generally commending the policy so long as only musical merit is considered in the choice.

**THE HOLLYWOOD BOWL ORCHESTRA** had as its conductor for September 6th, Leopold Stokowski, with four prodigies as soloists. Six year old Sandra Berkova played the first movement of Mendelssohn's "Concerto for Violin"; seven year old Lewis Izumi, Los Angeles born Japanese, played the first movement of Mozart's "Piano Concerto in A"; maidenly modest as to her age, Linda Ware sang the *Parla waltz* song of Arditi; and nine year old Lorin Maazel conducted the *March Slav* of Tchaikowsky.

LORIN  
MAAZEL

**HONEGGER'S "JEANNE D'ARC"** had recently its first performance in Paris. It was first heard when given at Bâle, Switzerland, in 1938, and afterwards was performed at Orléans. Honegger is said to be at work on a "Passion" that will be heard next year at Salzbach, Switzerland.

**THE MUSIC TEACHERS NATIONAL ASSOCIATION** will meet from December 28th to 30th, at Kansas City, Missouri, with Edwin Hughes, president, in the chair. Problems of great interest to the profession will be discussed by outstanding educators, with renowned artists contributing programs for artistic entertainment. Particulars may be had from D. M. Swarthout, University of Kansas, Lawrence, Kansas.

**EUGENE GOOSSENS**, popular English born conductor of the Cincinnati Symphony Orchestra, is reported to have taken out his first papers as a step toward becoming an American citizen.

**THE METROPOLITAN OPERA COMPANY** announces eight new artists on its roster for this season, including Jarmila Novotna, Czech coloratura soprano and protégée of Reinhardt and Toscanini; Hilde Reggiani, coloratura soprano of Italy, the Continent and Buenos Aires; Eyvind Laholm, Wagnerian tenor; Lodovico Oliviero, character tenor; and of the three American singers two are Annamary Dickey and Mack Harrell, Auditions of the Air Winners.

HILDE  
REGGIANI

**A ROBERT SCHUMANN PRIZE** of five hundred reichmarks is to be awarded each year on June 8th, the composer's birthday, at Zwischau, his birthplace, for a work by a young composer.

**A NON-PROFIT CIVIC OPERA** association has been organized in St. Louis, for the production of opera with Metropolitan Opera stars in the leading rôles. To encourage St. Louis talent, a minor rôle in each production will be filled by a local singer chosen by competition. San Francisco was the leader in this type of opera. The Mayor of St. Louis is Chairman of the Board of Governors. Laszlo Halasz is to be conductor, and Dr. Ernst Lert is to be stage manager for the first season.

**THE HOUSE OF KARL VAN BEE-THOVEN**, at Linz, Germany, where his brother, Ludwig, often visited, has been demolished. It was there that Beethoven wrote the *Finale* of his "Eighth Symphony."

**LIVERPOOL PHILHARMONIC HALL**, built to replace the old one burned some years ago, was dedicated on June 20th by a concert of choral and orchestral music conducted by Sir Thomas Beecham. It is reported to possess excellent acoustical properties and to be finely adapted to its purposes. Hail to Liverpool and its wonderful spirit!

**LATE DISCOVERIES OF THEATRICAL MUSIC** in Italy are reported to be a melodrama by Alessandro Scarlatti, found by Signor Corio, head of Sammartini Music College; and a previously unknown opera, "La Doriclea," by Stradella.

**RIO DE JANEIRO** has its opera company composed entirely of Brazilian artists, which has given a season including productions of "Aida," "Rigoletto," "Madama Butterfly," "La Traviata" and other standard works.

**TORRE DEL LAGO**, where Puccini lived so many years, has been renamed by royal decree and is now Torre del Lago Puccini. (Continued on Page 829)

# All Teachers of Children Should Know the Renowned Music Education Materials

CREATED BY

*Jessie L. Gaynor and Dorothy Gaynor Blake*

## Educational and Recreational Books for Juvenile Piano Students

### A METHOD FOR THE PIANO

For Little Children By JESSIE L. GAYNOR  
Published late in Mrs. Gaynor's career this book really is a transcription to the printed page of her successful plan of teaching by which little children quickly comprehend the beginnings of piano playing. Includes interesting pieces and teacher and pupil duets. Price, \$1.00.

### MINIATURE MELODIES

For the Young Pianist

By JESSIE L. GAYNOR IN 3 VOLUMES  
The very first supplementary material for tiny tots studying the piano starts Vol. 1; some are pieces of only 8 measures. These pieces are all progressively arranged and in Vols. 2 and 3 of Miniature Melodies the selections reach well into the second grade. Price, 75 cents, each volume.

### FINGER PLAYS

Elemental Hand and Finger Exercises

By JESSIE L. GAYNOR

A half dozen games, with interesting and descriptive verses and charming tunes, for use in teaching hand position and finger movements. Numerous illustrations accompany the descriptions. Price, 60 cents.

### FIRST PEDAL STUDIES

By JESSIE L. GAYNOR

This is probably the most frequently used of Mrs. Gaynor's educational works for very young piano students. It gives the juvenile the fundamental work in pedal technique which must prepare for the further study as an advanced student and does so in an understandable manner, interesting to the pupil. This book may be taken up in the second grade. Price, 60 cents.

### MINIATURE DUETS FOR TEACHER AND PUPIL

By JESSIE L. GAYNOR

Fascinating little four-hand numbers that supply sight-reading material for tiny tots. Some have the pupil's part in the *Primo*, others in the *Secondo*. The pupil's part is printed in special large-size notes, almost all of the pieces remaining in the five-finger position throughout. Price, 75 cents.

### MINIATURE MELODIES FOR TWO

Melodies by JESSIE L. GAYNOR

Arr. by Dorothy Gaynor Blake

These are duets for two players of equal grade. They will be found valuable for use as first recital material. Among them are four-hand arrangements of some of Mrs. Gaynor's most popular piano pieces. Grade 2. Price, 75 cents.

### A DUET BOOK

For Teacher and Pupil By DOROTHY GAYNOR BLAKE

A book of four-hand numbers for first grade pupils of more mature age, or those whose home environment has created an appreciation of good music. The teacher's part is full and rich harmonically while the pupil's part, sometimes in the treble, sometimes in the bass, always is interesting. P., 75c.

### Successful Piano Pieces

## Song Books for Children

### SONGS OF THE CHILD WORLD

Three Volumes

By ALICE C. D. RILEY  
and JESSIE L. GAYNOR

The most popular collections of children's songs published. For years these have been used in the home, in the kindergarten, in primary classes in public and private schools, and in juvenile clubs and societies. The songs are classified for various seasons and occasions, for various activities in the life of a child. They are educational, recreational, yes, and even devotional, as several sacred songs for Sunday school groups are included.

Cloth Bound. Price, \$1.25 each

### SONGS OF MODERN CHILD LIFE

By JESSIE L. GAYNOR

and DOROTHY GAYNOR BLAKE

This book, the last work of Mrs. Gaynor, has groups of juvenile songs devoted to health, safety, science and invention, the home and community relationship. These were suggested by the Council of Public Safety and the Child Health Organization of America.

Cloth Bound. Price, \$1.00

### HEALTH SONGS

By JESSIE L. GAYNOR

and DOROTHY GAYNOR BLAKE

These eleven songs are those listed under the above captioned classification in "Songs of Modern Child Life," and published in an inexpensive paper-bound book for convenience and economy in distributing copies to children and parents. Price, 25 cents.

### SONGS AND SHADOW PICTURES

By JESSIE L. GAYNOR

A little art-music book of songs for children. The verses were contributed by Rachel Barton Butler and the shadow picture illustrations are in free-hand paper cutting by Susanne Fenimore Tyndale. Makes a most delightful gift book for youngsters. Price, 75 cents.

### SACRED SONGS FOR LITTLE CHILDREN

By JESSIE L. GAYNOR

Here is a fine collection of devotional songs for children to sing, not only in Sunday school, but at home and in school on weekdays as well. The index is classified for various occasions and purposes. Price, 75 cents.

### Children's Songs

By JESSIE L. GAYNOR

The Elephant.....\$0.50  
Ho! St. Nick......40  
One-a-Penny......30  
The Tin Soldiers......50  
Twilight Song......30  
What a Very Handy Thing a Monkey's Tail Must Be....40

### DANCES AND GAMES FOR CHILDREN

The Descriptive Text by Susan Hoffman Gilman

The Silhouettes by Susanne Fenimore Tyndale

The Music by JESSIE L. GAYNOR

A book for teachers of dancing who wish to make their classes instructive play and formative activity. Ideal for juveniles, for grade school children and for playground groups. Price, \$2.00.

## THE JOHN CHURCH COMPANY

## THIRTY RHYTHMIC PANTOMIMES

Song Texts by Alice C. D. Riley

Music by Jessie L. Gaynor

Descriptions and Illustrations

By DOROTHY GAYNOR BLAKE

From the celebrated *Songs of the Child World* volumes Dorothy Gaynor Blake has selected for this book thirty most attractive songs. Accompanying each are clever "match-stick" drawings which show the rhythmic action for young people. Besides the rhythmic consciousness developed, the child thus is given early training in music appreciation and group activity work. Mothers, too, can use these rhythmic pantomimes and songs with pre-school children in the home. Suggestions for use of the rhythmic with other songs in the original volumes also are given. Complete texts, of course.

Price, \$1.25

## Cantatas, Operettas, Chorus Collections

### THE MAGIC WHEEL

An Opera in Two Acts

Book and Lyrics by Alice C. D. Riley

Music by JESSIE L. GAYNOR

A complete evening's entertainment in this romantic, old-world story, delightful music and clever dance numbers. It calls for a large cast and chorus which may be selected from senior and junior high school students. Vocal Score, \$1.50; Stage Manager's Copy, 50 cents.

### THE RETURN OF PROSERPINA

Cantata for Female Voices

Book by Alice C. D. Riley Music by Jessie L. Gaynor

May be given in concert form, but is much more effective if given with actions, costumes and scenery. Requires two soloists and the average girls' chorus of high school age. Vocal Score, 60 cents.

## Jessie L. Gaynor's SONGS FOR GIRLS' VOICES

Texts by Alice C. D. Riley

Part songs and unison songs for use in intermediate and high schools or girls' glee clubs. Price, 75 cents.

# The Secret of a Merry Christmas

WHEN the first clear voice of the belfry rings out upon the frost sweetened Christmas morning air, let us rise within ourselves to a higher realization of the significance of the Christmas spirit. It remained for the noble, manger-born Jew of Nazareth to imbue this festival time with the splendid spirit of sacrifice, and to teach us that there is far greater joy in giving than in receiving.

It is the special mission of all art workers to give. It is within their power to contribute to the world a kind of wealth beside which the millions of the plutocrat seem paltry. The glorious Christmastide affords a fine opportunity for the musician to carry his tribute to those who need him most.

What shall be your frankincense and myrrh?

It might be a little song to carry some aged soul back to the golden days of youth, when the argosies were all coming in, when life was all hope, all joy, all love; it might be a soothing melody caressed from an old violin to ease the pain and mental anguish of some sufferer; it might be some happy little tune, played for the dear little ones in

an orphan asylum, to make them forget, if for only a few moments, what it means to spend Christmas—of all days in the year—without a mamma or a papa.

Come, do not let us fall into the venal convention of making Christmas an orgie of cheap tinsel and gourmandizing. Let us be completely filled with the jovial spirit of the day. Let us remember that it is the privilege of musicians to give certain gifts, not to be

found in the steel barred vaults of the multimillionaire. Let us realize that the best way to attain happiness is through making others happy. This is the secret of a Merry Christmas.

*The foregoing Christmas editorial was written for the twenty-fifth Christmas issue of THE ETUDE in 1907, thirty-two years ago. It was your editor's first Christmas editorial, and embodied the life thought of*

*the founder of THE ETUDE, the late Theodore Presser, to whom Christmas was a period of unbounded rejoicing and gratitude.*

*Since that time the world has made tremendous advances in many directions, and it has also gone through cataclysms too hideous to think about. Empires, great cities, huge navies and millions of men have been wiped out of existence, but these ideals of the Christ Spirit, the spirit of love and giving, enthroned in Christmas, are eternal. A millennium of wars could not crush them.*

*These ideals are still the ideals of THE ETUDE, now, in this materialistic*

*age, even more than ever before. They have sustained and fortified us. They are our everlasting Fountain of Youth, Faith and Joy. We are grateful for the unending fine responses that our readers have always given to them. They bring all of us closer together.*

*A MERRY CHRISTMAS TO ETUDE READERS, EVERYWHERE!*

## The Dudley Buck Centenary

IF YOU had asked almost any musician of fifty years ago who was the dominating American composer, the answer, in all probability, would have been, "Dudley Buck." Hardly a month went by in any Protestant Church of America without an opportunity to hear at least one or two of his works. His *Festival Te Deum*, in *B-flat* and *Fear Ye Not, O Israel*, were two of the most widely sold compositions in the whole field of religious music. It is not remembered now, however, that he wrote about fifteen notable cantatas, the best of which was possibly "The Light of Asia." He also wrote a comic opera, "Deseret," a grand opera, "Serapis," a symphonic overture, "Marmion," and much excellent organ music, as well as very widely sold instruction books for this instrument. As an organist, he was recognized as the greatest in the America of his day. He was also distinguished as a teacher of the organ and of composition. Your editor was one of his pupils, unfortunately for an all too limited period. He was an excellent, exacting pedagogue, although at times irascible and impatient after the manner of the old-fashioned schoolmaster. He could be inspiring, and frequently was very witty.

Dudley Buck

Dudley Buck was born March 10, 1839 on Ann Street, Hartford, Connecticut. On his mother's side, he was descended from President John Adams, and on his father's side from Pilgrims who came to this country on the second trip of the Mayflower. The father, Dudley Buck I, was a steamship owner. One of his vessels towed the Monitor to Hampton Roads for its memorable battle with the Merrimac.

His materially minded parents objected to the boy's following music as a career and forbade his playing. Upon which the boy painted a keyboard in black and white on a board and practiced upon that in the garret. When his father relented and bought a melodeon, he was amazed to discover that his son already had a technique; so he gave up all objections in the face of such persistence and sent his son to Europe, where the young man became a student at the Leipsig Conservatory (1858-9). His masters were Plaidy, Moscheles, Hauptmann and Richter. Later he studied with Schneider in Dresden, and then for one year with other teachers in Paris. On returning to America, he held many important positions as organist—at the Cincinnati May Festivals, in leading churches of Hartford and Chicago, and as assistant conductor to Theodore Thomas at the Central Park Concerts of New York City. He later became organist at three famous Brooklyn churches, Plymouth, St. Anne's, and finally at Holy Trinity, where he remained twenty-five years.

In April, 1889, Edward A. MacDowell played his own pianoforte "Concerto in D Minor" with the Boston Symphony Orchestra under Gericke. Here was a young man who painted on a broader canvas, with richer colors and a new brush. His genius was such that he commanded wide attention, and the works of his older colleague, Dudley Buck, were, in our opinion, unwisely eclipsed in public favor. We have a very strong feeling that many of Buck's works should be actively revived. They display sound musicianship, excellent melodies, and have a distinctive character. Many of them, upholstered with modern orchestral devices, would surprise present day musicians. Dudley Buck III has resided for many years in Chicago, as one of the foremost voice teachers in America.

Why not a Dudley Buck revival? The Buck field would offer many extremely effective features for 1940 programs.

## The World's Largest City School System

IN NEW YORK CITY, according to Dr. Harold D. Campbell, Superintendent of Schools, as quoted in the *Journal of the National Educational Association*, there is the largest and most heterogeneous school system in the world. One million and a quarter of school children are housed in one thousand buildings, representing an investment of half a billion dollars. This equals the population of the sixth largest city in the United States. The teaching and supervisory staff numbers approximately thirty-nine thousand. One school in Brooklyn has three hundred and forty-nine teachers and nine thousand, nine hundred and sixty-five pupils.

It costs \$152,350,000 a year to operate the New York City Public School System. The cost per student each year is one hundred and three dollars and five cents in elementary schools; one hundred and thirteen dollars and ninety-nine cents in Junior High Schools and one hundred and forty-four dollars and thirty cents in Senior High Schools. The number of persons engaged in teaching music in the Junior and Senior High Schools of New York City, according to Dr. George H. Gartlan, Director of Music, is five hundred and eleven. This does not include the departmental teachers of music in the elementary grades, from the first through the sixth year. Despite the hue and cry against art training in the schools, now unanimously endorsed by practically all educators, the proportionate percentage cost is very small.

## Studying with a Master

THE time-old debate as to the value of studying at an organized school or with an individual master will apparently never end.

The collateral advantages to be gained in studying at a great conservatory are obvious, but the value of a music school does not depend upon its buildings, its catalogued courses, or its name, but very largely upon the efficiency of the individual teachers in the faculty. Should these teachers become perfunctory in the performance of their duties, through the comfortable insurance of a sinecure, their value to the student is enormously reduced.

There is something very inspiring about a master teacher, a Salieri with a Beethoven and a Schubert, a Czerny with a Liszt and a Thalberg, a Leschetizky with a Paderewski, a Hambourg or a Gabrilowitsch, an Auer with an Elman or a Heifetz, a Marchesi with a Calve, a Gerster, a Melba, and an Eames. It is only human for the individual teacher, working independently, to take a very deep, very intimate, and very personal interest in the pupil. The sphere of the individual private teacher of high ideals, superior training and real teaching talent, is perhaps expanding rather than contracting. Pupils still continue to pay a high premium for the services of such a teacher.

In looking over the catalogs of a great many colleges, we have been surprised by the large number of members of the faculties of these institutions, who, even though they have graduated from some distinguished school or conservatory, take pains to indicate the particular masters with whom they have studied. All this points to individuality in art, and it is one of the reasons why all educational institutions are endeavoring to permit their faculty members to have as much artistic latitude as possible.

## Vision and The Etude

THE proverb, "Where there is no vision the people perish," is carved in stone by the portals of the New York Public Library. The Etude always has been a forward-looking institution. The next issue (January) will be a delightful surprise to our friends, wherever they be, because of its new and brilliant features, and its new "format," or size and proportions; but with all the fine old Etude values preserved. It will set many tongues wagging; and our friends will want to introduce it to musical circles everywhere.

Granville Bantock was born in London, England, August 7, 1868. He was a pupil of Frederic Order at the Royal Academy of Music (1889-1922), where he became the first holder of the MacFarren scholarship. While still at the Royal Academy, his overture *The Fire Worshipers*, ballet, "Rameses II", and his one act opera, "Medmar", were produced. From 1893 to 1896, he edited *The New Quarterly Music Review*. He then secured a post as conductor for the memorable George Edwards musical comedy companies of "Gaiety Girl" fame, and 1894-1895 toured the world with one of these sprightly musical organizations. In 1900 he became principal of the Birmingham and Midland School of Music; and in 1908, he succeeded Sir Edward Elgar as professor of music at the University of Birmingham, a post he held until 1934.

All his life he has been a moving spirit in supporting and developing talented young British musicians; and, while very modern, he has no inclination to become radical. It is interesting to note that Bantock was the first to conduct the works of Sibelius in England.

As a composer, he is best known through his work "Omar Khayyam", a setting of Edward Fitzgerald's translation of the Rubaiyat, in voices, chorus and orchestra. The work is in three parts and requires a huge chorus and a large orchestra. The first part was produced in Birmingham in 1906; the second at the Cardiff Festival, Wales, in 1907; and the third in Birmingham in 1909. He is also the composer of a large number of other major works which have been widely acclaimed. In recent years, Granville has been director of Trinity College of Music in London; and he has made many extensive tours for supervising examinations.

\* \* \* \* \*

IT IS LITERALLY IMPOSSIBLE to comment intelligently upon post-war music in Europe, because so much of it is apparently aimed at entirely different objectives from those which obtained in the previous century. Great music is always a development of the past, not a total revolution. The broad and rich art of Wagner finds its roots running all the way back to Palestrina and Bach. Wagner is more popular in Europe than ever. In fact a large part of the public in all lands is only now becoming able to appraise the transcendent beauty, the balance, the majesty, and the force and depth of philosophy of the great master of Bayreuth. After Wagner, Sibelius is looming very powerfully, from a standpoint of popularity. Sibelius is not affected by modern cacophonous experiments, nor was Richard Strauss. The work of these two masters, which manifests brilliant genius, is wholesome and sound, and is built upon technical and practical foundations, indicating a knowledge of the entire musical sphere, and not a little section. Intense study of the works of his predecessors did not hinder Wagner. It helped him, and he gives the impression of having lived in a gorgeous triumph of tonal ideas, which still intoxicate our souls with their undying beauty.

There has been a tendency through all the ages for young people to do things too quickly, to expect results before they were entitled to them. "Life is short and art long" calls Hippocrates down through twenty-two centuries. The trouble with some modern music is that it comes from half-baked minds; so there is small wonder that it is little more than dough and often very hard dough. Kalsushuk Hokusai (1760-1849), the greatest of all Japanese painters of the Edo school, once said, "At the age of twenty I had a desire to be an artist; when I was thirty I studied the rudiments; at forty I learned how to mix colors; at fifty I studied composition; at sixty I observed nature; at seventy I made sketches; at eighty I began to paint; at nearly ninety I have actually begun to paint." His dying words were, "If Heaven had lent me but five years more, I should have become a great painter."

WILLIAM ROBERTS TILFORD

they are twenty, they feel that their instructors are at fault. Precocity and genius are not synonymous. Remember that while Brahms' "First Symphony" was written when he was twenty-two, his great "Fourth Symphony" was not written until he was fifty-two. Michelangelo and Titian were comparatively slow in their development through long years of experience. It takes time to season one's creations with long deliberations. The student who thinks that he will stumble upon the grand arcanum in a musical alchemist's laboratory, is doomed to humiliating disappointment. He never will find it. There is no gold in the baser metals. That is the reason why so much of the post-war music is played once and then forgotten. With all its wild wails and squeaks, it dies stillborn.

One naturally inclines toward favorite composers. Bach and Mozart are inevitable. I have always felt that Franz Liszt was greatly underestimated as a composer. Even some of his finely made fantasias for the piano, and his masterly arrangements of the compositions of others, are now looked down upon by many who are in every way incompetent to judge them. They are, as a matter of fact, very valuable contributions to the repertory of the piano. Few people realize that Liszt gave up public performance for composition, at the half-way of life. Of course, he made occasional appearances in his later years, but he did not regularly pursue the career of the virtuoso with incessant tours. Liszt unquestionably influenced Wagner as "Tristan and Isolde" and "Die Walküre" reveal. You see, while Liszt was only nineteen months older than his son-in-law, he had been a prodigy; and, when Wagner was struggling for recognition, Liszt was already one of the musical heroes of Europe.

Although I have always been an ardent admirer of the finer works of Franz Liszt, I never saw him but once. He came to England only twice. The first visit was in 1840, when he played before the Queen in Buckingham Palace. Despite his great renown on the continent, it is said that when he first appeared at Sheffield there were only fifteen people in the hall. Liszt, instead of being annoyed by the situation, played his program in magnificent style, after having invited his whole audience to be his guests at dinner. The failure to create a furore must, however, have affected him deeply, as he canceled the rest of his tour and did not return to England until 1886, forty-six years later. It was then that I saw him in St. James Hall, at a recital given by his pupil, the Scottish-born Frederic A. Lamond. The announcement that Liszt, then an internationally famous personage, would appear, had caused widespread curiosity and excitement. He was then seventy-five, and, after his hard and tumultuous life, was a very venerable figure. He did not play but went up to the platform so many times in response to the applause, that the audience finally desisted in sympathy for the elderly artist. After Liszt left the people in the audience also departed, and poor Lamond was obliged to finish the recital practically alone. Liszt died a few months later, in the midst of a Wagner festival at Bayreuth.

*Truth in Art*

ALTHOUGH AS A YOUNG MAN I was always looked upon as a radical, I feel that the only music that is worth while is that which is likely to become permanent, that is, as permanent as anything can be in art. So much highly lauded effort has been wholly transient. It is for this reason that I find that jewel of permanence in the works of Richard Strauss, Peter I. Tschaikowsky, Jan Sibelius, Edward Elgar and Frederick Delius, that I do not find in the compositions of some other modern masters. From this it must not be inferred that I do not admire Debussy, Stravinsky and others; but I cannot feel that these works have the structural solidity that imbues the works of the other composers I have mentioned. Perhaps they are not intended to have it. Perhaps they are designed as exquisite and transient dreams, too ethereal to be based upon a more material pedestal.

Music must mean something to me. It must have body and form and color, and it cannot be a mere parade of cacophonous ghosts. If you have ever tried to read the "Ulysses" of James Joyce, you will know what I mean. What sense

is there in strings of disconnected words which are nothing but nonsense to anyone but the author or a coterie of *poscurs* who pretend that they can comprehend such gibberish and who proclaim the writer a master largely because he is incomprehensible. Surely all sense has not left the human race, and we are not all going to continue to be the victims of such literary, artistic and musical bosh.

Edward Elgar is far and away the greatest musician that England has had since William Byrd, who it must be remembered was a highly successful music publisher. In fact, he and Tallis had a license from the crown which gave them a virtual monopoly of the business. He was a very active, cultured and intelligent man of great energy. He seemed to be in continual litigation over his properties. Both in England and abroad, he was known as the "Father of Musick." He wrote one hundred and seventy-three pieces, mostly for the virginal. His career (1543 or 1542 to 1623) should be especially interesting to Americans, since his music was that most likely to have been heard by the Pilgrim Fathers who were contemporaries of Byrd. These pious people, however, rarely permitted themselves to hear anything more than their lugubrious Psalms.

Fully recognizing the talent and genius of our other early English master, Henry Purcell, he is not generally regarded as highly as Byrd. It seems strange that such a music loving nation as Great Britain should be obliged to wait over three centuries before the appearance of another very great composer, Sir Edward Elgar.

### A Worthy Modern

ALTHOUGH SIBELIUS' works had already reached their eighty-second opus with his "Fifth Symphony", at the time the war commenced in 1914, his musical fame was extremely restricted, though he is now widely acclaimed in all countries. Music is certainly the most universal language. The best test then of a work of art is the question, "How extensive and how enduring is the appeal?" The works of Bach, for instance, are given regularly in all cultured countries; and, despite the fact that they are now practically two centuries old, they are heard by millions; whereas when Bach was alive they were known in only a small section of the world, and I doubt whether more than fifteen thousand people heard Bach's compositions during his lifetime.

The works of Sibelius have already had world-wide acceptance, and I am sure that they will last through the centuries. He did me the honor, in 1907, of dedicating to me his "Third Symphony, in C major." Since the beginning of the World War, he has written three other great symphonies, and I consider these the greatest contribution to the art in the post-war period. Richard Strauss' greater operas and symphonies were all written prior to 1911.

### A Mistaken Idea

By

MARGARET E. FITZ-GERALD

ONCE IN A WHILE a teacher receives the following message, "Susan has not touched the piano since you were here, so it is useless for her to take a lesson this week."

A candid reply would be, "You are very much mistaken, madam, for the greater amount of time spent with the instructor, the more rapid will be the progress of the pupil. The student may not need further explanation on former matters, but a good teacher has ample means and knowledge with which she will occupy the hour to the advantage of the pupil."

\* \* \* \* \*

"It is quite impossible to avoid falling into an ecstatic tone when speaking on the true nature of Beethoven's music."

—Wagner.

## A Christmas Prayer

1939

Arise again! O Star of Light!  
That shone when Christ was born,  
And fill the hearts of men with love  
That now are battle-torn.

The sun still shines at Heaven's gate,  
The skies are blue and bright,  
And those who weep shall smile again  
When they have passed the night.

Bless those who strive for brother love,  
Put triumph in their hands,  
Exalt the glory of Thy name  
In all the stricken lands.

And all good will and joy and love,  
For which Thou liv'dst and died,  
Have not yet failed upon the earth,  
Save where they were not tried.

Sing! Angels of the Heavenly Choir!  
And dry each needless tear.  
Bring peace on earth to men once more,  
The Christmas dawn is here!

James Francis Cooke

## Amaryllis and Louis XIII

By IDA A. RICE

FEW INDEED are the persons who have heard or played *Amaryllis* as arranged by Henri Ghys. Whenever this composition is played it is generally accepted that King Louis XIII was the composer. But the French King did not have anything to do with this composition.

However there are many false compositions in music; and the *Amaryllis* was written by an Italian named Baltazarini before Louis XIII was born.

It was not named *Amaryllis* but *Clochette* by the composer. This from the fact that a little bell sounded all through the main theme.

Nevertheless Louis XIII did write *Amaryllis*, but it was a four part song, in praise of Mme. D'Hauteville. It was named *Amaryllis* in accordance with the tradition of the French court, but it should not be confused with the *Amaryllis* as arranged by Henri Ghys.

\* \* \* \* \*

## Dr. Damrosch on Musical Tolerance

DR. WALTER DAMROSCH was the speaker at the opening of the beautiful Hammond Organ Studios on West 57th Street, New York City. After praising in the highest terms, the well known Hammond Organ and the "Novachord" and stating, "I think that this invention will prove to be one of the greatest commercial projects ever connected with music, and one of the greatest contributions to the art," he discussed tolerance in Art. His address follows:

"I remember some twenty years ago that a lady friend came to see me and said, 'so many words, Mr. Damrosch, we are now in the midst of a war against Germany. You are playing Beethoven, Wagner in your symphony concerts. These two composers should be struck from your programs. We can acknowledge that they are great, but the greater they are and the deeper the impression that they make, the more the cause of Germany in the present war is thereby enhanced.'

"Well, that seemed to me very poor logic and I said so. Her husband was one of the directors of the Metropolitan Museum. I said that if I were no longer to give symphonies of Beethoven in my programs during the duration of the war, would your husband be willing either to destroy or to put into the cellar of the Museum those great works of the 19th Century German masters which are now enjoyed?

"It was unanswerable, he wouldn't; and so I continued during the war to give Beethoven symphonies together with the French, English or Belgian composers. That is the freedom of art which we all strive for, and this is contrary to what is being done today in totalitarian countries of Europe. They only enchain their citizens politically that they have neither thoughts nor rights politically of their own, but they cannot say what kind of music shall be written or performed or not performed. The state edicts what sculptors shall be encouraged or tolerated, what paintings should be shown. Of course, that is monstrous and is reducing these countries in the respect of art to a feudal state which art cannot endure and the time will come when these chains will be thrown off. Art must, and shall be free.

"Art should be never shackled politically. It must be free to follow its own dictum."

A Musical Playlet  
for the  
Christmas Season

By

MARGARET  
FREEMAN  
TURNER

## THE SONG OF THE DRUM

### STAGE SETTING

The stage is made to represent a living room. In the center is a fireplace made of a frame, using imitation red brick (paper). Inside are andirons and red and yellow electric lights to represent fire-light glow. On each side is a ladder-back chair. At one side of the stage is the piano, and the Christmas tree is on the other side.

About five children are grouped around the fire. One is playing scales on the piano, one reading fairy tales, one little boy is whistling and another playing some kind of game on the floor. Barbara, the big sister, is arranging gifts on and around the Christmas Tree. As the pupils finish their numbers, they step behind the tree and assist Barbara in placing the gifts, in order not to detract from the child playing.

\* \* \* \* \*

But, oh, if extra fingers  
Grew on my hand some night,  
Then I'd have twenty fingers  
And never get things right.

She then takes her seat at the piano and plays When Snowflakes Leave the Sky (Grade III), by Ada May Piaget. Barbara comments on it and tells her she may hang her stocking.

BETTY: "Oh, let me hurry and play my piece so that we can go out and sing carols. It won't take long." She plays Christmas Eve (Grade IV), by Heins, and after Barbara's approval, hangs her stocking.

BARBARA (speaking to one of the boys who is busy whistling): "Aren't you going with the others to sing carols, Clyde?"

CLYDE: "Yes, Barbara, if they'll wait until I get my sling shot fork made."

Barbara then tells Clyde to play his piece. He plays The Indians (Grade II½), by Frank Grey. The children rush out, joyously anticipating the fun in store for them. They leave amid confusion, each making

some kind of remark about wanting a sweater, a hat, or something. Sleigh bells outside.

Wilton (dressed in boy scout uniform) rushes in looking for something. He seems in a great hurry.

BARBARA: "Wilton, what are you looking for, and why the big rush?"

WILTON: "I'm going to a scout meeting, sis, and I'm late now. Where's my scout knife I left here on the table?"

BARBARA: "It's right there where you left it; but wait a second, young man. Before you go, I want you to go through the piece you're to play in the recital, just to see if you know it well enough. It will take only a minute or two. Come on."

WILTON: "Gosh, I know it about as well now as I'll ever know it!"

He hurriedly takes the seat at piano, and runs through his piece, The Boy Scouts' Hike (Grade II), by Walter Rolfe. He jumps up and grabs his hat and rushes out, calling over his shoulder,

"Bye, sis, see you later."

During this time, Jimmie has been sitting at the left and reading the Fairy Tales one of the girls left.

JIMMIE (looking up): "Gee, I'll be glad when I'm old enough to be a scout!"

Two older girls, Norene and Edith, come in, dressed to go to a dance. They are talking animatedly about their dance dates.

BARBARA: "How lovely you look, girls, and where is the big affair, may I ask?"

NORENE: "Bob and Tom are taking us to the Christmas Dance that Nancy is giving. We heard about the lovely tree you are having and decided to let the boys meet us here so we could see the tree. We're leaving tomorrow, you know, to visit Marion. And here are our little gifts for you, Babs. By the way, Edith, while we're waiting on the boys, how about playing Blue Danube Waltzes (by Johann Strauss)? You know, that's a beautiful thing, such good music and rhythm for dancing."

EDITH (plays the Blue Danube Waltzes. She remains seated at the piano but turns to Norene): "Norene, what is the name of the piece you were playing at Sue's last night? I'm just crazy about it. Let's see, it goes something like this (playing a few notes). How about playing it for us?"

ANABEL: "Oh, I just hate to practice! I'm so tired of running the same old scales, making the same old mistakes and never getting anywhere."

ETTY: "You should be one of the little girls in this fairy story book Grandmother gave me, then you wouldn't have to practice. That's what is so nice about being a story book girl."

MMIE: (playing with tops on floor): "Won't you read or tell us a fairy story?"

BARBARA: "Remember, children, Miss Mae told you to practice hard every day for the recital tomorrow, so how about playing your pieces over, and letting me see how well you know them. When you have finished, you may hang your stocking for Santa Claus."

MARY ALICE: "And may we all go serenading to sing Christmas carols, when we've finished?"

BARBARA: "Hum—That is if you play your piece well enough."

Anabel plays her piece, Chimes at Christmas (Grade III), by B. Greenwald.

BARBARA: "That was lovely, Anabel. You may hang your stocking for that. Now, Mary Alice, let us have your piece."

MARY ALICE: "Oh, sister, I know mine already. Must I play it again?"

BARBARA: "Certainly. If you hang your stocking and go out with the others, you must. Don't you think it would be much better to play?"

Mary Alice sighs and goes over to the piano to play. She pauses, holds out her hands and recites the following poem by Elizabeth Winstone.

I take piano lessons,  
I practice hard each day;  
But I've so many fingers  
They're always in the way.

My third comes down in thumb's place,  
And thumb and second fight;  
I make so many blunders  
I seldom get things right.

NORENE: "Oh, that's *Valcik*, by John Mokrejs. (She goes to the piano and plays it. If possible, when piece is just about finished, have a doorbell to ring as if the boys have just arrived.)

EDITH: "There they are now, right on time." (Both say "Good-bye" to Barbara.)

BARBARA: "Good-bye, and have a good time!"

*Nell and Martha, two little friends of the family, enter.*

MARTHA: "Where are the others, Barbara? We came over to go with them to sing Christmas carols."

NELL: "Oh, what a beautiful tree! I do believe, Barbara, that is the prettiest tree I ever have seen; and I know you must have had fun fixing it. We hope you will be at the recital tomorrow, and we hope we know our pieces (laughs)."

BARBARA: "I'm afraid I won't be able to go, but how about playing them for me now. I'd love so much to hear them."

*Nell plays Christmas Song (Grade III), by Krug, and Martha plays Snowflakes (Grade III), by George Hamer. Barbara comments on how well they play, and they leave to join the others in singing carols. They bid Barbara good-night and wish her a Merry Christmas. As they are leaving, they hum Jingle Bells, in order to make a less awkward departure.*

JIMMIE: "Would you like to hear my new piece, sis? Miss Mae says I play it swell."

BARBARA: "Yes, Jimmie, I was going to ask you to play before you went up to bed." He plays Song of the Drum (Grade I½), by Anna Priscilla Risher.

*(A very pretty effect, and also an amusing touch, can be achieved by having a very little boy in his "nighties" come out playing a toy Christmas drum, as shown in the accompanying picture.)*

BARBARA: "That was simply fine, Jimmie. Now hang up your stocking and run along to bed."

JIMMIE: "But, sis, it's Christmas Eve!"

BARBARA: "Yes, and that is just the reason you should get to bed early. Big day tomorrow."

JIMMIE: "O. K. sis, but—"

BARBARA: "But what, dear?"

JIMMIE: "Well, I just thought, well, mother always read *The Night Before Christmas* for us on Christmas Eve."

BARBARA: "Yes, of course, I remember now. Sure I'll read it. Run up to your room and get it."

JIMMIE: "I have it here! (as he digs it from under a pillow on the sofa)."

BARBARA: "Are you ready?"

JIMMIE: "Yes, sis, but we ought to have candles."

BARBARA: "That's right. We'll have them just like mother did. Will you get them?"

JIMMIE: "Sure!" (He goes out, and returns a little later carrying two candles.) "May I light them, sis?"

*Barbara strikes a match and places it in Jimmie's small fingers. She remains silent while the child walks across the room and turns out the light.*

BARBARA: "Come, let's sit here on the sofa, where we can read by the candlelight." In a throaty, sad voice, Barbara begins reading "Twas the night before Christmas"

JIMMIE (when she has read only a line or two): "Oh, no, sis, not like that."

BARBARA: "What's wrong, darling?"

JIMMIE: "Oh, mother made it sound—aw—funny and—aw—I don't know, but not like that."

*Barbara begins reading again, this time with a lot of pep and trying to make it sound lively. She finishes reading.*

JIMMIE: "Sis, do you believe in fairies?"

BARBARA: "Well, you see, Jimmie, there are no fairies, as real creatures to be seen; but sometimes we feel that one of them would like to tell us something. But they can't talk; so, if they play we can understand. You see, music is a language that everyone, young and old alike, can understand. I'll tell you a Christmas story (Grade III),

by Stephen Heller, by playing it to you. That will be my way of telling you a fairy tale and of letting you get acquainted with some of these little creatures through music."

*Before she has quite finished playing, Jimmie falls asleep. Barbara tiptoes from the room. Outside the children are softly singing There's a Song in the Air.*

*Arrange for blue lights to come on, and have a little girl dressed as a fairy come in and dance around the room, waving her wand, and then recite, not too loudly.*

"Perhaps you'll be surprised to find that fairies know how to walk,  
Perhaps you'll be surprised to find that fairies can also talk.

*He then plays Soldiers Marching.*

*The Fairy waves her wand, and another child appears in Gypsy costume. She plays About Gipsies, by James H. Rogers.*

*The Fairy waves her wand and a child, dressed to represent the Spirit of Christmas, enters and recites Christmas Everywhere.*

CHILD:

"Everywhere, everywhere, Christmas tonight!

Christmas in lands of the fir-tree and pine,

Christmas in lands of the palm-tree and vine;

Christmas where snow peaks stand solemn and white,

## FIFTY YEARS AGO THIS MONTH

JOHN C. FILLMORE, widely recognized American piano teacher and musical historian, contributed the following very helpful passage on the singing touch while discussing "The Requirements of Modern Pianoforte Technique."

"Now, what are the requirements of lyric playing? First and foremost, the production of a pure tone. This depends absolutely upon the touch of the player. And the prime quality in a good touch is independence of finger, the individualization of the fingers—the power to determine the whole nervous force of the flexors of the forearm into any one finger, while all the others are perfectly in repose. The least rigidity, the least nervous constriction about the hand or arm is fatal to the quality of tone. When the player telegraphs to any given finger to perform a given motion, he must be able to refrain from telegraphing to any other finger to do anything whatever. The rest are to be absolutely quiescent and wait their turn. A hand thus quiet, elastic, flexible, admits of the firmest and most powerful stroke, or rather *pulling-in pressure* (for that is the indispensable basis of a good touch), which any one finger can produce when impelled by the whole force of the muscles which flex all the fingers. This is the first thing to be done—to acquire the ability to use any given finger to its fullest capacity without disturbing any other.

"This is the basis of lyric style and also of the attainment of discriminative emphasis. The two qualities may or may not be combined in any given piece. Lyric style implies simply a melody, which is to be prominent, and an accompaniment, which is to be kept subordinate. One hand may play the melody and the other the accompaniment. Discriminative emphasis implies a melody and accompaniment to be delivered in their proper relation of prominence and subordination by the same hand at the same time. This requires the utmost control of the nerves and muscles, the utmost individualization of the nerves and muscles, and the utmost development of power, to be determined into the individual fingers at will.

"A good Chopin or Schumann player must be able to produce any degree of power of which his fingers are capable with any given finger, especially the fourth and fifth, while he produces at the same time any given subordinate degree of power with one or more of the remaining fingers of the same hand. This quality is often embodied in full chords, the upper note of which requires to be made more prominent than all the others put together."

That our vocabulary is small, you'll surely understand

The shoe will be on the other foot, when you're in Fairyland."

*She plays Fairy Footsteps (Grade II½), by Frederick Emerson Farrar. When she has finished, she waves her wand, and another little girl appears in the costume of Little Miss Muffet. She recites the poem and then plays the piece by that name. The fairy waves her wand, and a little boy in a soldier's uniform appears.*

LITTLE BOY:

"Oh, it's fine to be a soldier and have a little gun,

Oh, a war must be a frolic and a battle lots of fun,

Oh, it's fine to have a swelling chest, and back that hollows in,

And sure I think those shiny little shoulder-straps no sin;

Oh, I am just a-pining for the battle to begin,

Bzz-z-zt!

Biff-bang!"

Christmas where cornfields stand sunny and bright;

Christmas where children are hopeful and gay,

Christmas where old men are patient and gray;

Christmas where peace, like a dove in his flight,

Broods o'er brave men in the thick of the fight;

Everywhere, everywhere, Christmas tonight!

For the Christ-child who comes is the Master of all;

No palace too great, and no cottage too small."

*She then plays Christmas Day in the Morning, author unknown. When she has finished, the others tiptoe back into the room, gather around the Christmas Tree and begin singing softly. Silent Night. This awakens Jimmie, and he gets up, yawns, walks toward the middle of the room, rubs his eyes, and then goes over to the tree to join the others.*

CURTAIN

## Let Us Give the Piece a "Rub"

By MAE-AILEEN ERB

ROBERT AND MARY want to go down the street with their bicycles glittering. He shall we get them just as much interest in rubbing the dust off their pieces.

After such details as notes, rests, fingering, and tempo have been mastered, a piece cannot be considered as "polished" until an interesting interpretation makes it "shine", too. Can't we get our Mary to Robert's to be just as interested in the brightness of their pieces as of their bicycles?

Separate passages should be played over and over again to attain the proper shading. This process of repetition is taken for granted in learning the piece generally, but rarely is it applied with enough perseverance in getting well balanced tonal effect. Go to the average pupils' recital and listen. Beautiful tone and singing *legato* are too much "among the absent."

But shading should be taught to the youngest pupil; and then by the time a few years have passed it will become second nature. In fact a small child becomes very much interested if a story is told to stimulate the imagination, or if pieces are selected which are written especially to stress interpretation, such as a *Huntsong* or those with such titles as *Cuckoo* or *My Echo*.

We recently heard an elderly musician tell how one of her most treasured memories was once having been in an adjoining suite to that occupied by Fannie Bloch-Zeissler on the day preceding a concert she was giving in Chicago. After hearing her repeat a certain passage an infinite number of times, she began counting and was amazed to find that Bloch-Zeissler played that four-measure phrase fifty times before reaching the particular nuance for which she was striving.

If a famous concert pianist considers it necessary, the average piano student should not rebel at the paltry ten or fifteen times prescribed by his teacher. The willingness to do this painstaking polishing is what lifts a pupil out of the mediocre to the distinguished class.

## The Pencil

By

GERTRUDE GREENHALGH WALKER

SCHOOL AUTHORITIES everywhere agree that written work quickly and firmly established in the student's mind subjects that must be memorized. Spelling, "Time Table" poems, and so on, must be written as well as presented orally to the teacher.

Thus it is well for the music teacher to emulate the school system by requiring written work whenever possible.

All musical terms occurring in an assignment not only should be looked up in the musical dictionary but also should be written out on paper and handed in to the teacher at the next lesson. The teacher should carefully peruse the work to see that all terms are spelled correctly. The phase of the lesson should be insisted upon until the student not only knows the interpretation of the terms but can spell them aloud whenever requested. After which the teacher at his discretion may require drilling only on unfamiliar material.

When wrong phrasing, or fingering is played, the pupil should be handed a pen and be required to make the necessary correction. Lesson assignments are remembered in full, if the pupil writes them out for himself. The pencil is a necessary part of a studio equipment and is an important factor in recalling the teacher's criticism to the pupil; but it becomes doubly efficacious when used by the pupil.

A TYPICAL MAJOR BOWES  
AMATEUR AUDIENCE

IF YOU HAVE ANY DOUBT in your mind as to the value of a personality, you need only look at the theurgic success of Major Edward Bowes, showman extraordinary, keen business executive, and the best "emsee" of the age. If you are not a pilgrim on the "Great White Way", or if you are not a subscriber to "Variety", or the "Billboard", you probably do not know what the noun "emsee", or the verb "to emsee", means. "Emsee" is simply post-depression jargon taken from the night club performers who are masters of ceremonies (M. C.). These, "we have with us tonight", and "give the little girl a great big hand", folks, who can unblushingly exaggerate a backwoods prima donna into an "amazing artiste", were sired by the old-fashioned toastmasters and trained in the school of ballyhoo.

Major Bowes, of course, does his "emseeing" over the air, does it in a more dignified manner, and is extremely droit in his field. For years before he introduced his Amateur Hour, he "emseed" his Sunday noon musical programs, coming from his famous New York Capitol Theater. In these programs he inserted little bits of homely philosophy and an occasional poem, usually highly sentimental and moral. These he delivered with the proper confidential, or lachrymose accent, savoring of his Hibernian ancestry. When an Irishman is sentimental, he is

# The Story of Major Bowes and His Amateur Hour

By

ANTHONY J. BRANSON

sentimental. The Major knew that the world is always short on sentiment, and he has made a real contribution to a mechanized age by his homely and sometimes tearful contributions. He published these very appealing and human poems in a book called "Verses I Like", and Theodore Roosevelt thought enough of them to write a very laudatory three page "Foreword" to the book. Unquestionably his scattering of the philosophy of kindness, tolerance and optimism has helped millions. But, if sentiment is a grace of the Irish mind, so is wit; and when the Major laughs and chuckles you can almost see the loud-speaker grin.

Major Bowes was apparently endowed with the Midas touch. Almost everything to which he has turned his hand has succeeded. He has won the favor of millions in all classes of human endeavor. Therefore, to the would-be footlight aspirant, the favor of the Major is looked upon as a kind of theatrical rabbit's foot. His success in his particular field, in which music has played a conspicuous part, is so startling that anything pertaining to it is of curious and profitable interest. As a showman, he is a master of the art of pleasing people; and his "mike" technique is worthy of study.

## Biographical and Hereditary

MAJOR EDWARD BOWES was born in San Francisco, of Irish parents. The Major does not give his age, not even in a "Who's Who" in America. He is one of those perpetually young people over fifty, who might be between sixty and seventy—and who cares. Around the beginning of this century he had already established himself as a wealthy business man in San Francisco. His grandfather

MAJOR  
BOWES

## A Million Dollar Idea Carried Out By a Million Dollar Personality

was a North of Ireland Methodist Clergyman. There is to this day a relic of a Wesleyan pulpit effulgence in the Major's voice. He always seems to be talking to his congregation.

In his youth, young Bowes was moderately trained in music. However, he has not had the audacity of his former satellite, "Roxy", who, with no musical knowledge whatever, did not hesitate to conduct imposing symphonic works played by large orchestras. The Major's first business enterprise, as a very young man, was that of writing business and calling cards, at a time when the art was mixed up with making fanciful pictures of birds. His handwriting is today such that he could return to his juvenile spencerian undertaking. A job in a real estate office, at three dollars a week, determined the Major's career. He has always been in the real estate business on the side and has owned a vast amount of property. His rise was rocketlike. He became the best real estate operator in the city of "The Golden Gate." As fortune favored him, he became interested in yachting, in a training stable, and in automobile racing. He once took the wheel and won a fifty mile non-stop race, in the days when every racing

driver was a daredevil. Life was an everlastingly new and exciting adventure for young Bowes, and he was continually upon the lookout for more thrills. This he found next in politics.

In 1904, San Francisco's municipal rule began to sink to new lows in American affairs. Corruption was a commonplace, and not since the days of the vigilants had the city government been such a national scandal. Here was a grand fight for an Irish-American heart! Major Bowes was appointed upon a Grand Jury, and, the more he learned of the depravity of the city, the more his anger soared. He soon found himself heading a reform movement with Hiram Johnson (later Governor Johnson and then Senator Johnson) as his attorney. Theodore Roosevelt became aware of the situation and, at Major Bowes' solicitation, sent the famous detective, William J. Burns, to his aid. Bowes knew that the greatest asset he could have was an aroused public sentiment, and he employed his publicity methods to tell the good people of the city of some of the dangers surrounding them. Part of his raid upon crime was devoted to a battle to end the Chinese tongs, with their record of uncanny oriental

murders, and part to the drug traffic. Major Bowes attacked these fearlessly, often going personally and single-handed into situations that would make a moving picture thriller. With him was the courageous District Attorney, Francis J. Heaney, who later was shot down in open court. Ultimately all of the malefactors were put behind bars and San Francisco was placed upon a new civic basis.

### When Nature Took a Hand

THIS WAS NOT THE ONLY EXCITING EVENT in Major Bowes' San Francisco days. After he had made a trip to Ireland to visit the birthplace of his parents, he returned upon the night of the momentous debut of Caruso in the San Francisco Opera House. The occasion was momentous indeed, because the applause for the great tenor had scarcely died out when the great earthquake and fire took place. The Major's fortune was largely in real estate, and his buildings were soon in ashes. While the embers were still white hot, he interested capital and engaged workmen to erect an office building, with firmer foundations, on the site of his ruins. The Major was following the optimistic doctrine he had preached for years. By guessing right as to the location of his new building, he reestablished his fortune.

elevate musical taste in America. Major Bowes weekly "Family" Programs led to the development of a huge radio audience; and, when he came to start his Amateur Hour, he had little difficulty in enlisting the interest of millions.

Fate has played too big a part in the career of Major Bowes not to influence his interpretation of life. His familiar introductory line of his Amateur Hour, "Again we have the Wheel of Fortune. Around and around she goes, and where she stops nobody knows," is nowhere better illustrated than in the Major's own career. There have been amateur contests in vaudeville for four decades. Once the idea was so popular that the amateurs actually became professionals, making tours of the theaters and acting the rôles of amateurs. This fraud was easily penetrated, and the public soon turned its back on amateur hours.

Whether the amateur hour on the radio came as an inspiration or as a carefully worked out plan, the Major has not told. The appeal of the idea is multifold.

First, there is the appeal to the performers, who feel that the hour gives them an escape from oblivion provided by fate, dangling before them possibly immense financial returns.

Second, it affords to hundreds a means of expressing themselves to the

theater of the ether. The others must be told to go home and try again, or that there is no chance whatsoever.

### Grist from All Climes

THE MAJOR'S PROGRAMS are catholic, in that they include almost all kinds of human expression, from the scalp to the feet. Their audience is, therefore, almost universal. It

DORIS WESTON,

moving picture star, is a Major Bowes discovery.

is very doubtful, however, if these programs could succeed without the Major, who is the biggest part of the show. His reassuring voice and simple presentations are the Major's own inimitable brand and contribute enormously to the amusement of the hearers. Most of all, the writer feels, however, the first appeal of the hour is in "Fate": "Who will fate favor tonight?" The Major, in all probability, got his famous line from the Chinese sage, Confucius, who said, "The Wheel of Fortune turns round incessantly and who can say to himself, 'I shall today be uppermost?'"

The uncertainty of destiny in an amateur program, the thing which has made thousands invest in the Irish Sweepstakes, is another form of the magnet of chance, which draws thousands of performers and listeners to the Amateur Hour. A man turns up from "nowhere", suddenly Fortune gives him his chance, and he is actually heard addressing the entire nation. Such a case was that of Harvey Mearns, a salesman for bakers' supplies in Philadelphia. He learned bell-ringing, musical rattles, the tubular harp and Javanese chimes. Major Bowes introduced him to Destiny on an Amateur Hour. He made good and was immediately engaged for a tour with one of the Bowes' Theater Units. He saved his money, and, on returning to Philadelphia, found that his former employer was obliged to give up his business. Mearns bought it with his savings. Note, however, that if he had not had the opportunity presented by Major Bowes, he could not have grasped the opportunity which put him in a successful business. No wonder Lord Bacon said, "A wise man makes more opportunities than he finds."

The Major's script or program routine must be very carefully prepared. The time limits of the radio make this imperative. Of course much of the banter and fun that the listener hears is really spontaneous. It all, however, must have the semblance of being spontaneous. Just who thinks up the spurts of precocity which come bubbling from the mouths of children on the program, we do not know; but evidently it is all as ingeniously prepared, as is the copy advertising the wares of the sponsors. The Major and his Amateurs must sell automobiles, or the public would be deprived of one of its leading weekly entertainments. The Chrysler interests are not concerned in giving away free entertainment. They must move motor cars as rapidly as possible from the line in the garage.

Variety is one of the problems of the Major's programs. Anyone who ever has served as a judge in a musical contest knows how certain musical "war horses" keep continually tramping to the front. The Major has probably heard the *Prologue* from "I Pagliacci" and Victor Herbert's *Gypsy Love Song* enough times to give him blind staggers. Applicants with musical "fresh meat" of real interest to the general public must be as much of a thrill to the Major as they are to his listeners.

The Amateur Hour is now nearly five years old. It started March 24, 1935. It is estimated that consideration has been given to over fifty thousand applicants. This does not mean merely an audition, because nearly every applicant has a struggle story. Major Bowes and his staff have heard enough life romances to fill a thousand books. All this is important to the attractiveness of the Amateur Hour, because the greater the struggle, the greater the drama, and the greater the appeal to the audience.

### A Theatrical Flair

THE AMATEUR HOUR of Major Bowes has the advantage of being presented before a real audience in a real theater. The building is a former Broadway playhouse, taken over for such purposes by the Columbia Broadcasting Company. The seats are free, but passes must be secured in advance. The house is always "packed". The audience, and its applause, then become parts of the air show. The wary Major knows the value of this. The audience sees the performers and the effect of appearance and personality is unfailingly indicated. A tubby, spongy-nosed baritone from Askalulu, with a good voice but an impossible appearance, would not under these circumstances have the same appeal as a delightful young coloratura from the Mulberry Street Riviera, whose voice might not be top notch, but whose smile and manner carry a fortune. The Major is probably the only man in the theatrical field whose "try outs" are free. Like the automobile manufacturer, his product goes right from "the line" to the dealer and the consumer. The applause in the theater and over the air lets the manager know what he is engaging. The plan is what the French term "*étonnant* (astonishing, marvelous)"; there never has been anything like it. The audiences in the theaters know that they at least will see performances that thousands have already

ELMER TRUDGEN, a Canadian farm boy, pictured with the "One Man Band" he assembled and played on one of the Major Bowes' Amateur Hours over the air. His band includes Piano, Violin, Guitar, Drums, Triangles, Wood Blocks, Cymbal, Bells and Chimes.

CLYDE BARRIE, called one of the greatest Negro singing discoveries since Roland Hayes. Clyde Barrie, baritone, is a Major Bowes discovery. Barrie worked as elevator boy, red cap, clerk, and so on.

In 1903, Major Bowes married the famous actress, Margaret Illington; they moved to New York where Major Bowes acquired an interest in the Cort Theater (also the Park Square Theater in Boston); and he commenced producing plays. In 1918, he built the Capitol Theater on Broadway in New York, which at that time had the largest seating capacity of any modern playhouse. It was the first of the huge "Cinema Cathedrals" in New York City. There he instituted a new form of musical, vaudeville, and moving picture entertainment, which has been widely imitated. In 1925 he started to broadcast a weekly "Family" Program on Sunday, with a very humanistic personal musical appeal. The music was always of a very high order and remains so today. This type of program led to the development of moving picture symphony orchestras in all parts of the country. H. L. Rothafel ("Roxy") also had a big part in this movement. The sound pictures put an end to many of the orchestras, but not to the Major's. He knew their value in bringing customers to the box office. The symphony orchestras in the movie theaters called for the expenditure of millions of dollars and did much to

world and thus releasing pent up ambitions.

Third, it puts the idea of a contest before the radio audience.

Fourth, it provides a varied and interesting program.

Fifth, it has a curious human appeal, in that the Major very cleverly introduces little personalities which range from burlesque to tragedy.

Sixth, it presents the always admirable picture of a human individual in a tense struggle to succeed; and the essence of drama is struggle.

Naturally this has brought myriads of all kinds of people to Major Bowes' doors. If you were to spend a day in his anteroom, you would be torn between laughter and tears. Only a comparatively few of those who enlist for auditions ever reach the

CHARLES M. SCHWAB, the late Steel King, as an alert photographer caught him at Major Bowes' Amateur Hour broadcast.

approved. Smart Major, smart audiences smart idea!

Major Bowes has an uncanny sense of musical selectivity. That is, he knows a good thing when he sees it and hears it. It was Major Bowes who gave Erno Rapée his opportunity as a conductor. Later on Eugene Ormandy came to the orchestra as

(Continued on Page 825)

A PROPERLY DESIGNED AND ARRANGED studio is helpful in acquiring students. It should be more or less centrally located in the area from which the teacher expects to draw pupils. A location which will contribute to an atmosphere of professional dignity is likewise desirable.

Perhaps one's career must be started in his own home; in that case a comfortable little studio can be arranged in the front room. In any event, consideration should be given to proper temperature which will make the room comfortable for the student, and to the interior decorations which should be simple and in good taste.

A comfortable couch, a hat-rack, and suitable reading material should be provided. *THE ETUDE* is a very fine magazine for the studio, as it has a Junior section of interest to most children. At all times the studio should be kept in order and have an air of freshness.

A suitable studio sign is required. It should be designed with letters sufficiently large to be visible across the street, and it must be neat. A good size is about sixteen by twenty inches. The lettering on the sign may include the words: "Piano Studio" with the name of the teacher in the lower right hand corner, or perhaps the teacher may prefer to feature his name in the lettering and put "Piano Studio" in the corner. Either arrangement is acceptable. If the sign is purchased locally, another opportunity will be afforded to get acquainted.

The studio piano should be well tuned, with necessary adjustments made to insure freedom of action. There should be no keys that stick, or keys that fail to sound. The keyboard should be kept clean at all times. After all, the piano is the teacher's chief tool; and it should be a recommendation for him.

Decorations in the studio may include a picture or two of the music masters. A plaque on the wall, or a bust on the piano is a suitable adornment. They contribute to a musical and educational atmosphere.

### The "Fee" Problem

THE TEACHER SHOULD DETERMINE upon a reasonable fee, giving consideration to the income of the average family in the community. Thereafter, he should make no exceptions. It should be universally the custom to pay in advance for piano lessons.

Teachers may stress the point in conversation with parents that lessons are more successful when paid for in advance. Certainly it makes for less bookkeeping and more certain revenue for the teacher (to which he is unquestionably entitled, as he usually has no other source of income). Occasional exceptions may be made when parents have reliable credit standing in the community, own their own property, or give other evidence of reliability. In any event, the teacher should not hesitate to arrange for a definite payment schedule.

When lessons are not given in the studio, but in the home, a somewhat higher fee is justified, which will defray transportation costs as well as time lost from the studio. With a full teaching schedule, the teacher can accommodate fewer students by going to the homes than at his studio. On the other hand, collection

is easier when one calls regularly at the child's home; as it serves as a constant reminder to the parents and usually avoids any necessity of dunning persons who might otherwise be slow pay.

In a competitive community the fee may be set about the same as the prevailing fee; or, the teacher may prefer in some cases to offer a shorter lesson at lower cost. Lessons may be given in the half hour period; a popular time in many communities is forty minutes; and as a rule

# How to Make Money by Teaching the Piano

By

WALTER ELLIOTT

Prominent Piano Pedagog of the Far West

## Part III

the more advanced students will require an hour lesson each week. A very young child may require three twenty minute lessons per week, in order to give the teacher a chance to direct his daily practice and progress.

There are no universal rules to be laid down in the field of teaching. Each child will be an individual case and will require individual attention. The more that the teacher knows of the child's background, interests, and family, the more intelligent his approach will be.

From the start, the teacher should relinquish any impulse to develop prodigies. He should be satisfied with average results, with average daily practice, and be content to allow the child to take its natural course of development in piano studies. Overenthusiasm is to be avoided; it is much safer to teach the child material that is within his grasp than to discourage him by a composition that is far above his ability. At all times, good judgment should be used in selecting compositions adapted to each child's needs.

Over a period of time, the child advances most rapidly if he proceeds uniformly with material within his technical grasp, or slightly above his ability. The average child will pass the first grade of musical development in about the same time as a school term. Exceptions, of course, will be noted with brighter and duller students.

### Study the Student

EXCEPTIONALLY BRIGHT PUPILS may master a greater number of studies, or they may show their aptitude in some particular line towards perfection of study or interpretation. It can be said that a slower student who passes fewer studies is on the same achievement level as a faster student, if he knows those studies very well. No anxiety should be felt for the progress of either student. Childhood abilities undergo fluctuation, and unexpected aptitudes and interests may

emerge at any time.

A cheerful patience on the part of the teacher must be maintained all the while. A child is often quick to seize upon an impatient reproof; he can be unduly hurt, and his progress be greatly impeded.

The use of marginal notes in the pupil's exercise book is advisable; they serve to remind him of the technical points to which he is to give particular attention during practice. Quite often there will be several little points to

be studied by the pupil; and, without these notes to remind him, he will overlook some of them.

### Some Working Rules

THERE IS PERHAPS ONE RULE which will be applicable in all cases—the pupil must be taught to think for himself. It is wise to encourage this by means of brief reviews from time to time. The pupil may be questioned during review concerning the significance of what he has studied, and then may be placed on similar compositions with somewhat different and more advanced material. Each selection may teach the pupil a few points, but not too many, at a lesson.

There is another rule of general application: Tell the student the correct way to do things; avoid stressing or demonstrating the wrong ways of playing. This may be termed the positive view of teaching. In teaching finger action, for example, the teacher should show the child the proper way to strike the keys instead of pointing out the wrong technic which the child may be using and making it stick in his mind. As the child recalls his lesson, he should recall correct methods, encouraging words, and pleasant experiences.

The teacher should avoid speaking too rapidly in describing the various points of the lesson. It is also well to avoid covering too many points. One should start with a rough outline of the lesson, then gradually fill in correlating material.

### And Then to Discipline

THERE IS PRACTICALLY NO NEED of discipline when teaching students individually. It is in teaching groups of pupils that discipline becomes a factor of importance. Exceptions may arise in teaching individual students, but in such cases the reasons for perverse behavior are usually evident. Here the teacher may reason with the student and gain his confidence. The average student has a good sense of coöperation, and, if approached with tact, will prove tractable.

In some instances it will be necessary for the teacher to be more than generous with a student. It must be remembered that the teacher's job is to make music a thing to be enjoyed. In his beginning years of experience, he will encounter various trials that will call for all his patience and ingenuity, if he is to succeed in his profession. This is, of course, something that the teacher must take in his stride.

A temperamental attitude is to be avoided. Some beginning teachers tend to develop such an attitude after acquiring a few students, and it is unfortunate when they must learn their mistake at the loss of several pupils that might have continued. A pleasing personality must be cultivated for the purpose of retaining students as well as for obtaining them.

Tactful teachers will give the proper information concerning the lesson, at the time when it is needed. They must endeavor to observe this point, even if the pupil's attitude is not what it should be. The teacher who loses his patience loses likewise the respect and confidence of the student. It is better to let the student think he is doing his best at the time, and later when he sees his mistake he will probably make an apology, later avoiding hasty decisions. Patience is the cardinal virtue to be practiced by the teacher.

An understanding attitude is especially helpful to the timid student; he is poorly benefited by an impatient reprimand. Usually the retiring type of child progresses more rapidly when he takes his lesson at home in familiar surroundings. The teacher may keep a notebook in such cases, in which he may enter the child's needs and course

GEORGE LIEBLING WITH THE AUTHOR  
*Walter Elliott (right) with the noted Liszt pupil, George Liebling, at the latter's home in Hollywood. George Liebling is a brother of the late Emil Liebling, beloved by many successful pupils.*

of progress, which will be a stimulant to him.

The spoiled child is a serious problem: he takes little interest in his lessons and is un-receptive to the usual teaching suggestions. The teacher may try several methods of interesting these pupils. Martial music, with its strong rhythms, will occasionally be found effective; and duets may be arranged with the proper partner. Any kind of competition will usually help this type of pupil. When a boy is encountered who has the idea that music is "sissified", a man to man talk about sports which interest him is often helpful. It may be pointed out that most composers and great pianists are men, and that they can do many other outstanding things besides play and compose.

### The Practice Problem

THE STUDENT SHOULD MAKE HIS PRACTICE a daily routine, as he does his meals. Where routine is lacking in his daily life, his practice will be irregular and his advancement hindered. There are many things to distract the child's attention, especially in urban districts; and for this reason the teacher should plan the pupil's lessons ahead of time, making them as attractive and interesting as can be. It is purely competition between the teacher's ability to make the lesson interesting enough to overcome distractions; as there will be always something to misdirect the child's attention. The distractive competition must be reduced to a minimum.

### The Missed Lesson Jinx

THE PUPIL SHOULD START OUT with a clear understanding that lessons are not to be missed. The habit of missing lessons every other week, or so, leads only to complete failure. There are a number of reasons for students missing their music lessons, as for missing any other lessons; and if the teacher has such a pupil he should look into the matter promptly and determine what was the reason for the student's absence. It may be found that the hour is inconvenient. In this case, correction can be made more or less to meet the needs of the student. Or the pupil may lose interest and present various alibis. In this case it may be that, in all fairness, the teacher should speak frankly, considering the student's viewpoint. It may even be necessary for the teacher to call at the student's home and clarify the problem with the parents.

When a lesson is inevitably missed, the teacher should endeavor to have the student make it up within a day or two. The complete missing of lessons is to be avoided upon every occasion.

### And There Are "Methods"

THE METHOD IDEA CONSISTS of featuring one method of instruction with which the teacher is satisfied as providing a properly developed and rounded course.

A recommended instruction book is the "Standard Graded Course" by W. S. B. Mathews. This fine book is standard among popular piano teachers, because it uses the modern method of the "Middle-C approach" and starts the child off on the first exercises using the proper finger action of all ten fingers. The first exercises use whole notes; and, as the lessons increase in difficulty, half notes and quarter notes are introduced. A continually graded rate of development is maintained, and rests are introduced along with time values of notes and meter. Succeeding lessons properly develop each finger in turn.

A great advantage of this method is the fact that the child is encouraged to listen to his own playing, which trains his ear and teaches him to detect his own technical errors.

Simple duets are introduced early in the course, between the child and teacher. This tends to stimulate the pupil's interest. Other melodic exercises and easy compositions continually add interest to the course. Supplemental compositions are listed at the bottom of each page; these are attractively composed and keep the student practicing

the technic taught in the course. This sheet music is printed with attractive pictures on the covers; it is sold separately from the course.

Some of these selections are provided with words, and they can be taught by having the child learn to sing the melody and later to play it at the piano.

The course covers the ten grades of musical development, ending in the highest stage of virtuosity.

### Mainsprings of Interest

THE PIANO LESSON should be a time of continual inspiration for the pupil. At each lesson, the teacher should play for the student all the material with which he is occupied at the time. This shows the child the correct manner in which to play the exercises and presents the essential musical idea therein. Now and then at the end of a lesson the teacher should play one of his own good interpretations and display his ability. This is a fundamental method of interesting the student, and other devices are more or less artificial. It is always well for the teacher to have at hand several brilliant compositions; this is an aspect of showmanship. The selections may be highly classical and rather over the heads of the juvenile audience; but so much the better—the student then obtains an idea of the goal toward which he is striving.

Merits and Emblems are of value in encouraging effort. A rather informal merit

system can be used to excite interest among the students. The old idea of using gold stars for perfect lessons has always been successful. Stars can be used only for young pupils. For the older students, a certificate may be presented at the end of a year's work. This can be done at the home or during public recitals.

Gold and silver pins, used as emblems of merit, are very good. They will have the same function as the certificates.

For very advanced students, an engraved diploma may certify his accomplishments and proclaim him to have attained a certain higher grade of piano playing.

## Music of Worth in the Movies

By VERA ARVEY

APPROXIMATELY THREE YEARS before the United States Postal Department announced that Victor Herbert had been selected by President Roosevelt as one of five American composers to be portrayed on postage stamps, Paramount Studios in Hollywood had acquired the screen rights to all the Victor Herbert melodies and had started preparations for a biographical picture based on that composer's life. The scene is to be New York after the turn of the century, for Herbert's life span was from 1859 to 1924. Ella Herbert, daughter of the composer, was engaged to act as technical advisor; while Walter Connolly, well known character actor, is to portray the composer himself and is to be seen conducting (after careful instruction in that art) in the completed film. Connolly is said to resemble the composer more than any other available actor.

Thirty-four songs have been planned for this film, and all music heard will be that of Victor Herbert. No Hollywood composed music is to be used, though Arthur Lange is doing all the reorchestrating and giving the familiar tunes new treatments. The story itself revolves around two romantic young people in the entertainment world who specialize in the singing of Herbert songs: Allan Jones and Mary Martin, whose much publicized singing of *My Heart Belongs to Daddy* failed to reveal the fact that she really has a fine voice which she is able to use with true artistry, Andrew Stone is producer and director of "Victor Herbert."

It will be recalled that in a recent film issued by Paramount, "The Star Maker", in which nine of Gus Edwards' songs were used, there were also heard Tschaikowsky's *Waltz of the Flowers*, Ardit's *Parla Valse* and parts of Beethoven's "Fifth Symphony."

The report that Fox Studios plan to star Lily Pons in a film based on the life of Offenbach is false, according to authorities; but this studio does have in production "Swanee River", based on the life of Stephen Foster, another American composer officially honored by his own government on a postage stamp. Like "Victor

Herbert", this film is not scheduled for release until after the first of 1940. It will have versatile Don Ameche playing Stephen Foster, and Al Jolson playing Edwin P. Christy, the renowned minstrel man of bygone years. Of course he will sing many Foster songs in the picture. Nancy Kelly has the feminine lead and Sidney Lansfield is the director.

An unusual parallel prevailed in Hollywood, when Warner Brothers' Studio filmed "We Are Not Alone," starring Paul Muni, and Selznick filmed "Intermezzo," with actor Leslie Howard. The former is a picture in which Muni plays the rôle of a music lover who turns to playing the violin for solace; and in the latter film, Howard impersonates a concert violinist who falls in love with his accompanist (*Ingrid Bergman*). Oddly enough, both male stars are reported to have been excellent violinists in their youth, to have practiced hard in preparation for their forthcoming films, and to do the actual playing of this instrument on the screen. "Intermezzo" contains music by Grieg, Schubert, Tschaikowsky and Beethoven. It also enlists (in addition to actress Edna Best) the services of a new child discovery, ten year old Maria Flynn, ballet dancer, linguist and accordionist.

Walt Disney has not yet committed himself to a definite date of release on his much publicized concert feature (with Mickey Mouse in *Dukas' The Sorcerer's Apprentice*, Tschaikowsky's "Nutcracker Suite," Debussy's *Clair de Lune*, Beethoven's "Seventh Symphony," Bach's *Toccata and Fugue in D minor*, and Stravinsky's "Rites of Spring") except to say that it will not appear until "Pinocchio" is done, a matter of many months hence. However, the music has been already recorded, in Philadelphia, by Leopold Stokowski and the Philadelphia Symphony Orchestra. Because Disney thought of having Deems Taylor add program notes to this feature, in an endeavor to unify it, he held a summer conference with Mr. Taylor and Mr. Stokowski. He is enthusiastic over the new feature and declares it will surpass "Snow White and the Seven Dwarfs"!

# Radio Flashes

By PAUL GIRARD

IT HAS BEEN GRATIFYING to have the dissemination of war news on the air reduced. It is equally gratifying to find that the harrowing news from Europe does not dominate radio, and that we, as a neutral nation, can still enjoy our favorite musical programs.

Not until his honeymoon with Lily Pons last year, did the CBS orchestra leader, André Kostelanetz, know there was such a dance as the *samba*. But everywhere he went in Brazil he found people playing, or dancing to, its fascinating rhythm. So on his return home he played a series of Brazilian records over and over again until he found the best example of the *samba*. After arranging it to suit his own orchestra, he introduced this lively dance to his American listeners. Kostelanetz, who, with his forty-five piece orchestra, is heard every Monday over the Columbia network (8:00 to 8:30 P.M., EST), is an ingenious arranger. Some of his effects are not only novel, but also most original.

"The Story of the Song", one of our favorite programs, has been changed to 3:30 P.M., EST, Tuesdays. It is customary, in these broadcasts, to feature a single composer, and by following them regularly one will find many unfamiliar as well as familiar composers presented. The singers vary, but all, in our experience, have been good.

It has become a radio tradition in this country to tune in on Fridays from 2:00 to 3:00 P.M., EST (NBC—Blue Network) to hear the NBC Music Appreciation Hour with the veteran American orchestral leader, Dr. Walter Damrosch, as conductor and master of ceremonies. This is the twelfth consecutive season that Dr. Damrosch has been on the air. One of radio's most outstanding features in the field of music education, this program will appeal to old and young alike. For those interested, a twenty-four page Instructor's Manual can be procured for twenty-five cents. These contain program notes on the broadcasts.

The series of recitals given by the Dorian Quartet since July, over the Columbia network, Saturdays 11:30 A.M., EST, have been most interesting. Alexander Cores, the first violinist, has delved deep into a century of chamber music composition in America and has presented a group of distinctly worth while American works.

If you like Negro spirituals, do not miss the broadcasts known as "Wings Over Jordan", heard Sundays from 9:30 to 10:00 A.M., EST (Columbia network). Since January, 1938, this program has been broadcast without interruption. The choir of thirty-five mixed voices was recruited from ten representative Negro churches in Cleveland, by the Rev. Glenn T. Settle, in an effort to promote better understanding between the races.

The Cincinnati Conservatory of Music early in October resumed its sixth year of Saturday morning concerts (Columbia Network—11:05 A.M. to 12 Noon, EST). The excellent school orchestra and string ensemble are directed by Alexander von Kreisler. Student and faculty artists participate again this year in the programs. The Curtis Institute of Music program, featuring the Curtis String Quartet, also returned to the airways in October in a series of Monday afternoon concerts (Columbia—4:00 to 4:30 P.M., EST). On November 20, the first this season of Saturday evening concerts (10:30 to 11:00 P.M.) by the Curtis Institute was given.

WILLIAM BILLINGS WAS PICTURESQUE, even on the streets of old Boston. An uncouth, eccentric prodigal, he was a tanner by trade, and probably a pretty good one at that, for at one time he had his own shop. His robust, happy heart, however, was less concerned with the conditioning of his hides than in chalking down on them little tunes that came to him as he worked; and there came a day when he made an abrupt turn to the left and became America's first professional musician.

Billings was one of God's oddlings. Blind in one eye, with a withered arm and a short leg, he was often openly and unkempt about his person. He had lusty habits of inhaling his snuff from an open palm, of loudly howling and wheezing as he proceeded down the street, and of having his clothing always plentifully powdered with tobacco dust.

With these peculiarities, he naturally became a butt for the derision of the rowdies of Boston, who stood outside his singing classes and caterwauled in imitation of the singers. One of the town wits once came to him with the question, "Should snoring be classed as vocal or instrumental music?"

Billings replied, "With a nose like yours it would be instrumental." Billings had a sign over the door of his little shop, "BILLINGS' MUSIC." Some of the village roustabouts tied two cats by the tails and hung them over the sign, to the great amusement of the townspeople.

#### *Tanner Turns Tunemaker*

BILLINGS WAS BORN in Boston nearly two hundred years ago, on October 7, 1746, to parents of moderate

means and ambitions. In his early youth he was apprenticed to a tanner. When he was eighteen years old, in opposition to his young wife and the advising elders of the commonwealth, he abandoned his tannery, opened a music shop in Boston, and set his defiant, wayward feet on the unwavering road to the unknown grave in Boston Commons Cemetery which now houses him.

In pre-Revolutionary America, there was no such thing as a native professional, and the Europeans, even while they were successfully stirring up sizable interest in concerts in the cities, were having a slim time of it.

Billings managed to make a go of it by selling tickets to musical events, of which there were quite a few, and by handling such musical merchandise as scores, strings, frets, and a few instruments.

Six years after opening his shop, Billings published his first work, "The New England Psalm Singer" came out in 1770 and gained in recognition and popularity all that Billings' wildest dreams could have pictured. This was the beginning of twenty unbelievable years when his wild little compositions, which he called fugues, would dominate the music of the churches of New England, even to its most remote corners. His music was filled with errors. He laughed at parallel fifths and octaves and correct resolutions, but his public was not equipped to be critical.

#### *America's First Music Book*

AT THE TIME BILLINGS PUBLISHED his first book, the colonists had been, for a century and a half, droning in confusion and discord the few psalm songs the Pilgrims brought with them from England. One hundred and fifty years without score or instrument to guide them was giving the ministers themselves the screaming jitters. One preacher declared that that to which he had to listen on Sunday mornings was enough to drive a man to popery. Some of these ministers were doing what they could to restore the psalms to their original selves by bringing out their own editions of new or corrected arrangements, prefacing them with "rules for tuning the voice" and elementary instruction in the art of "musick."

Four part psalm singing was not Billings' meat. He had a new idea. No longer content with simple harmony, he must needs give each voice its own tune, independent, inter-related. This he called a fugue, although it did not in any way bear out the laws of fugue after the manner of Bach. So bumptious and excited was he with this miracle of his creation that he wrote: "It has more than twenty times the power of the old slow tunes; each part straining for mastery and victory, the audience entertained and delighted, their minds surpassingly agitated and extremely fluctuated, sometimes declaring for one part and sometimes for another. Now the solemn

bass demands their attention; next the manly tenor; now the lofty counter; now the volatile treble. Now here, now there, now here again. O, ecstatic! Rush on, ye sons of harmony."

This was riding high, but Billings was not abashed. Probably totally unaware of his incompetence, and allowing his instincts to guide him, he staggered together

his pleasant, ingenious little tunes with a rhythmic spark and raucous liveliness that were to emerge one hundred and fifty years later as jazz. These tunes have become known as "Billings' fuguing tunes."

Musically he was the man of the hour, for his tunes caught on. They were vigorous, in contrast to the monotony of the psalm songs. His rhythms moved. His songs were easy to memorize for all their multiple construction, and they were not above the heads of the people. Also they took more expertness on the part

of the choir than had previously been required. Many an ambitious village soprano, eager to show off the voice, must have clutched the Billings book to an eager breast and, in any event, have closed a not very critical eye to such shortcomings as might have come to attention.

#### *Singers' Foibles Rebuked*

THIS FIRST BOOK WAS COMPOSED of some one hundred and twenty tunes covering one hundred and eight pages. There were hymns and anthems, and twenty-two pages of instructions in which he set forth such good advice as, "Many ignorant singers take great license with these trills and without confining themselves to any rule, they shake all notes promiscuously and they are apt to tear a note to pieces, which should be struck fair and plump as any other. Let such persons be informed that it is impossible to shake a note without going off it, which occasions discord."

At this time the influence of the florid religious choruses of the English writers of the elaborate ecclesiastical school was beginning to be felt in the Colonies. This was partly because of their introduction by foreign musicians who touched upon our shores, and partly because the singing schools which had sprung up all over the country were interested in, and competent enough to handle, something more complicated than the four-part wail of the psalms.

Billings' efforts to realize the emotional and intellectual excitement of the fugues of the masters met with a better general response than a real fugue by Bach, which pure art at that time could have been appreciated in the hearts of only a few. As it was, he did achieve a kind of excitement and some fortuitous phrases which, written singly or in counterpoint, were cheerful and rhythmic, and an enormous contrast to, and relief from, what had come before them. New England never before had seen his like.

#### *A Law Unto Himself*

BILLINGS HAD READ A TREATISE or two on harmony but was neither impressed nor dismayed by what he had to learn. His first attempts at harmony were written in the tannery, with a piece of chalk, on sides of leather. His technical knowledge was crude. He rather flamboyantly boasted of his ignorance of the most intricate of arts, and did not hesitate to assume leadership. He wrote, "To All Musical Practitioners: Perhaps it may be expected by some that I should say something concerning the rules for Composition; to these I answer that NATURE IS THE BEST DICTATOR, for all the hard dry studied rules that were ever prescribed will not enable a person to form an Air. . . . It must be Nature. Nature must lay the foundation, Nature must inspire the thought. . . . For my part, as I don't think myself confined to any rules of Composition laid down by any that went before me neither should I think (were I to pretend to lay down rules) that any who comes after me were in any ways obligated to adhere to them any further than they should think proper. So in fact I think it is best for every Composer to be his own Carver."

Billings grew up during those turbulent years when the situation between England and the Colonies was becoming acute. He was a friend of some of the prominent men in Boston who shaped the policies of the colonies during these

years. Governor Samuel Adams, the most defiant and successful agitator of them all, was one of them, and he must have rejoiced in a kindred soul as he surveyed the ugly little tanner roaring above the crowd and drowning out the choir.

Two years before the Revolutionary War, Billings gathered about him, in a little singing class conducted at the home of Robert Capen of Stoughton, Massachusetts, a group of forty-eight men and women. After the War the group grew larger and in 1786 was formally organized into "The Stoughton Society," named for the little town just outside of Boston, where it was organized. The Society is in existence today and is the oldest in the country. The men and women were not cultured amateurs nor semiprofessionals. They were people with no cultural pretensions at all beyond a pleasure in choral singing, which drew them together under the ardent baton of William Billings.

Billings had some ability as a leader. Whether he had any technic or not, he knew what he wanted. His own voice was said to be very rasping and disagreeable; but he had a mental conception, an ideal, toward which he worked with some success.

It was the custom of the day to exchange ministers from pulpit to pulpit. As the preachers passed through Stoughton the fame of the excellent singing of its Society spread until some time later the choir of the First Parish of Dorchester, Massachusetts, challenged the Stoughton singers to a contest. The Stoughton Society sent twenty men who sang unaccompanied. The Dorchesterians brought along a bass viol. When the Stoughtons finished up with singing without score or accompaniment, Handel's *Halleluiah Chorus*, the Dorchester singers acknowledged themselves defeated. Beyond this contest there is no record that The Stoughton Society has accomplished anything very momentous, during its one hundred and fifty-three years of existence, that is more wonderful than the mere fact of its survival.

### The Musical Patriot

THE REVOLUTIONARY WAR came on and Billings was one of the most fiery patriots on the scene. Undoubtedly a member of the tea dumping party organized by Samuel Adams in Boston Harbor, Billings carried on through the conflict, going into the camps with his hearty, cheering war songs. With the war actually on, the religious conscience of the colonies quieted down and Billings suited his material to his need. The British occupied Boston, and blandly he paraphrased:

"By the rivers of Watertown we sat down  
Yea, we wept as we remembered  
Boston."

Then he came out with *Chester*. *Chester* is the war song that helped win the Revolution. Composed first as a hymn, Billings wrote new words for it, snapped up the rhythm, and passed it out among the troops:

*Let tyrants shake their iron rod  
And slavery clank her galling chains,  
We'll fear them not:—we trust in God,  
New England's God forever reigns.*

*When God inspired us for the fight,  
Their ranks were broke, their lines  
were forc'd,  
Their ships were Shelter'd in our sight,  
Or swiftly driven from our Coast.*

*The Foe comes on with haughty Stride,  
Our troops advance with martial noise,  
Their Vet'rans flee before our Youth  
And Gen'als yield to beardless boys."*

Many a hearth and camp fire were encouraged and heartened during the long winters of the Revolution by the singing of these verses.

The war was still on when Billings published his second book. Officially entitled "The Singing Master's Assistant," it became generally known as "Billings' Best" and was possibly an improvement over the first book. It contained *Chester* and was a great popular success. Nearly every home and choir stall had a copy, and the Continentals carried it from camp to camp.

### Introspection Sets In

BY NOW BILLINGS DID NOT FEEL quite so good about his first book and he prefaced this one with, "Kind reader, no doubt you remember that about ten years ago I published a book entitled 'The New England Psalm Singer,' and truly a most masterful performance I then thought it to be. How lavish was I of encomiums on this my infant production! 'Welcome, thrice wel-

come thou legitimate offspring of my brain; go forth and immortalize the name of your author. May your sale be rapid and may you speedily run through ten thousand editions.' Said I, 'Thou art my Reuben, my first born, the beginning of my Strength, the excellency of my Dignity and the excellency of my Power.' But to my great mortification, I soon discovered that many pieces were never worth printing nor your inspection."

Then in 1781, when the war was over and the soldiers dismissed, Billings brought out his third book, "The Psalm Singers Amusement." Following this, 1786 saw the "Suffolk Harmony." The star of William Billings was in its ascendant. He published a few anthems in separate editions, some of them becoming quite generally used. *The Rose of Sharon* was most popular

and was programmed even on some of the more distinguished presentations of the day.

By 1790 Billings' career was at its peak. There was hardly a collection of hymns that did not contain something by Billings. He had achieved something few American composers have had the satisfaction of knowing. He was a part of the main stream of the life of his times. No chauvinism nor promptings from the side were required to interest the people in what he wrote. He was accordingly famous and honored, even regarded by many as a genius.

### The Penumbra of Eclipse

BUT NO STAR EVER SANK more precipitately than his. Not only were better equipped  
(Continued on Page 816)

## Old Familiar Carols Game

By FRANCES E. LESLIE

ALL OVER THE WORLD the Christmas season is ushered in by the singing of carols, the beautiful songs of Christmas, which have been handed down through the centuries. In this busy new age we hear the Christmas melodies over the radio, on the street, in the great stores, in the churches. Ofttimes we let other people do the singing for us, and some of us have forgotten the words.

Let a musical member of your family conduct the following game at your Christmas party.

Give each player a pencil and sheet of paper. Let each one write numbers from one to twelve. The conductor of the game will read the Christmas story as follows. When he comes to the music, the first line of a familiar carol, he will play it on the piano or any other musical instrument, without so much as a whisper of the words. The players will write down the words of each title, ere the story continues. A Christmas present could be given to the person with the highest score.

"And there went out a decree from Caesar Augustus, that all the world should be taxed. And all went to be taxed, every one to his own city. And Joseph with his wife Mary went up from Galilee out of the city of Nazareth, into Judea, unto the city of David, because he was of the house and lineage of David." St. Luke 2. 1-4

And so it came to pass that one

when the sky was aglow with the brightest star that had ever appeared,

in a field, on a hillside, just outside

that Mary and Joseph were obliged to stop for the night. The inn was full, but they found a place in a cave in a nearby hill, where the cattle were wont to shelter. While all the world was sleeping,

that to Mary, her first-born son, the little baby Jesus was born, destined to be the greatest

High in the heavens, to the shepherds, came the sound of

The shepherds whispered one to another

So greatly amazed were they, that they left their sheep to graze under the stars, saying with one accord

When they came to the place where,

the little Jesus lay, they heard the voices of strangers, who hailed them saying,

The Shepherds replied,

Reverently, they all paid their homage to the new-born babe and went forth to tell the world their wondrous story. Today that story is still being told, and we will end our telling of it with a Christmas song of rejoicing,

\* \* \* \* \*

### ANSWERS TO OLD FAMILIAR CAROLS GAME

1. Silent night.
2. While shepherds watched their flocks by night.
3. O little town of Bethlehem.
4. It came upon the midnight clear.
5. Joy to the world.
6. The first nowell.
7. Hark, the herald angels sing.
8. O come all ye faithful.
9. Away in a manger, no crib for a bed.
10. We three kings of Orient are.
11. God rest you merry, gentlemen.
12. Good Christian men, rejoice.

# "Music Is My Hobby!"

**WALTER ROBERT SCHUMANN**  
*Stamp Editor of the New York Sun. Great grandson of Robert and Clara Schumann*

SOMETHING OVER TEN YEARS AGO, two distinguished musicians plunged themselves into a lively discussion on the subject of music. There is no news, certainly, in that fact. There is news, though, in the fact that this chance discussion became the direct means of opening the door upon a new interest and a new stimulus to millions of Americans who otherwise might never have had it.

Back in the 1920's, the late Ossip Gabrilowitsch spent a pleasant afternoon in the office of his friend, Walter Koons, now of the National Broadcasting Company. It led to music making, music making led back to talk, and presently the two gentlemen found themselves deep in one of those questions which can have a thousand answers, or none at all: *What is music?* The afternoon ended without a solution to the question, since every definition of music contrived to arrange itself in terms that took something, at least, of the art for granted. Webster's Dictionary does not even list the word! As a matter of accuracy, the ultimate answer to "What is music?" has not yet been found; but the quest has led to something of far greater practical value than an abstract definition.

Mr. Koons became absorbed in the question, asked a number of distinguished professionals to answer it, and as many interesting replies. This led to his next step, the question to a group of non-professionals—

**REAR ADM. R. E. BAKENHUS (RETIRED)**  
*Distinguished naval authority, pianist*

*The Engaging Story of How Successful Business and Professional Men and Women Avoid Life Monotony and Insure Against a Dull and Profitless Old Age by Taking Up Music Study*

By

**ROSE HEYLBUT**

**HENDRIK WILLEM VAN LOON**  
*Eminent historian, geographer and excellent violinist*

business men, engineers, lawyers, doctors, housewives, and the like—in order to discover what music means to the average layman. And the answers bred a new conviction in Mr. Koons. He saw that the number of people who are genuinely interested in music, who put forth efforts to maintain a high degree of skill in it, regardless of the pressure of other interests and other work, is far greater than one generally supposes it to be. From this point on, the story becomes one of action rather than one of theory; and the action is entirely Mr. Koons'.

## *The Birth of a Reformation*

HE "DID SOMETHING" about his beliefs. He suggested to NBC that it might be valuable to present a radio program which would give pleasure to listeners at the same time that it accomplished three things:

1. *The presenting of good, well performed music without the aid of "big names" and professional embellishment.*
2. *The discovery of amateurs, in all parts of the country, of sufficient skill to maintain such a program.*
3. *The demonstration to the millions of NBC listeners that personal music making, on a strictly non-professional basis, is a tremendous lot of fun.*

The suggestion was received with interest, but also with doubts. How would a program of amateur music "go over" with people who turn on the radio for entertainment? Would there be enough first rank amateur

performers? What would be the effect on an audience that comprises the vastly varying backgrounds and tastes of the entire nation? Still, Mr. Koons wrapped himself in a mantle of faith; and, under his personal supervision there appeared, in February of 1933, an entirely new venture in air programs. It was the popular "Music Is My Hobby." It was also the first amateur program to appear on any major network; and, with brief seasonal interruptions, it has continued on the air for more than six years. The program has never been commercialized, eager sponsors being advised that the best interests of the program were served by keeping it as a cultural and educational feature. It never has varied from that level. It never has lowered its standards to "stunts"; it never has been used as a short cut into professional music. The people who have appeared on "Music Is My Hobby" cultivate music strictly as an avocation, for the "after hours" of busy professional or business lives; they have come before the microphones for the sole purpose of sharing their enthusiasm with other amateurs, and of encouraging potential amateurs to join in. And thousands of American listeners have heard, enjoyed, and been stimulated to take a turn of their own at the fun of making music.

## *A Roll of Doers*

WHAT SORT OF PERSON finds his after hour recreation in singing and playing? Among the three hundred odd performers who have "guested" on Mr. Koons' program, we find:

The late Hayward S. Kirby, Vice President and Secretary of the Irving Trust Company. Pianist.

Archibald MacNichol, partner in the stock brokerage firm of Shippee and Rawson. Violinist.

Hartwell Cabell, prominent attorney, and cousin of James Branch Cabell, the writer. Pianist. (By way of

**PROF. VLADIMIR KARAPETOFF**  
*World-famed electrical engineer*

parenthesis, Mr. Cabell demonstrated that his musicianship goes deeper than a mere playing of notes. Although he plays from memory, the music was placed before him at his broadcast. In the nervous excitement, from which  
(Continued on Page 824)

IN THE FOLLOWING EXAMPLE you will find a spot at which there are no less than four foreign notes. This four-ply suspension (actually unprepared suspensions, or appoggiaturas) makes a terrific wrong, as you can hear for yourself when you play it, and the listening ear is heartily relieved when the wrong is righted. It is from *The Raven's Wedding, an Old Norse Air*

The places marked by *x*'s are merely passing notes. It is at *y* that the quadruple-barreled suspension takes place. These four foreign notes appear "out of the blue" and are therefore to be classified as "unprepared suspensions."

### Another Foreign Note—the Pedal Point

WHENEVER WE RUN ACROSS a three-note or four-note suspension, such as the one just illustrated, we are apt to raise questioning eyebrows at the suggestion that all four upper notes are wrong, and only the bass note correct. We are reminded all too forcibly of the old gag about "everybody being out of step but father." And our skepticism becomes even stronger when we meet passages in which a multiple suspension is prolonged—in which the bass note solidly stands its ground for several measures while the other notes above it move in groups of two, three or four, as if they were complete chords in themselves.

Take this passage, for example, from the *Prelude No. 22*, from Volume I of "The Well-Tempered Clavichord" by J. S. Bach.

If we ignore the monotonously repeated B-flat in the bass, we can explain the harmonic structure of these measures very easily. Only three chords are used: tonic triad, subdominant seventh chord and leading tone seventh chord in the key of B-flat minor, with a few passing notes and suspensions thrown in for variety. But if we try to fit that repeated B-flat bass note into our theory, it explodes. Most of the time B-flat simply does not belong there.

There is another, different way in which we can explain the presence of the continual B-flat bass. We can say that the entire passage has as its underlying harmony the tonic triad—B-flat, D-flat, F—and that all the other notes are suspensions or passing notes. According to this viewpoint the entire phrase is one grand, prolonged suspension which plays its game of hide-and-seek and finally comes to rest on the chord which has been so insistently hinted at by the B-flat bass.

Every passage of this sort can be looked at from two angles. It all depends on your particular viewpoint of the moment, whether it is "father" or "the rest of the regiment" which is out of step. The question need not trouble you, however, for it is just about as immaterial as the more famous question concerning the chicken and the egg. The monotone bass effect happens to be a well-recognized phenomenon in music; it goes by the name of *pedal point*; and if you can

recognize it and label it as such, that is enough.

Why "pedal point"? Because this device first became popular in organ music. As you know, the low bass notes of an organ are played by stepping on a row of large wooden pedals, arranged in keyboard fashion. When an organist wants to play a passage which sustains a single bass tone through shifting harmonies, he holds one foot motionless on a bass pedal while his fingers roam the keyboard. Hence, the effect has come to be called a *pedal point*, or, sometimes, an *organ point*.

The chief effect of a pedal point is to emphasize the home key by constantly reminding us of its presence even when the harmony tries to wander into other fields. Most pedal points hammer away at either the tonic or the dominant note.

One of the simplest and most effective pedal points is the drone bass so characteristic of Scotch bagpipes. These instruments impart a primitive insistence as well as a certain discordant gaiety to the music they play.

Sir Arthur Sullivan harmonized many of his tunes with drone bass accompaniments. The scores of Gilbert and Sullivan operettas are well sprinkled with them, in the manner of this quotation from *When a Merry Maiden Marries*, from "The Gondoliers" by Sir Arthur Sullivan.

These measures are reproduced by special permission of Mr. D'Oyly Carte, owner of their copyright.

Simple tonic and dominant harmonies, enriched by the sustained F in the bass. In both the second and fourth measures the sustained F is foreign to the chord above it.

One of the greatest and most stirring pedal points in the literature of music is the monotone hammered out so ominously by the kettle-drum and string basses at the

very opening of the "First Symphony, in C Minor" by Johannes Brahms.

For a more restrained use of pedal point we can turn to the Russian symphonist, Tchaikowsky. In the opening movement of his "Pathétique Symphony" he introduces as his second theme an eloquent, soul-baring melody for the violins (probably an old acquaintance of yours) which moves above rich, shifting harmonies; and beneath it all the bass viols hold a low, unobtrusive tonic D, like an anchor to windward in a stormy sea. Listen for this the next time you hear the symphony.

### Foreign Notes That Fail to Become "Naturalized"

BEFORE WE LEAVE THE SUBJECT of foreign notes there is another point worth mentioning. We usually think of a foreign note as being like a mistake which needs to be corrected. If a composer upsets us by permitting a foreign note to intrude, he is obliged to pacify us forthwith by "resolving" that note into one which belongs to the chord, thereby replacing discord with concord. It sometimes happens, however, that a foreign note has only a fraction of an instant in which to correct itself, and fails to take advantage of that brief interval. Or, again, it happens that even if the note has plenty of time to change it hangs on until the last minute, just to tease us, and then, before it has had a chance to move to the spot where it belongs, the chord beneath it changes. When this occurs, the wrong remains uncorrected.

Ordinarily this would be annoying to a musically trained ear. But if the first chord happens to be a chord of motion (dissonance), and the second a chord of rest (consonance), we are perfectly willing to allow the composer to skip the job of making the discordant foreign note blend into the chord, as long as he accomplishes the job of mak-

ing the discordant chord-of-motion move to a peaceful chord. To illustrate:

Instead of Ex. 5a, we are willing to accept Ex. 5b; and instead of Ex. 5c we are willing to accept Ex. 5d.

In the F major example the foreign note is A. It ought to move to G in order to become a part of the dominant seventh chord, but we are willing to let our imagination fill the gap left by the composer, so long as the dominant seventh changes into the tonic triad.

In the F minor example the foreign note is E-flat, and the chord is the dominant ninth chord of F minor. Here, too, the resolution of the foreign note can be withheld, since our imagination will complete it.

It might be interesting to speculate as to how in the first place, composers gained the idea that they could omit the "naturalization" of a foreign note. Perhaps they discovered, as did Shelton Brooks in his *The Darktown Strutters' Ball*, that on certain occasions the music proceeds too rapidly to permit a graceful resolution, and that under such circumstances it sounds better without any resolution at all.

The very first note, E, of the opening phrase of the chorus (on the word "I'll"), is a foreign note. On the word "be" it moves downward with proper decorum to the chord-note, D. So far, so good. But when the phrase is repeated eight measures later, the foreign note, E, (on the syllable "re-") comes in at a later point in the measure than it did the first time. It has no time for decorum, no time to pause at D on the way down to C. So what does it do? It brazenly skips D and leaves the foreign note unresolved. Yet somehow the result sounds perfectly all right. The tonic chord is enough to satisfy us.

Here is another case of an uncorrected mistake, in which we meet the same dominant seventh chord and the very same foreign note, in the *First Movement* of the "Symphony in D minor" of César Franck.

This quotation is reproduced by the permission of E. Hamelle owner of its copyright.

There are three things in this Franck quotation which deserve our attention.

First, the deft modulation in the opening two measures by which the organist-composer of St. Clothilde leads us suddenly, yet gently, in the key of F major. A great help to him in achieving this shift of tonality is the altered chord marked *x*, for it enables him to slide from one key into the other by half-tones.

Second, we should notice the three-measure pedal point in the bass. At *y* it will be observed that the bass note C has nothing to do with the chord above it (a B-D-F-A chord with the D omitted).

And third, we must not fail to notice the action of the foreign note marked *z*. Instead of resolving downward to G or upward to B-flat, it wanders afield (Continued on Page 812)

# BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

## Getting the Right Music for Your Band

### The Need of Care in Editing the Band's Music

By

WILLIAM D. REVELLI

YAL BANDSMEN long have been working toward the general recognition of the band as a musical medium whose excellence is on a level with that of our symphony orchestras. Much progress has been made in this direction, and yet it is our belief that one of the final steps to be taken, in order for bands to achieve a standard of musical performance equal to that of our symphony orchestras, is to manifest greater care in editing band music. A great deal depends on the sheet music placed before each member of the band, for it is his guide—a mute indicator of what he should play. Recently we have heard several programs by summer concert bands whose personnel constituted the "who's who" of the band field. Those bands, usually of seventy-five pieces each, left nothing to be desired in the way of instrumentation, balance, and musicianship. Yet the general musical effect of the concert by each group was in many instances quite unsatisfactory, due to a noticeable lack of careful editing of the selections performed.

With the symphony orchestra the problem is not acute. In the most part its repertoire includes music written expressly for orchestra, and there is much less need for editing than in the case of the band. Attention has to be given, often, to bowings, phrase marks, and occasionally instrumentation, even in the orchestral repertory, yet not to the extent of the band music.

Recent band transcriptions and arrangements, to be sure, are, to a great degree, improvements over editions of the past. Publishers, composers and arrangers are deserving of commendation for their attainments in better band compositions and arrangements. It cannot be denied, however, that there remains a tremendous amount of band literature which stands in need of careful editing and changes to make it appropriate for and adaptable to modern bands. This is particularly true of many of the compositions arranged earlier than the last ten or fifteen years.

Specifically, in many arrangements of the past, the instrumentation, conceived as it was for the small municipal or military band, did not satisfactorily fulfill the intentions of the original score. Very frequently certain parts were omitted, and in some cases entire parts displaced. On examination we might find that the arranger took the liberty of changing the voicing. For example, an operatic aria belonging to the baritone or tenor may have been assigned to the cornet or oboe. This kind of thing is indefensible, and indicates a gross stupidity or incompetency on the part of the arranger.

#### The Important Question

THE MATTER OF EDITING band music, we do face two important questions: "Shall we try to retain so far as possible the mood, character, and effect of the composer's original composition? Should we preserve band music as a regimented mediocrity?"

The arranger has many problems to solve in transcribing orchestral material for band. His ability in judging, his musicianship, and his wide knowledge of band literature in all of its phases, all are so vital to the very musical values of our bands stand in the balance. The efficacy and accuracy of his editing and arranging have a powerful influence on the band audi-

ence. And yet we can find important orchestral works which have been transcribed for band in such a manner as to cause us to surmise that the transcription was made from a piano score, or that the arranger had never seen the orchestra score.

What, then, should be our considerations in the editing of band arrangements? What shall we look for? What can we do to insure an improvement, if we lack the experience and confidence that our editing and incidental alterations are proper and authentic? We can give careful attention to the following items, all of which have a profound effect upon band performance:

1. Instrumentation
2. Phrasing
3. Articulation
4. Proper distribution of chords to all choirs

#### MUSIC FROM COAL, WATER AND AIR

Here is a transparent, non-crackable clarinet played by a member of Phil Spitalny's famous all girl orchestra. The material is Lucite, a modern chemical miracle made by Dupont from coal, water and air.

5. Voice changing of certain instruments
6. Balance of parts
7. Tempi
8. Keys

In the first place we must overcome the tendency toward heavy parts—generally the thick parts should be considerably thinned. Tempi are frequently inaccurate and

misleading, as marked on conductor's score and individual parts. Occasionally the keys selected by the arranger are not conducive to best results. Particularly in the case of music of the classical period do we find our band arrangements "over-scored." If the works of Mozart, Haydn and other composers of the era are to be played at all by our bands, due consideration must be given to keeping them in the character and style intended by the composer. Otherwise, this music should be restricted to the orchestral performance for which it was originally written.

We do not wish to imply that our bands cannot satisfactorily perform music of this classical type, nor that its performance by bands is inferior to that by orchestras; but too often arrangements for this type of music fail to prove sympathetic to the composer's conception of his selection. Usually one fault lies in thick scoring.

Along this line, it appears a point of logic first to become familiar with the life, personal characteristics, environment and background of the author of a musical composition. One must understand the effect and influence of his teachers, his contemporaries, his ideals. The information acquired allows for an authoritative and accurate line of reasoning in bringing about desirable changes in parts. Of course, this comes under the head of "musical history" and of musicology in general, yet the importance of the subject cannot be overestimated.

Secondly, an interesting task preceding the actual editing of the band score is that of becoming familiar with the authentic orchestral score of the composition, providing one is available. Perhaps the purchase of piano or organ score would be otherwise useful. These scores are indispensable and are excellent guides and aids in editorial work. If one is not thoroughly familiar with the selection, the purchase and study of the best phonograph recording of the number are suggested. After becoming acquainted with the composition, one can turn with some confidence to the matter of studying interpretations, instrumentation, tempi, and so on.

#### Need for Accuracy

IN USING A PHONOGRAPH RECORD, here again there must be the certainty that the recording is accurate and authentic. In the past the exigencies of recording often had an adverse effect on tempo, balance, and dynamics; but the advances in sound technique have made these recordings quite satisfactory. If the record is newly produced, or the composition new, one has an excellent means of hearing a selection performed by the world's greatest conductors and finest orchestras.

Perhaps we can best show cause for the claim that editing is of untold importance in band music by specific instances. Some time ago a valuable lesson in the matter of authenticity of score was exhibited. All orchestra and band players are familiar with the Overture to "The Barber of Seville." In our library are three orchestral scores, all German, and three orchestral recordings of this overture. All of us have heard it played innumerable times, and many have played it again and again. Yet how many are aware that in the *Allegro Vivace* (which, incidentally, is never played vivace) measures two and three should be played thus:

Usually these measures are heard and played as:

It will be noted that there are only two eighth notes in the last beat of the third measure, instead of the three which almost always are played. As a matter of fact, it is written as a group of three eighths on every score and part in all of the band arrangements which we ever have seen. This same error is made, naturally, wherever this particular motif reappears in the same movement.

The three German scores in our possession all called

# THE ETUDE MUSIC LOVER'S BOOKSHELF

By B. MEREDITH CADMAN

Realizing that many of our readers may have difficulty in securing the books listed in this department, THE ETUDE MUSIC MAGAZINE will be glad to furnish its readers with these books at the price given, plus the slight charge for transportation and delivery.

## Origins of Musical Time and Expression

The Oxford Press, which we are told is the largest publishing business in the world, issues all manner of books, and among these are many permanently valuable works. That is, they have more of the nature of having been written with the definite objective of collating and preserving important scientific records, rather than of making readable books. "Origins of Musical Time and Expression," by Dr. Rosamond E. M. Harding, is a work of distinguished scholarship. Its opening chapter deals with "The Metronome and Its Precursors." She traces the origin of musical tempo to the Augustine monk, Zaccari, who in 1592 selected the human pulse, or heartbeat, for the standard of time. Thus in ordinary tempo there was one pulsation for every half measure in an *Allegro assai*. In an *Allergretto* there was one pulsation for every quarter note.

After Galileo's discovery of the employment of the pendulum, Le Père Mersenne worked out in 1736 the length of a pendulum for measuring time. The first machine for counting time, before the invention of Maelzel, was the Chronometre of Étienne Loulié. This was described and pictured in 1696, in a book called "Elements ou principes de musique." A copy of this book is in the University Library at Cambridge.

Dr. Harding's book serves to indicate how great was the struggle to bring order to a system of metric measure in music. Gradually she takes us through the elemental efforts toward the development of musical instruments, and of the provisions for a suitable notation to express the music required.

The footnote documentation of this work is an indication of the enormous amount of research done by the author. Often these notes alone occupy over half of the page. She has uncovered much that is very quaint and interesting to the scholar. The early use of the pitch pipe in England is very amusing. Quoting from a book, with its venerable and curious syntax and spellings: the *Scholar* asks, "How shall I know the right sound of any key, so as to sound it neither too high nor too low?" The *Master* replies, "If you would Key a Composition of various Parts for any Quire or Company of Singers and have not a Pitch-pipe nor any Instrument depending. First, take a View thro' the whole Composition and

try if you can sound the whole highest Notes of the upper Parts above the Key-Note, and also the lowest Notes of the Bass-Below; which if you can do without squeaking or grumbling, and all other Voices perform clear and smooth; then may your Song be said to be pitch'd in a Proper Key; for it is a general Maxim among Musicians, That, 'A Tune well Key'd, is half sung.'" This is the advice of one William Tans'ur (1746), in his "A New Musical Grammar; or, the Harmonical Spectator."

"Origins of Musical Time and Expression" By Rosamond E. M. Harding. Ph. D. Pages: 115 Price: \$4.25 net Published by: Oxford University Press

## "How to Sing for Money"

THIS IS PROBABLY ONE OF THE FRANKEST titles ever given to a book. The author breaks down right on the cover and confesses that singers actually accept money for their services. The book should have been properly dedicated to "Little Tommy Tucker, who sang for his supper." In the good old Victorian days the artist, after performing, stroked his Napoleon III goatee and left the hall with a look of complete disdain for filthy lucre, only to glance eagerly in the envelope secretly handed him to see whether he had been offended with the right number of guineas. Now, that is all over, and we have a three hundred and sixty-nine page treatise upon the best method by which the vocalist can assay the public for shekels.

The author puts aside all hypocrisy, as well as tradition, at the outstart and goes directly for the cash in the shortest and most practical manner. Apparently Charles Palmer, a popular writer famed for his work in the *Cosmopolitan Magazine*, was the professional "ghost" who frightened this remarkable and very readable book out of the long Hollywood experience of Charles Henderson, ASCAP, one of the best known song coaches of Los Angeles, who trained Gracie Allen, Deanna Durbin, and scores of other film prima donnas, in "how to put a song over." Henderson knows his business from every standpoint. He has written ten acknowledged song hits. He has been closely associated with Vallee, Waring, Kostelanetz and Billy Rose, in "putting over" their programs. He

has handled the vocal end of many of the best known film shows of Hollywood. More than this, he had a sound training in classical music as a background. All joking aside, he should surely know "the art and business of singing popular songs successfully." He tells, among other things, "How the Microphone has Changed Singing Technic"; "The Six Song Types and What they Demand from the Singer"; "The Six Spotlights of Popular Singing"; "How to start Shaping a New Song"; "Faulty Pitch: the Hazards and Cures"; "Bringing a Song to Life"; "The Heart of Showmanship"; "Swing Singing"; "How to Pick Your Songs"; "How to Audition"; "Records, Transcriptions and Television"; "Singing for Pictures"; "Staying on Top"; "This Matter of Agents"; "Publicity"; and scores of other things without a knowledge of which the singer can hardly hope for a share in the swift stream of dollars which seem to gush from the golden cinema geysers of Hollywood.

This is in no sense a book on vocal culture. The writer confesses that he never has attempted "to improve upon Deanna Durbin's glorious voice," but "I do teach her how to sing popular songs." He intimates that this means work and hard work. He writes, "There is no pill that will put you to sleep and let you wake up in front of Rudy Vallee's mike." His definition of popular songs as "songs with 'foot appeal' which boys and girls may sing to each other as they dance" is a lively use of words to make a very clever picture. Torch songs are "songs of strong passion, unrequited love and the like." Rhythm songs are those "to be sung to strict dance tempo"; while swing, or hot, songs are "characterized by use of the written melody primarily as a point of departure for rhythmic variations of a spontaneous nature."

As far as purely vocal requirements are

concerned, the qualifications of the singer descend in the scale thus:

1. Operetta Singer  
"Trained and excellent quality"
2. Torch Singer  
"A good voice not necessarily trained"
3. Ballad Singer  
"A pleasing voice"
4. Rhythm Singer  
"An accurate voice"
5. Swing Singer  
"Practically 'no voice'"
6. Comedy Singer  
"Voice requirement zero"

This coincides with our own cinematic observations, but you must read Mr. Henderson's book in detail to get the full complete facts. One surprising bit of news is that Bing Crosby "can do a professional job in all six song types." The writer does not state what might happen if Bing should get all six of his types mixed.

"Your Voice and What to do about It" is an admirable chapter. In fact, as we went page by page through the book we developed the conviction that, if the vocal teachers of America were to make a careful study of this very different and interesting work, there would be far more acceptable singing done in America; and singers in the home, the club and the church would again captivate the public mind. Mr. Henderson has provided the remedy for those who are mercilessly bored by songs and singers that have no rational significance. Even the most sophisticated musicians will rejoice in an escape from the absurd artificiality with which some singers, who should know better, attempt to interpret master works. Perhaps it would be a good idea for some of our grand opera companies to hire Mr. Henderson and see what he can do with some of those endless Wagnerian monologues. We remember

(Continued on Page 811)

DEANNA DURBIN

Miss Durbin was coached in practical singing details by Charles Henderson. This is a "still" from her famous film with Leopold Stokowski "100 Men and a Girl."

# THE TEACHERS' ROUND TABLE

Conducted Monthly by GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Correspondents with this Department are requested to limit their Letters to One Hundred and Fifty Words

## Various Matters

gain, I must ask the readers to be patient with the head of the Table for his messiness in getting 'round to them. Questions are piled sky high; and still they come. Every teacher has his importunate question which, of course, demands immediate solution. It is hard to realize in connection with a magazine like THE ETUDE, for which the material is prepared two months in advance of each issue, that several months must pass before you can have the speediest reply. Therefore, the remedy we can suggest is that you anticipate your pressing problems a year in advance—send them on—and you'll have answers when you need 'em!

My snooty remarks concerning correspondence schools of music inspired several letters putting me "on the spot." R. K. writes, "If you understood the work we are doing for the musical world you would see us in a different light. Everything a teacher says can be written; of course it must all be very accurate, only after years of experience have I learned to express ourselves so that the greatest number will grasp meanings and translate them into action. We cannot understand why most teachers are so 'stuck' us, for we make practically no

competition for them. Our students come from places where the possibility of finding a competent teacher is just about zero. Thousands of people love music but can't learn it any other way except through a correspondence school—like the engineer in the interior of the Philippines, a gold miner in the mountains of Venezuela, soldiers and marines in distant outposts, trappers in Alaska, a radio operator on a freighter, and a patient in your hospital in Ann Arbor!

"We don't try to prepare anyone for Carnegie Hall. None of our courses goes for more than two years. . . . And did you ever think how we help publishers and instrument makers by supplying them with a market of 700,000 potential buyers?"

Whew! I certainly learned a lot from that letter, and respectfully take my hat off to the correspondence schools. But, as to the statement, "everything a teacher says can be written," let me repeat that it is often not what the teacher says but how he says it; and then, afterward, how he plays it for the student—how he sounds, how he looks. These are things that count most; and that is why a good instrumental teacher is indispensable to the interest and success of the pupil.

\* \* \* \* \*

Teachers in my summer classes often give unusual and provocative questions. Here are a few of them:

*What about the necessity for giving extra time? Do you recommend teaching assignments a longer period than the lessons for? Some teachers I know work a week overtime with their pupils. Do your students learn of this and expect also to give extra time after the regular lesson?*

*Take warning from Alice's "Jabber-jabber," and recite daily:*

*"Beware the Overtime, my son  
The brain that tires, the claws that catch;  
Beware the Time-For-Nothing Bird:  
And shun  
The clumsy paws that snatch."*

*There you have the whole matter in a nutshell! Like the preacher, who futilely urges his congregation for an hour, you are a poor teacher if you cannot get your points over within a reasonably short period of concentrated effort. In the concentrated process of piano playing, the saturation point is reached very soon. Even advanced students should not be held longer than an hour at a sitting. And certainly, elementary pupils should not be kept longer than forty or forty-five minutes, even if on subjects are well diversified.*

*You give and demand sharp concentration; overtime is unnecessary. Besides, it is a dragon that will eat up hours, of your precious time and energy, and will make the parents think far less of you. You need to "whip a student into shape" at a recital, make a point of giving an hour lesson period at another time; and you cannot be paid, make it quite evident that you are doing this at a sacrifice and because of your interest in the student.*

*In the other hand, in the case of gifted students who cannot pay full time lesson*

rates, charge the regular amount for a short period, with the understanding that you will give a longer lesson whenever possible. Then, of course, you can incorporate the longer period into your regular schedule.

*"Can you suggest help for an adult who finds memorizing difficult, and has no knowledge of harmony?"*

1. Much playing without looking at the keyboard;

2. Playing parts of pieces from memory, in the lap or on the arm of a chair—first by half or whole measures, single handed, then hands together;

3. Get Lilius MacKinnon's "Music By Heart," by far the best book ever published on memorizing.

*"When, in daily practice, is the best time to work at technic? How long ought one to spend on it?"*

Contrary to the usual opinion, I do not consider the first period of the day's practice ideal for technic. Muscles are uncoordinated, circulation sluggish, mind vagrant: therefore, after a brief "warming up," by playing fortissimo chords in various positions and leaps, or slow, rich tone exercises, practice should be given over to memorization or working out new pieces. After about an hour, or just before fatigue, rest ten minutes and then tackle technic. Muscles will now respond more easily, and lasting results will follow more quickly. For practically all students, a good rule is to spend approximately one third of the total day's practice on technic.

*"Do you believe in doing quite a bit of teaching by rote? It has always seemed to me that the sooner 'they' can read notes, the better."*

You bet it is! Note and rote, from the very beginning, "sez I." How many of us have slaved and despaired with pupils who have been taught exclusively by rote for months, or sometimes years! It is easy to teach reading even to very young children.

There is no longer any excuse for excessive rote emphasis. I myself advocated it years ago, but know better now. If, from the first lessons, children are given assignments to play without looking at the keyboard, both reading and listening will develop naturally.

*"Is it better in teaching to leave off hearing some numbers when time goes quickly, and to do what you can as thoroughly as possible, or should one plan to hear everything even though sketchily? I give forty-five minute lessons."*

Neither plan should be followed exclusively. I advocate, rather, a combination of both—the first half of the lesson devoted to working toward finish or perfection, the latter half to skimming the surface of various assignments. If this is done, it is not necessary to cover the entire list of the week's exercises, etudes and pieces. And this goes for the advanced students as well as the others.

\* \* \* \* \*

To show Round Table colleagues what responsibility is ours in influencing young people in the choice of a career, I quote the following portion of a letter from a young man, with my reply. How long and how strong such influence can be is shown by the fact that the concert he mentions was given five years ago! Which proves that we often do not know how seriously we can bias a young life—either toward happiness or maladjustment. Here's the letter:

*"If it is wrong, to devote one's time and energy to many fields, then I'm guilty in the first degree. My greatest interest is in music, and for that I have you to blame, at least indirectly. Since the day I attended your recital at the High School, my interest in and love for music has developed. But, lest you think I am a wild eyed maestro, I must confess that I am quite unable even to strum my hair melodiously. I regard music as the greatest medium of artistic expression that exists. I claim to be artistic, but my talent is fettered, etc., etc."*

My reply:

"I hope you will be extremely cautious about choosing a career. I have known many young people with decided leanings toward the arts, and indeed with a certain amount of talent in several different artistic fields, but without the ability to concentrate on any one of them enough to make a success of it.

"Before long, you must try to find out in what branch of the Arts, if any, your talent is outstanding: then, having discovered this important fact, shear off all non-essentials and spend the next half dozen years of your life mastering the technic of this art. Then, if your gifts warrant it, and if you have been sufficiently intelligent and industrious in developing them, you may emerge an artist.

"From what you write, I fear it is too late to choose a career in music. Almost no one ever succeeds unless he possesses first rate talent which has been carefully developed from childhood."

May I add that it is my policy to advise even very talented young people to follow a musical career only if an inner urge compels them to eat, sleep, and (especially) work in music, day and night. Or, I tell them, "If you can live contentedly without music, don't become a musician. It's too

exhausting, too exacting." These may be hard, realistic words, but they have saved many an aspiring young person from making a tragic misstep.

\* \* \* \* \*

Now, listen to a happy musician, A. C., who writes from Virginia:

*"I think I have caught something of your enthusiasm. Certainly, I am seldom without ideas—never bored. My pupils are not little artists, but they love music. My greatest challenges are the ones without that indefinable something called talent. They make me think of the quality some women are born with, 'Oomph,' 'It,' or what have you. Because all the gals don't have it doesn't mean that they can't make themselves into charming, delightful people. I work much harder over those struggling children who show a pathetic eagerness to make music, once you have broken through the inferiority shell, than I do over the little darlings of the gods. I encourage every tiny improvement, and squander dollars and dollars on prizes for them. When I see a child, with no more sense of rhythm than a Barnum & Bailey seal, decide for herself to take two lessons a week instead of one; and another, who couldn't pick up a tune with a derrick, confidently join a Junior choir, I feel like Joan of Arc. Isn't it dreadful that the threshold of this beautiful world of music is still barred by so many pedagogs who can't see beyond the text books?"*

*"That is what I hope I'm getting—a realization what a music teacher's job really is; and for that I am eternally grateful."*

\* \* \* \* \*

In other words, a teacher should not be judged by what he has accomplished with the gifted student—the one out of ten—but with the nine others, the indifferent, shy, poorly coordinated, aspiring ones whom he has taught to play well and to love music. That's what I call teaching; and that's why A. C. and the rest of us wouldn't change our profession for anything in the world!

\* \* \* \* \*

## Transposition

I would like to ask about transposition. My teacher says to read one or more degrees up or down, depending upon the key you are transposing to. It seems to me that when we get to transposing to a key perhaps five or seven degrees from the original, it will make for inaccuracy as well as make it very difficult. Is there any other tried and proved method for transposing?—M. W., Colorado.

As art is my profession and piano playing and teaching are hobbies, I am not as skilled in transposing as I should be. Can you tell me the best method of teaching it and about how long it takes to be able to transpose at sight? The position I am trying for this summer requires that I transpose at sight.—E. G. S., Long Island.

Don't worry about transposing any piece more than a major third up or down, for it is almost never necessary to exceed that interval.

For elementary transposition I like Buena Carter's new "Transposition Patterns for the Piano," a series of forty-one short, five minute lessons, very thoroughly worked out through harmonic and melodic analysis.

# The "Erl King" of Schubert

As Transcribed for Piano by  
FRANZ LISZT

\* \* \* \*

## A Master Lesson

By  
MARK HAMBOURG

Eminent Piano Virtuoso and  
Teacher of London

SCHUBERT'S SONG, the *Erl King*, might well be claimed to be the most famous song in all the world of classical music. Certainly its dramatic intensity, and the wonderful manner in which the music fits the words, never have been surpassed in any composition for voice with pianoforte accompaniment. That the *Erl King* was written, in its original form, as early as the winter of 1815, near the close of the young composer's eighteenth year (he was born January 31, 1797), is sufficiently astonishing; for in it he shows musical powers of an emotional range which one might expect in a man of genius in middle life, who has been through much experience, but scarcely in a boy but out of adolescence. Thus Schubert's strength of creative imagination is one of the mysteries of his personality; for nothing in his rather everyday life could have accounted for it. It was inborn, a mighty power of musical expression.

The words of the *Erl King*, which are by Goethe, are themselves of great beauty and literary distinction; and Schubert's musical setting is so perfect and just in feeling that, if possible, it even enhances the splendor of Goethe's idioms.

In all his songs Schubert shows three supreme qualities:

First, the absolute suitability of his music to the words.

Second, his skillful use of unexpected modulation.

Third, the fitness of the accompaniments to the subjects.

These, by their surety of agreement, create a special atmosphere that surrounds the words and gives them more meaning.

Schubert was, without a doubt, the creator of the modern German song, as we envisage it today.

### An Unpropitious Première

THE *Erl King* had, however, no great success on its first appearance when Schubert brought it to the Imperial School, where he had been educated, and his friend, Holzapfel sang it there with the composer accompanying him. But later on an amateur singer by the name of Gymnich produced it at a private party where it made such an impression that the audience then and there decided to publish it at their own expense. It was first performed in public when Gymnich sang it in Vienna

### THE LEGEND OF THE ERL KING

From the Steingray Collection, reprinted by courtesy. Copyright.

on January 25, 1821, with Schubert on the platform and playing the accompaniment. Ever since that date the song, *Erl King*, has maintained its place in the forefront of vocal literature.

As a young man, Franz Liszt, the great pianist and composer, met Schubert in Vienna, and remained always an ardent admirer of his genius. Liszt has been always justly famous for his transcriptions for the piano of works originally created for other mediums; and amongst the best of these arrangements are those of a goodly number of Schubert's songs. So successful was Liszt in this art that he shed a new light on any song which he transcribed.

The arrangement of Schubert's *Erl King*, which we are now to consider, is one of Liszt's finest efforts at transcription; and in it he has preserved all the drama, the tragic atmosphere, and the eeriness, which make the combined words and music of this song such a masterpiece.

There has been no great dramatic singer who has not made it his or her pride to interpret at some time the *Erl King*. The best performance of it which I have heard by a man was that of the celebrated *Lieder* singer, Ludwig Wüllner; and from a woman it was that of an equally fine singer, Alice Barbi.

### The Song a Drama

WHETHER PLAYING OR SINGING the *Erl King*, it is important to bring out the various personalities: of the *Father*, tranquilizing, reassuring; the *Erl King*, persuasive and elflike; the *Child*, frightened and anxious; the *Narrator*, impartial.

The accompaniment is turbulent, excepting when the *Erl King* holds the stage, when it becomes caressing and eerie; and when the *Father* speaks, when its agitation moderates considerably.

The first fourteen measures of the composition consist of a prelude to the entry of the voice in Measure 15. These fourteen measures must be played with abandon-

ment, having regard to the mysterious and dramatic tents of the song to come, so as to put the audience in a fitting frame of mind to react to tension and apprehension. In the present transcription by Liszt, of the music for piano alone, the same mood should prevail in these fourteen opening measures, and every effort should be made to create an atmosphere of sinister excitement.

Care must be taken not to start too loudly the first octaves in Measure 1, but to make a rise and fall in every second and third measure up to Measure 8: *crescendo* up to the third beat in one measure, and *decrescendo* down to the last beat in the succeeding measure. The triplet octave passage in the left hand, measures 2, 4, 9, and 11, must give as much as possible the effect of *legato*. I advise playing the triplet octave in the right hand during the first five measures; the measures 8, 9, 10, 11, 12, as follows: the first eighth note of the triplet to be played as written as an octave, but the second one only as a single note on the lower octave, taking this G with the second finger, whilst the eighth note of the triplet is played again as an octave, that is, as written. This way of executing the triplet octave figures gives a more elastic feeling to the rhythm of the passages and also prevents fatigue of the wrists. It can be played exactly as written, if preferred, or as written in the music as *ossia*. Every time these triplet octave figures occur during the composition, they can be executed in the same manner, either as I have suggested or as written in the copy.

The octave D, in the bass, on the third beat of the second measure, should be stressed a little; and also the top note of the octave A in the treble, on the first beat of Measure 6; and the B-flat occupying a similar position in Measure 7. Stressing should mark also A on the third beat of Measure 7, but with less volume of sound; and

(Continued on Page 809)

# THE ERL KING

## ERLKÖNIG

Concert transcription by  
FRANZ LISZT

See another page of this issue for a lesson  
on this piece by Mark Hambourg.

Mark Hambourg, a born pedagogue as well as a virtuoso, has given us, in this issue, a "Master Lesson" which should be carefully preserved in every  
musical educational library.

This lesson has been engraved with a more playable distribution of the right hand and left hand parts, but aside from the suggestion for play-  
ing the first measure there have been no alterations in notation from the original Liszt piano transcription of Schubert's song. Grade 9.

Ossia:

**Presto agitato**

*mf* *drammatico* *cresc.* *decresc.* *legato* *stress* *mp* *pp*

Who rides there so late through night so  
wild? A lov- ing fa- ther with his young

The musical score is a concert transcription of Schubert's 'The Erl King' by Franz Liszt. It is presented in a two-staff format (treble and bass clef) with a key signature of one flat (B-flat major/D minor) and a common time signature. The tempo is marked 'Presto agitato'. The score includes various musical notations such as dynamics (mf, cresc., decresc., mp, pp), articulation (stress, legato), and fingering numbers. The lyrics are in English and are placed below the vocal line. The score is divided into measures, with measure numbers 1 through 28 indicated. The piece is a Grade 9 work.

Play the upper fingering when the upper notes are omitted.

# MIRRORED MOODS

Victor Herbert's gifted protégé, Gustav Klemm, has embodied in *Mirrored Moods* the melodic lilting style of his master. He writes, "Please do not play this piece stiffly; make it graceful and emotional, or play it not at all." Watch the sustained notes. Grade 4.

Lightly M.M. ♩ = 108

Moderately, and gracefully

GUSTAV KLEMM

The musical score for "Mirrored Moods" is presented in a standard piano format with a grand staff (treble and bass clefs). The piece begins with a tempo marking of "Lightly M.M. ♩ = 108" and a performance instruction of "Moderately, and gracefully". The key signature is one sharp (F#) and the time signature is common time (C). The score includes various musical notations such as dynamics (mf, f, sf, mp, dim), articulation (poco rit., cresc., dim.), and performance instructions (l.h., Ped. simile, with intense feeling, a tempo, D.S.). The piece is divided into sections, with a "TRIO" section starting at the bottom. The score is written for piano and features a variety of musical notations including dynamics (mf, f, sf, mp, dim), articulation (poco rit., cresc., dim.), and performance instructions (l.h., Ped. simile, with intense feeling, a tempo, D.S.).

\*From here go back to sign (§) and play to *Fine*; then play *Trio*

# PETIT MENUET

This delightful little minuet is one of the favorite melodies of the composer, who played it repeatedly at his band concerts. Totally unlike the style of march music usually associated with the magnificent martial strains of the great bandmaster, here is a very simple and very pretty little piece which will appear on thousands of recital programs, showing the composer's versatility. The phrasing is very clean and clear cut and any third grade pupil should be able to master it in a few lessons. Grade 3.

DECEMBER 1939

This page contains six systems of musical notation for piano. The notation includes various dynamics, articulation, and fingerings.

- System 1:** Features a right-hand (r.h.) melodic line and a left-hand (l.h.) accompaniment. Dynamics include *pp* (pianissimo) and *sf* (sforzando). Fingerings are indicated with numbers 1-5.
- System 2:** Continues the melodic and accompaniment lines. Dynamics include *p* (piano), *mf* (mezzo-forte), and *rit.* (ritardando). The tempo marking *a tempo* is present. The instruction *Poco più mosso* (a little more motion) appears at the end of the system.
- System 3:** The right-hand part features a complex, rapid melodic line with many triplets and sixteenth notes. Dynamics include *p* (piano), *mf* (mezzo-forte), and *pp* (pianissimo). The instruction *ben marcato il canto* (well marked the song) is written above the right-hand part. The left-hand part provides a steady accompaniment.
- System 4:** The right-hand part continues with rapid, flowing melodic passages. Dynamics include *mf* (mezzo-forte) and *pp* (pianissimo). The instruction *sempre p* (always piano) is written above the right-hand part.
- System 5:** The right-hand part features a series of rapid, ascending and descending melodic lines. Dynamics include *pp* (pianissimo). The instruction *ten.* (tenuto) is written above the right-hand part.
- System 6:** The right-hand part continues with rapid, flowing melodic passages. Dynamics include *pp* (pianissimo). The instruction *ten.* (tenuto) is written above the right-hand part.

# KNIGHT RUPERT

## KNECHT RUPRECHT

Knecht Ruprecht is the German Santa Claus. In some villages the presents for the children are sent to one person who, clad in high buskin, a white robe, mask and an enormous flax wig, goes from house to house, calls for the children and gives them presents, according to the parents' report of good behavior during the year.

### SECONDO

R. SCHUMANN, Op. 68, No. 1

Allegro M.M. ♩ = 126

The musical score for 'Knecht Ruprecht' is written for piano. It begins with a tempo marking of 'Allegro M.M. ♩ = 126'. The key signature is one flat (B-flat major or D minor). The score is divided into systems, with the first system starting with a forte (f) dynamic. The second system features a 'tranquillo' section. The piece concludes with a 'Fine' marking and a 'D.O.' (Da Capo) instruction. The score includes various musical notations such as treble and bass staves, dynamic markings (f, sf, ff, p, cresc., fp), articulation (accents, slurs), and fingerings.

# The "Erl King" of Schubert

(Continued from Page 784)

st note in Measure 8, all in the treble. Measure 14, the last group of triplets, E-natural, and B-flat, must be brought out in the right hand; and I play the B-flats with the left hand. Also the F-sharp in the treble, on the first eighth note of Measure 15 must be made prominent.

## A Weird Tale Is Started

ON THE LAST BEAT of Measure 15 the narrator begins his story. To make this passage more effective, and to assist in its execution, I have revised the distribution of the right hand and left hand parts. This revision, as engraved in the music for this Master Lesson, starts on the last beat of Measure 15 and continues through Measures 17, 18, and 20.

Having arrived at Measure 32, the execution may be again made easier by taking the lower G's of the triplet octaves in the treble—all except the first one—with the left hand; and these triplets must be played lightly, to convey the feeling of fear in the Child. From the last beat of Measure 36, to Measure 40, the tempo should be rather slower; the wildness should die down; and with the triplet accompaniment and the song, which now is in the bass, must sound more calm and soothing; the Father is trying to reassure the Child.

At Measure 40 the music returns to the original tempo. In Measures 41, 42, 43, 44, 45, 47, 48, and 49, I make the same distribution of the parts as was recommended for Measures 15, 16, 17, 18, and 20.

Throughout the piece, the notes of the song, wherever placed, must penetrate through the accompaniment; and a different note quality should be introduced to suggest each personality being presented.

On the fourth beat of Measure 41 it is the Child who has the melody; so the texture of the sound must be lighter, but caught with foreboding. The Father answers the Child in Measure 51, and onward Measure 54; and these measures must be played slightly slower, with a singing and tranquilizing tone. The bass notes in Measures 55 and 56 must be done without any pedal. They must be played lightly and distinctly, with very abrupt staccato.

## Enters the Villain

AT THE END of MEASURE 57 the Erl King begins his song, when the music must be piano in tone, but very significant and insistent, the rise and fall of the melody being so very marked. The interpretation of this part of the piece must be seductive, pressing, with something of the Puckish, and, if possible, an unearthly spirit about it. The pedal must be taken sparingly, and changed carefully as marked, before each new harmony. This will tend to give an effect of lightness to the music. A crescendo should be made from the last beat of Measure 62 up to the second beat of Measure 63; and, again, from the last beat of Measure 66 to the first beat of Measure 66, and yet another from the second beat of this measure to its third beat.

Throughout the succeeding measures, up to Measure 72, the marking of the changing of the pedal must be exactly followed. Measure 72 the tone rises to an increased forte, for the Child cries out in terror; and all the next eight measures must be played with vehemence.

There is a further crescendo in Measure 73 with accents on all the notes of the song in Measures 75, 76, 77, 78, and the last beat of Measure 79, as marked, the accented notes being the half note E-flat,

the dotted quarter note E-flat and the eighth note E-flat in the treble of Measure 75; eighth note D and quarter note A in Measure 76; quarter notes B-flat, A, B-flat and B-natural in Measure 77; the half note C, dotted quarter note C-sharp, and eighth note C-sharp in Measure 78; and also the first note, D, in Measure 79. An accent on the first octave D in Measure 80 brings the appeal of the Child to a close, so the music should calm down as the Father tries again to pacify the little one. In Measures 81 to 87, therefore, the bass notes, which are the melody, should be played piano, but with warmth of tone.

## The Drama More Gripping

AT THE END of MEASURE 86, the Erl King appears again, and from here on to Measure 96 all the melody is given cajolingly in piano tone, but with proper regard to the rise and fall of the music. At the last two eighth notes in the treble, in Measure 92, there is a sudden drop in tone; and, proceeding to Measure 93, there should be a hesitation in tempo, and an emphasis on the first octave G. The melody then resumes its tempo, flowingly and with expression, until the phrase culminates on the first two beats of Measure 96, with a rubato ending. From Measure 97 onward to Measure 105, the ever increasing fear of the Child must be denoted in the performance of the music, by means of unevenness of tempo, and of accents where marked, and by a feeling of hysteria in the execution.

A slight rallentando in Measure 111 will give emphasis to the end of the phrase which represents the Father's further efforts to quiet the Child's nervousness. On the last beat of Measure 116 the Erl King's music returns, and in Measure 117 a little stress should be given to the first chord on E-flat, with some slowing down of the tempo. The tone rises as the music becomes more impassioned, and in Measure 122 the rendering should be very dramatic, the statement of the melody be given with great emphasis, and the tempo much retarded.

From Measure 123 onward the original tempo is resumed and a spirit of frenzy should be introduced into the performance here, until the third beat of Measure 128, when the music becomes somewhat slower and, in Measure 129, somewhat ponderous, as though depicting the poor Child as overcome with the lassitude of despair; then eventually, in Measure 130, it arrives at a distinct rallentando, so as to mark the horror of the situation.

From Measure 131 to Measure 139 the music must be performed with ever growing speed and wildness, but there must be no forgetting to bring out the melody in the right hand, and to work the whole statement to a crisis on the dotted quarter note octave on G, in the treble on the third beat of Measure 139, with a big rallentando, almost like a fermata. Measures 140, 141 and 142 should be played with rushes of tempo, as if to give an effect of panting and straining; but on the last beat of Measure 143 the music should get slower again, with a weary feeling, as if the Father realized the calamity which had happened. In Measure 145 there is a slight crescendo on the first beat, and then a diminuendo, whilst in Measure 146 the notes in unison must be played in declamatory style, but softly, as if they were spoken.

The last two measures of the piece, 147 and 148, explain themselves: no hope, no consolation; the tragedy is complete. The two final chords should be played very abruptly, with just touches of the pedal.

## Improve Your Voice Production

By

ALBERT E. RUFF

Wherein a Famous Teacher of Noted Singers Explains the Vocal Muscular System and Its Operation

### Part II

**M**ANY TEACHERS AND SINGERS have no knowledge of what the vocal cords really are, so for their benefit it will be well to explain them.

They certainly are *not* cords, but the callous edges of the *Thyro-Arytenoid*. When seen with the laryngoscope, they look more like bands and, when healthy, are pearly white. In length, they are about three-fourths of an inch in the man and about one-half an inch in the woman, varying from one-sixteenth to one-eighth of an inch in width.

every high tone ought to diminish into the falsetto, the finishing touch of a tone. To do this smoothly, is one of the finest points of a singer's art.

As it is more difficult to swell from the falsetto into the body tone; this should not be attempted until the diminishing has been perfected. This action, swelling from falsetto, is accomplished by combining the muscles of the body tone and the outer neck muscles in focusing the tone on the vocal cords, thus making the voice most powerful and ringing.

### VOCAL CORDS IN PHONATION

(As seen with the Laryngoscope)

Low Voice

Medium Voice

High Voice

The Germans call them *Stimmbaender* (voicebands) which I believe more clearly expresses their nature.

The Crico-Arytenoids come into play when singing ppp, in which case they act alone, that is, the *edges* of the *Thyro-Arytenoid*, and not the body, are brought into play.

By this action the so-called *falsetto* is made. We say "so-called", as that term has come down to us from before the invention of the laryngoscope, and even today it is frequently used. Previous to the discovery of that great invention, the so-called falsetto was supposed to be made with the edges of the ventricles, for which reason they were called "False Vocal Cords."

By examining the cords with the laryngoscope, we find that all musical sounds are made on the vocal cords and reflected into the resonance chambers, where the quality (timbre) is developed, and the real value of the voice established. However,

The old Italians called this manner of tone production "voce mista" (mixed voice). I cannot conceive of a tone being mixed; so I call it a combination tone, as it is constructed by a combination of the muscles.

The Germans have no love for the falsetto, and most of them insist that all tones should be sung with the *Brustton* (chest tone) as being the acme of voice culture. This method usually ends in disaster to the *Thyro-Arytenoid*, which soon finishes the singer's career.

Many fine artists can sing well with loud voice, and also with soft, but cannot go from the one to the other without a decided click; this is on account of a too sudden relaxing of the *Thyro-Arytenoid* before connecting with the *Lateral-Crico-Arytenoid*.

The outer muscles, being controlled by the mind, assist the inner muscles. If we relax the outer muscles at the same time the tone is being diminished with the breath

pressure, this click will gradually disappear and a smooth and natural transition will result. In some instances it may take many months before the inner and outer muscles act in harmony; but this is worth striving for, as attaining a perfect diminish by a correct muscular combination not only lengthens the usefulness of the voice into old age but also prolongs life itself; for, to sing artistically, we must have the breath under control. Space will not permit the

higher the fingers are placed on the finger board, the higher the tone, as thereby the vibrating part of the string has been shortened.

We find the same principle can be applied to the voice; but, unlike the violin no visible mechanical explanation can be given. All sounds made by the voice, must be controlled by the ear.

The teacher should know the construction and function of the Vocal Muscular Sys

entrance of this important subject of breath control at this time.

### Pitch Production

THE MANNER IN WHICH PITCH is accomplished on the vocal cords is still a much disputed question. Some claim that the high tones are produced by narrowing the space between the Thyroid and Cricoid in front; and again others insist that this is accomplished by an exactly opposite mode.

Pitch will be described here just as Dr. Merkel explained it to me, namely: Each tone should have its exact position on the cords, every time it is sung, and this is accomplished by breath pressure, the various inner muscles governing their action with the assistance of the ear.

I have found that, with nearly all pupils who have not studied nor sung very much, nor used their voices to any great extent in imitating unnatural sounds, the vocal

tem, in order to detect the change taking place on the cords. The orifice indicates the position on the cords where in former years the several so-called registers were formed. Some teachers had their pupils practice the registers separately, until each could be clearly distinguished. This made a very uneven quality of voice, which not only disturbed the tone but also played havoc with the fibrous continuation of the *Thyro-Arytenoid* Muscle. I therefore condemn the use of the name register.

The voice ought to be trained to pass from one of the orifices (so-called registers) to the other, without a noticeable change. This usually can be accomplished if soft singing with relaxed throat is persistently practiced.

If by loud singing, the voice is forced beyond the orifice, the fibres are liable to become bunched, which ultimately become a *nodula*. The *nodula* most frequently ap

(Right) VOCAL CORDS IN REPOSE

1. Nodula

cords function according to Dr. Merkel's theory: The low tones are focused on the posterior end—the middle tones on the center, the high ones on the anterior, or front of the cords.

The violin is perhaps the nearest instrument by which to describe how pitch is made with the voice. The open string on the violin yields its lowest tone, the

appears about one-third from the front of the cord. Until recently the removal of the *nodula* was supposed to be left to the surgeon, and this is still (I am sorry to say) recommended by some.

That the node can be removed by certain exercises, I have proven many times. Thinking my experience in this line might help others, who might, perhaps, improve

## Suggestions for Good Reading

## CHILDREN'S MUSIC BOOKS

**CHILD'S BOOK OF FAMOUS COMPOSERS** by Gladys Burch and John Wolcott. Authentic, inspiring lives of great composers and their music. Illustrated contemporary portraits. \$1.50. A. S. Barnes & Co., 67 W. 44th St., New York.

on the method, it may be well to give some reason for my specializing on this subject.

While studying with Dr. Merkel, he often spoke about the *Saenger Knoten* (singer knots) and their cause, but never mentioned how they could be removed without a surgical operation.

After coming to America in 1878, I had as a pupil Dr. Jefferson Battman, a noted throat specialist. At that time the doctor had a patient who had nodes; and, as he did not favor any kind of operation on the cords, my advice was asked as to their removal by vocal exercises.

It occurred to me that, if by forced singing the fibres were bunched, an opposite action might bring them back to normal. Dr. Battman was enthusiastic, and asked me to try the experiment. I did, and was successful.

The nodes of this patient were about one-third from the front of the vocal cord. The *Thyro-Arytenoid* bulging at that point, no orifice was visible. The patient was asked to produce a hum. He could make no sound whatever; only breath passing from the cords could be heard. He was urged to keep trying for a week.

## The Etude Music Lover's Bookshelf

(Continued from Page 782)

elderly gentleman at a grand opera performance, who, when his wife said, "Look, the lights are gradually going out," growled, *solo voce*, "I wish I could too."

More than this, we are sure that vocal teachers, themselves, would certainly learn how to make more money in teaching, by reading this book. Henderson knows all the tricks, voice range, diction, applause endings, routines, bringing a song to life, checking and polishing, picking songs, and singing for the radio. In fact, there is hardly anything of a practical nature in popular singing that he has not touched. Just glance at what he does to *Love in Bloom* in Chapter VIII and you will comprehend what we mean. In fact this is a different book from anything that has hitherto been written, because it comes out of the heart of a new world. It will give the reader a new respect for the immense amount of detailed preparation required to present a song "on the film" or "over the air."

This new world has a language all its own, a patois and a technology just as individual as that of the Boule Mische (that inimitable district on the left bank of the Seine) which, when mastered, we are told makes one indisputably a Parisian. What a delight this vocabulary, which Mr. Henderson discloses in a glossary of several pages, would be to H. L. Mencken, who in his "American Language" welcomes expansions of our national lingo. For instance, we learn that "to lay an egg" is to fail to impress, in other words, to "flop." A "lick" is a short improvised melodic phrase, usually fitted with meaningless syllables by a Swing-singer; "off the cob" means "corny," and if you don't know what that means you turn back and discover that "corny" is "out-of-mode, dated, unsophisticated, rural," an epithet which may be applied over night in the fast moving studios of celluloid and ether. "To chirp" is to sing; and "Black and White" refers to standard semiclassical songs. "Boogy-woogy" is a type of "hot" music derived from Negro piano players, featuring a melodic moving bass. A "dog" is a published song which has failed commercially. To "hype-up" is to stimulate, while "out in the ally" means standing too far away from the microphone. "Proppy" is obviously artificial. If you want to refer to vocal hokum it is called "schmaltz." One of the best in the glossary is "clambake," which evidently means a vocal mix up or mess. Here certainly is a new field for a Berlitz School. You will immensely enjoy reading the glossary.

By that time a screechy sound was heard, which by the end of a second week became a small musical tone.

It thus became evident that we were accomplishing something, especially when I observed the orifice showing itself. We now began to apply my theory of forcing the orifice back with a stronger voice in glissando. By working conscientiously and consistently with this method for about two months, the nodes gradually disappeared.

By this method, I have since then removed the nodes from many artists, some under the observation of well known throat specialists, who have given me their written testimonials.

At my age, it would seem that my task in that line is about finished; but as there is still considerable investigation required to reach final results, it is hoped that some younger person with ambition may see some light in what I have written and thereby be inspired to seek further proof that voice culture should be primarily The Correct Manipulation of the Vocal Muscular System, and perhaps prove that singing may be reduced to a positive method.

So thorough and so comprehensive are the chapters dealing with the radio and with the moving pictures that this book will probably remain for years a kind of primer to those who desire to sing before the mike or the Kleig lights. We very highly recommend it for this purpose. The author has a particularly clear style, and the reader will have no uncertainty as to just exactly what Mr. Henderson means.

We can picture the horror with which the teacher of other days might have received this book. "Commercial! Mercenary! Inartistic!" Not a bit of it. Singing is something to be heard. If it gives pleasure and satisfaction to a great number of people, it accomplishes its purpose. This book will go a long way to help thousands of singers to do this. There still remains a great place for the master teacher of great Lieder and great rôles.

One of the most carefully worked out and best features of the book is the twenty-eight page appendix upon diction. Any intelligent pupil with fair advancement may get the value of the price of this book from the appendix alone, even if it cost \$4.00 instead of \$3.95.

## HOW TO SING FOR MONEY

Secrets that Make Singers Popular Revealed by Vocal Coach of Stars

Your voice may be far better than that of many who sing for radio and movies, yet they make big money. Why? Because they know what to sing and how to sing it to win fans and get contracts! They know how to get auditions; what the "mike" will do to and for the voice; they know the practical side of the singing business! Now this immensely valuable knowledge is yours. Charles Henderson, famed Hollywood vocal coach, tells you everything it takes to make a successful singer, all in a fascinating, fast-moving, easy-to-read book of 379 pages. It's the first book to tell you how to make a hit in putting over popular songs; first book that gives you the real "inside" on singing for radio, movies, dance orchestras, night clubs and recordings—first book that tells you clearly and completely how to do to turn a singing voice into big time money. Helps you whether you have a voice teacher or not.

### Praised by Critics

DEEMS TAYLOR: "An immensely illuminating discussion of a subject that so far as I know has never before been adequately covered... As a matter of fact many an aspiring concert singer might find in it much food for thought." SIGMUND SPAETH: "Packs an incredible amount of information."

### Amazing Reviews

TIME Magazine: "Canny appraisal of the ins and outs of song-singing." NEW YORKER: "It works, and so will you if you're a singer who can put the Henderson lore into practice." ETUDE: "Hardly anything of practical nature it has not touched. We recommend it highly."

### MONEY-BACK GUARANTEE

Think of the hundreds of dollars you'd pay for a year's coaching by Charles Henderson, vocal supervisor of such screen hits as "That Certain Age," "Second Fiddle," "Star Maker," and air hits like the Texaco and Chesterfield programs. Here, packed between the covers of this invaluable book, is the very knowledge and all the secrets he would teach you. You can own this book—learn the secrets of successful singing—for only \$3.95 on a money-back guarantee. Don't wonder how others turn their voices into cash, find out. Send coupon now.

# The Threshold of Music

(Continued from Page 780)

to C, then—realizing that it has left A still unresolved—returns to A. By this time it is too late. Another measure is ready to begin. The harmony changes, resolving from the dominant into a peaceful tonic. And where is the melody? It has been caught napping, and is still resting serenely on its same old perch, A. The melody of these last four measures might almost be called a soprano pedal-point, so stubbornly does it keep to that single note.

As we have just seen, it often happens that a foreign note does not find its proper niche until after the chord underneath it has changed. We ran into just that situation in the last two examples. In each of these cases the note never reached the niche at all. Sometimes, however, it happens that the note does reach its proper niche, but not until the chord has changed. When this happens, we have the effect of the melody being one jump behind the harmony, and unable to catch up. This is illustrated in *Kiss Me Again*, from "Mlle. Modiste", by Victor Herbert.

If we simplified this melody down to the bare harmonic framework, it would go like this:

This quotation, and the one from the "Concerto in F" by George Gershwin, are reproduced by permission of the Music Publishers Holding Corporation, owner of their copyrights.

In "a" there are just the chords alone without any melodic line above them. In "b" we have the same chords, each embellished with a foreign note which moves at once to the nearest chord-note. And in "c" there are the chords again. This time the foreign notes on F-sharp and C delay their movement down to the chord-note until the chord below changes.

The third way, c, is the one in which Victor Herbert chose to handle the situation. In doing so he gives the listener credit for being able to follow his line of thought, even when he leaves part of it unsaid. In the time of Haydn and Mozart such freedom of musical style was not allowed; but in the music of recent years similar compressions of thought appear frequently. In fact, certain aspects of modernistic music are to be explained simply as a further, logical development of this method of taking, for granted, and hence compressing or eliding, a musical line of thought.

Let us examine one more quotation, from the *First Movement* of the "Concerto in F" by George Gershwin.

The third measure sounds quite modernistic, as if it were composed of ninth, eleventh and thirteenth chords. But if we examine the first two measures closely we will find a different explanation. For in these two opening measures the composer has introduced an inner melody which runs in thirds. When this subordinate melody reaches the third measure it produces double suspensions galore—and these suspensions are the cause of the dissonant effects. This particular measure is a splendid example of the doubling-up of musical ideas. In it, you will notice, each chord makes its appearance at the very moment that the suspensions in the previous chord resolve, instead of waiting until after the suspensions have already resolved.

The chords after the double bar are not a part of the "Concerto in F." They have been added as an appendix to the quotation, to show how the third measure would have sounded if it had been written by a strict composer of classic times—one who insisted on having all his foreign notes naturalized before proceeding with the next chord.

Now that we have investigated suspensions, appoggiaturas, anticipations, passing notes and pedal points, and also some of the ways in which composers use them, our excursion into the field of foreign notes is completed. But we should not dismiss them for an instant from our minds, for these harmonic Argentines, Portuguese and Greeks play important rôles in the drama of music. Whenever we are confronted with harmonies that cannot be analyzed as chords composed of piled up thirds, we shall have to look for the presence of foreign notes.

## Clapping the Rests

By GLADYS M. STEIN

TO AROUSE THE INTEREST of young piano pupils in rests, the writer has tried the following plan of clapping rests with excellent results.

To illustrate this idea take the four measures from *An Invitation* by Dorothy Gaynor Blake, shown here.

"No matter at what level of musical culture a man or woman may be, the mind of each individual turns instinctively toward good music."

—Ernestine Schumann-Heink.

# VOICE QUESTIONS Answered

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## A Telephone Operator Who Wants to Sing in Opera

**Q.** I am twenty-one years old, and I have been singing for nearly a year. My range is from D below middle C to G above high C and I am being trained as a coloratura soprano. I sing scales on vowels with a free, relaxed throat, but when I sing words I tighten my throat and make it almost impossible to sing the songs. Is this an uncommon fault? Is twenty-one too late to start training for a career in opera? Everyone else seems to have begun at sixteen. I am a telephone operator; and often, after two or three hours' work, I develop a slight, dull ache deep down in my throat. Will the continuous talking in my work have a bad effect upon my singing? —J. A.

**A.** The slight dull ache deep down in your throat seems to indicate that your speaking voice does not issue freely from your throat into your mouth and so out into the air. Apparently you are stiffening all the speaking muscles of the throat, inside and out, jaw, tongue, buccal muscles, and perhaps even the uvula and soft palate. The fact that you are able to sing upon the vowel sounds and not the words suggests the same thing. Before you can have much success as a singer you must learn how to speak. Form your vowel and consonant sounds, in both speaking and singing; easily, comfortably and delicately, without any undue stiffness of any of the muscles involved. Watch the outer muscles of the throat in a hand mirror, when you practice, and endeavor to correct any strain that you perceive. This is a difficult thing to overcome; but time and careful practice will do it if you have good teaching. Have a heart to heart talk with your teacher about it. It would have been better if you had commenced your musical training earlier; but you must study all the harder to improve your singing, your knowledge of languages, your musicianship, and your stage deportment, to make up for the lost time.

## The Young Tenor Who Has Forced His Voice

**Q.** I am a boy seventeen years of age, with a robust tenor voice. I have been complimented by very reliable persons on my talent of production and musical sense. I have been sacrificing my throat and voice to an effective performance, for about three years, and consequently I force to a great excess. I am six feet tall and weigh one hundred ninety pounds, and I have good breath control but am unable to sing without injuring my throat. So that I become hoarse quickly. Is there any method or exercises to overcome this condition? How can I know that my teacher is reliable and correct? All the teachers I have had are entirely different and disagree with one another. —M. E.

**A.** In spite of the facts that you are six feet tall and weigh one hundred ninety pounds, you are still a boy and your voice is not entirely settled. Apparently you have been encouraged to sing too loud, too high and for too long a time, just because you are strong and have a good natural voice. If you continue to sing so forcefully, you will soon develop a tremolo; then you will commence to sing flat upon your high tones; and next they will become difficult, harsh and uncomfortable. It is astonishing, to say the least, how much rough use a young voice will stand, but eventually it will commence to show deterioration, as I have pointed out. You must revise your method of voice production. Never force, but try for freedom of emission, a sensation of comfort in the throat, jaw and tongue, and no tremolo. Purity of tone must be sought, rather than volume of sound. No book can completely cure you, although it can make suggestions to you regarding your production. Read many of them and learn from each. You can tell whether a teacher is helping you or not by his results. If you improve under his instruction, he is a good teacher for you. If not, find another.

## Baritone with a Short Range

**Q.** I am a baritone of twenty-two, who sang soprano as a boy. I have been told that my voice has a rare quality, but my range is comparatively small being from F the first space below the staff to E the second line above, Bass Clef. I have been told by some teachers that this range can be extended, but it seems almost impossible as my top F's and G's are so tight and strident. What is the best method to extend the range upwards? —W. F. G.

**A.**—Are you sure you are a baritone and not a bass? Decide this first before you attempt to enlarge your range.

From your letter I should judge that you sing the upper F's and G's with too much breath pressure, relying on force rather than placement to produce them. As a result they sound thin, strained, and, in the singer's slang, "too open." Read what I have written to L. A. M. and K. T. in this and last month's issues of THE ETUDE.

To increase the range of the voice without hurting its natural good tone quality requires skill on the part of the teacher and brains and patience on the part of the pupil? Try to discover a good example of the former, and cultivate the latter.

## The Young Singer Again

**Q.** My daughter of twelve and one half years wants to be a singer. She is well developed and often is taken for fifteen. She has a mature voice, reaching the high watch her carefully, care for her voice with plenty of cod liver oil and rest and spine. Will you please advise me if you think I am on the right road to give her a chance to be famous? She occasionally has asthma, but her breathing is better in the West. Will you please recommend a teacher to me in L. Angeles. She is taking piano lessons and plays pieces of the third grade.—Mrs. J. E.

**A.** I have answered the questions of anxious mothers in THE ETUDE on several occasions. Please get these answers and read them. It is very exceptional for a young girl at twelve and a half years to have a voice sufficiently developed to stand the work of serious voice lessons. Be very patient and careful with her. Have her taught piano several foreign languages and watch her physical health. Give her a thorough school education, and look after her manners, speech and behaviour. There is plenty of time for her to learn to be a good singer. It is obvious that it would be very bad taste for THE ETUDE to recommend any special voice teacher in a region where there are so many.

## Class Lessons

**Q.** I can afford only class lessons. There are six girls in the class all around sixteen years of age; but our advancement is not so great as if we could afford private lessons.

1. Do you think this class will help me my singing?

2. Although my voice is powerful, I can get no volume at all on G of the second line and A of the second space in the treble staff. What causes this, and is there a remedy?

3. Some days my voice is deep and low, like a contralto; but on other days it is very high like a lyric soprano. Is this natural? Is it an asset or a liability? My range is from F below middle C to D above high C.—E. B.

**A.**—1. Class lessons should help you, provided you have an experienced teacher and the other girls in the class have voices as good as your own. Do not forget that one learns from hearing others. Therefore listen and learn from every possible singer you hear either person or over the air.

2. It is very difficult to classify a voice for a description alone. To hear it is much safer and better. But, as far as I can judge from your letter, first, you have a natural mezzo-soprano, or even an alto voice; and second you carry the so-called chest register too high up to F-sharp or G. Upon the lower tones you are able to make a powerful sound; but at you change into the so called head register and the resulting tones are thin and weak. Your teacher must warn you against singing the chest tones too high in the scale, and show you how to blend these registers. It is a long and somewhat difficult process, but unless you accomplish it, you will never be a finished singer, and you will always have an irregular scale.

3. Your range as quoted is a very long one. Perhaps you are making the mistake, quite common among singers, of including all the low notes you can growl, and all the high ones you can squeeze out, no matter how ugly they may be. The practical and real range of voice includes only those tones that are pleasant to hear and easy to produce. The rest is useless, because the audience will refuse to listen to them. You cannot be both a contralto and a lyric soprano. With the help of your teacher make your choice and train your voice accordingly.

## The Violoncello as Vocal Guide

**Q.** I know a man of forty who should have been a singer instead of an organist. He has a range from E-flat on the first line below the bass staff to E-flat above middle C. He has a wonderful legato and pronounces beautifully. Is he a tenor or a bass or a baritone? He studied and played the violoncello for ten years. He studied singing by playing slow scales on the violoncello and singing them at the same time. Would you recommend this style of study? —D. K.

**A.** A man who plays the violoncello well must have a very sensitive ear and a very musical nature. His appreciation of tone quality and of differences of pitch must be extraordinarily acute. Given such a musician a man who combines talent, education and good natural voice with an earnest desire to sing, and his own energy, taste and ability will guide him safely. He is the exception that proves the rule. He listens to his own voice and compares his tones with the tone of the instrument, while many singers never listen to themselves at all, but rely on book knowledge or the criticism of a teacher. He thinks for himself, where they do not. This extraordinarily gifted musician, like most great composers, was almost entirely self-taught. I would hesitate to recommend his method to others less gifted by nature. From your description, I should say his voice is a bass-baritone.

## FOR LITTLE TOT PIANO PLAYERS

*Pianos are built for adults. Jenkins Aids rebuild them for children!*

## JENKINS EXTENSION PIANO PEDAL AND FOOT REST

Any child (as young as 5 years) with this aid can operate the pedals, and a platform is provided on which to rest his feet obviating dangling of his little legs.

## JENKINS ADJUSTABLE PIANO MUSIC RACK

Brings music forward and down to proper distance so a child can read his music with ease. Prevents eye strain and nervousness. Invaluable for adults who have difficulty in reading music at a distance or who wear bifocal glasses.

PRICE \$250

These aids to child piano players are used and recommended by the following well known pedagogues in their classes: John Thompson, John Williams, Bernard Wagner, Robin MacLachlan and many others.

No screws or gadgets to mar piano. Examine these aids at our expense and after doing so, if you are not highly pleased, return to us at our expense. We will pay all transportation charges.

Discriptive Literature Mailed Upon Request

**PIANO PROBLEMS** solved. For information write: Austin Keefer, Langhorne, Pa.

## RECENT RECORD RELEASES

By PETER HUGH REED

ONE WONDERS whether Joseph Joachim, the famous violinist for whom Brahms wrote his "Concerto in D, Op. 77," ever played as magnificently as Jascha Heifetz does in his recording (Victor set M-581). We are told that "Joachim played it with love and devotion." But that is exactly the way we would describe Heifetz' performance in the astoundingly realistic performance of Victor. Assisted by Koussevitzky, and the Boston Symphony Orchestra, the violinist has made record history in his projection of this great work; for, at the same time that he achieves superb technical brilliancy, he also plays with an unsurpassed tonal richness and communicative warmth.

Another great historical recording may well be that of Ernest Bloch's "Concerto for Violin," which is played with flawless artistry by Joseph Szigeti with the Paris Conservatory Orchestra under the direction of Charles Munch (Columbia set M-380). Although modern in spirit and harmonic background this work has none of the offending psychoses and neuroses of so much new music; instead it is romantically impassioned, richly rhapsodic and intensely human in its sentimental feeling.

Less compelling perhaps, but none the less rewarding, are Toscanini's performances of the elfin *Scherzo*, and the devotional *Adagio* from Beethoven's last "String Quartet, Op. 135," which he plays with the full strings of the NBC Symphony Orchestra (Victor set M-590). Toscanini long has had a predilection for this music, and often has given it in concert. The NBC Symphony Orchestra is heard to advantage in this music, which is strangely coupled with the virtuoso but meaningless *Moto perpetuum* of Paganini. The reproduction here is a great improvement over the earlier recordings of this famous radio ensemble.

Handel's "Concerti Grossi" are such warm and wholesome works it is hard to understand why the companies have not issued recordings of them by leading conductors. Recently Weingartner started a series of these in England with the London Symphony Orchestra, a series which it is hoped in these uncertain times can be completed. The first to reach these shores is the "Concerto Grosso No. 5, in D major"—a truly delightful work, genial and buoyant (Columbia album X-142). It is excellently played and recorded.

Another well played and recorded set, issued by Columbia (No. X-144), contains a suite from "Carmen." The music is arranged and directed by the ever alert and imaginative Sir Thomas Beecham, with the London Philharmonic Orchestra.

A work of César Franck that has long been looked for on records is his symphonic poem "Les Eolides." It is said to have been inspired by some lines by the poet de Lisle. Aeolus was, of course, the Greek god of the winds, hence the Franckian poem is said to be suggestive of "floating breezes of the skies." Howard Barlow and the Columbia Broadcasting Symphony Orchestra plays this work with admirable lucidity (Columbia set X-145).

Victor recently announced that it intends to bring forward a series of recordings of the entire classic literature of the organ. The instrument to be used is the organ located in the Germanic Museum of Harvard University, said to be virtually a duplicate of the organs of Bach's time. The capable organist is to be E. Power Biggs. The first of this series is a recording of Handel's *Concerto for Organ, No. 10, in D minor*. The problem of blending ideally the organ with an orchestra is one that the recorders seem to have been unable to solve, since the recording is badly blurred.

Biggs is assisted by Arthur Fiedler and his Sinfonietta (Victor set M-587).

Bruno Walter, conducting the Vienna Philharmonic Orchestra, gives one of his best performances of a Mozart work on records, in his reading of the great "Jupiter Symphony" (Victor set M-584). Aided by some of the best recording that the Vienna Philharmonic Orchestra has ever had (there are no echoes or tonal diffusions here), the exultant fugal *finale* is more realistically projected than ever before on records. This is a set that ranks side by side with Beecham's notable reading of this work (Columbia set M-194).

One of the shortest and most ingratiating works that Stravinsky has written is his *Vocalise* for voice with wind quartet, called *Pastorale*. Stokowski, replacing the voice with violins, gives a lovely performance of this idyl on Victor disc 1998.

Emil Sauer, the veteran pianist, contributes performances of Liszt's *Consolation, No. 3* and *Valse Oublie, No. 1* that are not only highly enjoyable phonographic experiences but also valuable lessons to the piano student (Columbia disc 69688-D).

In his performance of Chopin's "Sonata in B-flat minor" (*Funeral March*), Edward Kilenyi gives us a brilliant exposition of the opening and *scherzo* movements, a tonally rich reading of the *Funeral March*, and an unforgettably eerie rendition of the *finale*. Kilenyi's preëminent masculine characteristics stand him in good stead. (Columbia set M-378).

The Coolidge Quartet plays Beethoven's "Quartet No. 1, in F major, Op. 18" for Victor (set M-550). Victor announces that it intends to bring out a series of Beethoven quartets played by this ensemble. As a recording this set is a brilliant achievement. The warm hue and notably styled performance of the Busch Quartet (Victor set M-206), although recorded several years ago, is more desirable in every way than this new set.

The Pasquier Trio has contributed a delightful record for chamber music enthusiasts, one that we can well imagine will be played over and over again. It contains an early *Menuet and Fugue* by Haydn and a five part *Fantasia* by Purcell. The Haydn piece suggests a happy evening at the Esterhazys in the amicable qualities of this genial music. There are a depth of feeling and a harmonic richness in the Purcell work that is very moving. (Columbia disc 69687-D).

In their "Folk Songs of Central Europe" (Victor set M-586), the Trapp Family reminds us that the people of this section are of a gentler and more sentimental nature than many would make us believe. No one who really knows the folk songs of the German peoples can refute their expressive intimacy or their kindly human feeling. The Trapp Choir brings out these characteristics in this album.

Richard Crooks, the American tenor, has recorded a half-dozen operatic arias for Victor (set M-585). They are the *Cavatins* from "Faust" and "Romeo and Juliet" (disc 15542); "Ah, fuyez douce image," from "Manon" and the *Aubade* from "Le Roi d'Ys" (disc 15543); *Mi par d'udir encore* from "Pescatori di Perle" and *Lamento di Frederico* from "L'Arlesiana" (disc 15544). Crooks, blessed with a fine natural voice, here sings unevenly. There are a too frequent use of falsetto and a tendency to push the voice beyond its lyric capacities. He is happiest in the aria from "Manon," which is sung with real conviction, and in the one from "L'Arlesiana." The tenor apparently finds it necessary to transpose all of the arias, for none is sung in its original key.

# THE ORGANIST'S ETUDE

A Department, Complete in Itself, for Organists and Choirmasters

## Brahms and the Organ

By

JAMES A. G. MARTINDALE

WAS IT NOT HANS VON BÜLOW who, in referring to Bach, Beethoven, and Brahms, first used the phrase, "The Three Great I's"? This phrase was hackneyed long ago, but we must admit that it has maintained some merit even to this day. That Bach is the father of modern music is a point on which there is no contention. We agree, probably without exception, that Beethoven revolutionized our art with his outstanding developments in the orchestral and instrumental forms. Then Brahms, the last great representative of the classical tradition appears on the scene, and in assimilating the polyphonic resources of Bach, and by expanding and expounding the orchestral technic of Beethoven, his greatness was assured.

It is too often forgotten, however, in this present day that Brahms, the successor to Bach and Beethoven, the composer of the four great symphonies, the chamber works, the beautiful lieder, and the many brilliant compositions for the pianoforte, was also the composer of a very small but interesting group of works for the organ. His many biographers, almost without exception, have passed over this very important phase of his career. Any mention they make is usually but a scratch on the polished surface.

### Not an Organ Master

IT IS PROBABLE that Brahms was not very familiar with the technic of the organ. We read that he first turned his attention to it at Düsseldorf, in 1856, when he was twenty-three years of age. He was collaborating with his friend Joachim in the study of counterpoint, and his new interest in the organ proved to be a great incentive to him when he was writing his exercises to be exchanged with the Hungarian violinist. Brahms evidently took a delight in writing for the organ; and, although it is probable that his severe self-criticism led to the destruction of a lot of valuable examples, some writers feel certain that a little of it has survived in the "Eleven Chorale Preludes" which were published posthumously by Simrock in 1902.

The first of his published works for the instrument appeared in 1864 without opus number and supplementary to the *Allgemeine Zeitung* of Leipzig, one of the leading musical journals of the day. The composition was a *Fugue* in the startling key of A-flat minor. Seven flats! One can almost imagine Brahms writing such a work with his tongue in his cheek, for he was full of that almost demoniacal humor which we have long associated with his predecessor, Beethoven. Certainly organists would not clamor to perform a work in such a remote key, and for that reason it gained no great vogue.

A decade or so later, in 1881 to be precise, his second work for the organ was issued, also without opus number. This was

a *Chorale Prelude and Fugue* on the old German hymn *O Traurigkeit, O Herzelied*, published as a supplement of the *Musikalisches Wochenblatt*. Incidentally both of these fugues are curiously interesting examples of contrapuntal writing, for in each

suggest that the eleven preludes were actually composed in Upper Ischl, Austria, in the summer of 1896, and the present writer is inclined to accept this theory. Brahms possibly intended the opus to be a memorial to his great friend, Clara Schumann, whose death in May of that year was a terrible blow to him. Indeed his own demise was hastened, perhaps, by a chill caught at her graveside after he had travelled forty fatiguing hours across country. We remember that of Madame Schumann he had said, "the most beautiful experience of my life, it's greatest wealth, it's noblest content". Certainly no finer or more lasting memorial could be left for one he loved so dearly.

Organ in the Totendanz Chapel of the Marienkirche of Lubeck, where Bach and Buxtehude met, and Bach later played for Buxtehude, as guest organist.

the answer to the subject is inverted when it appears for the first time.

### A Rich Memorial

AND NOW WE COME to a consideration of the "Eleven Chorale Preludes, Opus 122." As stated above, some writers are of the opinion that some of these were in his old exercises in counterpoint, revised. Others

Almost all of the chorale preludes deal with the preparation of the soul for the adventure of death; and we may feel sure that Brahms considered it an adventure that was to be met placidly. The *Eleventh Prelude*, perhaps the very last composition to emerge from his facile brain, was the intensely poetic and beautiful *O World, I Now Must Leave Thee*. Brahms was con-

scious of his approaching death and seemed even to have welcomed it. We know that when he wrote the ninth and tenth preludes on the hymn, *My Heart Is Filled with Longing to Pass Away in Peace*, the old text expressed his thought very well. And he did pass away so quietly that his friends could announce to the world that "Brahms fell asleep this morning."

### Not a Cantor of Leipzig

IT DOES NOT REQUIRE more than a cursory analysis to show that the master was not thoroughly at home where the instrument of Bach was concerned. Although writing in the contrapuntal traditions of Johann Sebastian with a consummate skill, he did not accept altogether the organ idiom of the older German. Brahms almost neglects the pedal, whereas the Thomaskirche Cantor would have given it a part or parts just as important as anything which he wrote for the manuals. J. Fuller Maitland, in his excellent volume "Brahms" has suggested that several of the "Preludes", particularly numbers Ten and Eleven, were probably written with the piano in mind rather than the organ. The writer disagrees, however, with this idea and feels rather that Brahms, steeped in the traditions of Beethoven, thought more of orchestral effect.

Look at the very last prelude, *O World, I Now Must Leave Thee*. We have the theme of the old hymn stated very boldly at first, as though by full orchestra. Then the first echo is heard which would sound beautiful if given to the woodwinds. Following this, the quieter second echo reminds one of a quartet of muted French Horns. And then that sublime final passage, perhaps the most beautiful in organ literature, which closes the work as also a great career! This suggests a quatuor with the accompanying chords given to soft strings. On the other hand the *Fifth Prelude*, based on the very familiar *Deck Thee Self, My Soul, With Gladness*—a three part composition with the *cantus firmus* in the treble—is ideal for the piano. The *legato* melody, with its arabesque accompaniment lends itself admirably to the percussion instrument. *Blessed Are Ye, Faithful Servants*, number Six; and number Eight, the Christmas hymn, *Lo How a Rose E'er Blooming*, seem more suggestive of soft strings than any other medium. The *Seventh Prelude*, based on *O God, Thou Faithful God*, is the finest of the lot and seems to run the orchestral gamut from soft wood passages to full *tutti*. Indeed the writer has scored it for orchestra and has been surprised at its adaptability. So, in performing the preludes, the organist with an elementary knowledge of orchestration should succeed quite well in putting the ideas of the composer before his listeners.

### An Archaic Note

THOSE OF OUR READERS who have had the opportunity to study the original edition of the "Eleven Choral Preludes", as issued by Simrock, will have been struck, no doubt, by the frequent use of the C-clef. Once a common sight in music, it was performing the same task in Brahms' day as at present, namely, in orchestral scores to obviate ledger lines in the bass parts and thus to facilitate reading on the part of the performers. Yes, Brahms at-

Mr. Herbert Jackson  
of ST. LOUIS writes.

"The WICKS Organ recently installed in my home, more than fulfills all expectations. Friends of mine, including professional and amateur musicians and music lovers — all share my enthusiasm for the beautiful tone and fine appearance of this instrument."

surely wrote the "Eleven Chorale Preludes" for the organ, but one feels certain that he did think them orchestrally.

The organ works of Johannes Brahms have been sadly neglected, and the fault lies mostly at the door of our organists. To attract attention they must be given a place or places in recitals of good organ music. We have had whole series of programmes exploiting the organ works of J. S. Bach. That is quite as it should be, but we must become aware of the fact that it would take only one programme to give the entire organ works of Brahms a fair hearing.

In closing let it be said that as musicians we are most certainly, everyone of us, disciples of music. If we did not play the compositions of Bach, and Beethoven, and Brahms, and the whole host of composers, they could never be considered immortal. No one would know enough about them to appreciate their value. The frescoes in the Sistine Chapel at Rome tell the old story of the book of Genesis just as beautifully and as completely today as they did when Michelangelo finished their painting in 1520. Contemporary man can do nothing to improve them. The original idea of the artist speaks for itself. With music it is a different story. We, as pianists, organists, and singers, have an important place in the sun. We must do the speaking for the composer. Brahms left a great torch for us, as organists, to hold aloft. Let us bear it well!

## Dr. Damrosch on Tolerance

(Continued from Page 770)

and inner urge. I cannot excuse these countries whose governments not only enslave their citizens politically, but also seek to prescribe what music shall be written, what kind of painting shall be permitted, and what sculptures may be shown.

"On the other hand, we Americans must show absolute tolerance toward the art of other nations. Whether we sympathize with their policies or not, we must give untinted admiration to those artists who enrich our lives regardless of their nationality.

"I remember when I went to France during the War. I got to know a little group of French officers who were there as a liaison between the French and American armies. They were cultivated men and I saw a great deal of them, and after the dinners together—and my! what good dinners these French officers could get up even with war rations—I had to play for them on an old upright piano. And what did they ask for? Wagner and Schumann! They were patriotic Frenchmen; but the idea that they should be limited in their artistic happiness, by a conflict between two countries, was to them monstrous and ridiculous. We must pursue the same course. Although we have great sympathies in different directions we must not forget that art is universal. And as for the music we have in this country, our programs will always contain this music. No matter what country the composer came from, or what country the artists come from, here they shall be received with a friendly handclasp and sympathetic heart.

"I am told that in Greece and the surrounding countries such ideas prevail and that the actor is free without the so-called passport to pass from one country to the other—so you see I could claim for myself and my colleagues privileges which even the liberal governments of the day would be willing to grant. You may think it is conceit on our part, but it is not—the true artist will never do anything contrary to decency."

So long as the artist merely amuses, he appears as the servant of the public; only when he offers something beautiful, true and grand, will he stand above it.

## Let Glorious Organ Music

become a part of your Daily Life

Open your door—NOW—to a new realm of music for your home.

Let your family live with a richer, deeper musical enjoyment... with a Hammond Organ in your home.

For the Hammond is a complete organ! By giving you hundreds of different tone qualities, it enables you to orchestrate your favorite music in hundreds of different ways. It gives you a full and glorious range of tone volume. And it offers you ease of playing—so simple that your knowledge of the piano keyboard lets you start playing!

Yet, marvelous though it may seem, the Hammond Organ is easy to own. Its price is so low that it is within reach of medium incomes. So now, you don't need to deny yourself or your family. You can have a Hammond Organ... you can let glorious organ music become a part of your daily life.

Visit your nearest Hammond Organ Dealer. Let him demonstrate the Hammond... and the

It's compact — occupies just a 4-foot square of floor space. It's sensibly priced — definitely within reach of moderate incomes. You can own a Hammond Organ.

Aeolian-Hammond Player Organ. And let him explain how you can purchase conveniently out of income. Or write for full information. Hammond Instrument Company, 2929 N. Western Avenue, Chicago. In Canada: Northern Electric Company, Ltd., Montreal.

## "Billings' Best"

(Continued from Page 778)

musicians from Europe coming in to expose his weaknesses, but also here and there about the country a man with more discriminating taste recognized his crudeness, his amateurishness, his naïve mismanagement of his oftentimes charming ideas.

Andrew Law was one of them. A man with slightly better training and a flair for writing criticism, he attacked Billings with all the venom of his nature. Law, in his way, was trying to raise such musical standards as there were in the United States. He tirelessly introduced one European artist after the other, and attempted to destroy anyone who stood in his way. Billings' popularity was the biggest thorn in his side, and he was merciless in the way in which he exposed the weaknesses of this man of the people. Although Law was generally regarded as a tedious old fool, Billings suffered under the barrage of his criticism and the inevitable comparisons which followed. Gradually his name disappeared from programs.

The distress of his wife and six children became acute. Even in 1790, when his popularity was at its height, a benefit concert was given for him, although benefits in behalf of almost all musicians before the public were frequent things in those days. In 1792 the community again became sensitive about the poverty of the family, and a committee sent out a circular asking for assistance in getting out a special publication by Billings, this to be taken up in subscriptions. In 1794 the "Continental Harmony" was brought out, which was Billings' last publication.

## A Born Innovator

WILLIAM BILLINGS LOVED MUSIC sincerely and was completely honest in his efforts to free the music of his church and country from the icy clutch of English Psalmody. His greatest sin was his pitiful lack of technical equipment. He had right ideas and more than once supplied a remedy that was at least an improvement over

conditions that developed a recognized need.

Among other things he introduced the pitch pipe into the choir, and the bass viol as an accompanying instrument into the church service, both reforms badly needed. He devised a sort of metronome and helped put an end to the reluctantly relinquished practice of "deaconing." In the early days the deacon read two lines of a psalm, after which the congregation sang them, waiting for the next two lines prompted by Mr. Deacon. It was a conspicuous, important assignment, and even after the people could read and write and had hymn books with both words and music, the deacons persisted. It was too much for Billings. With common sense and the blustering temper that was always his, he wrote, "As all now have books, and all can read, 'tis insulting to have the lines read in this way, for it is practically saying, 'We are men of letters, You are ignorant creatures.'"

One fall day late in September of 1800, death came to Billings. He was fifty-four years old and had lived long enough to see his powers wane, his efforts, once revered, replaced and ridiculed. No one knows where he lies, nor what he looked like. There is no picture, no bust, no grave-stone.

Billings was one of three composers of his generation whose names are vital to American beginnings. One was James Lyons, who was a minister and wrote for the church alone; and the other was Francis Hopkinson, signer of the Declaration of Independence, a famed jurist, and a cultured amateur musician, who wrote the first secular music created by a native of the United States.

Of the three, Billings was the most robust, the least trained. He had the largest following. Had he lived today, his name would doubtless be in lights on Broadway, with a swing band on the airways, and he would occupy a penthouse on the avenue. He probably deserves the honor of being the first American composer, and possibly the first American publisher of music, worthy of the name.

\* \* \* \* \*

If you love the beautiful, you are sure to seek and to cultivate it. Many pretend to love it, but they forever admire and support the mediocre, if not the homely. Love the good! Yes, your works are sure to show it! So your art tastes and home adornments will bear evidence of your love for the beautiful.—K. Merz.

# ORGAN AND CHOIR QUESTIONS

## Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I have started a Junior Choir. It consists of children aged seven to fourteen. We use the official Methodist Hymnal. The hymns seem to be a trifle difficult for the younger members. Can you suggest any way to present them so that they will be easier to master? One of the girls in the choir sings everything an octave lower than the melody. Her range is from F below middle C to C above middle C. Should I teach her the alto part or let her sing soprano?—W. G. B.

A. You do not state what method you pursue in teaching the Junior choir. We suggest that you play the melodies only of the hymns, with the members of the choir singing them. The harmonies can be added after they have become thoroughly familiar with the melodies. We would not favor the girl singing the soprano part an octave lower. If possible, teach her to sing the alto part.

Q. I send herewith specification of an old reed organ. Which stops should be used for congregational singing, and which for chants and psalms? Do you think it would be possible for me to train a children's choir, having had no experience in choir conducting, and the children having had no training in singing? If you have any books which would help me to know how to proceed, will you please give me the names and prices—also would appreciate any suggestions as to books for reed organ work.—L. R. N.

A. For hearty congregational singing, we should think you could use "full organ," probably available through opening knee swells on right and left sides of the instrument. For psalms and chants, use whatever amount of tone is necessary to support the voices. 8' stops produce normal pitch (same as piano), 4' stops produce a tone one octave higher, 2' stops two octaves higher and 16' stops one octave lower than normal pitch. 4' tone series to brighten the combinations. Couplers bring into action keys one octave from those being played. Vox Humana in a reed organ is a tremulant. Forte stop acts as the opening of a swell.

You might be able to train a children's choir by reading books on the subject and applying the knowledge to the work. You might study the following: "Voice Culture for Children" by Bates (two volumes, including Exercises), at 75 cents each; and "Junior Chords" by Vosseler, at \$1.00.

For the reed organ we suggest Landon's "Reed Organ Method," which contains an article on "Stops and Their Management."

Q. What ranks of pipes and how many manuals are included in the Hope-Jones organs in Ocean Grove, N. J. Auditorium (6 Ranks) and Tauro Synagogue, New Orleans (10 ranks)? Please give pipe analysis. Do you think it possible that the Estey Company would give me scales and information on the construction of William E. Haskell's labial Tuba Mirabilis? How is a synthetic Saxophone produced? How much would a used two manual and pedal console (electric or tracker) cost? I would like to get working drawings and dimensions for all parts for Hope-Jones electro-pneumatic lever which is attached to a pallet and slider windchest. Where can I obtain drawings and scales of the Hope-Jones Diaphone in St. Paul's Cathedral, Buffalo? Concerning the two Hope-Jones organs (Ocean Grove and New Orleans) what are the scales of the stops and how are the organs divided if more than one swell box is included? Who built and what is the specification of the organ in the room in Fontainebleau Palace dedicated to the memory of Theodore Presser?—E. H. H.

A. We do not remember the specifications of the Hope-Jones organs you mention. For definite information, address the organists of the two institutions. The Ocean Grove organist is Clarence Kohlmann, 2437 North Eighth Street, Philadelphia. For information on the Hope-Jones organs, communicate with the organists who play the instruments. Thank you for the specification of the Paris Theatre organ, which we shall file for possible future use. We cannot say whether the Estey organization would supply the information you wish. Write to them. Emerson L. Richards, organ architect, of Atlantic City, suggests the following combination for synthetic Saxophone: Clarinet 8'—Open Flute 8' and Kinnara 8'. We cannot quote you price on a used console; nor can we advise as to securing drawings and details you wish in reference to electro-pneumatic lever, Diaphone and so forth. You might address the organist of St. Paul's Cathedral, Buffalo, for information in reference to the instrument in that edifice. The swell boxes of Hope-Jones organs are usually divided as to tone families, not manuals. The organ in the Fontainebleau room is a very small two manual instrument. We do not have details and suggest that you might get the information by addressing the Fontainebleau School, Fontainebleau, France.

Q. Enclosed is specification of a unit organ which costs sixteen hundred dollars. Do you think it is too much to pay? Do you think the instrument well balanced? If not, what suggestion could you make for additional pipes? Would you prefer the direct electric action or the electro-pneumatic, and why? Can additional pipes be included in this organ without further unifying it? What are some 8' pipes that would give most depth to an organ? I like full, round tones. Do you think wood pipes emit more beautiful tones than metal, and can pipes be had in either, or do certain pipes come in different materials?—F. W.

A. We do not consider the price exorbitant for the specification quoted. We would prefer the Great Nazard and Super Octave to be extensions of the Dulciana instead of Violin Diapason, and also would like to have the Swell Geleckt extended to include Nazard Flute 2 3/4' and Piccolo 2' instead of Super Octave from Great. The policy of THE ETUDE will not permit our expressing an opinion as to the relative merits of any particular type of action. Additional 8' pipes can undoubtedly be arranged for—but at additional cost. A Melodia or a bright Cornopean might be considered. Perhaps, since you like "round tone," you should arrange for an Open Diapason instead of the Violin Diapason. We prefer both metal and wood pipes to be included as each material has its individual tone qualities.

Q. For congregational singing should the chorister precede the pianist to the platform and from it? Where can I get a text book of patterns used in song lyric construction?—L. B.

A. We suggest that the director follow pianist to the platform and precede the pianist from the platform. You might seek information from "Musical Forms" by Pauer, which may be secured through the publishers of THE ETUDE.

Q. We have in our church a Vocation reed organ. We are informed that a motor can be attached to the bellows. Would it be advisable to have a set of pedals connected to the instrument, if motor is attached?—J. G.

A. The Vocation organ differs from the ordinary reed organ in that air is blown through the reeds instead of suction being used, and you will have to be sure that this is understood when motor is installed. Also be careful to see that bellows is tight enough to carry the pressure. A set of pedals might be attached to the instrument, if you decide to install a motor to furnish the wind supply.

Q. When there is no leader for the Song Service and the congregation is small, should the pianist try to lead, or should she listen to those who are singing and follow them? Will the congregation take their own time?—M. W. L.

A. The procedure is subject to local conditions. If the congregation "drags" the slugging pianist probably would be justified in trying to lead them to a more suitable tempo. We, of course, cannot answer the question as to whether they would follow their own ideas. Perhaps they could be told of their "dragging" and requested to take the tempo from the pianist.

Q. The church of which I am pianist has decided to use an old reed organ in the services. Will you send me names and addresses of firms from whom reeds can be obtained. Would also appreciate any other information on the subject of reed organs.—C. T.

A. We suggest that you secure the reeds from the original builders of the organ, if possible. If they are no longer in business, you might address the firm whose name we are sending by mail, describing instrument, make and so forth, and asking where reeds may be secured. For information on the subject of reed organs, we suggest Landon's "Reed Organ Method," which includes an article on "Stops and Their Management."

Q. Will you please give some idea of the correct tempo, M.M. ♩=, of the Prelude and Fugue in G major, No. 5, of "Short Preludes and Fugues" by Bach, Book I? It is given as "slowly," but that is indefinite.—N. P. D.

A. The Edition by Edwin Arthur Kraft, of the "Eight Little Preludes and Fugues" (Bach) gives the following metronome markings for that in G major, to which you refer: Prelude—Grave, ♩=56.

Prelude—Allegro, starting in fifth measure, ♩=84.

Fugue—♩=100.

We suggest these markings as a basis for the comparative tempos to be used.

# THE ACCORDION DEPARTMENT

## Accordion Repairs

By PIETRO DEIRO

As told to EIVera Collins

Part II

THE REEDS OF MODERN ACCORDIONS seldom fail to function properly, but occasionally some minor difficulty may develop. Perhaps it may be a reed which plays with one action of the bellows and is silent with the reverse action. It may be a reed which produces a muffled sound, or one which is entirely silent.

We do not encourage accordionists to attempt complicated reed repairs but believe there are a few minor adjustments of which they may learn to take care in emergencies.

The subject of accordion reeds is an interesting one. They are called free vibrating reeds because one end is fastened to an aluminum block and the opposite end vibrates when pressure of air from the bellows reaches it. That is how the tone is produced. The vibrating end is called the tongue and the opening, into which it snugly fits, is called the vent. Tuning of reeds is accomplished by a system of filing the tongue of the reed. The pitch can be thus raised or lowered.

Let us assume that we are about to repair a reed, on the treble side of the accordion, which does not function when the bellows are opened. It responds all right when the bellows are being closed.

Before taking the accordion apart, we must familiarize ourselves with the pitch of the reed so we can remember this when we are trying to locate the reed. It is also important to remember that the reed did not function on the outward action of the bellows.

There are six pins which fasten the framework of the treble side of the accordion to the bellows. These must be removed and the upper half of the instrument lifted gently away from the bellows. The entire reed section is then visible. The individual reeds are mounted on reed blocks and these are fastened at each end by a clamp. When the clamps are released the individual reed blocks may be lifted out.

### Reeds of Various Sizes

YOU WILL NOTICE that the size of the reeds varies. The reeds for tones in the high register are quite small and those for tones in the lower register are correspondingly larger. Further examination of the reeds shows one exposed reed and one reed concealed by a strip of leather. They are of identical pitch. The reed under the strip of leather responds to the outward action of the bellows and the exposed reed plays when the bellows are being closed.

Presuming that the reed we are to repair is a high E, we know that we must look for it among the small, short reeds. The pitch of a reed may be determined by gently snapping the vibrating end with a pin. We assumed that the faulty reed did not respond with the outward action of the bellows so we know that it will be a reed which is concealed by a strip of leather. This will not be difficult to find because when we sound the pitch of the exposed reed and then lift the leather strip to examine the concealed reed of identical pitch.

When we have located the reed we shall probably find that a piece of dust or lint is lodged between the tongue of the reed and the opening and thus prevented the reed from vibrating freely. This may either free the reed entirely or make it produce

a muffled, wheezy tone. A mere touch of a pin point will free the reed and the dust can then be blown out.

When the reed blocks are removed, and also when they are put back in place, care should be taken of the metal slide which is connected with the register switch. There should be also care that all the leather strips remain in position. They must not be bent or curled.

We have limited our reed repair explanation to the treble side of the instrument, because the bass section is more complicated.

There are a few other minor repairs which may be found convenient for accordionists. Occasionally the leaves of the bellows stick together. This can be remedied by shaking talcum powder between the folds of the bellows.

Each individual side of the bellows can be relined at a minimum expense, provided the wear is confined to the outer covering. The bellows should not be neglected until such a time as the rubbing finally wears a hole through the outer covering and into the bellows. They will then be beyond repair and new bellows will be needed.

### Other Ills

IF A TONE on an accordion sounds all the time when the instrument is opened or closed it may be caused by any of these conditions: dust under the valve; insufficient tension in the spring; valve not being level against the plate; or valve being loose from the key rod.

Bass keys may stick because of: the button not sliding freely; bass cover being warped so that it rubs against the pins; rods being gummy; or the mechanical parts not working freely.

Noisy key action may be caused by the hardening of the felt strip which runs along the piano keyboard under the edge of the keys. This can be corrected by removing the old strip and gluing on a new one. Other causes for noisy key action may be the hardening of the skin under the valves; the celluloid coming loose from the key; or the key rod hitting the under side of the gallery.

If there is an air leak in the instrument it may be caused by some of the pins being absent from the instrument. There is a

(Continued on Page 820)

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

For Teachers, Students and Players of All String Instruments

## The Bowing Optimum

By

J. ARNOLD OUREN

**A** VERY IMPORTANT PRINCIPLE for the violinist to observe is always to draw his bow in the most favorable stroke bed. Compliance with this principle requires that the bow be drawn across the string, in a line parallel to the bridge, at the point along its length at which the bow interferes the least with the vibration of the string; while the string, at the same time, preserves its fullest possible amplitude of vibration. In the scheme of nature, this point happens also to be the one at which the fullest and roundest tone—the tone having the most carrying power, the intrinsic tone commensurate with the inherent qualities of a given instrument—can be produced. The violinist who would produce such a tone must draw his bow in this most favorable stroke bed, or optimum, as it may be termed.

The optimum is located at a distance from the bridge of about one tenth to one ninth the length of the vibrating segment of the string; hence, on a full sized violin having a string length of thirteen inches, the optimum for the open strings would be located at a distance from the bridge of about one and three tenths to one and four ninths inches, or about half-way between the bridge and the upper end of the finger board.

The location of the optimum varies slightly on the different strings, and on different instruments. If the location of the optimum on the A string be taken as the criterion and norm, then on the E string it will be found to be a little nearer to the bridge; on the D string, a little nearer to the finger board; and on the G string, about the same as on the A string.

### An Important Factor

OBSERVE THAT IT IS THE LENGTH of the vibrating segment of the string that governs the location of the optimum. This means that, as the left hand ascends into the higher positions while a passage is being played, the optimum moves, in conjunction with it, proportionally nearer to the bridge, and *vice versa*. If, for instance, in playing the tone A on the open A string, the optimum is located at a distance from the bridge of one and one third inches, then in playing the tone A an octave higher on the A string, the optimum will be located at a distance from the bridge equal to one half of one and one third inches, or two thirds of an inch. The optimum has moved nearer to the bridge because the vibrating segment of the string is now only one half as long as it was in the first place. It follows, then, that in playing an ascending scale passage on one string, the bow should gradually slide toward the bridge, and at the same time remain parallel to it; and inversely, in playing a descending scale passage, the bow should gradually approach the finger board.

It is observance of the principle of the optimum which requires the bow to be

drawn close to the bridge when natural and artificial harmonics are played. As the finger is lightly touched to the string at points of one half, one third, or one fourth, of its length from either end, it vibrates, respectively, in two, three or four, separate segments. The corresponding optima are located at a distance from the bridge equal to about one tenth the length of one of these aliquot segments. If, for instance, the

YEHUDI MENUHIN

A "Wonder Child" of but recent years who has become one of the supreme virtuoso violinists of today.

third finger be lightly touched to the A string at the point slightly above where the tone D is ordinarily firmly stopped in the first position, a harmonic tone two octaves higher in pitch than the open string A will be produced, and the A string will vibrate in four aliquot segments; hence, the optimum will be located at a distance from the bridge of one tenth the length of one of these four equal segments. In other words, it will be located at a distance from the bridge equal to one fortieth of the entire length of the open A string.

When artificial harmonics are played, the same principle obtains. The firmly stopping finger forms a new fundamental segment; the lightly touching finger divides this fundamental segment into aliquot harmonic segments; and the segment between the optimum and the bridge is one tenth as long as one of these harmonic segments.

All great violinists noted for the beauty of their tone undoubtedly have taken cognizance of, or have unconsciously given spontaneous expression to, the principle of the optimum. To mention one instance, Pablo

Sarasate's faintest *pianissimo* tone is said to have been heard with distinctness throughout the entire extent of the largest concert hall. No doubt, Sarasate's rigid adherence to the principle of maintaining the optimum had much to do with the engendering of this happy effect.

### Striving for the Ideal

IF THE FOREGOING is true—and it surely is—then those who advocate sliding the bow toward the finger board while a *diminuendo* on a fixed tone is being produced, are not in accord with fundamental principles. Such procedure does not primarily diminish the tone; it merely muffles the tone, and decreases its carrying power. In effecting a *diminuendo* on a fixed tone, the bow should always remain at the optimum, the *diminuendo* being brought about by reducing the speed of, and the pressure upon, the bow.

While to bow at the optimum is an ideal

Later, each position should receive separate treatment, especial attention being accorded the higher ones. When practicing in positions, the second finger should be used for stopping the strings so as to establish the average optimum for any given position. Practice of the foregoing nature must be persevered in until the violinist develops a sense for the optimum such that it will manifest itself spontaneously in his practical playing. This unconscious sense can best be developed by conscious practice, just as a would be orator develops consciously, by means of practice in private, the articulation and gestures that he hopes will manifest themselves unconsciously and spontaneously when he appears in public. When one considers the marvelous improvement in tone quality that it engenders, and the sense of command over the bow that it instills, the acquisition of a delicate sense for the location of the optimum is a goal for which it is well worth striving.

## What Is A Violin Worth?

By

ERIC L. ARMSTRONG

**S**TRADIVARIUS, maker of the finest violins, sold them for a few dollars each. So did other makers of his period. Today these instruments are valued at thousands of dollars. Why?

To his everlasting credit it must be stated that Stradivarius turned out good violins, although naturally some were better than others. Many have been destroyed lost forever. Probably they were regarded as being "just another fiddle", easily replaced.

Artist performers desire them today partly because of the idea that an old violin is better than a new one—to which many do not agree—and also because of the appeal to the audience; some artists have also the collector urge.

With a public clamoring to hear a genuine Stradivarius in the hands of an artist player, it is an asset to own one. It proves a good drawing card.

With this in mind, and considering that these violins are rare, it is reasonable to say that one may be worth \$10,000.00, or even more.

But there are hundreds of modern makers. Many copy old masters, others evolve a model of their own.

Apart from these who make and finish their own violins with loving care, there are scores of factories that turn out millions of violins, in which each part is made by a different worker, these assembled without regard to tonal results, varnished with some quick drying concoction, and sold for a small price in the stores of country dealers and through mail order firms.

### Each Has Its Label

IT IS WELL KNOWN that most of the products of such factories is labelled as being a Stradivarius, a Guarneri, a Stainer, or other old master. Many are misled, through such fictitious labels, into buying what is little better than trash. To most of us, a Stradivarius is beyond our financial resources. The idea of a factory fiddle is odious. We are compelled to choose from among the

modern makers and with them to be satisfied. It has been the privilege of the writer to use a few, and appraise many violins by recent makers. Invariably we find a "rawness" with one previously unused. The tones vary individually as much as do the voices of singers. Some are sombre, others brilliant, a few are undesirable for any purpose, even though made of good timber, with careful workmanship.

Violins priced around one hundred dollars will be found after a year of good use to respond readily, and to prove satisfactory to the owner.

Once, when present at a demonstration where old and new violins were played by artists, I found it difficult to determine the old from the new, merely by tone.

Accepting the finding that for general use a good modern violin is the equal of an old one, and can be purchased for one hundred dollars; that a finer one may be had for two hundred dollars, and that a Stradivarius will cost \$10,000.00, we compromise with one at one hundred fifty dollars.

For some years the owner will study under a teacher, play with local orchestras, and do a little concert work. During this period he will become acquainted with his violin and learn to love it. The violin will lose its rawness, become responsive, and answer to any demand made on it. Having arrived at the artist stage of his career, the owner will have an instrument that for all practical purposes is the equal of one of the old masters.

## The Bass Clef and Its Relationship to the Violin

By THOMAS NICOLAI EVANOFF

HOW MANY VIOLINISTS know anything about the bass clef beyond what it looks like? From long experience with violinists, we feel safe in saying, very few. For ourselves, we often play Bach's "Two-Part Inventions" (originally written for piano), with another oddler who plays the upper line while we transpose the bass of the bottom line at sight. All goes smoothly for a while, then suddenly the other player stops.

"What's the trouble?" we ask. Then the inevitable reply, "The next two measures are in the bass staff and I'll have to omit them because I can't read it."

Such incidents are apt to occur in any violinist's career, and a few hints about the bass clef and staff (they are not identical) may prove useful.

Seeing the notes of the G string written in the bass staff and studying them thoroughly so as to recognize them at sight mainly shows the relationship between the bass and treble staves. This is made clear in Ex. 1.

The first line below the staff (Middle C) in the treble staff, is the same as the first line above the bass staff (this same Middle C). The second space below the treble staff is the same as the first space

above the bass staff. Both are the note B (the second finger on the G string), and so on. The notes of the D string also may be written in the bass staff, and their position in the treble staff is clearly shown in Ex. 2.

Ex. 3 shows middle C (third finger on the G string) with all four clefs.

This note sounds the very same tone in every staff, despite its different positions. To play notes in the bass staff which are below the range of the violin, simply read them a third higher than they appear on the bass staff, and then think of them as being in the treble staff.

Ex. 4b shows the lowest note of the viola with relation to middle C (Ex. 4a), while Ex. 4c shows the lowest note of the violoncello with relation to middle C.

## Tones and Semitones on the Violin

By ERIC DALEN

ONE OF THE DIFFICULTIES of the beginner in violin playing is that of getting the tones and semitones in their proper places. Often, students with several months of practice are doubtful of the position of whole steps and half steps as they finger the notes on the different strings.

The majority of violin methods take the student through the range of the first position in the natural tones, except in the case of F on the E string which is often played F-sharp. Each string is taken separately, proceeding with one finger at a time. In this manner the half steps are placed differently on each string, making the fingering confusing for the young beginner.

To form a clear picture in the mind of the student as to why half steps are played in certain places on each string, a diagram of the piano keyboard from G (lowest string on violin) to C (on E string) is

made. Explain that the black keys are flats and sharps and, for the present, are not to be played on the violin. As we are playing only the natural tones (white keys) the student is shown that he plays whole steps as long as there is a black key between the note that is being played and the succeeding one.

When the two white keys come together without the black between, a half step is played (B-C) and (E-F).

The idea given to the student is that he duplicates each note of the piano keyboard, regardless of the different positions of the half steps on the strings.

Lastly, this diagram may be kept and referred to when the student is in doubt about certain steps, rather than to practice time that a certain half step has been practiced in the wrong position.

The best man is he who most tries to perfect himself, and the happiest man is he who most feels that he is perfecting himself.—Socrates.

THE RUDOLPH WURLITZER COMPANY, DE KALB, ILLINOIS

**Miracle Wound STRINGS**

Strings can go modern and Miracle Wound strings lead the way thru the wonders of modern plastics. Moisture resistant—perspiration can't penetrate—stays true in intonation—marvelously smooth surface—no frayed strings to sound dull. Miracle Wound, a string you must try but once to be convinced.

## Accordion Repairs

(Continued from Page 817)

small strip of leather, called a gasket, between the bellows and the upper and lower sections of the accordion. If this leather is shrunk or hardened, it may cause an air leak. Other causes may be that the valves are out of alignment and do not completely cover the holes in the plate, or the bellows themselves may leak. The air valve must not cause unnecessary friction or a leak will result.

Finally, we wish to remind accordionists that they can avoid many repairs if they take proper care of their instruments. Dust

should never be allowed to accumulate on an accordion as it may eventually work into the delicate mechanism. The instrument always should be kept in its case when not in use and should not be exposed to dampness, excessive heat or bright sunlight. It is well to form the habit of always setting the instrument down gently, as continual rough jolts are injurious to the mechanism.

"Repairing Your Accordion," a valuable accessory for all players, may be secured from the publishers of *THE ETUDE*.

## How to Develop the Piano Pupil's Sense of Rhythm

By HAROLD S. PACKER

A FAULTY SENSE of rhythm is primarily caused through incorrect hearing. In the process of uniting the sense of hearing with that of feeling, confusion takes place in the mind and one sense opposes the other. This condition is particularly apparent where cross rhythms are concerned and it is further aggravated when the pupil attempts to count or to use the metronome.

It is obvious from the outset that the pupil must sense the beginning of rhythm groups. To do this let the pupil practice exercises and other forms of technic in duple, triple and quadruple rhythms. Let him sound only the first note of each group, using finger touch, and, for the remaining note or notes of each group, touch the

By practicing in this manner the pupil will have a better opportunity to hear adequately the beginning of each rhythm; and he will, at the same time, properly sense the *feel* of the other notes of the group. Once this has been accomplished combinations of simple and complex rhythms may be taken up and the pupil may sound all the notes, count or use the metronome without becoming tonally deaf to the rhythms involved.

## VIOLIN QUESTIONS *Answered*

By ROBERT BRAINE

No questions will be answered in *THE ETUDE* unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the *Violinist's Etude* consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of *The Etude* and other musical publications.)

### Violins by Pfretzschner

J. H. L.—The violins marked G. A. Pfretzschner, made at Markneukirchen, Germany, are of only medium quality. I do not know where detailed information concerning them could be found. A vast number of similar violins are exported to the United States and other foreign countries.

### Securing New Pupils

A. E. S.—Different violin teachers have different theories as to the best methods of securing new pupils. Some consider the best method is to work up a large repertoire of solo works, suitable for public performance, and then to get as many public engagements as possible. If the solo work is well done, it is bound to result in a great deal of newspaper and social publicity. The soloist becomes well known, and is consequently much sought after as a teacher, and a large class invariably results.

Another method largely used by teachers is newspaper and magazine advertising, which is often successful, especially in the case of artists of wide reputation. Much publicity is given to the life and career of the artist, and to the lives of the notable pupils he has produced. Leopold Auer, teacher of Heifetz, Elman, Rosen, Zimbalist, and a long list of brilliant pupils, won world-wide fame by the success of his pupils; and the pupils themselves were in great demand as teachers and as public performers.

### Violins and Violinists

An interesting magazine for violinists has been recently established by Ernest N. Doring, at 1322 Hinman Avenue, Evanston, Illinois. The magazine treats of everything pertaining to violins—violin playing, violinists, and similar topics. Among the articles are, "Suggestions on Sight Reading"; "Joseph Szigeti's Pietro Guarneri"; "Chicago Business Men's Orchestra"; "Musical Genius"; "How Many Strads?"; "Northwestern University"; "Fiddle Gossip from Old New England"; "Impressions and Souvenirs of Cremona," by Emile Francois; "Part IV, Music Review"; "Queries and Comments"; "Among the Violin Makers," and "Musical Notes."

It contains several excellent plates showing a violin, by Pietro Guarneri of Venice; Joseph Szigeti; The "Ex-Joachim" Stradivari; The "Adam" Stradivari, and the New Clarinet Family. For the present, the magazine will be published every two months, and single copies can be obtained at the rate of 25 cents per copy. Published by: "Violins & Violinists," 1322 Hinman Avenue, Evanston, Ill.

### Violin Values

L. R.—Violins, like every other article of value, have their ups and downs as they regard to value. The violins of Cremona, since first their supreme value began to be recognized have fluctuated in price, but their price has in the main, been steadily upward. The greatest advance has been in the violins of Stradivarius and Guarnerius, which command the highest prices of all. The present market price of a high grade Stradivarius is from \$25,000 to \$50,000. The Joseph Guarnerius violins of the highest grade command almost equally high prices. Other Cremona violins are of very high price, if of first rate quality. Some other violins, those of Jacobus Stainer, the greatest German master, especially, have either stood still, or else decreased as regards value. Shortly after his death some of his best violins sold for as much as 8,000 gulden (\$4,000), a price which it would be impossible to obtain at present. In his day he sold them at a price of about thirty gulden (fifteen dollars in American money).

These figures show clearly what a vast fluctuation has taken place in the price of the really great violins of the world.

### Sight Reading

E. C.—Your young son's violin teacher "said a mouthful" when he told the boy that the little sight reading he (himself) knew, he had practically taught himself. He had read a vast amount of music, of all kinds. Personally, I learned most of my sight reading from playing the violin part of Haydn's "String Quartets." Other quartets, quintets, and sextets would be equally good. Playing first violin in an orchestra is also fine practice. The point in sight reading is to "keep going," and not to stop for mistakes. That is the reason why playing in quartets and orchestras is so beneficial. If the player stops, the orchestra goes on, and he is left behind. Every violin student should do more or less sight reading.

### Locating Master Violins

L. T. L.—The exact number of Stradivari violins is not known. However, a great many are known. They have been mostly named by the owners. Dealers in old violins—such as Lyon and Healy, Chicago; W. E. Hill, London, England, or the Rudolph Wurlitzer Co., New York City—are the most likely to have lists of famous violins and their owners. Whether they would supply you with such lists, or sell them to you, I do not know. You might write to them.

"Maybe you'd better stay out of 'Silent Night' altogether, Ben"

**A MONEY-SAVER**  
FOR YOU  
AND YOUR PUPILS  
**CENTURY**  
**Certified**  
**CENTURY MUSIC**  
**SHEET MUSIC**  
**15¢ A COPY** 20 CTS. IN CAN.

CENTURY gives you the world's best music, beautifully printed on the best paper, every bar in the standard size, each note certified to be correct, as the master wrote it! What more can sheet music be! There are over 3,000 compositions in the Century catalog, all 15¢—(20¢ in Canada).

When you buy music, tell your dealer what selection you want and be sure to say, "In the CENTURY EDITION, please." That means you will pay only 15¢—less than half what you usually pay. And you can't buy better music at any price.

THOUSANDS OF SUCCESSFUL TEACHERS use and recommend "CENTURY CERTIFIED EDITION" exclusively because they know it is all that good music can be at half the price or less. Its modest price aids them in enrolling more pupils, and parents greatly appreciate the saving.

# BANDS AND ORCHESTRAS

## Getting the Right Music for Your Band

(Continued from Page 781)

for the three eighth-note B's in both the second and third measures, yet Arturo Toscanini, in his recording of the overture, plays it with but two eighth-notes in the third measure. This difference aroused our curiosity, and as a consequence it was found that the Italian score shows but two B's in measure three. Also we learned from Pierre Henrotte (for many years concertmaster of the Metropolitan Opera Orchestra) that the opera orchestras always play the phrase with but two eighth-note B's in that measure.

Frankly, it was almost embarrassing to recall the number of times we had played this measure incorrectly, and yet for many years bands and even symphony orchestras have made this error. Apparently a great many orchestra scores and probably all band scores were prepared from German scores which had been inaccurately transcribed from the original Italian.

In case the reader is especially interested in this observation on the overture, he is referred to the Victor recording No. 7255, played by the New York Philharmonic Orchestra, under the direction of Arturo Toscanini.

### Editing "Euryanthe" Overture

AS AN EXAMPLE of some of the ideas expressed herein, and of the sort of gain to be had by editing, let us turn to Weber's "Euryanthe" Overture, with which we are familiar. It has appeared on band programs for many years, and yet is still badly in need of complete editing. In following the suggestions offered in editing band music, we first learn something about Weber himself. Although his musical training began in the eighteenth century and he accepted Mozart as his model, he nevertheless belongs to the nineteenth century and to an entirely different kind of musicianship from that of the classical masters. As a musician, Weber was much more versatile than any of his contemporaries or fore-runners—although his versatility may have been more of a liability than an asset. He was a pianist, conductor, critic, poet, writer; and, in addition to his sonatas, concertos and variations for piano, he wrote masses, cantatas, songs, choruses, chamber music, and symphonies. His most significant effort, however, was in the opera. His tendency to brilliance and natural theatricalism was at cross purposes to his efforts as a composer of symphonies and chamber music. His best works incline toward virtuosity or the *bravura* style of composition. Proof of this characteristic lies in his concertos, duets, quartets for clarinet, brilliant polonaises and piano concertos. Although he wrote beautiful melodies, he was also a restless dramatist; and the melodies of his three great overtures are correspondingly penetrating, restless, full of motion and leaning toward the brilliant or stirring side of melodic writing.

Weber might safely be classed as a romanticist, writing dramatic music with a touch of the classical. With this in mind, we can go on to the editing of the overture. Our initial problem is that of tempo. We will note that the opening movement, *allegro*, is frequently marked, in band scores, M.M.  $\text{♩} = 120$  to 132; while the same movement, in the orchestral scores, is written  $\text{♩} = 92$ . Naturally, the tempo cannot be regulated too closely, but what a sad mistake it would be to play this *allegro* movement of "Euryanthe" at  $\text{♩} = 120$ . Neither do we believe that a tempo of

$\text{♩} = 92$  would be a proper nor comfortable rate to undertake with our bands. We personally would not enjoy hearing the movement at such a rapid pace, for either band or orchestra.

The story is told that Weber, becoming very much alarmed with the faulty tempi employed by the various orchestras in the early performances of the overture, drew up for the benefit of conductors a detailed list of metronome numbers for each section of "Euryanthe." We see then, that following a strict tempo throughout, as marked on the score, would be hardly in accord with the composer's intention.

It seems impossible, moreover, to define the exact meaning of tempo markings such as *allegro*, *andante*, or any of the other agogics as presented in most of our music. There is a need for an understanding of the moods and requirements of the selection and its author.

In "Euryanthe," we find also that no tempo changes are marked until we arrive at the *largo*. Yet tradition informs us that there are several variances in tempo throughout the *allegro*, all of which might not be editing, but a matter of interpretation.

### Instrumentation Analyzed

OUR NEXT PROBLEM is one of instrumentation. In examining the band score, we find that throughout the overture the percussion parts are inclined to be too heavy. If we refer to the orchestral score, we can immediately notice that there is no call for percussion in the opening bars at all, except for tympani. But we have heard bands many times play this opening movement with a full battery of field drums performing at double *forte*. Naturally, this is not in good taste. If percussion parts were not used, we would reduce the dynamic level to *mf*, and in addition revise the tympani part so that it would correspond to the orchestra arrangement.

In some arrangements of "Euryanthe" the melody has been given to the cornet. In our opinion, the melodic line is too rapid for this instrument, and when handled by the cornet the woodwinds are outweighed. We prefer using the trumpet parts, as written for orchestra. The care shown in instrumentation will do much to enhance the final performance.

In measure sixteen of the overture, the melody in the band arrangement is phrased as:

We would, however, prefer

Throughout this section the phrasing and articulation can be greatly improved by a reference to the orchestral score. Twenty-four measures before the *Largo* movement, we find that the horns are much more effective if we comply with the orchestral arrangement. Since Weber wrote the *Largo* for eight violins, it would seem best that, in the band transcription, no more than four players to each part were used, and if there are exceptionally fine performers in the band, even as few as two players to each part would be effective and desirable.

## FRETTED INSTRUMENTS

### Ensembles of Fretted Instruments

By GEORGE C. KRICK

**M**OST OF US, when taking up the study of a musical instrument, do so with the desire of playing for the pleasure to be derived from it, and perhaps of adding to the enjoyment of family and friends. After a student has acquired a fair amount of technical proficiency, he often happens to meet other players, and here is where the most interesting chapter in his musical career has its beginning. Aside from the social contacts he will make, the playing together in small or large ensembles is a quite enjoyable experience.

Several years study under the guidance of a teacher is, after all, only the foundation and preparation for the years during which the student will have to rely on himself and to develop his own individuality. With his eyes and ears open at all times, he will gain in knowledge and self-confidence by meeting others pursuing the same aims.

Another great help to the director of an orchestra or to its members is the radio. It is time well spent to listen to the orchestras on the air; to find those that are similarly organized as to size of membership and type of instrumentation, and then to try to develop your own organization along these lines, continuously striving for perfection in ensemble.

An interesting point regarding fretted instruments is their variety, which includes mandolins, mandolas, mandocellos, mandolin banjos, tenor banjos, plectrum and five stringed banjos, guitar banjos, classic and plectrum guitars, Hawaiian and tenor guitars. Since some of these are primarily melody instruments, while others are ideal for accompaniment purposes, complete ensembles can be formed without calling upon the bowed instruments for assistance. In order to select the proper combination, however, one must consider carefully the timbre or tonal character of each instrument.

#### Varied Instruments, Varied Tones

AS WE ALL KNOW, the classic guitar is a perfect solo instrument and requires no support from others; but there are also a great many duets, trios and even a few quartets, that should be heard more often.

A great deal of literature which is quite effective, is available for mandolin solo with piano accompaniment; but the accompanist should be an experienced one, able to subdue the tone of the piano sufficiently to obtain a proper blending with the delicate tone of the mandolin.

A mandolin and guitar make an excellent duet; the banjo mandolin requires an accompaniment of a tenor banjo or plectrum guitar; a Hawaiian guitar is most effective with either Spanish or plectrum guitar; a tenor banjo and a plectrum banjo make an excellent duet; and the same may be said of two plectrum guitars.

Combinations of three instruments should be arranged as follows: two mandolins and guitar; mandolin, mandola and guitar; mandolin, mandocello and guitar; mandolin banjo, tenor banjo and guitar banjo or plectrum guitar; tenor banjo, plectrum banjo and plectrum guitar or bass banjo; mandolin, Hawaiian guitar and plectrum or Spanish guitar; first and second Hawaiian guitar, and Spanish guitar; and, finally three plectrum guitars, the first and second playing single or double notes for melody and harmony, the third for accompaniment.

The most effective combination for small groups is the quartet, as this furnishes op-

portunity for full and complete harmony. First and second mandolin, mandola and mandocello form what is known as the classic quartet; while first and second mandolin, mandola and guitar are the instruments of what is called the romantic quartet. For the small ensembles of mandolins the writer prefers the classic guitar as an accompaniment, as the gut and silk strings have a tendency to soften the metallic tone of the other instruments. Quartets of the banjo family may be arranged thus: First and second mandolin banjos, tenor banjo and bass banjo; or first and second tenor banjos, plectrum banjo and bass banjo (a plectrum guitar may be used in place of the bass banjo, when this is not available).

There are several ways in which an Hawaiian ensemble can be made effective: first and second Hawaiian guitars, ukulele and Spanish guitar; Hawaiian guitar, mandola, mandocello and Spanish guitar; or first, second and third Hawaiian guitars and Spanish guitar.

The quintet is completed by adding a mando bass or contra bass banjo, which will add the fundamental bass giving depth and body to the combination.

#### The Larger Groups

TO FORM A SEXTETTE we usually add another melody instrument playing the first part in unison or in octaves. Seven or eight players will find it advantageous to use the same combination as the sextette with the addition of one or two instruments playing the inner voices. If it so happens that no mando bass is available, the use of a piano is recommended for an ensemble of seven or more players, and if possible the addition of drums and traps is advisable.

In forming larger orchestras one must always keep in mind the proper balancing of the different instruments, and as an example, we suggest this instrumentation for a sixteen piece mandolin orchestra:—Four first and three second mandolins, two mandolas, two mandocellos, three guitars, one mando bass, drums and traps. For an orchestra of thirty players, double the instruments for each voice; and for a banjo band, substitute the corresponding banjo instruments for those of the mandolin family.

As stated before, it is not advisable, in small ensembles, to combine the instruments of a different tonal character; a duet of mandolin and tenor banjo is not satisfactory, neither is that of tenor banjo and Hawaiian guitar. On the other hand when organizing a larger orchestra it is not only permissible but advisable to add instruments of different timbre for the sake of variety. For instance, a mandolin orchestra of thirty players, as previously outlined, might be augmented by adding two tenor and two plectrum banjos and several Hawaiian guitars. By the use of proper orchestrations, giving the banjos and Hawaiian guitars opportunities to play occasional melody passages, the possibilities for variety and special orchestral effects may be greatly enhanced. We must not forget that a high standard of orchestral performance is the result of technical proficiency of the individual members and of their enthusiastic cooperation with a competent leader; and, since the fretted instruments are sufficient unto themselves, the player has splendid opportunities to come in contact with the world's beautiful music.

# QUESTIONS and ANSWERS

A Music Information Service Department  
Conducted Each Month

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## Origin of the Word Symphony

Q. Explain the origin of the term "symphony" and its history as applied to bagpipes, descant, faux bourdon, and musica facta.

—D. DeB.

A. The word "symphony" comes from the Greek "syn" (with) + "phone" (sound). This term, like most others, was applied indiscriminately to a large number of things when it first came into use centuries ago. The term is found even in Daniel III (Vulgate) where it refers to an instrument which was probably similar to the bagpipe. By the end of the Middle Ages it was applied to a number of different instruments such as the bagpipe, hurdy-gurdy, and so on, and later even to the virginal. It also came to be applied to any harmonious combination of sounds. As it became necessary to clarify terminology, the terms descant, faux bourdon, musica facta, and so on, replaced the general word symphony. Gradually the word symphony became more and more specific in its application until it reached its present day definitions.

For a more complete discussion of this matter than can possibly be given in this column I would suggest that you consult both the latest unabridged edition of "Webster's Dictionary" and "Grove's Dictionary of Music and Musicians" under the headings "symphonia" and "symphony."

## Is It A-sharp or A-natural?

Q. Is this arrow marked note from Beethoven's Minuet in G an A-sharp or A-natural?

Ex. 1

2. Is this arrow marked note from Bach's Fifth Prelude ("Well-Tempered Clavier," Bk. 1) F-sharp or F-natural?

—Mrs. B. K. C.

Ex. 2

A. 1. Most editions of this Minuet that I have looked at have A-natural, but the Oliver Ditson edition uses A-sharp. Good reasons for the use of either could be cited. I am inclined to think that Beethoven had A-natural; however, this is only a guess.

2. Most editions use F-sharp. The Kroll edition has F-sharp and Czerny changed it to F-natural. The Kroll edition is more apt to be correct.

## Tempo in Schumann

Q. Would you oblige by giving the metronome markings for the following pieces: 1. Papillons, No. 5, in B-flat and 2. Papillons, No. 6, in D minor by Schumann; 3. A Study in D major by Sterndale Bennett (No. 5 of "Six Studies in the form of Capriccios").—Miss F. L.

A. (1) Papillons, No. 5 is about M.M. ♩ = 76.

(2) Papillons, No. 6 is M.M. ♩ = 80 (Short passage in A major, a little slower; F major portion about M.M. ♩ = 138).

(3) M.M. ♩ = 100.

## How to form a Diminished Chord

Q. I. My theory teacher taught me that a diminished chord was formed by lowering the third and fifth degrees of a major triad a half step. Yet in my accordion book I find the diminished chord of C written C, E-flat, A; and the diminished seventh chord of C is written C, E-flat, F-sharp, A. Please explain how this can be.

2. Could you give me the name of some book which would explain these chords?—V. P.

A. 1. Your theory teacher is correct in his explanation of how to form a diminished triad; and so, also, is your accordion book. The diminished chord C, E-flat, A is really C, E-flat on a diminished chord on A), only it is in the first inversion. The diminished seventh chord C, E-flat, F-sharp, A is really sharp, A, C, E-flat (a diminished seventh chord on F-sharp), only in its second inversion. This chord might just as well, however, have been written C, E-flat, G-flat, A (or B double-flat) since F-sharp and G-flat are harmonically the same, as are also A and B double-flat.

2. Almost any good book on harmony explains diminished chords. I believe you will find the explanations very clear as given in "Harmony for Beginners" by Orem and in "Lessons 64, 68, and 74 of 'Lessons in Harmony' by Healey and Lehmann, which may be procured through the publishers of THE ETUDE.

## Stories About Songs—and Swing Music

Q. 1. a. Is it true that Schubert composed his Ave Maria in a cafe during a fit of remorse over his love for Caroline Esterhazy?

b. If so, why is it called Ave Maria?

c. Did Schubert put the words to it?

d. Did he harmonize it?

2. What is the story behind each of the following:

a. Gounod's Ave Marie.

b. Rachmaninoff's Prelude in C-sharp Minor.

c. von Suppe's Poet and Peasant Overture.

3. Where could I get "Credo d'Herculanum" and at what price?

4. What is your opinion of swing music?

—B. L. D.

A. 1. a. There is no historical basis for this story; it is mere fiction. Schubert taught music to the Esterhazy children during the summers of 1818 and 1824 and did fall in love with Caroline Esterhazy, but many of his biographers have undoubtedly exaggerated this incident in his life. The Ave Maria was composed in 1825 either immediately before or during a summer trip Schubert took with his friend Vogl through the Austrian Alps. The incident which you relate seems to be a mixture of the sensational anecdote about Schubert's love for Caroline Esterhazy and the authentic account of his having dashed off Hark, Hark the Lark on the back of a menu card in a cafe.

b. and c. The words are taken from Sir Walter Scott's "Lady of the Lake." Schubert set seven different portions of this lengthy poem to music; of these seven songs, the Ave Maria is by far the most popular.

It is called Ave Maria because this song to the Virgin, sung in the poem by Ellen, begins with the words "Ave Maria." Since it is addressed to the Virgin it may properly be called Ave Maria (Hail, Mary), even though the words are not those of the Catholic prayer to the Virgin Mary.

d. Schubert wrote both the melody and the accompaniment of this song.

2. a. I know of no story behind Gounod's Ave Maria. The accompaniment is the First Prelude in C major from Bach's "Well-Tempered Clavier," Volume I. To this Gounod added the melody and the words of the prayer Ave Maria. Even though the accompaniment is by one composer and the melody by another, the union of the two elements is phenomenally perfect.

b. There is no story behind Rachmaninoff's Prelude in C-sharp Minor; it is "pure" or "absolute" music. Rachmaninoff has given us no program for it, and the title indicates only that it is a short piece in free form in the key of C-sharp minor. As has happened in the case of many pieces, there has grown up a large number of stories concerning this famous prelude. The two commonest ones are that the prelude represents the city of Moscow and its ringing bells, or that it tells the tale of marching prisoners who revolt and are driven back into their dismal prison. Both of these stories, like all the others, are merely the products of someone's imagination, and Rachmaninoff disclaims them.

c. The Poet and Peasant is an independent orchestral composition, and is rather improperly called an overture, since it does not precede a larger structure such as an opera, operetta, or oratorio. Von Suppe did, however, write two grand operas and many operettas. The following description of the overture is given in the book, "Music Appreciation with the Victrola, for Children":

"This celebrated overture affords an interesting study in contrasting themes. It opens with a quiet introduction, with smoothly flowing, graceful melody, suggestive of the dreamy meditation of a poet. Then comes a faster movement for the full orchestra, merging into a waltz theme, depicting the sturdy, joyous life of the peasants. This develops into a fast, furious movement, followed by a return of the waltz, before the brilliant, rushing coda." The appropriateness of the name lies in the fact that the work follows the outline and spirit of overtures to the popular Italian operas of its period.

3. Although I have searched extensively and have inquired of several authorities, I can find no trace of a composition called "Credo d'Herculanum." Can any of our readers give information concerning it?

4. Swing Music is merely a highly emotionalized manner of playing jazz. It is excellent for stirring physical excitement leading to vigorous and often frenzied movements in dancing, but it is distressing for a sensitive musician to listen to, and it has no place in any system of serious music education.

# Music Is My Hobby

(Continued from Page 779)

no amateur is quite free, he lost his place, and then used the few seconds it took to find it again, in improvising sixteen measures so completely in the style of the composer—it was a Bach fugue!—that only a person intimately acquainted with the score could have detected the slip.)

Richard Simon, of the publishing firm of Simon and Schuster. Pianist—who plays ensemble works with his brother, Dr. Henry Simon, Professor of English at Columbia University, a violinist.

Walter Rosen, senior partner of the banking firm of Ladenburg, Thalman. Pianist.

Dr. Vladimir Karapetoff, Professor of Electrical Engineering at Cornell University, and recognized as one of the world's greatest electrical scientists. Dr. Karapetoff's hobby is playing trios with himself. He makes a recording of any of the great trios, beginning with the piano part. Upon this, he superimposes a recording of the violin part. Then he sets this twice made record in motion, and uses it as accompaniment while he plays the violoncello.

Hendrik Willem Van Loon, author, artist, philosopher, and commentator. Violinist.

William T. Taylor, Vice President of the Commercial National Bank and Trust Company. Baritone. On the evening that Mr. Taylor broadcast, NBC was flooded with inquiries as to whether it wasn't really Lawrence Tibbett who had just sung, and what did the broadcasting officials mean by fooling the public?

Mrs. George Eustice Corcoran, society matron. Pianist. As the result of Mrs. Corcoran's broadcast, a number of her friends urged Mrs. Corcoran to form a class for coaching other ladies who had neglected their music studies for years and now desired to return to them.

Mrs. Lionello Perera, society matron. Violinist.

The late Edgar Leventritt, New York attorney. Pianist.

Rear Admiral R. E. Bakenhus, United States Navy. Pianist.

Geoffrey Parsons, chief editorial writer of the New York Herald-Tribune. Pianist.

The wife of Rear Admiral William Woodward Phelps, United States Navy. Pianist.

Mrs. Elizabeth Sprague Coolidge, music patron, who plays trios with her son, a professor of Harvard, and her grandson, a student at Yale.

Howard H. Pell, Jr., Secretary of the Columbia Gas and Electric Company. Flutist.

Mrs. Schuyler Schiefflin, society matron. Clavichordist.

Dr. Leo Glushak, prominent plastic surgeon. Tenor.

James H. Van Alen, National Court Tennis Champion. Pianist, singer, and composer of many of his own selections.

Michael Zetkin, Federal Revenue Agent. Baritone.

Walter Robert Schumann, Assistant Stamp Editor of The New York Sun, and great-grandson of Robert and Clara Schumann. Pianist and composer of light music.

Rosalie Caroli, field worker among the blind, New York State Department of Social Welfare. Miss Caroli is herself blind.

## And Humbler Heroes

ADDED TO THESE OWNERS of "big names" and "big jobs," there appeared an even greater number of plain, everyday, average citizens—secretaries, accountants, motorcar salesmen, stenographers, lawyers, doctors, a district attorney, jewelers, insurance salesmen, housewives—the individual mention of whom must, regrettably, be limited to the story of Mrs. Mark Hafner and Mrs. David Tannenbaum, housewives and

mothers, of Brooklyn, New York. These ladies made each other's acquaintance at a piano recital. A casual exchange of concert comments revealed that both "liked the piano" and had more than once thought of reviving active music making. They met at another concert and talked some more. Then they decided to take up two-piano work. They broadcasted as a fluent and distinguished two-piano team, and refer to their work as "Old Age Insurance" that will net them dividends of stimulus and pleasure when their children are grown and their active interests have decreased.

Nearly all the participants showed an amazingly high level of performance; and they were invited to appear strictly on the basis of their abilities. The fact that they reveal varied backgrounds of race, profession, training, and economic security proves anew that music is genuinely a "public domain," open not only to the rich, the idle, the "arty," but also to every least one who cares enough for music to want to live with it.

Mr. Koons asked each participant why he chose music as a hobby. A survey of the replies shows that the choice was actuated solely by personal inclination. Nobody turned to music for any reason of advantage—but all discovered benefits, many of them unsuspected. Music, it was found, stimulates and relaxes after a busy day; it brings comfort; it provides an emotional safety-valve through complete self-expression; it supplies the degree of concentration that rests the mind after work; it serves as a social asset; it perfects mental alertness and coordination between mind, eyes, and muscles; it fosters self-discipline.

While Mr. Van Loon said that he plays, no matter how it sounds, for his own amusement, Mr. Taylor said that he sings for his own amazement. Mrs. Coolidge turned to music as a solace for personal sorrow, and spoke of its benefits in terms of intellectual and moral discipline, of emotional balance, and of the spiritual healing it provides in offering impersonal difficulties to solve. Incidentally, Mrs. Coolidge's notable furthering of professional music came as the result of her personal hobby interest. Having found that music study gave her comfort at a time of bereavement, she determined to share music, insofar as she could, with others who might derive similar comfort from hearing it.

## A Fountain of Youth

SO MUCH FOR THE PARTICIPANTS. The effect of the program had yet to be determined. From the time that "Music Is My Hobby" was first launched, NBC received numerous letters from the listeners for whom this experiment in amateur music was held to be a risk. The general verdict was that the hobby program not only entertained but also gave something personal to build upon, released something within them. A banker in Chicago confessed that he had kept his own clarinet playing a secret, because music making was thought to be "sissy"; but, after a number of bankers and industrialists had come out in the open and played before the microphones, he revealed his "secret" and now plays for his friends. A farm wife was encouraged to return to the singing she had given up when a great career dream failed to materialize. Children became inspired to practice for the fun of the thing.

Letter after letter attests to the joy it has given some listener to hear "other people" making music for no reason other than the pleasure and release it affords them. Letter after letter tells of plain, everyday amateurs going back to their playing and singing with new incentive and new zeal. Later, then, they report the

progress made as a result of listening to "Music Is My Hobby"; a new world of interest, or of solace, has been opened, new friends have been made, old ties have been more strongly cemented through the fun of making music together. People have profited through the mental discipline of accurate practicing; people have reorganized hazy time schedules by rising an hour earlier for a bit of practice before work, or devoting half the commuting distance

## The Story of Major Bowes and His Amateur Hour

(Continued from Page 774)

violin player on the last row of the violin section. Before long, he stepped up to the position of first violinist, then conductor of the Capitol Theater Orchestra, where he remained for years, then conductor of the Minneapolis Orchestra, then conductor of the Philadelphia Orchestra. The shrewd impresario had guessed right again. Major Bowes, for obvious reasons, does not encourage amateurs to come to him from all over the country, but rather from the vicinity of New York. He evidently does not feel that it is right to solicit applicants from a distance, because of the cost of transportation and the possible disappointment to those who do not pass the test of his auditions. Of course he cannot prevent any applicant from coming from anywhere.

### Where Enthusiasm Exudes

THE POPULARITY OF THE AMATEUR HOUR is almost incredible. Those who have visited the Chrysler Buildings in New York, and at the World's Fair, have seen something of the immense number of souvenirs, presents and "honors" which have poured in upon the Major from all over the world. Part of this museum of publicity is given over to police badges showered upon the Major from communities in all parts of the country. No Caribbean admiral could be more for more. If the Major were to piece his police badges together, he would have a garment that would put to shame the armor that would have dazzled a knight of the Middle Ages.

The Major's "fan mail" represents appreciation almost unequalled by anyone save Colonel Lindbergh. The records in the American Telephone and Telegraph Company it is reported reveal that over three million "vote" calls have been received since the hour was started. Over fifty expert telephone operators and tabulators are required in the Columbia Broadcasting System Building, on Broadway, to record calls on Amateur Nights.

Each of the fifty New York operators handles lines for two incoming calls. Pen-pals fly across special forms for recording the votes, limited to one to an individual, three to a family, and twenty-five to institutions and other group balloters. Two page boys collect them and shoot them to their accountants in a tabulating room. In that room also a direct wire brings in the vote tabulations from honor cities. Thirty seconds before each of the announcements of the results, given at 9:30 and 9:51, the lights are closed and rushed to Major Bowes' desk on the stage. More than mechanical alertness is required of the girls who receive the myriad calls for a score of acts. They must be ready, as well, to answer managers' bids for acts, or to reassure some worried caller who is certain the life of the entertainers is a long lost love.

### A Musical Marvel

AS MANY MEN AS WOMEN apply for auditions, it is said, which is contrary to the idea that women want to make themselves heard. Major Bowes' Theater Groups have played over four thousand engagements in over two thousand cities, including some in every state of the Union and in provinces of Canada. This, in itself, is a huge theatrical enterprise.

to theory study and memorizing of scores. Mr. Koons' hobby program has proven itself a unique success, from the viewpoint of the performers and of the listening recipients as well. It has uncovered a rich new field of spiritual stimulus and encouraged thousands of people, who live beyond the reach of the concert hall and the lecture platform, to stretch forth their hands and grasp at the finest kind of "Old Age Insurance."

Major Bowes' method of examining applicants is original. In his office, which resembles an old fashioned Victorian salon rather than an office, he has a finely adjusted loud-speaker, which may be switched from one studio to another. His large staff of experts, required to examine the applicants which number from five hundred to six hundred a week, hear the applicants in the studios. The Major turns on, by switch, this or that studio, as he desires, or as his attention is called to a particularly likely applicant. Of course it would be impossible for the Major to hear five hundred aspirants a week. He can take time only for the best. In hearing them through a loud-speaker, he gets the same effect that the listener will get over the radio.

Every applicant is given a careful hearing, if there is any indication of the slightest talent. At the auditions, they are permitted to sing their numbers complete. There is no gong at the auditions. The applicants are never discouraged. If it is felt that they are not available, they are told directly, but are never criticized. It should be remembered that the Major is far more anxious to discover desirable performers, in which the American public is likely to be interested, than is the applicant anxious for an opportunity to appear.

There can be no question that the Amateur Hour has stimulated an interest in music study. It affects all classes of music study and all instruments. Thousands of would be singers have been inspired by hearing that others of humble origin, have, by reason of hard study, risen until they have an opportunity to appear before the general public.

Although the Major, in his spontaneous "ensembling" strives to give candid verbal camera shots of the contestants, the appeal is, of course, entirely through the imagination, as it may be reached via the ear. The radio fan is obliged to imagine what the contestant looks like, his gestures, and his facial expression. When well known actors or moving picture stars are heard over the radio, their features are familiar to many of the listeners. In the Major's radio cast are performers who have been seen by only a handful of people. They are unknowns reaching up for fame. Because of the appeal to the ear, the programs must be limited largely to musical performance, imitations or tap dancing. There is a standard Broadway joke about the *danse du ventre* dancer who was indignant when she was rejected by a radio program maker. Although the appeal is entirely aural it is, nevertheless, surprising how much of the personality of the performers can be conveyed by the voice.

### Seeking the Primrose Path

NATURALLY, SUCH AN ALLURING DREAM of fame and wealth brings to the Major's elevator many aspiring "artists" with what may be indulgently called unstable mentalities. We waited around for hours watching some of these unfortunate people. Conversations in the elevators ascending to the Major's office can be both laughable and tragic. His assistants must have long since developed a technic to defend him from the barrage of cerebral misfits hungry for foot-light fame. As the writer was ascending to the studio office, one individual evidently

### Self-Development in Piano Mastery

"I assure you, at the outset, there is positively no short-cut to the mastering of the piano," said Ignaz Friedman in an interview with the late Harriette Brover. "If anyone affirms there is, he says what is false. Students think if they play a dozen études of Czerny, they have acquired all he has said; but they have not. There is a great deal more to Czerny than that. It is the same with many other technical masters who have contributed to the literature for acquiring mechanical perfection.

"When one has worked through all the important material of this nature, it is only the outside shell after all. It is the proper assimilation of all this material which will adequately equip the artist."

73rd YEAR

A complete school of music, dramatic art and dancing. Courses lead to degrees. Special students may enter at any time.

## MUSICIAN'S LIBRARY

### Volumes of Music

Price, \$2.50 Each

SUBSTANTIALLY BOUND WITH PROTECTED HEAVY PAPER COVERS

Send for Catalog of Complete Series.

#### MODERN FRENCH SONGS

Edited by Philip Hale

VOL. I—Bemberg to Franck  
High Voice—Low Voice

VOL. II—Georges to Widor  
High Voice—Low Voice

Large volumes of songs by the best modern French composers. Biographical sketches and portraits of the composers represented.

#### ROBERT SCHUMANN FIFTY SONGS

Edited by W. J. Henderson

High Voice—Low Voice

The singer's library will be enriched by this collection of Schumann's songs and his or her repertoire most certainly should include a goodly number of them.

#### 100 ENGLISH FOLKSONGS

Edited by Granville Bantock

Medium Voice

Songs covering the period from the 13th to the 19th centuries. Includes an authoritative discussion of folk songs by the editor.

#### FRANZ SCHUBERT FIFTY SONGS

Edited by Henry T. Finck

High Voice—Low Voice

This great melodist gave to the world several of the most stirring and most dramatic songs ever written and yet he also brought forth through his inspired pen some of the best of artistic song gems rich in their melodic flowings.

#### JOHANNES BRAHMS SELECTED PIANO COMPOSITIONS

Edited by Rafael Joseffy

A volume that should not be overlooked by any one with a serious interest in, and a cultivated appreciation for, good piano music.

#### MODERN RUSSIAN PIANO MUSIC

Edited by C. von Sternberg

VOL. I—Akimenko to Korestchenko

VOL. II—Liadoff to Wrangell

Fifty-one selections in Volume One and 48 in Volume Two. These compositions provide the pianist with an interesting and varied repertoire of enviable proportions.

#### FREDERICK CHOPIN FORTY PIANO COMPOSITIONS

Edited by James Huneker

This well-edited volume provides a liberal selection of favorites from the pen of "the poet of the piano".

#### MODERN RUSSIAN SONGS

Edited by Ernest Newman

VOL. I—Alpheraky to Moussorgsky  
High Voice—Low Voice

VOL. II—Moussorgsky to Wihtol  
High Voice—Low Voice

These volumes of Russian songs, rich in beauty and variety, were compiled and edited by one of London's foremost critics and historians.

#### ONE HUNDRED SONGS BY TEN MASTERS

Edited by Henry T. Finck

VOL. I—Schubert, Schumann, Franz, Rubinstein and Jensen  
High Voice—Low Voice

VOL. II—Brahms, Tchaikovsky, Grieg, Wolf and Strauss  
High Voice—Low Voice

The names of the composers and the editor should be sufficient to indicate the superlative merits of these volumes.

#### 70 NEGRO SPIRITUALS

Edited by William Arms Fisher

High Voice—Low Voice

A most authoritative and complete collection of these picturesque and appealing folk-songs.

#### EDWARD GRIEG FIFTY SONGS

Edited by Henry T. Finck

High Voice—Low Voice

Here are songs that are found regularly on the programs of artist singers and a number that are heard too seldom to satisfy those who are especially partial to the songs of this Norwegian master.

#### JOHANN SEBASTIAN BACH PIANO COMPOSITIONS

VOL. I—Shorter Compositions

VOL. II—Larger Compositions

Edited by Ebenezer Prout

Two splendid library volumes supplying piano classics that hold a place all their own in the realm of music.

#### FRANZ LISZT 20 PIANO COMPOSITIONS

Edited by August Spanuth

Liszt's masterly transcriptions of songs and other compositions with a portrait of the master. 156 pages of music.

#### WOLFGANG AMADEUS MOZART 20 PIANO COMPOSITIONS

Edited by Carl Reinecke

Selections from the sonatas and fantasias, and from the shorter compositions of this genius of the keyboard.

## The Story of Major Bowes and His Amateur Hour

(Continued from Page 825)

mistook him for the Major himself. He stood stiffly at salute, as formal as the guard at the gate of Buckingham Palace, gradually focused his eyes on the point of his radiant nose, and then chuckled us under the chin. Just what his specialty was the writer never found out.

### A Road to Recognition

THE MAJOR ALWAYS STRESSES the importance of preparation. Not that he undervalues natural talent; but he feels that many of those who fail do so because they are only "half-baked." He also lays great stress upon character and individuality, realizing that in order to succeed, one must have something distinctive to give the world.

At one time there were sixteen different Major Bowes Amateur Hour units on the road. Practically all of the talent in these units was unknown before discovered by Major Bowes; and much of it would have been obliged to wait for years, had it not been uncovered in this way. These companies, in themselves, are a major amusement enterprise of large dimensions.

Major Bowes is in no sense a professional musician; although he studied music when a child and recalls with no little thrill when he played at the Lincoln Grammar School in San Francisco. David Belasco and David Warfield attended the same school.

What becomes of the performers who make good on the radio hour? Do they drop right back into oblivion? Not if they have the "stuff." From very small beginnings, great artists have arisen. Long before the Amateur Hour, Rosa Ponselle and

John Charles Thomas were both in vaudeville. That was years before the Metropolitan hailed them as great artists. Lucille Browning, who sang at the Metropolitan Opera, was literally discovered by the Amateur Hour. Doris Weston, who played opposite Dick Powell in the pictures, was another. The famous Negro baritone, Clyde Barrie, was another Amateur Hour product.

The Major is an optimist in the highest sense. He wants to see a more joyous world, with more joyous people in it. One of his favorite quotations, which he has reprinted in his "Verses I Like", comes from the memoirs of the Reverend Sydney Smith (1855). It runs, "When you rise in the morning, form a resolution to make the day a happy one to a fellow creature. It is easily done; a left off garment to the man who needs it, a kind word to the sorrowful, an encouraging expression to the striving; trifles, in themselves as light as air, will do it, at least for the twenty-four hours; and, if you are young, depend upon it, it will tell when you are old; and, if you are old, rest assured it will send you gently and happily down the stream of human time to eternity. By the most simple arithmetical sum, look at the result; you send one person, only one, happily through the day; that is three hundred and sixty-five in the course of the year; and supposing you live only forty years after you commence that course of medicine, you have made 14,600 human beings happy, at all events for a time. Now, worthy reader, is this not simple? It is too short for a sermon, too homely for ethics, and too easily accomplished for you to say, 'I would if I could!'"

## Getting the Right Music for Your Band

(Continued from Page 821)

Usually the solo cornet part is overscored, and we would recommend the careful editing of such a part, observing the necessity of changing it to conform to the orchestral score, especially in those portions where the rapid passages are duplicating the woodwinds. This change is not recommended simply because it is difficult, but because when played it becomes too heavy, and the passage sounds thick and weighty. Furthermore, we cannot approve of a placement of cornet on violin passages that are much better when handled by the clarinet, such as in the opening measures of the overture.

Nor can we neglect the rôles of the trombones and basses. Note that in measures 33 through 38 the trombones and brass basses are given the triplet passage, whereas, in the orchestral arrangement the passage is performed by the violoncello, string bass, and bassoon; these latter instruments are capable of playing this passage, but it is certainly not suited to trombone and brass bass. Probably in bygone days there was a necessity for relegating such parts to these instruments, but with our large, fully instrumented bands of today, it is advisable to give these passages to the bass reeds and string bass.

Of course, we must make allowances for the types of instrumentation available, knowing that not all bands are so fully instrumented that all of these suggestions can be carried out. It is apparent, though,

that careful thought, given to editing by even the smallest amongst us, will be conducive to more pleasing results.

In editing the dynamics of "Euryanthe" (and a great many other selections) we find that usually when one voice is given a *ff* the entire instrumentation is given the same dynamic sign. Such a course is rather inappropriate—dynamics are not such an automatic matter. A careful check-up must be made on each individual part and its relation to other parts studied. Dynamics must be balanced and proportioned so as to achieve the best possible performance.

Usually we find it necessary to reduce the dynamics of the brasses and percussion since these instruments are by nature heavier-voiced than the woodwinds, but are normally encompassed within the same dynamic range. At the time of checking dynamics, it is well to give careful attention to the marking of breath marks, and their placement should precede the rehearsal of any number with full band.

Rarely do we find music for bands that is perfect in every respect—there are unending factors which might lead to error. A genuine interest in the performance of the modern band almost demands a fulfillment of editorial duties by the conductor and should not be neglected by any serious minded musician. That editing takes time, energy, and often painstaking research is patent; but, as with any worth while effort, the rewards are in proportion.

### Where the Music Hungry Dwell

"It is quite true that in the large cities, where the virtuoso struggles for a chance to appear, there seem to be at times almost as many performers as there are persons in a possible audience. Yet in the country at large there is a music-hunger, for the most part unsatisfied. In many towns of the United States, and of other countries, no excellent musician resides, no excellent teacher, no friend and guide of the art.—John Erskine.

### THE COVER FOR THIS MONTH—

Every adult, whether a parent, an uncle, an aunt, a godparent, or just a friend, who is interested in a child, would do well if he or she were to lend a hand in helping make come true the juvenile's wish for a means of musical expression. Time was when the child's Christmas wish for a piano was beyond consideration in some homes. To-day special student-size instruments, as well as new modern condensed sizes and attractively styled instruments, are available at exceptionally reasonable prices.

The piano, of course, is the first and foremost musical instrument for the home, but to supplement pianos already in some homes, or to meet special desires, there are other instruments that may be considered for Christmas giving. We are glad that it is possible to bring before the public eye at this season of the year an ETUDE Christmas cover which suggests the type of Christmas gift that can be so beneficial all the year 'round.

Musical instruments and musical reproducing instruments are far better than many other useless and soon forgotten things so often utilized for Christmas giving. A Christ-

mas that brings to a child an opportunity to get started in music is a Christmas that will continue through a life-time to give joy and happiness to the recipient. We hope that this cover will inspire many to be Santa's helper by listening to the musical wishes of the juveniles in whom they are interested.

We are indebted to the photographic library of H. Armstrong Roberts, Philadelphia, for the basic part of the cover on this issue, and to the artist, Miss Verna Evelyn Shaffer, for making visual the music Christmas suggestions being given to Santa.

### CHRISTMAS MUSIC PROGRAMS—

While most choir and chorus programs for Christmas are well in rehearsal by the time this copy of THE ETUDE reaches our readers, there may be some who for one reason or another have not made their selection of materials. We wish to advise these choir-masters, organists or soloists, that if they cannot obtain satisfactory local service, the Theodore Presser Co. is prepared to send for examination, at a moment's notice, Christmas music in any classification. Quantities of a number are not sent with return privileges, of course, but single copies always are obtainable "on approval."

An "Air Mail" letter will do wonders in obtaining prompt service on last minute orders for Carol Collections to be used for community singing, for Christmas songs for the church soloist, for appropriate Christmas numbers for the organist's contribution to the celebration. A few suggestions in vocal and organ solos that may be helpful:

#### VOCAL SOLOS

**THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES—**Have you ever described anybody or anything as "long-winded"? Such an observation vouches for quantity but not necessarily for quality. We usually avoid the after-dinner speaker, or the new book on how-to-play bridge, that is described in this way. Things must be brief and to-the-point to hold one's interest in today's fast-moving world and therefore it is a rarity to find something that warrants praise for "long-windedness."

The Etude Historical Musical Portrait Series is one of these rarities. After almost eight years this regular monthly feature of THE ETUDE is still a popular feature. Started in February, 1932, this series of alphabetically-listed pictures and biographies of the world's best known musicians now has almost completed those whose family names begin with "W".

Never before has there been so comprehensive a collection. Its value for reference, scrap books, program notes, etc., has been proven time and again. Of special note, too, is the fact that separate copies of all past instalments may be obtained for the nominal sum of 5 cents a sheet. If, therefore, you would like to have a separate copy of any past instalments in the series, the publishers will promptly supply you upon order.

**MUSICAL GREETING CARDS—**In response to many requests for Christmas Greeting Cards having a musical appeal, or rather designs featuring music in some way, the Theodore Presser Co. is offering six different cards and folders. These have been produced in a tasteful and dignified manner and it is felt sure that they will be very popular with musical folk for their personal or professional Christmas Greeting mailings. An envelope is provided with each and the price is 5 cents each. It is not possible to send these cards for examination but a set including one each of the six different designs is supplied at the special set price of 25 cents for the set complete, including envelopes.

**CALENDARS—**Our Calendar offering for this year brings along a new panel *Gallery of Great Pianists of To-day*. This panel of twelve great pianists' portraits beautifully lithographed in colors includes—Paderewski, Rachmaninoff, Rosenthal, Hofmann, Horowitz, Hambourg, Iturbi, Bauer, Ganz, Grainger, Hutcheson, and Samaroff. On Calendar purchases there will be the choice of this panel and two other panels, one of these being the *Gallery of Great Composers* which in color lithography presents the portraits of Bach, Beethoven, Chopin, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Verdi, and Wagner; or the *Gallery of Recent Great Composers* which in colors give the portraits of Brahms, Debussy, Dvořák, Elgar, Gounod, Grieg, MacDowell, Rimsky-Korsakov, Saint-Saëns, Sibelius, R. Strauss, and Tschaiowsky.

On dozen lot orders where no choice is named the calendars will be assorted, including some of each of these three panels.

These 1940 Musical Calendars will be very acceptable Christmas remembrances to musicians and music pupils, or for musicians and music teachers to send to their friends. The heavy substantial back mat of these Calendars is approximately 10 3/4 x 7 1/2", and the artistic mount that frames the panel also provides a cut-out cover flap for the Calendar pads which are of a neat size yet with figures that are very legible. The price for these Calendars is 10 cents each, or in dozen lots the price is \$1.00 a dozen.

### MY OWN HYMN BOOK, *Favorite Hymns in Easy Arrangements for Piano*, by Ada Richter—

Parents often request teachers to give their children hymns to play. In fact, they sometimes expect a child to be able to play them after taking lessons only a year, little realizing that hymns are usually more difficult to learn than easy-grade piano music. The hymns in this book, however, are so simplified that the pupil who has studied a year can play them with ease.

The book is divided into two sections. "Hymns for Every Day" includes some twenty famous hymns familiar to all, such as *Come, Thou Almighty King; Faith of Our Fathers; Rock of Ages; Nearer, My God, To Thee*; and *My Faith Looks Up To Thee*. "Hymns for Special Occasions" are those used for Thanksgiving, Christmas, Easter, Missionary Services, and Gospel or Evangelistic meetings. This section includes such favorites as *Come, Ye Thankful People, Come; Joy To The World; O Little Town Of Bethlehem; Come, Ye Faithful, Raise The Strain; From Greenland's Icy Mountains; What A Friend We Have In Jesus; He Leadeth Me; O Happy Day; and Blessed Assurance*. More than fifty hymns are included and piano teachers who number among their pupils regular Sunday School attendants and children of church-going folk would do well to consider the psychological value of assigning this book as soon as such students are ready for it.

Such teachers will not want to miss the opportunity now offered to secure a first-from-the-press copy of this useful book at the special advance of publication cash price, 30 cents, postpaid. The sale will be confined to the U. S. A. and Its Possessions.

**PRESSER'S HOLIDAY BARGAINS—**Many mercantile houses take on a heavy expense item in order to give their patrons something in the way of a douceur at Christmas-time. Theodore Presser, the founder of our company, was a very practical and thrifty minded man and rather than expend money for some little advertising novelty that might or might not be acceptable to many of his patrons decided that his Christmas present to the patrons of his business would be money-saving prices on music albums and musical literature books in which most every one of his patrons would be interested, either for Christmas giving or for adding to his or her own library of music or musical literature.

Continuing this custom of special price reductions on music albums and musical literature works the Theodore Presser Co. again presents this year money-saving opportunities for the gift buying season. These are *Holiday Cash Prices* and for remittance with order delivery is made postpaid. Selected items from the *Holiday Offer* will be found on advertising pages in this issue and those desiring to have a list of every publication included in the *Holiday Offer* are invited to send a postal request to the—

Theodore Presser Co.  
1712 Chestnut Street  
Philadelphia, Pa.

Ask for a copy of the complete *Holiday Offer*.

### CHILD'S OWN BOOK OF GREAT MUSICIANS—DVOŘÁK, by Thomas Tapper—

In providing this booklet on the noted Bohemian composer, Mr. Tapper continues a series that teachers, everywhere, recommend as an excellent means of creating interest in music, especially with younger children. Of the modern great masters, Dvořák's compositions are better known to the casual music listener than are those of any other composer with the possible exception of Tschaiowsky. His life story is replete with interest and should prove an inspiration to students.

This booklet will be presented in the same unique style that characterizes the 16 previously published subjects in the series. Unbound, but with cover, needle and silk cord for art-style binding supplied, it provides ample space for the child student to write his own version of the biography, designates places where the many "cut-out" pictures in the accompanying packet are to be pasted, and thus enables the young student to make his "own book."

In advance of publication single copies of *Child's Own Book—Dvořák* may be ordered at the special advance cash price, 10 cents postpaid. The 16 previously published booklets in the series are priced at 20 cents each. They cover the following composers: *Bach, Beethoven, Schubert, Mozart, Mendelssohn, Wagner, Schumann, Handel, Haydn, Chopin, Verdi, Liszt, Grieg, Brahms, Tschaiowsky, MacDowell*.

### POEMS FOR PETER, (*A Book of Rote Songs*) by Lysbeth Boyd Borie, Set to Music by Ada Richter—

No matter how old we grow, there always remains in us enough of the child to appreciate juvenile sayings, happenings, humor, and heart problems. Much to be envied is the person who can see and hear these gems of childhood and perpetuate them, in prose or verse, for readers of all ages to read and enjoy.

Two present-day outstanding book publications, *Poems for Peter* and *More Poems for Peter*, both by Mrs. Borie, illustrate the above statement. For simplicity, childish humor, and everything that has juvenile appeal, these little poems take rank with the best of their kind.

For this book Mrs. Richter, whose various published music books of easy grade have made such an immediate and universal appeal, has given to a number of these poems musical settings which are gems of melodious simplicity. Even children with but little interest in music will take to them if only for the sake of the text.

School teachers need not hesitate to use Mrs. Richter's book, *Poems for Peter*, in the early grades, and no book of its kind can so well fit the multitudinous needs for home

(Continued on Page 828)

and general recreation activities. Representative titles of some of the poems selected for this purpose are: *Too Salty, Only Just Me, Too Expensive, Peter Family Tree, and Who Do You Suppose?*

Realizing that many ETUDE readers may like to get an advance of publication copy as soon as possible, we are offering single copies at the special cash price of 50 cents, postpaid, the copy to be forwarded just as soon as it is received from the printer.

**WHEN THE MOON RISES, A Musical Comedy in Two Acts, Book and Lyrics by Juanita Austin, Music by Clarence Kohlmann**—Young folk of today, whether in school or community groups, demand of any stage production they undertake an interesting story, lively and tuneful music and, as a rule, some opportunity for the introduction of sprightly dances. *When the Moon Rises* has a typical musical comedy plot, bits of romance, a few misunderstandings, etc., yet several surprising situations develop and one totally unexpected romance lends a comedy touch to the finale. The dialog, too, is sparkling with humor, and several comedy scenes are sure to make a hit.

Those who remember Mr. Kohlmann's music in *The Moon Maiden* and *An Old-Fashioned Charm* know what to expect in the solos, ensemble numbers and choruses the score of this work reveals. Capable critics who have seen the manuscript, or heard the music played, pronounce it even superior to his previous successes. He also has provided some excellent musical numbers for the dances.

As to the staging, considerable latitude is allowed the producer. But one stage setting is necessary and most of the costumes are modern sports wear. Yet the show can be made quite colorful with large choruses, attractive "props" and skilful lighting effects. Full directions for all of the mechanical details of the production are given in a Stage Manager's Guide to be issued on a rental basis. The Vocal Score will contain the complete dialog and music and single copies of it may be ordered now at the special advance of publication cash price, 40 cents postpaid.

**JACK AND THE BEANSTALK, A Story with Music for the Piano, by Ada Richter**—In childhood there is a great love for the world of "make believe." This is the reason why Mother Goose stories and favorite fairy tales have proved so captivating to children through many generations. Children love the repetition of such stories, and here in this book for young music students Mrs. Richter enhances the appeal of the old favorite *Jack and the Beanstalk* story for music classes of the kindergarten and primary grade ages.

With easy-to-play piano pieces a musical background is given to various moods and scenes in the story. As the pupils take these up, one by one through various music lesson periods, they also may color the illustrations on the pages of this story music book. When the book is completed by the class they have excellent material for a special program or recital, since the story may be dramatized as a little playlet with interpolations.

Every teacher of young students is offered the opportunity to become acquainted with this book through the advance of publication offer of a single copy at 25 cents postpaid. The price is for cash with order, the book to be delivered as soon as published.

**THE THRESHOLD OF MUSIC, A Layman's Guide to the Fascinating Language of Music, by Lawrence Abbott**—Many regular readers of THE ETUDE requested, long before announcement of this book's forthcoming publication was made, that these valuable articles by Mr. Abbott be gathered together in book form as a convenience for reference use. Certain it is that those who will take the time to read this book will get a lot more enjoyment out of any musical program to which they may listen. The work is for the casual as well as the regular listener, for the radio "fan," phonograph owner; yes, and even for the earnest student of music who may wish to do some "brushing-up" on fundamentals.

The author, in his work as assistant to Dr. Damrosch, preparing material for N.B.C.'s

"Music Appreciation Hours" has come in contact with all kinds of inquiries from seekers after musical knowledge. This has made him aware of the necessity for a book such as this and it has been with the greatest of care that he has prepared each succeeding chapter as it has appeared.

To illustrate the colloquially worded explanations given throughout the book, Mr. Abbott quotes from all of the great music masters, from modern composers like Oley Speaks, Victor Herbert and Ethelbert Nevin, even from so-called "popular hits" of recent years—*Indian Love Call, Rhapsody in Blue, Ol' Man River*, etc. An idea of the scope of the work, which begins with the fundamentals, may be gained further by the titles of the concluding chapters: "Trends of Modern Harmony," "The Idiom of Jazz and Blues" and "Favorite Harmonies of Great Composers."

This unusual publication will require some time in preparation for publication but those who wish to obtain first-off-the-press copies are advised to order now while they are obtainable at the special advance of publication cash price, \$1.25 postpaid.

**EIGHTEEN SHORT STUDIES FOR TECHNIC AND STYLE, For the Piano, by Cedric Lemont**—The earnest student of the piano who has reached grade-three and four will want plenty of supplementary material to that offered in the average standard graded course. He requires and will faithfully practice study material covering such problems as legato and staccato playing, triplets, octaves, chords, arpeggios, running passages, phrasing, pedaling, left hand melody, finger control,

double thirds, double sixths, etc. Giving him tuneful pieces containing examples stressing these technical problems, or pieces especially written to cover them, will increase his interest.

Mr. Lemont's new work is going to be considered a most valuable publication by many teachers. His popular piano compositions are well known for their grace and beauty as well as for their practicability and their fidelity to grade, a prime essential in assigning materials for teaching purposes. This work not only covers thoroughly the various technical points enumerated but it also aims to develop them equally in both the right and the left hand. And all are written in usually-used keys.

*Eighteen Short Studies for Technic and Style* will be added to the *Music Mastery Series* of piano studies, each volume of which is priced at 60 cents. In advance of publication single copies of this book may be ordered at the special cash price, 20 cents postpaid.

**MELODIES EVERYONE LOVES, A Collection of Piano Pieces for the Grown-Up Music Lover, Compiled and Arranged by William M. Felton**—Improved facilities for hearing music played—the radio which brings it into our homes, the automobile that takes folks, in a few brief hours, from sparsely settled areas to metropolitan centers where concerts, symphonies and operas can be given profitably—have made familiar to many folk gems of melody, acquaintance with which a few years ago was vouchsafed only to a privileged few. Then, too, the neighborhood "movie house" brings carefully selected theme melodies and excerpts from the masterpieces, as well as featured numbers in musical screen productions.

Mr. Felton's successful *Play With Pleasure*, despite the wealth of material it contains, by no means exhausts the literature of music that might be classified as "melodies everyone loves." The author's skill in bringing these favorite tunes within the playing capabilities of the average piano player, the pianist who does not aspire to virtuosity but is content to enjoy playing the many fine compositions of medium grade that are available, is well demonstrated in *Play With Pleasure*. Readers may be assured that he is equally successful in the arrangements about grades 3½ to 5 in this new volume.

The variety should prove most interesting as the author has drawn from grand and light opera sources, from folk songs, overtures, pieces in light rhythmic style and

from the immortal melodies of Beethoven, Schubert, Liszt, Verdi, Moszkowski, Tschai-kowsky, Saint-Saëns, Delibes, Massenet, Strauss, Gounod and Chaminade that have been made popular with the aid of the above mentioned modern inventions and developments.

This volume may be ordered now at the special advance of publication cash price, 40 cents postpaid. The sale of it will be confined to the U. S. A. and Its Possessions.

**TWELVE MASTER ETUDES IN MINOR KEYS, for the Piano, Op. 29, by Franciszek Zachara**—It is customary, when seeking for piano etudes in the more advanced grades, to search through the well-known compositions of masters like Chopin, Cramer, Moscheles, Bach, etc. These have been the standard for nearly one hundred years, and while their excellence is unquestioned, the modern teacher is naturally inclined to have a preference for worthwhile modern studies if such can be found.

We are glad to announce the forthcoming publication of a new work of this kind, *Twelve Master Etudes in Minor Keys*, composed by a talented young Polish pianist, Franciszek Zachara. This gifted composer and pianist has given numerous successful concerts in New York and other leading cities and is already recognized as one of our coming musicians.

The day is rapidly passing when minor music is generally associated with sadness. Some of the liveliest and most fascinating music has a minor background. Many of the loveliest selections from the great symphonies are in a minor key. This series of etudes, being minor throughout, will be found greatly enriched by the added breadth and beauty of tone, as well as by the increase of harmonic development. No two numbers are alike excepting in the painstaking manner in which the phrasing, pedaling, and other niceties of advanced interpretation are presented. The difficulty of execution runs from about grade six to eight. Thoroughly pianistic, melodiously conceived, and rich in masterful effects, these studies are destined to hold a firm place in musical literature.

This exceptional collection will be a valuable number in the *Music Mastery Series*, all copies of which are uniformly priced at 60 cents. In spite of this, single advance of publication copies of *Twelve Master Etudes* may be ordered at a specially low cash price of 20 cents, postpaid; copies to be sent on publication.

**SIDE BY SIDE, A Piano Duet Book for Young Players, by Ella Ketterer**—The author of this work needs no introduction to piano teachers. During the past decade her educational books *Adventures in Music Land* (1.00), *Adventures in Piano Technic* (75c) and *28 Miniature Etudes for the Third Grade Student* (75c) have been added to the curricula of many private teachers and educational institutions, while her tuneful piano pieces have delighted

thousands of piano students. All of her composing efforts reveal practical experience in teaching.

To the many teachers who use piano duets from the very start, this new work will be most welcome. Realizing that the early playing of duets develops a feeling for rhythm and that it is a fine preparation for ensemble playing in the future, with other pianists or instrumentalists, or as accompanist for singers, choral or orchestra groups, Miss Ketterer has provided a rhythmic definiteness for each number in this book. Keeping all of them strictly to grade, there are no notes smaller than an eighth and both hands are kept in the five-finger position. Both *Primo* and *Secondo* are of equal interest; in some pieces the *Secondo* carries the melody All keys up to two sharps and flats are used.

In advance of publication orders for single copies of this book may be placed at the special cash price, 50 cents postpaid. Copies will be mailed to advance subscribers when the book is published.

**ALL-CLASSIC BAND BOOK, for Young Bands, Arranged by Erik W. G. Leidzén**—All engraving and proof-reading having been completed, advance copies of this outstanding work will shortly be available for use by young bands.

The material selected for this book is of the highest type; the arrangements are not only interesting to young players, but they are musically sound, and inculcate a feeling for logical, correct harmonic progression. The book may be said to be truly educational in every sense.

A glance over the list of contents following will prove interesting. *Lovely Maiden*, Haydn; *At Twilight*, Schumann; *Minuet*, Bach; *Soldiers' March*, Schumann; *Romance*, Martini; *First Waltz*, Schubert; *Andante*, Beethoven; *Reverie*, Mendelssohn; *Blushing Roses*, Mozart; *Minuetto*, Verdi; *Meditation*, Handel; *Polonaise*, Bach; *Cradle Song*, Schubert; *Queen's Romance*, Haydn; *Gavotte*, Handel and *Air*, Gluck.

The instrumentation: C. Flute and Piccolo, D-flat Piccolo, E-flat Clarinet, 4 B-flat Clarinet parts, E-flat Alto Clarinet and B-flat Bass Clarinet, Oboe, Bassoon, 2 E-flat Alto Saxophone parts, B-flat Tenor Saxophone, E-flat Baritone Saxophone, 3 B-flat Cornet parts (one of which may be used for B-flat Soprano Saxophone), 2 Horns in F, 2 E-flat Alto Horns, 3 Trombone parts (Bass Clef), 3 Trombone parts (Treble Clef), Baritone Euphonium (Bass Clef), Baritone Horn (Treble Clef), Bass Horn, Tympani, Drums, Conductor's Score (Piano).

The special advance order price is still open, but will be withdrawn on the publication of the book; order at once. Single copies of the parts may be ordered at 15 cents; if 25 or more parts are ordered the price is 10 cents each. The Conductor's Score (Piano) is offered in advance of publication at 25 cents, postpaid.

**AT THE CONSOLE, A Collection of Pieces for Home and Church, Arranged from the Masters, with Special Registration for the Hammond and Other Standard Organs, by William M. Felton**—The mere announcement of this book, with completely descriptive sub-title, has been sufficient to bring to the publishers a veritable flood of requests that copies be sent to the writers as soon as the book is "off press."

Of course, this is not unusual in announcing a new book publication for the church organist—the repertoire demanded of this contributor to the beauty of divine worship necessitating constant additions. But the demand for this particular volume confirms the judgment of the compiler and the publishers that the many "home" organists, who have recently installed instruments of the electric type, also will welcome an economically priced collection of high class material.

The numbers that Mr. Felton has selected for this album are real organ numbers; that is, they are compositions of a character that sound especially well on the instrument, even those chosen from folk song sources. Many of the selections from the great masters are suitable for use in church services. Suggested registration, both for organs of the standard type and for the Hammond, is given.

There still is time this month to place an order for a copy of this really fine collection at the special advance of publication price, 75 cents postpaid. Due to copyright restrictions this volume will be sold only in the U. S. A. and Its Possessions.

**SYMPHONIC SKELETON SCORES, A Listener's Guide for Radio and Concert, by Violet Katzner**

- No. 1 Symphony No. 5 in C Minor ..... Beethoven
- No. 2 Symphony No. 3 in B Minor ..... Tschai-kowsky
- No. 3 Symphony in D Minor... Franck
- No. 4 Symphony No. 1 in C Minor ..... Brahms

When the daily press recognizes the interest in symphonic music to the extent of making special offers on recordings of the master works, it is quite evident that appreciation of these symphonies by the general public is on the increase. People who

ever had an opportunity to study music. Regularly listen to favorite radio broadcasts of symphonic programs.

For those who would listen with better understanding to the beautiful melodies woven together in these masterpieces, this series of "skeleton scores" should prove of much assistance. In each the outstanding theme is presented in an unbroken melody line, no matter to which instrument it is assigned in the playing of the composition. At the same time the entrance and the progress of each of the instruments are indicated. Following a composition with the aid of these scores is much easier than from the well known miniature scores and, for non-pianists, easier than with the piano arrangements and transcriptions now available. Incidentally, as a preface to each score, Miss Katzner gives an explanation of the work as well as of symphonic construction in general.

Music clubs, especially junior organizations, should find these skeleton scores valuable for study purposes. In fact, many prominent officials of these groups have placed their stamp of approval upon Miss Katzner's efforts and predict for these new books immense success. Each symphony will be published in a separate book, of course. While these scores are in preparation single copies of any one of the four may be ordered at the special advance of publication cash price, 25 cents postpaid. The complete set of four may be had for 90 cents.

**CHANGE OF ADDRESS**—When changing your address, please advise THE ETUDE circulation Dept. at least four weeks in advance so that you may receive your ETUDE promptly and prevent copies from going astray. Be sure to give both OLD and NEW addresses when notifying us.

**OUT OF THE SEA, An Operetta for Children. In One Act. Book and Lyrics by Ethel Watts Mumford, Music by Lily Strickland**—Juvenile entertainments have

an appeal, not only for the young participants, but for their elders as well. Primary grade teachers of today, however, seek to add the educational feature, when possible, in preparing young folks' entertainments. While the story of this playlet may be a bit fantastic, it presents opportunities for the correlation of history and geography study. The music, being far above the average for juvenile operettas, inculcates an appreciation for the better things in the tonal art.

And, yet, there is no lack of enjoyment in the preparation and presentation of *Out of the Sea*. Children enjoy a good story and when they are called upon to impersonate King Neptune, Undina and Davy Jones, to say nothing of such characters as The Sea Serpent, The Oyster, The Hermit Crab and The Fiddler Crab, you can rest assured they'll respond eagerly. Even the "earth beings" characters are interesting—the two children, Jackie and Jillie, The Aviator and the inquisitive scientist, Mr. Beebe.

Those preparing a production of this operetta will be greatly aided by the directions for staging, costumes and dancing numbers in the vocal score, which also gives music and dialog complete. The solo numbers are easy to sing and all of the chorus work is in unison. Some two-part singing is indicated, if the chorus is capable.

Orders for single copies of *Out of the Sea* may be placed now at the special advance of publication cash price, 35 cents postpaid.

## CHRISTMAS WREATHS WITH BERRIES

Those folk who buy Christmas wreaths when stocks are new and fresh choose the berry-laden holly. Likewise the mistletoe buyers pick the berry-laden sprigs. We often hear in the vernacular of the day, as an expression of enthusiastic approbation, the statement that something or other "is the berries."

Another form of approbation, as applied to music, is the constant flow of music buyers' orders received by the publishers and by music dealers everywhere for numbers which have found favor. These selling numbers regularly come along in the orders for printing new editions, and out of the publisher's printing orders of the last thirty days the following numbers have been selected as suggested items for consideration by those who want to obtain "On Approval" numbers to examine for their needs.

## Next Month

### Delightful Etude Surprises for January, 1940

The New 1940 Etude, alive with its fresh, attractive style, new dress, new format, new type, new features, and new paper, brings you many features:

DUSOLINA GIANNINI  
as Donna Anna

**GIANNINI TALKS TO SINGERS**  
Dusolina Giannini, Philadelphia born, and acclaimed throughout the world as one of the very great sopranos of the age, gives in a fine article the different fundamental principles which a singer must know to develop real vocal art.

### WARTIME MUSIC IN LONDON, PARIS AND BRUSSELS

M. Maurice Dumesnil, eminent French pianist, got off the boat from Southampton, just as we were going to press. He gives a most vivid, though wholly impartial, picture of just what he saw in musical affairs in the capitals of Europe.

### HOW TO MAKE A NAME

Arthur Judson, once a Professor of Violin Playing at an Ohio College, at which time he contributed regularly to THE ETUDE, went into the field of the concert manager and has managed some of the most successful artists of all time. In fact it is said that his artists earn an aggregate of over a million dollars a year. In a very lively article he tells what the novice must do in "Making a Name in the Concert Field."

### TELEVISION IN MUSICAL LIFE

A glimpse of what tomorrow may bring us through this astounding invention. How it will affect musical conditions, which are of great importance to you, is told by Rose Heyburn.

### CHOPIN'S MAGNIFICENT NOCTURNE, OP. 32, No. 2

This is another in the long list of distinguished Master Lessons on compositions of the great Masters, by Master Pianists. This time the famous pedagog is Maitre Isidor Philipp of Paris, regarded by many as "top" among living teachers of Piano in all the world. Many will find his lesson on this gorgeous romantic work worth many times the subscription cost of THE ETUDE.

### DREAMS OF OLD MUSICAL VIENNA

David Ewen relates how many of the world's greatest compositions have been written in the quaint, genial and picturesque little coffee-houses and restaurants of the colorful Vienna of yesteryear.

**A SUBSCRIPTION TO "THE ETUDE" IS A FINE CHRISTMAS GIFT**—No more appreciated gift can be made to a music loving friend than a year's subscription to THE ETUDE. Sending a subscription means no last minute rush and very little expense. With each Christmas gift subscription, we will send an attractive Christmas Gift Card giving your name as the donor. Place orders early to insure prompt delivery and to avoid possible disappointments through the delay in the mails during the holidays.

**WE GIVE FINE MERCHANDISE AS REWARDS FOR ETUDE SUBSCRIPTIONS**—The time is here to make up a list of your friends whom you wish to remember at Christmas. Do you know that you may do all of your Christmas gift shopping without one penny cash outlay? Here's the way to go about it. You have a wide circle of musical friends and acquaintances. Interview them. Secure their subscriptions, either new or renewal for THE ETUDE. The price is only \$2.00 per year. For each subscription you send to us (not your own) we will allow you one point credit toward any reward selected from the premium catalog. The merchandise is standard and fully guaranteed by the manufacturers. Any one would prize one of these gifts. With very little effort you can remember all of your friends, please them immensely and at the same time, do a distinct service in spreading the influence of THE ETUDE for the good of music in your community. A post card request will bring the complete catalog of gifts offered for subscriptions.

## The World of Music

(Continued from Page 765)

**THE CHICAGO WOMAN'S CONCERT BAND**, believed to be the only organization of its type, has lately finished a successful season in the city parks, with Lillian Poenisch as leader.

### The Choir Invisible

Owing to vicissitudes of transmission and publication, it is often impossible that notices of the death of people eminent in the musical world can appear in our columns till several months after these eventualities. We feel, however, that many of our readers desire to keep their records complete, irrespective of such delays, and so we shall continue to offer these items at the earliest possible date.

**HAROLD FLAMMER**, widely known music publisher, died October twenty-third, at his home in Bronxville, New York, aged fifty. A Princeton graduate, Mr. Flammer rose to a distinguished position in the music publishing world and was at one time president of the Music Publishers Association of the United States.

**TAMARA MORGAN**, internationally known pianist, died October 12th, at San Francisco, aged thirty-seven. Born in Scotland, the daughter of the foreign editor of the *Manchester Guardian*, she is credited with having introduced George Gershwin's *Rhapsody in Blue* to Europe, in a concert of 1924 at the Mozarteum of Salzburg.

**FAY TEMPLETON**, reigning favorite of the American musical comedy stage at the turn of the century, passed away at San Francisco on October 3rd at the age of seventy-four. Born in Little Rock, Arkansas, on Christmas Day of 1865, of a theatrical family, she grew up on the stage and at three and a half years was making a sensation by her singing of the then popular *Up in a Balloon*. *Buttercup* in "H. M. S. Pinafore" was one of the great successes of her career, and she sang this in a Philadelphia revival as late as 1931.

**WILLIAM BENBOW**, eminent American organist, of Buffalo, New York, died August 13th, at Chautauqua. Born July 28, 1865, at Columbus, Ohio, of Welsh parentage, he became organist of the Welsh Methodist Church at the age of eleven and gradually rose to prominence. His last sixteen years were devoted to the post of organist at Westminster Presbyterian Church of Buffalo.

# The Junior Etude

Edited by  
ELIZABETH A. GEST

## Letter to Mendelssohn

By E. A. G.

Dear Mr. Felix Mendelssohn-Bartholdy:  
You see, I am calling you by your full name as I never knew just how you prefer to be addressed. It seems like a long, impressive name, and around here people just call you Mendelssohn and let it go at that.

Anyway, I have just been learning two of your "Songs Without Words" and I like them so much I thought I would write and tell you so.

My teacher says you began to compose when you were eleven years old and that you and your sister were great chums. I wrote a little waltz this year, myself, but I guess you would not think it was very good; and I often play duets with my sister, who is two years older than I am.

I know you were a fine conductor, too, as well as a composer. I'd like to be a conductor; it must be thrilling to lead a big orchestra and to try to tell them how the composer would like to have his music played if he were conducting himself.

Lots of times the composer never had a good chance to hear his compositions played by good orchestras. And then, all that about Bach! You did a wonderful thing in bringing Bach's great compositions to the public so many years

after his death. I wonder if we would know Bach's music so well now, if you had not lived on this earth.

And then, founding the Leipzig Conservatory must have taken lots of your time. My book says you did that in 1843, and I figure it out that you were then only thirty-four years old. And my book also says that you painted beautiful pictures in water colors. How did you ever get time to do all those things, with composing and teaching and travelling around Europe and England so much, to conduct festivals and concerts. It took a long time to get places in those days. How do you think you would like to travel in our streamlined trains and airplanes? Well, you did not waste much time, that is certain; and it is no wonder you died in 1847 at the age of thirty-eight. You must have worked too hard. And I guess I had better start working a bit harder on my own music if I ever want to accomplish anything, so I will go now to finish my practicing and memorizing one of your *Songs Without Words*.

From JUNIOR.

P.S.—I meant to tell you also how much I like the Christmas carol that you composed, called *Hark, the Herald Angels Sing*. It is one of my favorite carols; we sing it in school and in Sunday School, and I'll be thinking of you whenever I sing it this year.

## Musical Travelogue

## A Song for Christmas

(A Playlet)

By ERNESTINE and FLORENCE HORVATH

### Characters and Costumes

Two Waits—Traditional costumes.

King Music—A crown and robe, decorated with holly.

Palestrina—A girl with long, dark robe; white collar; small cap on head.

Bach—A boy, with curled wig, or girl with light curls. Jacket with bright buttons, ruffles. Short trousers.

Handel—A girl or boy with long hair, ending in curls. Costume similar to Bach's, but brighter and richer.

Shepherd—Tunic, striped head covering,

sandals, crook.

Mendelssohn—A girl or boy with rather long hair. Flowing tie, white collar, long trousers.

Tschaikowsky—A boy wearing a dark suit.

Richard Strauss—Another boy, similarly dressed.

Franz Gruber—A boy, wearing tall hat, coat with cape.

Mary—Long dress, blue cloak, veil on head.

Scene: Holly decked room. Throne on one side, piano on other. Two curtains, center, hide alcove, which has deep blue backdrop. Waits stand on either side of curtains. King Music sits on throne.

\* \* \* \* \*

KING MUSIC: Merry Christmas! I, King Music, greet you! (*Bows.*) Have you ever stopped to think how Christmas impressed our great composers? All saw it—and put their impressions or thoughts into music! Palestrina, in the sixteenth century, saw it as a beautiful, religious occasion. He composed, among other music, *Lord of Mercy*.

(*Waits open curtains. Palestrina sits, writing, before an arched church window, of paper, pinned to backdrop. Looks up. Goes to piano. Waits close curtains. Plays. Exits, right.*)

KING MUSIC: Bach put the entire Christmas story to music! His "Christmas Oratorio" is his impression of Christmas—noble, great, and glorious! *Slumber, Beloved*, a cradle song to the Child of Bethlehem, is a wee part of the "Christmas Oratorio."

With all Thy hosts,  
O Lord, we sing,  
And thanks and praise  
To Thee we bring

(*Curtains are opened. Bach sits in a radiant light, writing. Nods, goes to piano. Plays. Exits, left.*)

KING MUSIC: Handel's "Messiah" is the same story, told in Handel's own way. The "Pastoral Symphony" is a small part of the "Messiah," and it tells of shepherds at Bethlehem.

(*Curtains are opened. A shepherd stands, gazing afar. Handel sits looking at shepherd. Smiles, goes to piano. Plays, as curtains are closed very slowly; goes off, right.*)

KING MUSIC: Mendelssohn saw peace and simple beauty, in Christmas. He composed *Hark! the Herald Angels Sing*. (*Curtains are opened. Mendelssohn writes, pausing to look upward at a picture of angels, hung on backdrop. Continues to write, then goes to piano. Waits closing curtains. Plays; exits.*)

KING MUSIC: Tschaikowsky put a merry Christmas story to gay music! It is the famous "Nutmacker Suite." He also wrote "Christmas." It is well to remember Tschaikowsky, now. He was born on May 7, 1840—almost 100 years ago. (*Curtains drawn, showing Tschaikowsky looking at a nutcracker, toys, and so on. Bell's jingle, in distance. Goes to piano.*)

Plays part of "Nutmacker Suite" and "Christmas." Exits.)

Silent night, holy night,  
All is calm, all is bright

KING MUSIC: Richard Strauss thought about the Three Kings. He took a poem by Heinrich Heine, called "The Three Holy Kings From an Eastern Land," and put it to music.

(*Curtains drawn. Strauss stands, reading. Nods, goes to piano, plays song. Exits.*)

KING MUSIC: Next we should remember a delightful song, written by a humble schoolmaster. It was printed for the first time in 1840, although written in 1818. It is *Silent Night*, and it was composed by Franz Gruber.

(*Enter Franz Gruber, left. Plays Silent Night. Curtains opened, showing Mary bending over the manger. Composer enters, with their offerings of music. Shepherd stands center.*)

KING MUSIC (as song ends): A merry Christmas, and a musical Christmas to all!

THE END

(Note: This playlet may be used as a form, embracing works of other composers and using other tableaux. Modern pieces appropriate for Christmas, also may be used.)

## A Motor Game

By NANCY D. DUNLEA

"Don't want to practice this morning!" Betty wanted Betty one Saturday when the sun and the breeze seemed to be calling out-  
 "Don't you want to go motoring with us this afternoon?" asked Gloria, her older sister.

"What has practicing got to do with living?" demanded Betty as she slowly opened her exercise book of what she called "repeat exercises."

Gloria came over to the piano and sat down beside Betty. Then she commenced to play Betty's exercise.

"Why do you look so hard at the page? You know it from memory—well, almost—"

"Id Betty.

"So I won't have a traffic accident!" exclaimed Gloria. Betty giggled in spite of the angry face she'd been wearing. "If I don't catch the road," Gloria went on, "I might run somebody down."

"Like a note, or somebody—I catch on!" Betty began to watch the notes herself. "You have to sharp F on the second line!"

"Oh that's in the next block!" answered Gloria, "I haven't turned the corner yet! If I don't hold my left wrist up as good as my right one, I can't steer straight."

"Do you suppose Daddy will let me drive my car some day?" asked Betty.

"If you learn to keep your mind on what you're doing—keep your eyes on the road—and obey the rules," said Big Sister.

"Let me play that exercise!" Betty went to work with zest. "I can go up and down hills just as nice as you do," she told Gloria. "Way down in the bass is the foot of the hill, and way up in the treble is the top of the hill! I'm going to call the rests, the traffic signals!"

"Good! Do you see any other driving rules?" asked Gloria.

Betty looked hard at the printed page. "Why I never noticed the road map before. There are places that say 'Slow down.'"

"Where?"

"Oh those Italian words," explained Betty proudly, "say *ritard*, and that means to slow up. Oh, I'm going to be a swell driver!"

"Are there any places you can speed up?" asked Gloria.

Betty looked surprised for a second, caught her breath and then looked hard at her music. "Why *accelerando* means to go faster."

"Sure enough!" Gloria laughed. "Well, when the road map says 'soft' and 'loud,' what will you do?"

"Oh," explained little sister, "when it says *p* I'll pretend I'm driving away out in the country. If it says *pp*—very soft—I'll play soft just as if I were passing a hospital. Then when the music says *f* or *ff* I'll be right in the heavy traffic!"

"So you will," said Gloria, "I hope you drive so carefully you'll never have an accident!"

## Musical Forms— In Rhyme

By Frances Taylor Rather

### THE SONATA

SONATA from *sonare* comes: *Sonare* means "to sound".) is an instrumental form in which two themes are found: two signal themes of vast content pattern and development.

has three movements—sometimes four, contrast—each complete, et so related as to mold form, well planned—concrete. the first is fast—the second, slow—third, bright, if used—last, quick *tempo*.

### THE SYMPHONY

the SYMPHONY, sonata form, though built on broader lines, written for the orchestra, with all that it combines. Each instrument has special part in this great form of Music's Art

### THE CONCERTO

this work has movements three or four— but rarely more than three. the solo part with orchestra, displays a style most free. though each is separate and distinct, all parts together must be linked.

### THE OVERTURE

this work, sonata form or free, musical prelude to opera, oratorio, and works of other mood. s separate pieces, overtures have also merit which endures.

DEAR JUNIOR ETUDE:

I am ten and have been taking music lessons for three years. My father gave me THE ETUDE for a present, and I always turn to the Junior Department the first thing. The very easy pieces in THE ETUDE are the only ones I can play just yet.

Last week my teacher gave a musical and I played. Our mothers and school teacher were invited, and they thought it was a fine program.

From your friend,  
FLORA LLOYD (Age 10),  
North Carolina.

DEAR JUNIOR ETUDE:

Our club consists of forty-two members from grades three to eight, and we call our club the HAPPY HOOR MUSIC CLUB. We hold our meetings every Friday in the study hall of our school. At the meetings we have roll call, a game connected with music, several selections by the Rhythm Band, and some solo pieces played by the members. Our club pins are blue and gold.

From your friend,  
JEANNE VAN DEUSEN

JUNIOR ORCHESTRA of Charleroi, Pennsylvania

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "My Favorite Piece." Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by January 18th. Names of prize winners and their contributions will appear in the April issue. The thirty next best contributors will receive honorable mention.

### RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriter and do not

have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

### Musical Biographies

(Prize Winner in Class A)

When I start the study of a piece I always find it helps a great deal to read something about the composer and his life. It is impossible to grasp the composer's meaning unless one has a knowledge of the surroundings that influenced his personality and thereby his compositions. In addition it makes one more appreciative of the composer's style of writing.

To help me, when I wish to find out something of the nature of a composer, I have assembled various Etude articles and pictures in a notebook. An example of this is "Beethoven's love of nature." It explains a great deal about the character of this composer. After reading an article like this on the composer, together with some bare facts, one has a much deeper understanding of him and becomes more acutely interested in the way he expresses himself in music.

ROSE MARY PIERCE (Age 15),  
Arizona.

### Musical Biographies

(Prize Winner in Class B)

Musical Biographies are short stories of composers lives, though they do not have to be short. Sometimes they are long. They tell where and when composers were born, where and when they died; and usually they give some of their most important works. They also tell of important events in their lives.

When people read biographies they imagine they know the composers. If they do not do this, they fancy they have seen the composers and heard them play.

If people read biographies and do not feel either of these things they do not have very good imaginations!

GEORGE LETT JONES (Age 11),  
Virginia.

### Hidden Musical Terms

By Rowena Gailey

Find the musical term hidden in each of the following sentences.

1. The picture in sepia, no doubt, was pretty.
2. This is a study for ten little fingers.
3. Is this item posted in the ledger?
4. There are several tomatoes in the salad.
5. We arrived at Cape Cod after dinner.
6. He unraveled the rope rather than cut it.
7. John received a bicycle for his birthday.
8. Cynthia's greeting was most affectionate.
9. The commandant entered the room briskly.

### Honorable Mention for September Essays:

Elvera Hultenius, Andrew McIntosh, Margaret Coleman, Meta Webster, Mary Ida Moore, Irma Bronson, Yvonne Keller, Nan Goodman, Barbara Mathews, Ardell Mawson, Harry Hicks, Edna Fanslow, Hilda Eicheim, Henry Fiedler, Marian McCullah, Doris Murphy, Carlene Harrison, Milton Wayburry, May Belle Hardman, Eva Whiteside, Eleanor Nutter, Mary Gray, Dorothy Wells, Anna May Morris, Polly Elkan, Rowena Burk, Anna Neff, Helen Byrd, Jewel Carson, Ruth Betman.

### Answers to Musical Travelogue

1. India; 2. Turkey; 3. Mandalay; 4. Athens; 5. Londonderry; 6. Vienna; 7. London; 8. Scotland; 9. Arkansas; 10. Hong Kong; 11. Kentucky; 12. Bethlehem; 13. Madrid; 14. Georgia; 15. Greenland.

### Answers to Musical Instrument Building

Puzzle in September

1. Oar-roan-organ
2. Cone-crone-cornet
3. Tier-their-zither
4. Nap-pain-piano
5. Pa-rap-harp

### Prize Winners for September Puzzle:

Class A, Jimmie Lee Talon (Age 14), Texas.

Class B, Marjorie Hitch (Age 12), Michigan.

Class C, Edna Brown (Age 9), Ohio.

### Honorable Mention for September Puzzles:

Ann Forester, Hilda Bloomquist, Dorothea Anderton, James Brown, Anna Mary Lee, Guy Elmont, Ruth Bringham, Nancy Andrews, Ray Smith, Doris Wier, Margaret Huff, Belle Ellerman, Marjorie Patterson, Catherine Connell, Eleanor Kemp, Mary Ellen Daniels, Irene Neff, Bradley Marson, Effie Goodrich, Dorothy Mendham, Isabel Crowell, Francis Cunningham, Jack Coolin, Shirley MacDowell, Wilma Stocker, Evelina Butts, Sydney Bellows, Jane Sharp, Betsy Brown, Mary Rose Pierce.

(To save space the titles of many of the articles have been somewhat condensed)
